This is a work of great merit, and should be placed in the hands of every young man who is suffering from past folly and indiscretion. It contains many valuable truths, and its perusal is certain to benefit him in many ways.—*London Mercantile Journal.*

**THE CORDIAL BALM OF ZERYLANICA; OR, NATURE'S GRAND RESTORATIVE,**

is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c. Even where Sterility seems to have fastened on the female constitution, this Medicine will warm and purify the blood and fluid, invigorate the body, and remove every impediment.

This Medicine should be taken previous to persons entering into the Matrimonial State, to prevent the offspring suffering from the former imprudence of its parents, or inheriting any seeds of disease, which is too frequently the case. Sold in Bottles, price 4s. 6d. and 11s. each, or the quantity of four in one Family Bottle for 35s., by which one 11s. Bottle is saved.

The £5 Cases may be had as usual.

**BRODIE'S PURIFYING VEGETABLE PILLS** are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 1½d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. BRODIE and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of £1, and in all cases the most inviolable Secrecy may be relied on. Only one Personal Visit is required to effect a Permanent Cure.

Observe—27, Montague-street, Russell-square, London.

**FRENCH PRINTS** just received from Paris,

of the richest and most voluptuous description, beautifully coloured, in sets of 12, at 1, 2, and 3 guineas per set. A few new single prints, 5s. to 21s. each. Also may be had, *La Lanterne Magique*, 30 coloured plates, 30s. *Amours of a Lady's Maid*, 30s. plates. *New Flash Songster*, 6s. plates. *Swell's New Guide* to all the fun in London, ladies, &c., 2s. 6d., plates. *Seduction Unveiled*, 2s. 6d., plates. *Amours of the Earl of Rochester*, 8s., plates. *Marriage*, 2s. 6d. plates. *Amours of Betty Ireland*, 7s., coloured plates. *Annals of the White House*, 1s., two plates. *Philosophy of Pleasure*, 9s., coloured plates. *Hints to Young Married People*, 2s. 6d., plates. Cause of Consumption, 1s., plates. How to Raise Love, 2 vols., capital coloured plates, £2 2s. *Female Husband*, 1s. coloured plate. *Venus Schoolmistress*, large coloured plates (curious), £2 2s. *Amours and Poems of the Earl of Rochester*, coloured plates, 8s. *Love on the Sly*, rich coloured plates, 27s. 6d. 40 *New Flash Song Books*, 1s. each, all different. *New Figures to Undress*, 2s. 6d. each.

P.S. **ANOTHER PRIZE LOT** HAS JUST ARRIVED, entire Novelties, DIRECT FROM PARIS, ranging in price from 2s. to £1. 1s. each. Observe the Address,—John Wilson, 86, Wardour-street, Oxford-street. Letters, with remittances, attended to. Catalogues gratis.—Observe, these are the right sort—not trash.

## THE EARL OF ALDBOROUGH CURED BY HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb., 1845.

To Professor HOLLOWAY.—  
SIR—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either.  
Your most obliged and obedient servant,  
(Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing.  
Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.—  
SIR—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.  
I am, Sir, yours, &c., &c.,  
(Signed) THOMAS TAYLOR.

This wonderful medicine can be recommended with the greatest confidence for any of the following diseases:

Ague	Inflammation
Asthma	Jaundice
Bilious complaints	Liver complaints
Blotches on the Skin	Lumbago
Bowel complaints	Piles
Colic	Rheumatism
Constipation of bowels	Retention of urine
Consumption	Sore throats
Debility	Scrofula, or King's evil
Dropsy	Stones and gravel
Dysentery	Secondary symptoms
Erysipelas	Tio-doloureux
Female irregularities	Tumours
Fevers of all kinds	Ulcers
Fits	Venereal affections
Gout	Worms of all kinds
Head-ache	Weakness from whatever causes, &c., &c.
Indigestion	

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicines THROUGHOUT THE CIVILIZED WORLD, at the following prices:—1s. 1½d. 2s. 9d., 4s. 6d., 11s., 22s., and 35s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

## PARISIAN NOVELTIES just received.—

La Galerie des Venus, four exquisitely coloured plates, 5s., tinted 3s. 6d.; *The Beauty of Woman*, six capital plates, 3s. 6d.; *Curiosities*, six plates, 2s.; the *Female Figures to Undress*, twelve sorts, 2s. 6d., 3s., and 3s. 6d. each; *Love's Fountain*, very good, 3s.; *Venus Looking-glass*, with change, 2s. 6d., and the last novelties; *French Linings for Paris Hats*, six sorts, 1s. each, colored. No gentleman, married or single, should be without one of these in his hat. Also a large collection of Plates at 1s., 2s., 3s., 4s., and 5s. each; single plates sold as specimens. A good and new assortment of Gentlemen's Song Books, containing all the Coal Hole and Cider Cellar Novelties, and every book or print advertised by any other house.

Direct to T. Ward, Parisian Repository, 103, Strand.  
N.B. All the above sent post free, without extra charge.

Sold wholesale by W. M. CLARK, Warwick-lane; CLEAVE, Shoe-lane; VICKERS, Holywell-street; STRANGE, Paternoster-row; and PURKISS, Compton-street.—Printed for the Proprietors, at the OFFICE of JOHN WORTHAM, 313, Strand.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 10. FOR THE WEEK ENDING JULY 26, 1845. THREE HALFPENCE.

DEER-STALKING—GLENARTNEY.

**W**UCH doubt hovered over our "magnum bonum" (which, we suppose, must be the future phrase, vice the grey-goose quill, so long known to prose) as to whether any article was needful to tell the story of the antler-bearing animal that figures on this page. The truth is, gentle reader, and we may as well make clean breast of it, we have been disappointed of several small engravings, wherewith, we had proposed to have commenced an article on "Swimming," which would have stood in place of this present picture. Nevertheless, we doubt not many will be pleased with the exchange, and had it not been for our excessive candour in informing them that they are indebted to an accident for the appearance of this noble deer, would have commended our judgment and good taste in presenting such a seasonable embellishment.

The royal excursions, which of late have been annually made to the north, have set all the London press to pillaging the handsome volume of Mr. Scrope on "Deer-stalking," and in some half dozen instances, we perceive, they have each treated their subscribers to the same spirited passage from his enthusiastic work; this is pitiful. Prince Albert, the poultry slayer of Stowe, (we would not willingly speak unkindly) has no more seen deer-stalking, albeit he shot seven bucks driven together in Glen Tilt, than a drove of black-stots in the middle of Smithfield market would deserve the name. To deer-stalking, in its integrity, all other British sports—so far as the *chasse au fusil* is concerned—must doff their caps. In point of fatigue and excitement, it excels them all; and there are many instances when men have had an opportunity of enjoying it in perfection, where it has given them a distaste for their previously most cherished amusements. Glenartney, the opening scene of the "Lady of the Lake" (at that supposed time it was a royal forest), lies about six

miles westward from the castle between it and Callander. It has continued a deer forest precisely and exactly the same ever since to this very hour; and the uninterrupted and lineal descendants of that fancied "Monarch of the waste," who led Fitzjames such a merciless chivy when he broke away over Ben Voirlich—a nearly perpendicular sugar-loaf mountain, only three thousand feet above the surface of Loch Earn, and three thousand three hundred above that of the sea—are the same species as they were in those days, still the only red deer which frequent this part of Perthshire, and who are here preserved by Lord Willoughby in their mountainous and time-out-of-mind native haunts. Shade of Jem Hill! was not the Great Unknown, now, alas! a fellow shade, astride of Pegasus with a vengeance when he detailed this Highland "Bilsdon Coplow day?" Nothing that ever was conceived or heard of, but a Hippogriff with dragon's wings could have come such a rummy chase through such a country. As to any "gallant gray" (by the way "the banks of the Seine" was the unlikeliest place in the world for Fitzjames to fall in with such a clipper), but a grey eagle, seeing a hound in it for ten consecutive minutes was impossible; but those were the days of magic, and Fitzjames's nag must have certainly, for the time, have been possessed of a devil (and a deuce of a one to go!), which deserted him at the "Brig of Turk:"—it would be a gruelling day's work for an air balloon.

The way in which these deer are now a-days followed is more suited to this poor prose, for it is altogether an affair of stratagem and circumvention. This celebrated glen commences just above the small village of Comry, where the impetuous Ruchill joins its waters to those of the Earn. In this lower extremity, on one side of which it is ascended by a tortuous road, its features are not particularly striking, it being little more than a shaggy dell, through which the Ruchill is heard, not seen, roaring through

the woods. On reaching the simple but beautiful bridge of Dulclothick, the glen expands, becomes destitute of wood, and progressively assumes a gloomy grandeur, which borders on the sublime. Just above the bridge stands the shooting-lodge, whence each feature of the glen is at once discernible. A pleasanter spot in the month of August no sportsman can picture to himself. The best and most extensive grouse-shooting can be reached from it: and the Ruchill at this period abounds with sea-trout, who run up to its impetuous and rocky torrents to spawn. On the naked hills which form the top of Glenartney the red deer resort, and it is called a forest only from old prescription and right; for in fact, as to its being a forest, it is, "*lucus a non lucendo*," seeing you would be puzzled, as Dr. Johnson says, to "cut a good walking stick." At this period of the year, however, there is fine sweet short herbage on them, and the harts feed and lie on the tops and sides of the most mountainous situations, whence they can see all around them—no animal which is the subject of man's pursuit being more apprehensive and wary: hence the extreme difficulty of approaching them with any certainty of success. Lower down among the dells and glens, where food and shelter are to be attained at less trouble, the hinds resort with their calves, and with them occasionally are a few young harts. A good telescope is as necessary an instrument as a rifle-gun, and the whole localities have to be strictly reconnoitred before any plan is resolved upon, much less any attempt made. I have been shown by an old and experienced deer-stalker what he assured me was a herd, but which I could not ascertain to be such, though, on resorting to the telescope, they were plainly discernible.

When the herd are perceived lying down or grazing, the first object (attain it how it can be done) is to get well to windward, for their wariness and power of winding their dreaded enemy are almost inconceivable. Sometimes, if the deer-stalker can undergo the fatigue of traversing these Alpine precipices, it may be advisable to endeavour to get up to them, as they sometimes are so placed that such advance can be made on them with a fair prospect of a shot. But this does not often happen, and the fatigue few gentlemen choose to incur. The shooters then resort to certain passes or stations, which the knowledge and experience of the foresters prompt them to recommend, according to the weather, the point the wind may blow from, &c.; most of whom are generally accompanied by an attendant or attendants (provided with spare rifles), and one or more large dogs of the rough greyhound species, termed (and I conceive properly) deer-hounds, as they add (mostly) to considerable speed the power of following by scent, and would seem, though they somewhat resemble them in shape, to vary, in fact totally to differ from the common greyhound: my own opinion is, that they are the same animal as the old Irish greyhound, now extinct in that country. They are not certainly so large as the Irish dog is represented to have been, but that could easily be accounted for from more than one cause.

The late Duke of Athol, who had one of the finest Deer Forests in Scotland, at Blair Athol, and who was devoted to the sport even almost to the very day of his death, had this breed in great plenty and perfection, and was certainly in his day the first deer-stalker in Scotland, excepting perhaps the late Macdonnell of Glengary. I shall, therefore, give an extract from the letter of an old sportsman some few years back.

"I had the pleasure to attend the Duke of Athol in an excursion into his extensive forest in August last, and will attempt to describe to you the manner of His Grace's sport. When he first alights from his horse the servants present him with telescopes, by the use of which, looking on the mountains' sides or in the valleys, it is easy to distinguish every hart, hind, or calf: and I may venture to assert that in eight hours not fewer had been perceived than from three to four thousand head, young and old; and were it possible to go over it in a day, I am confident a man might see ten thousand deer. When His Grace spies a herd settled, he uses all methods to gain the wind of them, approaching with the utmost caution till within a hundred or six score yards. He uses a single rifle gun, and, being a first marksman, seldom misses his aim. If the herd pass or cross him, his servants supply him with a second, and sometimes even a third piece, and he has frequently killed a hart at each shot. When they are not to be come at in the wide and open valleys, his men are sent round in all directions where the deer can catch the wind of them, and then or on sight, the deer return down wind, generally by some well-known pass or track, where His Grace, taking advance of the track, with the wind in his favour, can frequently fire his three rifle guns in the time they drive by him, and will hit them on full speed from one hundred to one hundred and fifty yards distance.\* When the deer is wounded in a general way he leaves the herd, or rather the other harts force him out as soon as he begins to bleed freely. The man who leads the greyhounds, by a signal from His Grace, or the forester, slips them, and they are laid on the spot or track; if the deer has not yet broke from the herd, the hounds will single him out from any number, and will not look at any other: sometimes he will run miles before the dogs can bring him to bay, where they will keep him until the foresters come up, who cut the deer's throat, and the dogs' reward is the hot blood, which makes them eager and keen.

\* A double rifle gun, as light as a common fowling-piece, made by Mr. Atcell of Perth, and at a hundred and fifty yards put the shot of both barrels resolutely into less space considerably than would be occupied by a full grown hart, even on full stretch.

The deer thus killed is paunched, laid across a horse, and tied on; and there are always three or four of these horses, and men, following at a distance to carry home the slain of the day. On some fortunate days His Grace has killed from four to six harts, weighing from twenty to twenty-five stone English weight; and I have seen several brought home to Blair Castle that cut on the haunches more than three inches of solid fat."

Such is a general outline of this grand sport amid the Alpine recesses of Glen Tilt, which is the most noted part of the Forest of Blair; and of all the scenes which may astonish the imagination in the wild bosom of the Grampians, none can be found combining more picturesque and characteristic features. But frequently it is found impossible, by the most skilful foresters, to drive the deer by the passes, as they either pass above or below them; in this last case it is then that the shooter is put to the exertion of every faculty; he will have to ascend as speedily as he can, or to descend a rugged and precipitous rock, or to run to endeavour to get in advance several hundred yards at the top of his speed, glad if he can then take his shot without rest or hesitation. But fatiguing, and frequently tantalizing as it is, I never yet knew one who had followed it who did not prefer it to all other sport. Indeed, it is so exciting that it frequently puts beginners, though capital shots otherwise, off their practice; and I could give many instances of well-known sportsmen who have experienced this to their great astonishment and vexation, and despite every endeavour to call upon their self-possession.

(To be continued in our next.)

**SHEEP SALVE.**—Mr Stewart, in his letter on this subject to the Highland Society of Scotland, observes, that "having got employment on the farm of Ballo, on the Lomond Hills, Fifeshire, power was given to me to manage the sheep entirely after my own fashion; and I instantly set myself to consider what were the real objects to be gained by salving. They are twofold: first, the destruction of vermin, and, second, the growth of wool of superior quality. Now, it is clear that the more innocent the substances used, so much the better will it be for the sheep as well as the wool; for it is easy to see that tar, turpentine, tobacco-juice, and arsenic, are all calculated merely to kill vermin, and cannot possibly be beneficial to wool; while the absorption of a portion of any of them through the pores of the skin cannot fail to hurt the animal more or less. Butter, therefore, appeared to be the only article that could benefit the wool, without injuring the sheep. I then considered that oil, of the cheapest sort used by itself, would serve the intended purpose; but as oil runs off easily by the heat of the sun, or even by that of the sheep themselves, it occurred to me to mix it with a portion of tallow, which, being nearly of the same nature, would tend to harden the salve, so as to retain it. Feeling assured I would get superior wool, I hoped also, it would prevent vermin on the sheep; but having some doubt on the propriety of leaving the tar entirely out, I mixed, in my first experiment, equal portions of tallow and train oil, weighing altogether 42 lbs., with 8 pints (16 quarts) of tar, for 160 hogs. I then smeared 400 with that sort of salve, and it proved much better than anything I had ever seen before, both for quality and quantity of wool, the vermin also being kept away. The wool stapler said he never had a clip come through his hands equal to it. Encouraged by success, I next year left out the tar entirely, and smeared 400 hogs with tallow and oil alone, in the proportions given above; and I found that I had still a larger growth of wool, and of superior quality, so much so that it realised in the market some shillings per stone more than the wool cured by the salves containing tar—at the same time that the advantage to the sheep was decidedly apparent." From these results Mr. Stewart confidently advises the shepherds of Scotland to use this salve only, if they wish to obtain—1st, about one third more money for their wool, on account of its superior quality and purity; and, 2nd, an improved condition of their sheep.

**CARROTS FOR HORSES.**—We were lately told by the proprietor of one of the most extensive livery-stables in this city that he has had an experience of several years in feeding the common yellow carrots to his horses, and that he considers the most valuable article for winter feed that he has ever used. He considers a peck of carrots and a peck of oats worth more for a horse than a bushel of oats alone; and that for horses that are not constantly employed, the carrots alone are far preferable to oats. His horses eat the carrots with a far better relish than oats; so much so, that, if a peck of each are turned into the manger, they will eat all the carrots before they taste the oats. When fed constantly on carrots, a horse will drink scarcely a pail of water in a week. The culture of carrots is recommended to our farmers as worthy of their attention.—*Connecticut Farmer's Gazette.*

**BENEFITS OF HABIT.**—A Benedict, on being asked whether he was seriously injured when a steam-boat boiler exploded, replied, "that he was so used to be blown up by his wife, that mere steam had no effect on him."

**A HANDSOME REWARD.**—An advertisement in a Philadelphia paper reads as follows: "Stolen, a watch worth a hundred dollars. If the thief will return it, he shall be informed, gratis, where he may steal one worth two of it, and no questions asked."

"I see the villain in your face, you rascal!" said a judge to an Irish prisoner. "May't please your wurship," replied Pat, "that must be a personal reflection, shure."

## BRITISH SONG BIRDS.—No. IX.

THE NIGHTINGALE.

**T**HE Nightingale, unrivalled as it may be in vocal powers, is one of the most homely of our native birds in its attire. In size it is a trifle larger than the Blackcap and the Garden Warbler, which it somewhat resembles in shape—although its bill and its hinder claw (or tarsus) are rather larger. Its general length is about five inches of which two and a-half are tail. But when well fed, or kept in confinement, we have known them (being bred from the nest,) grow as large as a lark. A condensation of the delightful and original sketch of the Nightingale, from the pen of the celebrated ornithologist, Mr. Audubon, shall first embellish our columns, and as we intend to devote more than one paper to this princess of the grove—the Sweetbreasted Philomela—we will give, ere we close this article, minute directions from the pen of a practical bird-fancier and breeder, full directions for breeding, keeping, and rearing the Nightingale.

"The blasts of winter," says Audubon, the American Ornithologist, "have passed away. The humble violet hangs on its delicate stem, embedded, as it were, in the midst of its deep green foliage. The sweet odour of the purple floweret diffused through the bland air proves that the delightful days of spring have returned. Its companion the pale primrose spreads all over the mossy bank; there the virginal eglantine prepares to open its snowy blossoms; golden butter-cups and daisies bright cover the green pastures; and the groves send forth from amid their yet tender foliage tufts of flowers, some yet budding, like the laburnum, others bursting into beauty, like the purple lilac, and the delicate cream-coloured elder. Peach blossoms brightly blushing glow amid the varied hues of the orchard, whose clusters of nectar-drops have invited the humble bee to trim her wings anew, to ramble hither and thither, and with constant and most industrious care to reap the delicious harvest intended for her sustenance during the gloomy months of winter.

"How often at such a season as I have here attempted to describe, have I left my downy couch, awakened, not by the rays of the orb of day, but by an intuitive sensation, far more pleasing than that of indolent repose, and sallied forth to watch the eventful moments when nature's rest was for a time interrupted, and she arose fresh, blooming, and full of renovated vigour! How oft, I repeat, have I betaken myself to the fields and groves before the objects around me were clearly discernible, to watch the first notes of the vernal visitors of the feathered tribe, which from their sojourn in more sunny lands have returned to the abode of their youth! Then the Winter Fauvette would be heard to sing its humble lay, the little Wren would pour forth its lively chirpings, the Chaffinches challenged each other on the sprays, the loud notes of the Blackbird came on the ear from afar, while perhaps overhead, amid the branches of that sturdy elm, the Song Thrush, cousin to the Mocking Bird, poured forth his unpremeditated notes, so sonorous, so varied, and so mellow that, methinks, while listening to the lay, the rogue has actually practised the gamut of the Louisiana songster.

"In the midst of a thicket I now see a solitary bird, humble in its attire, and of most modest mien, peeping at me with a caution so uncommon, and yet so inviting, that I feel tempted to seek its acquaintance. With care I gradually approach the feathered stranger. Its form is somewhat elongated, yet not incompact; its eyes are large, and of peculiar mildness; it stands rather high on a pair of light flesh-coloured, and as it were, transparent legs; its wings, which are of moderate length, droop and seem at intervals to tremble; and as it moves from one twig to another, I see that it hops or leaps, and does not walk step by step like

many other birds. Its colour is a dull brownish-olive, but the hind part of the back and the tail are of a richer tint, though corresponding with the general hue. At this moment it flies lightly to the ground, hops a few steps, picks up a grub, and then returns to its former station. Can it be a Thrush? surely, if it is not, it ought to be. But I will watch your ways; nay, I will note down every one of your actions, mark the situation of your nest, its form and component parts, your eggs and your brood, and all about you and your mate, who methinks has not yet reached this lovely and secluded spot; so that perhaps at some future time I may present you to some friend who feels as much for and toward you as I myself do at this moment.

"When I was yet quite a lad, my father spoke to me of the songs of birds, both of Europe and of other countries. and frequently would endeavour to give me some idea of the affinities of different species. 'The Sky-Lark, if not so abundant,' he said, 'would be thought a most charming songster; the Goldfinch, the Linnet, the Blackbird, the Song Thrush, and many others are all pleasantly musical; but the Nightingale is amongst our birds as much superior as the Mocking Bird of your country is to every other songster there: and, although I am fully aware that America possesses many song birds of considerable powers, nay perhaps, on the whole, more so than Europe, I have never been able to convince either my countrymen or Englishmen of this truth. Of all this however you may judge for yourself. Go early and late to the woods, listen with attention to the songs of the birds; and be assured that while you will find them daily becoming more and more pleasing, you will be enabled to establish the truth of these matters, to which, I am sorry to say, few persons pay much attention.'

"Such lessons, reader, have never been forgotten by me. With all the anxious enthusiasm of youth I resolved to judge for myself of the powers of song in birds, and to begin by studying first those of the Nightingale. the very bird which had attracted my regard in its plain brown garb, and most modest mien.

The arrival of the Nightingale varies by a full fortnight, in the latter end of April and the earlier part of May. In France they appear about the 20th of March, and are rarely later than the first week in April. But we will again resort to the delightful prose of Audubon:—

"Many of my readers may think it strange that I should say to them that I never heard a Nightingale sing on its arrival, or before it was on the eve of being mated when the first sight of the female appears to bring forth its musical power. On the other hand, I have heard these birds in full song until within a few days of their departure about the middle of August. But this may possibly have been overlooked by students of nature, who, having heard the song of the Nightingale at a very early period, were not aware that at the same moment the bird had already formed a nest, and its mate was snugly incubating.

"About a week after the arrival of the female birds, the male Nightingales first seen are mated, and a spot has been chosen for the nest. The situations of their choice are generally in the interior of close thickets, but not unfrequently also at the roots of the thick sets of hedge-rows. I never saw one either in a bush, or on a tree of any sort. The colour of the materials employed in the composition of the nest, and even that of the eggs, are in accordance with the dull reddish brown garb of the bird itself. The whole of this fabric may be said to be of a rather rude construction, it being large, loosely put together externally, and rather scantily lined. I have no doubt that, like some of the smaller Thrushes, as well as several of the larger Warblers, the Nightingale to some extent scratches a seat for the basis of its tenement. The outer layer is usually composed of the dried leaves of various trees of the previous season, extending at times in a loose manner to the distance of several inches from the proper nest. The latter is cup-shaped, with its cavity about four inches in breadth, and nearly as much in depth, formed of dry fibrous roots of small size, now and then interwoven with a few horse hairs. The eggs are from four to six, rather large for the bird, three quarters of an inch in length, seven-twelfths in breadth, and of a pale brownish colour. The parent birds incubate alternately, although the female spends more time on the eggs than her mate.

"Young Nightingales, like most young birds of their tribe, are at first fed with macerated substances, for eight or ten days, after which they receive small larvae, worms, and insects. On two or three occasions, I have seen the young, when yet not much more than half-fledged, leave the nest, and hop about its vicinity during the day, but return towards evening and huddle together, their mother covering them with due care. So similar is their colour to that of the ground at this period, that it is almost impossible to discover them, until the parents, through their anxiety for their safety, are seen to hop round them, and thus point them out to the searcher. At this early age I have observed that they exhibited a great desire for small insects, and even at times seized a butterfly extremely common in France, especially in the neighbourhood of gardens and orchards, to which the Nightingale not unfrequently resorts for food.

"During the summer, and towards the period of its departure, this species, Thrush-like, feeds on several sorts of small and juicy berries; those which tarry latest especially, for I have seen Nightingales in the neighbourhood of Paris as late as the 15th of September, or about a

month later than the period chosen by the young birds to migrate toward their winter quarters."

(To be continued in our next.)

### SETTLING DAY AT "THE CORNER."

[The following *jeu d'esprit*, from the admirable pen of the facetious Tom Hood, now that "Poor Tom's a-cold," will be read with a saddened smile. Truly of Hood it may be said, "He touched nothing that he did not adorn." Here is his touch at the Turf. We need not say it alludes to the events of the Derby of 1840.—Ed.]

"As I was going to (the) Derby,  
All on" &c.—OLD SONG.

I wish I'd never bet;  
I wish I'd never seen a horse or colt;  
I wish I'd never join'd that jockeying set;  
I wish I'd stopp'd away  
From Epsom on the Derby Day—  
And all such places!  
I wish I'd kept at home,  
And never shown my person at a  
Hippodrome.  
I wish, instead of going like a dolt  
To those horse-races,  
I'd gone to Cowes' Regatta!  
We've all our ups and downs, I know,  
Both great and small;  
But, oh!  
Those Epsom Downs are worst of all.  
What could have made me join those gambling jockeys?  
(Out-of-door Crockies);  
How could I reckon so without my host?  
How could I, cockney born and bred,  
So run my head  
Against that betting post?  
Brought up in staid pursuits  
(Not among nasty animals and brutes),  
How could I think, to such a blustering clan,  
My reason and my cash to yield?  
I never was a martial man;  
How could I "take the field?"

Why did I, stupid dolt,  
Back that confounded, desperate, Solace colt,  
Or of that mulish Muley make a pet?  
No doubt, large sums I thought of soon amassin';  
But what a double ass I was to bet  
On that Ass-ass-in.

The bounds of prudence, how hard to regain,  
When once a man o'ersteps 'em!  
But I have done: Richard's himself again!  
Yes, be assured,  
I'm now completely cured;  
At least, this *shall* be my last dose of Epsom.

It was an awful moment—that run-in—  
(Especially for those young minors short of tin!)  
I own I felt my heart sink then,  
And all my thoughts seemed driven into a "Corner":  
And then I thought of North America, and Canton,  
And then I turned a scorner  
Of men,

And thought of Joseph Manton.  
And then the race-course whirled before my eyes;  
And then I heard a voice, in words of thunder,  
Say,

"Heyday,  
Good sir! you seem to have some great surprise."  
"Yes, and it's Little Wonder!"

However, now  
That's past,  
And I have made a vow  
That bet shall be my last.  
All wagers now I nauseate and detest  
("Odds" and the rest).  
All jockeys hate,  
(Welter and feather weight),  
All meetings fly  
(October and July);  
In short, I think all racing sad,  
And all its courses bad.

And as for the stupidity of those who go  
The difference, I trow  
(If there's a tittle),  
"Twixt Donkey-ster and Ass-cot's mighty little.

I've burnt my "books;" no horse again I'll back  
(Racer or hack):  
No more I'll hedge: and, by the Grecian gods,  
I'll not stand on the long odds,  
With tens, and fives, and fours, and threes to one  
I've done. I've done with saying "Done, done, done!"  
My means no more I'll stake upon a Derby Day:  
It's my last lay.

From this day forth for evermore,  
Though I should live to four—or forty score,  
I'll never lay another shilling—  
If I do I'm a villain—  
(Be this the moral of my tale),  
Though you should make me the most tempting offer—  
Golconda to an empty coffer—  
A thousand sterling to a pint of ale—  
You shan't prevail;  
No matter what the sum,  
I won't.  
Come,  
I'll bet you half-a-crown I don't!

### THE THAMES REGATTA.

This Regatta was established in 1843, by a few gentlemen zealous in the cause they had espoused, at a time when the great increase of steam boats on the river had almost if not entirely deprived the Thames watermen of their occupation; and, by diminishing the number of both Amateur Clubs and rowers, had taken away the principal means of support of an industrious class of mechanics employed in boat building.

As soon as the project was made known, many noblemen and gentlemen residing on the banks of the Thames, the Universities of Oxford and Cambridge, the principal London boat clubs, and the most distinguished amateurs on the river cordially responded to the appeal, Prince Albert kindly consenting to become the Patron of the Regatta and to contribute towards its support. In this the Prince was seconded by the Dukes of Northumberland and Buccleuch, the Earl of Ripon, Lords Castlereagh and Grimston, and that steady patroniser of the river Thames, Sir Launcelet Shadwell, the Vice-Chancellor of England, all of whom proffered their support, as well as their good wishes to the undertaking.

Never was there anything to equal the array of clubs and cutters of the present year. It ought not to be forgotten that, when these numerous clubs of gentlemen and the many others who add their quota to the funds of the Regatta contribute liberally to enhance its success—in addition to the promotion of sport and amusement—they are, in fact, rendering a great advantage to hundreds of industrious men, of gaining a livelihood, but whose opportunities of doing so were before daily decreasing. And furthermore, it must be recollected, that a pleasing change has been effected, and a gratifying interest established between the watermen and amateurs; for while in times gone by, violence of conduct and language used to characterise a waterman's match, there is now an increase of civility and correctness of conduct and demeanour among those whose bread is "cast upon the waters."

The influence before alluded to has extended itself far beyond the neighbourhood of London, for, instead of the bluff and coarse reception given by a "west-country bargeman" to him in the frail bark, and the "recklessness of acts and words" exhibited by the former to the latter, a greater degree of urbanity of manner may now be obtained from such a source. Again, we cannot but hail an institution which brings the landsman or the mechanic out of his humble domicile, his skittle alley, or some such places, to enjoy the fresh air, and invigorate his constitution with a "pull" on the bosom of Old Father Thames. And then the order and regularity which all competitors are bound, and we are perfectly assured are inclined, to keep, induce the practice of those habits which will always tend to raise a man in that scale of society to which he belongs.

FIGHTING ON THE WRONG SIDE.—Dick Wilson wrote for his servant to bring up two of his heaviest gamecocks, to fight at the approaching main at the "Royal Cockpit." His servant ignorantly put them in the same bag, and, when he got to town releasing them from their confinement, one of them was nearly pecked to death. Dick, after heartily cursing his servant for his stupidity, received this artless question from him:—"Who, sir, could have thought that there was any risk of their falling out, while travelling, when they were both backed to fight on the same side?"

Why is a pugilist, who refuses to strip, like D'Israeli? Because he has an aversion to PEEL!

**A BATTLE BETWEEN TWO HARES.**—On Easter Sunday, in the afternoon, as I was proceeding with my brother-in-law, Mr. Carr, to look at a wild-duck's nest, in an adjacent wood, we saw two hares fighting with inconceivable fury on the open ground, about a hundred and fifty yards distant from us. They stood on their hinder legs like two bull-dogs resolutely bent on destruction. Having watched them for about a quarter of an hour, we then entered the wood, I observing to Mr. Carr that we should find them engaged on our return. We stayed in the wood some ten minutes; and, on leaving it, we saw the hares still in desperate battle. They had moved along the hill-side, and the grass was strongly marked with their down for a space of twenty yards. At last one of the sylvan warriors fell on its side, and never got upon its legs again. Its antagonist retreated for a yard or two, stood still for a minute, as if in contemplation and then rushed vengefully on the fallen foe. This retreat and advance was performed many times; the conqueror striking its prostrate adversary with its fore feet, and clearing off great quantities of down with them. In the meantime the vanquished hare rolled over and over again, but could not recover the use of its legs, although it made several attempts to do so. Its movements put you in mind of a drunken man trying to get up from the floor after a hard night in the alehouse. It now lay still on the ground effectually subdued, while the other continued its attacks upon it with the fury of a little demon. Seeing that the fight was over, we approached the scene of action—the conqueror hare retiring as we drew near. I took up the fallen combatant just as it was breathing its last. Both its sides had been completely bared of fur, and large patches of down had been torn from its back and belly. It was a well-conditioned buck-hare, weighing, I should suppose, from seven to eight pounds.—*Waterloo's Essays on Natural History.*

**AN INNOCENT REPLY.**—A gentleman who was ordered to attend one evening at the bar of House of Commons, respecting the Isle of Man, was asked by Mr. Dundas M.P., if the population of the island was on the increase? "Very much," answered the witness, "since my living there."

## CORRESPONDENTS.

**CRICKET.**—P. T. W.—As you ask our candid opinion of slow bowling, and as we are by no means inclined to "hide our light under a bushel," (which, indeed, would be an impolitic measure,) you shall have it. Of course, as you instance the style of Clarke, of Nottingham, and Mr. Denison, of Marylebone, we conclude that you mean not only *slow* bowling, but the *slowest*, and therefore the candour which you ask at our hands compels us to say that it is very far from efficient, and that if generally followed up, would much reduce the science and interest of the game. One thing is past dispute, namely, that if well practised at by the batsman it would be far easier to play than any now in use, and long scores and protracted matches would become again the order of the day. As regards Mr. Denison, we are bound to admit that he has on several occasions been very successful; but his ball has a very peculiar twist, working from the leg into the wicket, crossing behind the bat, and often taking the off-stump; but this is a peculiarity not to be looked for in all slow bowlers, or if looked for—not found. On the whole, it is not ours alone, but the opinion of the cricketing world in general, that moderately fast overhanded bowling, such for instance, as that of Hillyer and Martingale, is that which is best calculated to carry out the interests and science of this much admired game.

**INQUIRY.**—It was Martingale who so finely caught Pilch at the slip, in the Kent against England Match; and Hillyer made a most difficult catch off his own bowling on the same day. Both were highly applauded by the spectators.

**S. T.**—We cannot agree that the "little Nonpareil," of Marylebone, is a very fine bat; he certainly has been very successful this season, and no one can dispute his being not only a first-rate, but one of the very first-rate players of England; still, there is too little of style in his batting for it ever to be considered as standing A. 1 in the list of batsmen, especially while we have Mr. C. Taylor, Messrs. N. Felix, Pilch, Gny, Hawkins, Bushby, Barker, Martingale, Bailey, and Sewell in the field.

**G. S. S.**—The Hornsey and Euston Clubs are shortly to enter into a contest; you may yet be in time.

**QUI.**—Hillyer, most decidedly. He is the first scientific bowler in England—indeed, in the world. This is a proud pre-eminence, and he deserves it.

**A. Z.**—Apply to Caldecott, Townsend-road, St. John's Wood.

**J. ROBERTS,** Birmingham.—Langan was born in 1798; his fighting weight 12st 5lbs. We do not consider Langan, though a brave, steady, and game pugilist, as a scientific one. Spring was unquestionably so. We shall be happy, as humble labourers in the good cause, to forward the progress of the "Testimonial" to the worthy host of the Castle. But why not send your note to "Bell's Life"? Anything we may receive we will duly acknowledge, and announce its transfer to the appointed treasurer.

**"L. EXMERSON,"** Dudley.—See the memoirs of BELCHER and of the GAME CHICKEN in this and the three former Nos. of the History of British Boxing in the "Sportman's Magazine." Deaf Burke's last fight was with Bob Castles, at Rainham Ferry, Essex, June 18th, 1843. The Burke mentioned in the lives first alluded to is called Bourke in FISTIANA; he is also called Joe Berks in the BOXIANA, but Burke is the spelling in the majority of newspapers of the time. He, although a game man, of great strength, and weighing 13 stone, was very unlucky in his antagonists, being twice beaten by Belcher, and twice by Pearce, both of whom were such men that defeat at their hands is anything but a proof that the beaten man was a bad one.

**"A. NOBODY,"** Dick Cahn, of Leicester, was never beaten but once, and that was by Clarkey Jones, of Manchester, Dec. 31, 1838. Cahn, (of Liverpool) beaten by Haydon, is the person you are confounding with him: the one is a 9st. 10lb. man, a sporting publican, much respected, and well known; the other a third-rate bigun, about 13st., whom we know nothing about, except that he was twice beaten in 1842.

**"A. YOUNG ANGLER."**—There are deeps at Twickenham and Richmond, respectively of the length of 400 and 700 yards; in that of Lord Howe's, at Twickenham, perch, roach, and dace, barbel and gudgeon may be caught; but the best gudgeon fishing is from the bank of the river. The London tackle-shops sell better articles, and at a more reasonable price, than you can otherwise procure them. The Oak, at Teddington, is kept by Kemp, and the Kemps and Dear are the puntmen: or there is the Bel Pie House on the Ait at Twickenham, kept by Coxon.

**"LONDONER."**—The Surry Canal Dock at Rotherhithe is well stocked with jacks, perch, roach, barbel, bream, and eels. It is a subscription water, a guinea a year, or a shilling for each day's angling. Lewisham river (the Ravensburg) has trout in it, *probatum est* we have taken them this year.

**"JOCKEY,"** Southampton.—At present we think of closing the volume with the year. But there is plenty of time yet to decide upon that. We shall, of course, give a title page and index, as the "Sportman's Magazine" is in a good form for binding.

**"JOSEPH MASON,"** Manchester.—Thanks for your recommendation; if every "Brother Bob" would "go and do likewise," our circulation would be such that a few pounds extra in the way of illustration would be no consideration. Your letter did not come to hand until the 12th of July. You have, of course, seen "The Perch" which was printed before the receipt of your request, which otherwise we would readily have complied with. "YOUNG PISCATOR" is certainly among you, for his letters bear the regu-

lar postmark, and he lately dropped us a drawing of a contrivance for spinning the minnow which should have been engraved had not the cuts for minnow-fishing been already in hand.

**WILLIAM MELLODEW.**—BURY.—The bet is drawn.

**"No HUMBUG"** has our best thanks. If all our readers were as liberal as himself, we would quickly improve the publication, and raise the price to 2d., but upon a fair calculation, based upon some experience, the vendors calculate we must lose one half our circulation by the change. This, therefore, will not do. We shall see in a week or two, when we give our "Map of the Thames."

**"J. B."** is correct: there is a typographical error in the calculation.

**"SETTON.—NOTTINGHAM."**—Yes; Caunt and Bendigo were merely announced, the interest will be more general as the event approaches.

\*. The SECOND PART of "THE SPORTSMAN'S MAGAZINE," for July, containing FORTY-THREE engravings, and upwards of fifty pages of letter-press, in an embellished wrapper, may be had of all booksellers, price sevenpence. ALL the numbers of the SPORTSMAN'S MAGAZINE are now in print, and procurable. We shall shortly, so soon as the arrangements are completed, publish a STAMPED EDITION, to forward by post. Price 2½d.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND BARNES.

**SUNDAY, July 20th.**—NINTH SUNDAY AFTER TRINITY.—Warner's invisible shell tried at Brighton, 1844, such a capital joke that the whole ship *split her sides!*

## WARNER'S LONG RANGE.

Oh! Captain Warner,  
Whose wished-for fortune keeps within the bounds  
Of some four or five hundred thousand pounds,  
You will not keep your merit, like Jack Horner,  
Hid in a corner;  
But at the treasury put in your thumb,  
And at one venture pull out half a 'plum.'

What's this "long range"  
Respecting whose great power you elate us?  
Is it a monster cooking apparatus,  
Which, when a careful guard its bars environs  
Will roast, bake, boil, stew, steam, or heat flat irons,  
Like those which did so—doubtless do so still,  
At Mr. Marriott's, on Ludgate Hill?  
Or, during war time, is its only use,  
To quote a common phrase in street abuse,  
For some dread enemy to "cook their goose,"  
With its huge boiler never giving quarter,  
Keeping the whole of Europe in hot water;  
How very strange!

What! is meant for Joinville's force to do,  
Settle their ash, or keep them in a stew!

The vapouring Tom Noddies.  
Did you intend when foreign victims fell,  
Instead of placing bodies in a shell  
To place shells in their bodies?  
How was it, by the Times so sadly goaded,  
That your invisible grenade, when loaded,  
E'er it had time to blow up was 'exploded'?

Answer me this.  
Come, Warner, let the fiction be confessed  
And give to your long range a few bars rest.

**MONDAY, 21st.**—Dudley and Tipton Races.—News received from the Warpsite that "the boy Jones" had thrown himself overboard, 1843. Sir Charles Napier perpetrates a joke by saying, he don't believe it, for to his certain knowledge in the present "short-handed" state of our ships of war, no vessel in the navy has its compliment of men and a boy over!—Not so bad for an "Old Commodore," eh?

**TUESDAY, 22d.**—Cork Harbour Regatta.—Battle of Salamanca, 1812.—Extraordinary birth!—This is a common heading in the provincial papers, but this is the most extraordinary of all. There is a birth under Government with a salary of 5,000l. per year, and really something to do for it! The department, however, has not yet been discovered.

**WEDNESDAY, 23d.**—Newton and Ipswich Races.—Three hundred nobility and gentry present at "the Waverley Ball," 1844. It is generally understood that Sir Walter Scott furnished written characters for all the people out of place there.

**THURSDAY, 24th.**—Tewkesbury Races.—Isle of Wight, ditto.—Cheap Furniture.—You must not give a house warming if you have bought cheap furniture, for the warming of the house will melt the glue, and the furniture will fall to pieces. A house may be furnished for 40l., if your necessities are confined to a deal table and a knife-box, a couple of Japan chairs, and a Pembroke two-flap. It has been said, that the cheap furniture is made of green stuff, but the stuff is not half so green as those who buy it.

**FRIDAY, 25th.**—HARWICK REGATTA.—Henlock Races.—Oldham ditto.—Gibraltar taken, 1704. A grand game at chess—the Spanish castle taken by the English Rook. Birds.—Most of the feathered tribe are now mute; the blackcap, the chiff-chaff, and the yellow-hammer are occasionally heard. Moths and butterflies abound, and the glow-worm shines at twilight hours. The death-watch beats and the grasshopper sings.

**SATURDAY, 26th.**—Westminster and Eton eight-oared match.—Wonderful Cold Water Cure.—Sir Peter Laurie commits a young woman for throwing herself into the Thames, 1843; he also announces he has "put down" suicide: "poor people have no business to kill themselves," and Sir Peter has ordered a number of boards with the intention of putting them up on each of the bridges and wharfs on the Thames, inscribed "No admittance except on business." They are not yet fixed, but the alderman expects that no despairing wretch will dare to jump into the river when forbid by the order of the corporation.

## NOTICE:

SEVERAL letters having been delayed from being directed either to the Publisher or the Printer (and in one instance to a vendor) of the SPORTSMAN'S MAGAZINE, the Editor begs to notify that all communications must be addressed to him at the OFFICE, 42, Holywell-street, Strand.—July 12th, 1845.

## The Sportsman's Magazine.

FOR THE WEEK ENDING JULY 26, 1845.

### THE FISHER'S CREEL.

As time flies and the seasons roll and change, so do the sportsman's pursuits vary with the varying year; a few weeks, and the rattling tube in the hands of senators and the spoilt children of the world's good fortune, will be awakening the echoes of the northern hills and scattering the feathers of the thick-legged grouse. Another month, and nearer home, the brown partridges will be sprung from the stubble; and the townsman, striding over the enclosed lands, will avail himself of his certificate to scatter whole coveys, and rightly deeming it

"Better to range the fields for health unbought,  
Than fee the doctor for a nauseous draught,"

purchase strength, cheerfulness, and recreation, at the low price of active sport. Another month, and the brilliant pheasant in vain whirrs aloft from the grove, "the swift messenger of lead" overtakes him, and he sinks to the earth a falling rainbow! Soon the echoes awake to the cheering horn. "Sly reynard breaks cover, hark forward, away!" The timid hare doubles before the fleet greyhounds, the lordly stag is unharboured, and royalty adds splendour to the scene. The woodcock and snipe are flushed, and all the joys of the chase and trigger are rife. The courser's sport increases, the young year buds into spring, the angler looks to his "books of tackle," the graceful race-horse takes his early gallops, preparatory to the fleet strife for victory; the dancing yachts spread their sails upon the wave, and behold our pen, the minister of our imagination, has brought us round again to the present article in the SPORTSMAN'S MAGAZINE for July 26, Anno Domini, one thousand eight hundred and forty-five.

And now, reader, a word with you: every species of literature, save and except "Sporting," has been brought down in price within the reach of the many, and its general cheap diffusion has enlarged the circle of readers, we had almost said a thousand-fold. This little Miscellany is an attempt to do for every admirer of field sports and manly exercises, what has been done for every branch of popular reading; here, the various admirers of various sports are offered a medium for their communications, their experiences, and their queries. For ourselves, so long as we can avoid pecuniary loss, the "pleasure that is in the labour outweighs the pain."

We would not willingly see this attempt prove unsuccessful, else should we despair of the chance of cheap sporting literature; therefore we respectfully call on all who wish us well to extend the circulation of the SPORTSMAN'S MAGAZINE by recommending it—if they deem it worthy—assuring them that if the sale rises so shall the embellishments, and, as far as in us lies, the contents be improved. Let each well-wisher remember that thousands are merely aggregations of units, and think not a single additional copy is an unimportant increase. But to return, not a *nos montons*, but to our FISH.

### THE CHUB, OR CHEVIN.

RE cannot say much for the Chub, either for the table or the sport of catching him, yet to thesecond-rate angler, and of these are 99-100ths of the brotherhood composed, he often affords a few hours' amusement: and is this nothing, ye who delight to dilate about the silvery salmon and the speckled trout? Hence will we say our say on the Chub, and give him a due consideration in our FISHER'S CREEL.

The Chub, Chevin, or Botling, is fond of large rivers with sandy or clayey bottoms, and haunts the deep holes and angles of eddies where the water runs slow and is much shaded. Hence they are generally found in deep and sluggish water, where the banks are much underworn by the stream setting directly into them; a hollowed bank is their chief delight, and it is not, depend on it, when other circumstances in the locality suit them, mere rapidity of stream that will drive chub from their hole. I know the head of one of the aits on the Thames, a little below Hampton, (it is the one which extends down to Hampton lock) where the stream is so rapid that it is every year fast wearing it away; yet this spot is excellent for large chub, and I could name several others like it. The side of a much worn bank, if the water be swift and deep, is

sure to be a haunt of chub, and a regular pike-hole is often a good chub hole. Trout and grayling, though to be found in the same streams, do not lie over a muddy bottom like the pike and chub.

For ourselves, as we are not what the shooter or the huntsman would call "pot hunter," and what, as applied to the angler, we would call a *kettle* hunter, we regard the chub with much more favourable eyes than the "aristocracy of the angle" are inclined to do. There is a fashion in writing, as in everything else, and of late years nothing but the salmon and the trout—the art of throwing thirty yards of line—the merits of an eighteen foot rod—the imitative or non-imitative intention of dragon-flies—the salmon rivers of Wales and of Scotland, seem to have become the staple commodity of every scribbler who spills ink in the pages of a

THE CHUB.

magazine or the columns of a Sunday paper—while, Heaven help the mark!—our noble Thames, and "one thousand rills and streams of note" in broad England are passed over as beneath the notice of these poor "Brummagem" imitators of Titus, and "Christopher North." There is a fashion in these things, as in most others, and it shall not be the fault of the SPORTSMAN'S MAGAZINE, if we don't laugh this cockney pretension for the distant—this quackish affectation of superior science—this attempt to impose *omne ignotum pro magnifico* on gaping Southrons, and bring them back to a due appreciation of their own unrivalled streams and fertile plains, where the "Contemplative Man's Recreation" may be even better enjoyed, than in those romantic regions, which the one in a thousand who reaches comes back from, ashamed to confess what a fool he has been, and therefore incontinently, like the fox who had lost his tail, advises others to go into the same trap, that there may be more company in "the ship of fools."

A running line is indispensable for taking chub, and great caution should be used to keep out of sight: when the fish is hooked, let him run a little before you attempt to turn him, the first rush over, with ordinary caution the fish is your own. The line should be strong with a good silkworm gut at bottom, and the hooks Nos. 3 or 4. A pleasant way of taking chub is what is termed dibbing, dipping, or daping, and is effected in the following way. In a hot summer's day, go to any hole where chub is known to haunt, and probably thirty or forty of them may be seen basking themselves on the surface of the water. You must be sure to place yourself out of sight behind some bush or tree, for the chub will fly to the bottom of the water at the very shadow of your rod, being a most timid fish; it will even make instantly to the bottom on the shadow of a bird flying over the water, but will presently arise and be floating on the top again; at which time move your rod slowly, let your bait fall softly on the water three or four inches before him, and he will infallibly take it. As he is a leather-mouthed fish, out of which a hook scarce ever loses its hold, you may therefore give him play enough before you offer to take him out of the water.

There are many baits to take the chub, such as a black snail, with its belly slit to show the white: sometimes a worm, or any kind of fly, as the ant fly, flesh fly, dor or beetle, or a bob, which is a short, white worm, like to, but bigger than, a gentle, or a cod or case-worm; he will take any of these very well, and never refuses a grasshopper at the top of a swift stream, or a young wasp-grub at the bottom. These grubs are found in the holes of banks, and discovered by the old ones going in and out, and are often found by the mowers while cutting grass: they must be boiled or baked before used: the chub will likewise bite at red cherries, provided you bait the pool with them the night before you fish. Let the bait lie almost on the ground in bottom-fishing, but if brains, about midwater is best. The landing-net is particularly necessary in angling for chub, as the best spots are generally encumbered by trees or bushes. Thus much

of the chub; and now after this chat upon the fish we will proceed to that obie enemy of all the finny tribes—THE OTTER.

## BEASTS OF CHASE.—NO. I.

THE OTTER.

WITH regard to the size of the Otter, naturalists vary materially. Captain Burn and other zoologists give three feet three inches as his length, while in the *Wiltshire Independent* for March 5, 1840, we find that Mr. Wyatt, of Ilffley Pound, near Abingdon, shot one four feet eleven inches long. Bell, in his "History of British Quadrupeds," says, a full grown male otter weighs from twenty to twenty-four pounds; but we have seen the skin of an otter killed in the old river Deben, near Norwich, at Letheringham, which weighed when alive 29 lbs.; and Pennant speaks of one killed on the river Lea, between Hertford and Ware, in 1794, which weighed forty pounds.

The upper parts of the body are of a brownish or chestnut colour; the nose is black, and the lips are whitish; the inner sides of the legs, the throat, breast, and belly are brownish gray. In Scotland, an otter is sometimes found spotted with white, and called by the common people "the King of the Otters." The head is flat, the ears short, semicircular, and erect; and the eyes are so placed that the animal can see objects above, even while its head is in a horizontal position; the feet are webbed, the toes covered with hair, and the tail flattened.

The habitation of the otter is in the bank of some well-stocked river or stream. But the account given by Pennant, and copied into almost every book of natural history, is altogether wrong: he says "it forms its habitation by burrowing underground on the banks of some river or lake, and always makes the entrance of its hole under water; works upwards to the surface of the earth, and there makes a minute orifice for the admission of air: it is further observed that this animal, the more effectually to conceal its retreat, contrives to make even this little hole in the midst of some thick bush." Now in the many otter's retreats we have seen, we never found any of this ingenious contrivance, which is very pretty reading for little children's books on natural history; but though such matter may amuse them, it certainly will not instruct them.

The otter's claws are unfitted for burrowing at all; they bear no resemblance to those of any burrowing animal; his retreat, it is true, is always at the edge of the water, but it is merely sheltered by the impending bank, or consists of some shallow hole, without the otter apparently making any efforts for its formation or its improvement. Its excrement or "seal" is generally the guide to its "holt," but the otter seldom goes straight home when pursued, but passes over it, then doubles back to lodge. A few words from "Geleret" on the habits of the animal shall conclude our say.

The period of the otter's gestation is stated at sixty-three days, and they produce two or three young ones at a birth, Old Izaak Walton's Venator says five; about March the young ones frequent the sources of rivers, or small brooks, where they may secure an abundance of fry and spawning fish, and guard their helpless young against the sudden rise of floods which, farther down stream, they would be liable to encounter. That otters do not attain to maturity under the fourth or fifth year I am convinced, from specimens under my own observation, where the growth of the animal has been so gradual as to warrant the above conclusion, though I have never had them in my possession for quite so long a period.

The organ of adhesiveness as regards localities, however, does not belong to the otter, for he is always on the move up or down stream, and

sometimes on the sea-shore, especially about the end of summer, when the surf is not heavy on the beach, and the old and young fish securely together, and retire to inaccessible holts and caverns in the cliffs: but the *Lutra vulgaris* must not be confounded with the *Enhydra* or sea otter, which has a short thick tail, very glossy fur, and is otherwise distinguished from the common otter.

We suspect the otter occupies a fresh bed every day after his night's exercise, where he rests high and dry until the dark shades of evening again invite him forth to satisfy his craving appetite: and I may add that I am borne out, in my opinion that he shifts his quarters nightly, by one of the most experienced and observant sportsmen in the west of England; I allude to Mr. H. Terrell. A very singular circumstance that occurred to myself, whilst staying with a friend on an otter-hunting visit in 1842, tends to corroborate what I have stated. The very night I arrived at Brimpt's, a tenant of his informed us that he had seen a "yellow otter" on the East River, in company with a dark one: accordingly next morning, May 3rd, we drew for this marvellous beast on the river in question, but came only on a stale trail. We then trotted off to the West River, where the hounds hit upon it in earnest, and brought up to a solid mark in a clitter of rocks. The terriers were at him hammer and tongs, and out he came into the pool below, when, to our great astonishment, he was "yellow," as the farmer had described him. He got into the rocks again, however, and having lots of water there the terriers failed to bolt him. The next day at him again; but I will not quote from my journal:—"May 4th—Met at Hexworthy Bridge; the albino or *Lutra natara* we found yesterday had now shifted his quarters about two miles down the stream, and we came upon him without a trail in a shallow hover near 'Huccaby Cleaves.' Midnight was the first hound to mark him, and old Prince bolted him. He appeared quite white in the water, and from the black soil at the bottom of the river of course there was no difficulty in 'gazing' him. After half an hour's diversion, we killed, and he proved to be a dog otter about 19lbs. weight, of a beautiful cream colour. I presented the skin to my host, who was glad to possess so rare a specimen of the lutrine tribe."

Having already observed that otters dotted with white are not very uncommon; they are called by the lower orders of Scotch "King of the otters," I will here add that they are supposed to bear a sort of charmed life. The spots are occasioned by ticks which attack themselves in vast numbers to the neck, shoulders, and back of the animal. I have killed one thus infested, and of course he was in sorry plight while the plague was upon him. An otter's sense of smelling is exquisite; so fine, that he can distinguish from the bank of a pool whether there be fish in it or not, and, I verily believe, whereabouts in the pool they lie. Having domesticated two otters at different times, which always came to a whistle, it was my chief amusement in leisure hours to practise them at their own particular game, and being provided with small live fish, I used to contrive to slip one unseen into a pond that was nigh at hand; the otter, after cantering round it in his own easy undulating style, and tossing his nose up to catch the wind, would always glide into the water like oil, and generally at the nearest point to the fish, which he took with a rush, and not, as has been asserted, by getting under it first by stealth. When there was no fish in the pond he scarcely noticed it, and objected to wetting his feet in search of prey which his nose told him was not there. If hounds draw a stream and come upon a trail, but disturb not the otter, and on the following day draw it again, all fresh trail will have vanished. The foiled bank alarms him, and the next night he fishes and retires to his holt without landing, and generally at a considerable distance up or down stream. His upper lips are large and thick, and apparently full of olfactory nerves, which give him this power. The jaws, too, are remarkable, being interlocked with each other at the points of junction, and not united by ligaments, as is the case with all other animals of which I have knowledge; and the canine teeth are peculiarly situated, but very advantageously so for securing their slippery prey.

The male otter possesses another peculiarity in the sexual department, viz., a solid piece of ivory, which in some countries is valued as the *spolia opima* of victory, and when mounted with silver, serves for a seal or tobacco-stopper to the lucky captor. Its excrement, called by the sportsmen "spraints" or "wedgin," is far from offensive to the smell, and varies according to sex; that of the male is hard and caked, but that of the female always in a state of mucilaginous pulp. The knowledge of this fact is sometimes very useful, as it enables the hunter to distinguish the sex of the animal before he disturbs him, which late in the season he would be loath to do if he suspected a female on one of his rivers. The position of the wedgin on a stone assists the hunter in deciding whether the animal is up stream or down; for the wedgin will almost invariably be nearest the water on the side that the otter emerges, and consequently his head will be pointing in the opposite direction. This remark I had many years ago from a famous otter and fount-hunter in Glamorgan-shire, called Evan Llanwensant. I have also heard the same from Sellick and John Roberts, in Devonshire, and my own observation assures me it is a correct one.

The seal of the otter is distinguished from that of other beasts of chase by its impression of five toes, without showing the nail-marks; and this we take also to be a proof against his burrowing. In our last we gave an otter hunt, and having now got upon his trail we have here "bolted" the beast himself for the reader's amusement.

## CORRESPONDENCE.

## BLINDNESS IN TROUT.

SIR,—The following singular occurrence may not be uninteresting to your readers, and some of them may perhaps be enabled to explain the cause of it. Into a pool of about four acres, partially surrounded with trees, and terminating a range of other pools above, through which constantly runs a small and irregular supply of waste water, about thirty brace of healthy trout were turned, varying from three quarters of a pound to a pound each, and taken from a neighbouring mill-pool. The pool, into which the trout were returned in the month of August, contained a great quantity of roach, some carp, tench, bleak, and perch, all healthy and thriving fish; but the trout, when taken out during the summer and the following season, seemed to have increased very little in weight. With the exception of one healthy fish of three pounds, nearly all the others were found to be entirely blind, or partially so, and doubtless would soon have died of starvation, as they were black, thin, and poor. Those which were not too far gone to recover, I turned into a neighbouring brook: but what could have caused this effect upon the trout alone, when all the other kind of fish upon being taken out of the same water were healthy and in good condition, I am at a loss to imagine. In the early part of the following month of March, I caught one of those trout of about two pounds, which I had the preceding summer turned into the brook; and although it was a very good colour, silvery and bright, it did not appear to be well fed, though no defect in the eyes could be perceived. Doubting whether to kill it or turn it in again for another day, I placed it in a small hoop net, while I tried for another fish, and threw the net into the stream. After taking two smaller trout in good condition, I took up the net and was surprised at perceiving this silvery bright fish had become perfectly black, so much so, that, but for its shape, it could not have been known as a trout. Trout when killed sometimes lose their colour, but here was a fish which, but a few minutes before, was perfectly bright, and suddenly, while alive, had become totally discoloured and black in the water, though apparently uninjured in any way; and probably, in a few minutes after being liberated, it would have regained its former beautiful hue. Could this sudden and singular change have arisen from fear, or from what other cause?

GEORGE AUSTIN, JUN.

## A FRAGMENT FROM A CREEL LEDGER.—THE RIVER DART.

BY WILL WHOOP.

(From the Sporting Review for July.)

The months of March and April last were more than commonly congenial for the purposes of the fly, and many a creel has been borne fruitlessly many a weary mile on the back of the desponding Piscator, without containing a single token of success to bless the burden. Fine water and cold winds are the elements against which he has had to contend; though his line fall never so delicately, or his fly never so softly on the surface of the stream, not a trout will move. Though he fish "fine and far off," and his feathers vie in neatness and colour with the living insect, still is he foiled; the skill and experience of his life go for nothing. Hope, however—that relic and gem of Pandora's box—buoys him up, and day after day he perseveres in his vocation, till at length, after a weary waiting, Favonius springs up, favours him for a while, but again soon resigns the field to the blood-curdling Eolus, who delights in blighting Piscator's short-lived happiness.

In bleak weather during these months I have ever found the stone fly to be the one on which most dependence can be placed; for a killer on rapid streams I would recommend its use, more especially as an end-fly. It is made on a large sized hook, with a grizzlecock's hackle and a dirty yellow body, ribbed with tarnished silver tinsel. This fly will frequently do execution when the fish will not look at any other. It should be allowed to sink a little below the surface of the water, as trout, when shy of springing, often take it freely in mid-water, and wholly disregard its more elegant brethren that are dancing and bobbing on the tops of every ripple. Thanks to this fly, I have had two tolerably good days during April, one on the Ely, in Glamorganshire, where I killed about 10lbs. of fair trout, including a few salmon-pink; and the other on the Avon, in Devonshire, where I laboured long and hard to make up 8lbs. The fish on this latter stream were not in such season as those of the former, but they were larger generally.

Were it not for the quantity of brushwood with which the Avon is bounded and fringed, it would be as pretty a fishing stream as any in England; as it is, few surpass it. Poaching, however, by torchlight (burning the water as it is called) and spirt-nets have thinned its streams, and it is much to be deplored that some steps are not taken by the contiguous landowners or neighbouring gentry to discountenance and prohibit such practices. Were the river properly stocked, abounding as it does with sharps and stickles, every hundred yards of it would afford a day's diversion to the fair fisherman, and many a traveller would be induced to diffuse the contents of his purse in the neighbourhood, and to wander on its banks in his piscatory passage among the very beautiful

and picturesque scenery. Still, despite of the poaching and alder bushes, many a good day might be had in genial weather; and it may be as well to add, for the information of any passing pilgrim, that Brent, Deptford Cot, or Aveton Gifford, afford the best quarters on this river. The pool, which I look upon as identical with the Tewin of Wales, is found here in great abundance, and, for the cuisine, is held to be superior in flavour to the king of the fresh waters. Salmon-pink, and what are called "white fish" (being as I imagine peel-fry), are also abundant in the Avon, and assist in filling up the corners of one's creel most conveniently.

Truly there are some noble rivers in Devon for throwing the fly. The Dart, so called from its headlong and impetuous character, is inferior to none; it affords a succession of streams and rapids, gurgling pools from Cranmere on Dartmoor down to Dartington in the Vale, a distance of about thirty miles, in which space it falls no less than one thousand eight hundred feet ere it gain the level of the sea. Spenser (author of the "Faery Queen") certainly took poetic license when in his "Wedding of the Medway and the Thames" he described the Dart as

"Nigh choked with sands of tinny mists."

The Dart is a rock-bound river, dancing and foaming for miles over masses of sparkling granite, which form its slippery bed; it remembers not in its course, but, like a mountain torrent, rushes on as though the "flood-gates of heaven" were let loose to supply it. The fishing on the Dart varies much in its character; above Hocene Climes, and on the Moor, the trout run small, but are very abundant; below that point heavy fish are very commonly taken. A good salmon, too, is occasionally caught during the season, and the uncertainty as to what comes next adds greatly to the interest of the fisherman, and increases his pleasure tenfold.

"Voluptates commendat rarior usus."

The salmon of the Dart is famous for its flavour, and well deserves the application of the following passage from Dryden's *Polyolbion*:—

"The lusty salmon, then, from Neptune's wat'ry realm,  
When, as his season serves, stemming my tideful stream,  
Then being in his kind, in me his pleasure takes  
(For whom the fisher then all other game forsakes),  
Which bending of himself to th' fashion of a ring,  
Above the forced weirs himself doth nimbly fling,  
And often when the net hath dragg'd him safe to land,  
Is seen by natural force to 'scape his murderer's hand;  
Whose grain doth rise in flakes, with fatness interlarded,  
Of many a liquorish lip that highly is regarded."

The fishing alone, however, is a small part of the pleasure derivable from a tour on the Dart; the grandeur and wildness of its scenery is surpassed by none in England. With the Moor at its back and the Mead at its foot, let the lover of nature follow its course from Bear Down to Staverton Bridge, and he will not fail to express his wonder that tourists should go abroad to seek for beauties of scenery which their own country could so well supply. Many a mighty oak may be seen towering above the precipice on which it has cast anchor, and apparently, from its stag-headed brow, may be coeval with the rocks themselves. The black cock, the buzzard, and the kite impart an additional charm to this wild scene, and impress the traveller with a belief that he has now fairly escaped from the haunts of man. Ere I close this sketch, I must be allowed to quote from a poem that has lately been published, and to the sentiments of the poet "every pulse of my heart" beats a wild response.

"Enamoured by Nature, her charms I revere  
In creatures of life on the mountain and mere;  
The jetty black cock and the watchful curlew,  
The loud booming bittern and the harrier so blue—  
Oh the buzzard's wild scream and the cataract's roar,  
Are the sounds that I love on the rugged Dartmoor."

It may be well to know that Asburton, Buckfastleigh, and Totnes afford the most comfortable and convenient quarters for fishing or viewing this river.

LIFE IN CANADA.—In Canada the lover of nature in her primeval magnificence, and to him who loves to view a city in embryo, and to him who is attached to the sports of the field, Canada is the place to gratify his most sanguine expectations, either in the chase or with his "Manton" or rifle; or if perchance he is of a piscatorial turn and a follower of "Imak," he will find plenty of sport to gratify his propensities, in the latter more especially; he may walk into the affections of some of the finest specimens of the finny tribe, altogether unknown in England. The woods are well stocked with deer, which may be disposed of without fear of "dabbling in the stocks;" plenty of game sans the dread of the keeper, or a "six months' residence" within the "wooden (or rather stone or brick) walls of Old England." Steeple chases are of frequent occurrence; and although they cannot boast of a "fives court," they have a "racket alley" where "milling" comes off in good style.

A HINT.—Never send anything to a newspaper "to be continued," unless it is a legacy or a dozen of port.

EMIGRATION.—A dentist and family left their happy homes last week to settle in one of the back shops in the interior of the Exeter Change Arcade. The scene at parting was heart-rending.—*Punch*.

## ARCHERY.

(Continued from page 225.)

## THE QUIVER.

All nations that have used the bow have found it expedient to adopt some method of carrying their arrows, without engaging the immediate attention of their hands. It may be inferred, therefore, that the invention of the quiver speedily succeeded that of the bow and arrow. That it was a concomitant of the bow in the time of Isaac, is clear, from the passage which we have already quoted, in our first part, from the book of Genesis: "Now, therefore, take, I pray thee, thy weapons, thy quiver and thy bow," &c. The high antiquity of the implement in Asia is thus satisfactorily proved; and there is no reason to suppose that, in the other parts of the world, its invention was much posterior to that of the bow.

The bark of trees, and the skins of animals, says Mr. Moseley, were most probably the materials from which quivers were anciently constructed. Those found among the savages of the present day are for the most part formed of such materials; some of them ornamented with elegant and curious workmanship, usually composed of the teeth of wild beasts, or fish, intermixed with shells, or feathers.

The quivers of the ancient Greeks, like those of other nations, were made of skins or leather. They were of various forms and sizes; sometimes round, sometimes square, open at the top, or closed with a lid. They were usually carried on the back, the upper end just rising above the right shoulder. Diana and Apollo are invariably represented by painters as carrying their arrows in this fashion.

By some the quiver was used, not merely as a case for their arrows, but also as a kind of rosary, by which the events of every day were registered. On retiring to rest, the Scythian threw a small stone into a quiver placed near his couch: and if he had spent the day in comfort, and to his satisfaction, he chose a white pebble; but if in trouble, a black one. At his death, the quiver was reversed, and the stones counted, and the owner was esteemed to have spent a happy or unhappy life, in proportion as the number of the white or black stones predominated.

Some of the Ethiopians are reported to have made use of no quiver, but, in preference, to have carried their arrows stuck round their heads, like *radii*.

The Normans not only carried their arrows by the quiver, but they also used that instrument as a kind of drum, to assist the clamour they usually raised at the opening of a battle.

The Corymbos, or Corymbus, was a kind of case used by many nations to carry their bows in. It appears to have been made on the same principle as the quiver, and not to have much exceeded it in length; its object being to admit half only of the length of the bow.\*

The quivers used by modern archers are seldom, if ever, carried on the back, but serve merely as a receptacle for the arrows at home. The pouch and loop appended to the belt (Cut, fig. 2, page 224.) are the substitutes now made use of on the target-ground.

## THE BRACER. (Cut, fig. 3, page 224.)

"A bracer," says Ascham, "serves two purposes; one to save the arrow from the stroke of the string when loosed upon it, and the coat from creasing; and the other that the string, gliding sharply and quickly off the bracer, may make a sharper shoot."

It is best, however, he adds, that the bow should have just so much bending that the string need never touch the arm, and consequently that a bracer should be needless.

He also says, that in a bracer (if used) three things should be particularly attended to; that it should have no nails in it, no buckles, and that it should be fastened on with laces without tags.

Ascham says nothing of the form or material of the bracer in his time. His annotator (Mr. Bennett) observes, that this account of the bracer is somewhat obscure, and that it seems to have been a kind of close sleeve laced upon the arm.

The modern bracer is composed of a piece of stout leather, polished on the exterior side, in order to allow the string to pass over it freely. In form it is either oval, or like the half of a coat-sleeve. The colour is either black or brown. The size of the bracer depends upon that of the arm, and the manner of holding the bow; for good archers (who hold their bows always steadily and alike, when they loose the arrow) find that the string generally strikes nearly in the same place, and can therefore shoot with a small bracer; but, in shooting with much elevation, the arm cannot be so well guarded by a very small one. Some modern archers have made use of a plate of horn fastened on the bracer, while others have glued small pieces of hard wood upon woollen cloth, having the sides opposed to the string made round, in order that the string might have the swifter passage in its return; but the leather bracer is the most commonly used; and it is now generally made from six to eight inches in length, with two straps and buckles to fasten it on the arm. See cut.

When the exterior becomes rough, the bracer should either be re-polished, or a new one purchased, lest the string should wear by the friction of its rough surface, and the safety of the bow be thus endangered.

## THE SHOOTING GLOVE. (Fig. 5, page 224.)

In modern times, various inventions for guarding the drawing fingers from the effect of the sharp loose of the bow-string, have been made use of; of which every archer uses that one which upon experience, he finds suits him best. The following are the most generally used, namely,

1st. *The shooting-glove*, which consist of finger-stalls fastened to thongs buttoned round the wrist, and may be used with or without a glove.

2d. *Finger-stalls* sewed to a common glove.

3d. *The tab*, which is a piece of flat leather, into which the fingers are let, and which lies on the inside of the hand.

The best leathers for each of the above is what is called *horse-butt*, or cow-hide leather, dressed on that side which is used outwardly.

## THE BELT, POUCH, TASSEL, AND GREASE-BOX.

The belt is usually made of the same leather as the bracer, provided on the right side with a sort of pouch, in figure somewhat resembling a small bucket, into which the pile ends of the arrows are inserted, through a leather loop which serves to keep them steady by the archer's side. (See cut, Fig. 2, page 224.)

The tassel, which is for the purpose of dusting or keeping the arrows clean, and usually made of green worsted, is slung on the belt on the archer's left side. (See cut.)

The grease-box hangs by the side of the tassel, and is a very necessary appendage to the sport of the Bowman; as the grease contained in it, which should be suet and bees-wax in equal quantities, is designed to keep up a moisture on the fingers of the shooting-glove, which, if allowed to become dry, will prove a great impediment to easy loosing. A neat fancy box may be procured for this purpose.

## THE TARGET.

At a time when wars were almost perpetual, and the hunting of wild beasts necessary, archers could seldom be at a loss for living objects against which to direct their arrows; but as these opportunities, in the progress of civilization, became less and less frequent, men had recourse to stationary targets, at which to try their skill, and exercise their art.

The heroic games instituted of old tended effectually to preserve and cherish in peace those accomplishments which are necessary in war; and the palm which was held out to the victorious in those combats, excited emulation and pride, from which all great efforts originate. Archery, however, does not appear to have holden any very conspicuous place among these exhibitions. Among the Greeks, says Moseley, there is no instance of its practice in the arena, though among the Romans there are several. But that the Greeks had places set aside for the practice of the art seems unquestionable from frequent references by classic authors. Xenophon clearly speaks of the ancient *butts*; and a line in *Æschylus* mentions that archers were accustomed to shoot at them.

The Persians of old practised at shields formed of raw hides, or sometimes of solid wood, which their arrows pierced without difficulty.

With respect to the Roman practice, Vegetius tells us there were places where the archers and slingers exercised, and where butts, were erected for the soldiers to aim at. These butts, or targets, were sometimes single posts only; sometimes they were usually placed at the distance of a *stadium* (or about six hundred feet) from the place at which the shooter stood.

These exercises were regulated by particular laws, and under the inspection of masters. One law was similar to a privilege granted by Henry VIII. to the Finsbury archers; namely, an indemnification from the charge of murder, if any person shooting should kill another passing between him and the butt. This was enjoyed by the Roman archers and slingers; but the Aquilean law denied the same to those who used the other weapons, such as the pilum, javelin, or plumbatum.

(To be continued in our next.)

**FONDNESS OF POULTRY FOR PEPPER.**—The *Capsicum frutescens*, which, and which alone, affords, when dried and powdered, the genuine Cayenne pepper, is commonly known in Jamaica by the name of bird-pepper, or hen-pepper, on account of its being so much eaten by birds, and especially by hens and turkeys, which will not leave a pod remaining on the bush that is within their reach by jumping up to them. They are so fond of these pods, as to eat a great number of them at a time. These peppers are called chillies in England. Even the Cayenne sold in Jamaica is prepared from several sorts of red capsicums, mixed with the *Capsicum frutescens*; but they are all much inferior in pungency and fine aromatic flavour; and persons who would have it genuine, are obliged to prepare it themselves.

**DYING A GOOD COLOUR.**—A sheriff's officer (says a Scotch paper), going last week to execute a writ at some dye-works at Govan, Glasgow, was thrown into a vat—the poor man, we hear, dyed in consequence; but he did not pay the *debt of nature*.

**A COMMERCIAL REFRESHER.**—Men go into the *Gazette* now-a-days just as they go to Margate, or take a plunge in the Serpentine to freshen themselves up, and feel the stronger for it.

"I feel a shooting pain in my head," as the partridge said on the 1st of September.

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

## CHAPTER III.

HEN. (OR HENRY) PEARCE, THE GAME CHICKEN, CHAMPION OF ENGLAND.

**H**IS friends of the Chicken, who had upon all occasions found him game, readily came forward and backed him for six hundred guineas to four hundred, to fight on Saturday, the 20th of July, 1805. Various rumours were now afloat among the Fancy, and the sporting world were somewhat divided as to the issue of the contest. Virginia-Water was the appointed rendezvous, and thither the company repaired; but it being understood that the fight would take place at Cobham, about three miles farther, the company quickly started thither, to obtain good places. A ring was made at Cobham, and nothing wanted but the combatants to enter it, to gratify the longing eyes of the spectators. But John Bull had more disappointments to contend against: some talked of a cross—others, that it was a mixed-up concern—and several of the would-be intelligent, prognosticated that no fight would take place that day. While this parley was going on, it was buzzed about that the magistrates had got scent, and it became necessary to brush off towards Blackwater, a few miles beyond Bagshot. This step determined on, the whole cavalcade were off like a shot—but upon their arrival at Blackwater, the *gammom* was again pitched about a cross; and Mr. Fletcher Reid, being assured that most of the bets were off, determined there should be no mill. But to prove the fallacy of such assertions, Mr. Berkeley Craven and Mr. Mellish publicly offered to support the Chicken to any amount, and said they should feel no hesitation in permitting Pearce to fight six hundred guineas to five only, so strongly were they convinced of his integrity and courage. This balm increased the anxiety of the Fancy in general, and stories out of number were in circulation; but the bets kept in favour of the Chicken, and the odds given upon his side. At length, the important day (Tuesday, October 8, 1805,) arrived, and all the admirers of the pugilistic art that could quit the metropolis set off for Hailsham, a small village, situate between Brighton and Lewes, in Sussex. The number of spectators was immense, the Downs being literally covered with equestrians and pedestrians. On a green adjoining the village of Hailsham, a twenty-four feet rope ring was made, and, at one o'clock, Gully entered, with Tom Jones for his second, and Dick Whale as his bottle-holder; immediately followed by the Game Chicken, attended by Clarke as his second, and Joe Ward, as his bottle-holder, in a few minutes after the men were in a position for

## THE FIGHT.

- 1.—The Fancy were never more attentive or anxiously interested than upon the present occasion, and every look of the combatants was turned to account. Gully had come well recommended, and he was gazed upon with more than ordinary degree of concern; when, after some little manoeuvring, he made a tremendous hit at the Chicken, but lost his distance. Pearce, always prepared, knocked Gully down. [The Chicken three to one.]
- 2.—Gully, upon the alert, gave the first hit, which the Chicken sharply returned, and Gully fell.
- 3.—The Chicken aimed a blow at his opponent's head, but it fell short. Gully made a hit and dropped.
- 4.—Pearce stood up heroically, and a smile of confidence was seen upon his gallant brow; several good blows given and well stopped; but Gully fell.
- 5.—The Chicken put in a tremendous blow in the neck, and levelled his opponent.
- 6.—Pearce made play right and left—planted good hits, and brought his man down again. [The Chicken ten to two.]
- 7.—Pearce, immediately on his opponent's facing him, knocked him down.
- 8.—Considerable science displayed on both sides; the Chicken put in a blow, but Gully, in the most finished style, stopped it, when they closed and fell.
- 9.—The Chicken, rather pricked, went in and floored Gully by a desperate effort.
- 10.—Gully rose in good spirits, and made a hit at his adversary; but Pearce neatly warded it off, and brought Gully down with a tremendous thump on the breast.
- 11.—Gully, full of gaiety, made an excellent hit; but the round finished in favour of the Chicken, who completely knocked Gully off his legs.
- 12.—Gully put in a most tremendous blow on the mouth of the Chicken, which he sharply returned; and in closing they fell.
- 13.—Gully distinguished himself in this round for most excellent courage and science; he put in some admirable blows, but fell from their force.
- 14.—Gully rose quickly, and met his man undauntedly; but Pearce got him down.
- 15.—The Chicken made a pretty hit, which Gully as smartly countered. Gully made another blow, but fell.
- 16.—Rather shy upon the part of Gully, who, it was asserted, fell without a blow.
- 17.—The spectators were uncommonly interested by the manliness displayed in this round—and it was the general opinion that a better one was never contested by any pugilists; it was, most certainly, the best-fought round in the battle. Pearce, full of gaiety and confidence, nobly opposed his adversary; while Gully, with an equal degree of valour and firmness, rallied, and

made several excellent hits, which were instantly returned by Pearce. Gully put in two severe blows on the Chicken's left eye, and partially succeeded in hitting him away; indeed he reduced the odds considerably—six to four on the Chicken.

18.—Torrents of blood flowing from Pearce—no fighting—and Gully slipped in making play.

19.—Gully, full of spirit, rallied, the Chicken quickly returned—several good blows were exchanged, when they closed fell.

20.—One of the Chicken's eyes so much swelled that he could scarcely see out of it; and the blood flowing from him copiously; his appearance shy and retreating, which Gully improving upon, followed the Chicken round the ring, several blows exchanged when they closed fell.

21.—The Chicken particularly cautious of his adversary; when Gully in making a hit, fell.

22.—Several sharp blows upon both sides, when Gully fell, and while in the act of falling, the Chicken put in a desperate blow on the side of Gully's head, which made him vomit considerably.

24.—The Chicken in making a hit lost his distance, when Gully returned a severe blow over Pearce's right eye, and fell upon his knees;—the Chicken, in giving the return quickly, struck Gully in that situation. Cries of "fool!" but not considered of consequence enough to stop the fight.

25.—The Chicken not so confident as heretofore. Gully, with determined resolution, followed him over the ring—good blows given and returned. Gully once more fell.

29.—The Chicken improving every round.

30.—Gully made a tremendous hit, and fell. The Chicken, much irritated at this conduct, stood over him with an indignant countenance.

31.—Several feints made, each trying for the advantage, when the Chicken, in putting in a blow, lost his distance. Gully, with great agility, struck over his guard, and nearly closed his right eye.

33.—Pearce on the look-out, acting on the defensive; when Gully, in the most manly manner, followed him round the ring, but in the event received a terrible blow in the throat, the severity of which brought him down.

36.—Gully now betrayed symptoms of weakness, but endeavoured to put in a blow at the Chicken's head, which he parried, and returned a slight hit. Gully, not dismayed, made a severe blow, which the Chicken caught with his left, and knocked down his adversary with his right hand.

37 to 43.—In the last six rounds the Chicken displayed a manifest superiority the punishment was severe in the extreme. Gully was literally covered from the torrents of gore which flowed from his ear; his head was truly terrific.

44.—The Chicken, with considerable science and force, planted his favourite hit in Gully's throat, when he fell like a log of wood. The fortitude which Gully had displayed in this most trying conflict had raised him considerably, not only in the estimation of his friends, but the sporting men in general. He had been so severely punished, that he was not able to face his man with his former resolution and propriety—his brave heart was reluctant to acknowledge superiority, and he endeavoured now and then to put in a hit, and falling, until

59.—When his friends interfered, and positively insisted that he should fight no longer, as the chance was against him; and at length he complied with their request, by surrendering victory to the Game Chicken. The contest lasted one hour and ten minutes!

In conquering such a formidable antagonist as Gully—a man whose determined resolution and science had gained universal praise, and who bid fair to be a most distinguished pugilist—the Chicken, if possible, had raised himself higher in the estimation of his friends, and the sporting world in general.

Pearce now received a challenge from his friends and patron, Belcher, for five hundred guineas, to fight within two months, play or pay, which was accepted by the Chicken. The amateurs were considerably divided in their opinions respecting the event of this contest—the combatants were men of such sound prowess, science, and bottom, that the most knowing were somewhat puzzled to come to any thing decisive upon the subject. The Chicken had performed such prodigies of valour, and Belcher had accomplished all that his most sanguine friends had wished, that it could not but unsettle the minds of the Fancy—and much better it might have proved had they never met—

"But who can rule the uncertain change of war?"

Supporters were not wanting upon either side, and Mr. Fletcher Reid, firm to the cause, and true to the *had been*, backed his old favourite, Jem Belcher, for five hundred guineas; while Captain Halliday, with great liberality, covered the above sum on the part of the Chicken; and promised, in the event proving successful, that Pearce should receive two hundred and fifty pounds. That no disappointment should take place, by the interference of the police, it was determined that the battle should be decided at least one hundred and fifty miles from the Metropolis; and the particular place to be settled by a toss-up between the combatants, when Belcher, proving the winner, decided for a Common, within a short distance from Captain Mellish's seat, at Blythe, three miles from Barnby-moor, nine from Doncaster, and one hundred and fifty from London, and the day was fixed for Friday, Dec. 6, 1805. A roped ring was formed twenty feet square, within another of forty feet; and every precaution taken to pre-

vent inconvenience being felt from the pressure of the spectators. The partisans of each of the heroes sported their favourite chief's colour:—the gay yellowman, long the boast and pride of the ring, and, for many years since known all over the kingdom, by the name of 'a Belcher,' was to be seen in great numbers; while the blue bird's eye graced the throattles of the backers of the Chicken. Bill Ward and Bill Gibbons waited upon Pearce; Belcher had for his second Joe Ward, and for his bottle-holder Dick Whale. Upon stripping, Belcher did not appear in such rude health as upon former occasions; but his spirits were good, and he seemed to feel his usual confidence. The Chickens looked in better condition, and the stronger man. The combatants shook hands, and the battle commenced.—Five to four upon THE CHICKEN was the current betting.

## THE FIGHT.

1.—The opening attitudes of the men were masterly, and the scientific manoeuvres of these finished professors to obtain an opening excited general admiration; at length Belcher popped in a severe hit over the Chicken's guard upon his eye, the blood following rapidly. Pearce was short in the return; the men closed, and Belcher was thrown.

2.—Belcher, upon the alert, made some feints, which the Chicken guarded, and put in a blow. Jem, full of spirit, gave the Chicken two sounders on the body, when they closed, but soon separated. Pearce endeavoured to put in a tremendous blow; but Belcher, with considerable neatness and agility, stopped it: a rally took place, in which the Chicken struck twice with some effect, and Jem was thrown again. [The Chicken twenty guineas to twelve].

3.—A well contested round, in which considerable skill was displayed, but Pearce had the best of it. The Chicken rallied, and several good hits were exchanged. A close, and Belcher thrown upon the ropes.

4.—The Chicken lost his distance, and his blows were ineffective; Belcher rallied, and obtained some advantage, but in the event was thrown.

5.—Pearce, full of confidence, though bleeding very much, went in and hustled Belcher, but Jem threw him.

6.—Belcher exhibited some fine specimens of the art, but did not appear to meet his adversary so gallily as heretofore; nevertheless he rallied, and some excellent hits were exchanged, during which they closed and fell, the Chicken uppermost.

7.—Pearce made a blow, which Belcher parried very neatly with his left hand, and with his right gave the Chicken a desperate fencer: a rally ensued, when the advantage appeared on the side of Belcher; but, in closing, Pearce got Jem's head under his arm, and punished him severely with his right: in the struggle, both went down.

8.—Belcher, with the most determined courage, went in and rallied—and never did he display a finer knowledge of the art: his superiority in this round was manifest, by putting in several hits with his right, and warding the Chicken's blows off with his left hand; he at length threw Pearce out of the ring. [The bets became level.]

9.—Belcher gave the Chicken a severe fencer, which marked him strongly. Both appeared in good spirits, and several sharp hits passed, when they closed and fell.

10.—Jem exhibited symptoms of becoming exhausted; and the Chicken appeared to have the best of the round.

11.—Pearce, in endeavouring to put in a good hit, lost his distance considerably, when they closed. Jem neatly disengaged himself, and gave the Chicken a blow, but ultimately was thrown.

12.—The true character of a pugilist was never seen to greater advantage than in this round—the Chicken rattled away furiously, and Belcher [was losing his strength fast; they closed, and Pearce threw him upon the ropes: in fact, Belcher was in such a position that Pearce might have put an end to the fight, had not his humanity rose superior to every other consideration. His antagonist was balancing on his back in a defenceless state; but the Chicken was above taking so cruel an advantage of his former friend, and putting himself in an offensive posture, to show that Belcher was in his power, exclaimed, most feelingly, "I'll take no advantage of thee, Jem—I'll not hit thee; no, lest I hurt thine other eye!" Such a circumstance ought never to be forgotten; the spectators hailed it with universal plaudits: it deserves to be written in letters of gold, and hung over the portrait of THE CHICKEN, as a pattern for future pugilists.

13.—Belcher's hits were scarcely of any effect, and Pearce forced him to a determined rally, when they closed; but, notwithstanding Belcher's weakness, he gave the Chicken a severe cross-buttock.

14.—More sparring than necessary; Belcher, who was bleeding from the effects of the last round, wishing to gain time, and somewhat shy of his man. Pearce followed him over the ring, and put in, through his guard, a severe blow under the eye that was dark, and threw Jem easily.

15.—It now became a forlorn hope to poor Jem, who felt terribly the loss of his eye, and also found out that his constitution was not so good as heretofore. This round decided the bets concerning the first knock-down blow; Belcher being hit clean down.

16.—The Chicken received a fencer; but Belcher was now too feeble to do much execution. Pearce hustled him, and, as in the twelfth round, got him once more on the ropes, but was too honourable to take advantage of his unfortunate position, and walked away. It was feared that Belcher's ribs were injured, by his being thrown against one of the stakes. [The odds were ten to one, but no takers.]

17.—Belcher, game as ever, was determined to make another stand; he endeavoured to put in a good hit—his courage was good, but his strength was gone, and the Chicken had it all his own way, following him to the ropes, and throwing him.

18.—Belcher stood up; but it was only to display his exhausted state, as his left arm was entirely useless, and he could not move it from his side; Jem, now, for the first time in his life, declared he could fight no longer. The Chicken, elated with the sound of victory, and overjoyed at his conquest of the

hitherto invincible Belcher, leaped in and out of the ring, and threw a somerset, to show his activity.

(To be continued.)

## THE LAY OF THE SHABBY ONE.

TO THE EDITOR OF THE SPORTING MAGAZINE.

SIR,—If you consider the enclosed verses worthy of publication, you are perfectly welcome to print them, gratis, which will be very flattering to me. Should you feel disposed to combine the *salce* with the *stale*, and send me the price of a four-and-ninepenny gossamer, or a pair of strong bluchers, I will be happy to meet your views in either extremes or extremities, and you will find me, as the motto of some nobleman states, *In utraque fortuna paratus*.

I am, sir, your most devoted servant,  
TIMOTHY SQUIB.

O, listen to a tale of woes,  
And one that's most distressing,  
Told by a dandy, who well knows  
The value of good dressing!

This coat was of the newest ton;  
Stultz said, that "ne'er indeed be  
Had seen such cloth;" the grain is gone,  
And now it looks quite seedy.

It got, I'm sure, as many dips  
As Colonel Pasley's diver;  
'Tis now a mass of rents and rips,  
Defying Scott's reviver.

One ragged waistcoat's all I've got;  
When made, 'twas for full-dress meant;  
Had I the means (I have not),  
I'd make a new in-vest-ment.

Inson and Rothe, they made for me  
In former days; but now, sirs,  
'Twould break the hardest heart to see  
The breeches in my trousers.

My shirt (one only can I find,  
Off further wear hath shuffled),  
Resembles much a tranquil mind,  
For 'tis no longer ruffled.

My boots, their uppers worn away,  
My poverty revealing;  
No ointment made by Holloway  
Those boots has power of healing.

My shoes are in no better plight,  
I shun the waltz entrancing;  
I surely must be done up quite,  
For I've no sole for dancing.

HOW TO FALL FROM A HORSE.—In all falls, the horseman should roll away from his horse as soon as he possibly can, lest in his struggle to rise again he strike him with his legs or head. It frequently happens that the horse himself rolls after he falls, and if in the direction in which his rider lies, is apt to crush and injure him. Indeed there is scarcely any hard rider who has not been thus served; but here, again, self-possession often stands his friend. When he sees the body of his horse approaching him, he frequently saves himself by meeting it with one of his feet, and, by obtaining a fulcrum, shoves his own body along the ground out of his reach. Coolness in this hour of peril likewise serves the sportsman in another way. Instead of losing hold of his reins, and abandoning his horse to his own will, as the man who is hurried at this time invariably does, he keeps them in his hand, if not always, perhaps in nine falls out of ten, and thus secures his horse. It was the remark of a gentleman who was, from his desperate system of riding, and despite of his fine horsemanship, known to have more falls than any other man during the time he hunted in Leicestershire, that nothing had so low an appearance as that of a man running on foot over a field calling out, "Stop my horse!"—*The Horse and Hound*.

FEAT EXTRAORDINARY.—An Irish Newspaper, dated January 8, 1821, mentions an extraordinary feat performed by Mr. Huddy, the postmaster of Lismore, co. Waterford, in the 97th year of his age. "He travelled for a wager," says our authority, "from Lismore to Fermoy, in a Dungaroon oyster-tub, drawn by a badger, a pig, two cats, a goose, and a hedgehog, with a large red night-cap on his head, a pig-driver's whip in one hand, and in the other a cow's horn which he blew to encourage his team."

## ADVERTISEMENTS.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings. Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and important edition of

**THE SILENT FRIEND; a Medical Work** on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The beneficial effects of solitary indulgence, neglected Gonorrhoea, Gleet, Stricture, Secondary Symptoms, &c., are fully pointed out. Illustrated by Engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and L. PERRY, & Co., Consulting Surgeons, London. Published by the Authors, and may be had at their Residence, 19, BERNERS STREET, OXFORD STREET. Sold by Strange, Paternoster-row; Hannay & Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

### OPINIONS OF THE PRESS.

"We regard the work before us, 'THE SILENT FRIEND,' as a work embracing most clear and practical views of a series of complaints hitherto little understood, and passed over by the majority of the Medical profession, for what reasons we are at a loss to know. We must however confess that a perusal of this work has left such a favourable impression on our minds, that we only recommend, but cordially wish, every one who is the victim of past folly, or suffering from indiscretion, to profit by the advice contained in its pages."—*Age and Argus*.

"The Authors of the SILENT FRIEND seem to be thoroughly conversant with the treatment of a class of complaints, which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—*Ergo*.

"This work should be read by all who value health and wish to enjoy life, for the truisms contained therein defy all doubt."—*Farmers' Journal*.

THE CORDIAL BALM OF SYRIACUM is exclusively directed to the cure of nervous and sexual debility, obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 33s., by which 11s. are saved. The five-pound cases may be had as usual.

THE CONCENTRATED DETERGENT ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 6d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammation, Irritation of the Bladder, &c., without hindrance to business.

Consultation-fee, if by letter, 21. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 11 till 9, and on Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

THE TRULY WONDERFUL CURES OF ASTHMA AND CONSUMPTION, COUGHS, COLDS, &c., Which are everywhere performed by

**DR. LOCOCK'S PULMONIC WAFERS,** have long established them as the most certain, perfect, and speedy remedy in existence for all disorders of the breath and lungs.

Cures of Pulmonary Consumption in Newcastle-upon-Tyne.

Dec. 5, 1844.

Gentlemen,—I can speak of your Wafers, myself, with the greatest confidence, having recommended them in many cases of Pulmonary Consumption, and they have always afforded relief when every thing else has failed; and the patients having been surfeited with medicine, are delighted to meet with so efficient a remedy having such an agreeable taste, &c.

(Signed)

JNO. MASON, Surgeon.

13, Mosley-street, Newcastle.

Another extraordinary Cure of Confirmed Asthma. Mrs. Gordon, of Flooker-a-brook, Chester, had long been given up as incurable, and was for many weeks confined to bed in the last stage of an asthma; she could not sleep for her difficult breathing, cough, &c. The FIRST TWO WAFERS she took relieved her cough, an hour after which she had a comfortable sleep, and in twelve days was able to walk out. Mrs. Gordon will be happy to reply to all inquiries. March 26, 1845.

Remarkable Case of Improvement of the Voice. From the celebrated Infant Thalia.

Jan. 15, 1845.

Sir,—My little girl, known as the Infant Thalia, suffered lately very severely from a cough, and relaxed uvula, so much so that she could not fulfil her professional duties. Various remedies were tried without success, until a friend recommended your Pulmonic Wafers; their beneficial effect was instantly apparent, and a cure speedily effected. The continued use of them finally and materially improved the tone and power of the voice. I could not let this very effectual cure pass over without informing you of it, in the hope that you might make it known for the benefit of others similarly suffering. I shall be happy to answer any inquiries.

S. SMITH.

49, Great Queen-street, London.

The particulars of many hundred Cures may be had from every agent throughout the Kingdom and on the Continent.

Dr. Locock's WAFERS give instant relief, and a rapid cure

of asthmas, consumptions, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 11d., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bride-lane, Fleet-street, London. Sold by all medicine vendors.

Just Published, the SIXTEENTH EDITION, illustrated with cases and Full-length Engravings, price 2s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 3s. 6d.

**THE SECRET COMPANION. A MEDICAL WORK ON NERVOUS DEBILITY and the concealed cause of the decline of PHYSICAL STRENGTH and the loss of MENTAL CAPACITY, with remarks on the effects of SOLITARY INDULGENCE, neglected GONORRHOEA, SYPHILIS, SECONDARY SYMPTOMS, &c., and Mode of Treatment: followed by observations on MARRIAGE, with proper Directions for the removal of all Disqualifications. Illustrated with Engravings, shewing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell square, London.**

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges-street, Covent-garden; Gordon, 146, Leadenhall-street, London: and by all Booksellers in town and country.

### OPINION OF THE PRESS.

This is a work of great merit, and should be placed in the hands of every young man who is suffering from past folly and indiscretion. It contains many valuable truths, and its perusal is certain to benefit him in many ways.—*London Mercantile Journal*.

THE CORDIAL BALM OF ZEYLANICA; OR, NATURE'S GRAND RESTORATIVE.

is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c. Even where Sterility seems to have fastened on the female constitution, this Medicine will warm and purify the blood and fluid, invigorate the body, and remove every impediment.

This Medicine should be taken previous to persons entering into the Matrimonial State, to prevent the offspring suffering from the former imprudence of its parents, or inheriting any seeds of disease, which is too frequently the case. Sold in Bottles, price 4s. 6d. and 11s. each, or the quantity of four in one Family Bottle for 33s., by which one 11s. Bottle is saved.

The 25 Cases may be had as usual.

BRODIE'S PURIFYING VEGETABLE PILLS are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 11d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. Brodie and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sunday from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of £1, and in all cases the most inviolable Secrecy may be relied on. Only one Personal Visit is required to effect a Permanent Cure.

Observe—27, Montague-street, Russell-square, London.

**THE EARL OF ALDBOROUGH CURED BY HOLLOWAY'S PILLS.**

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Masina, Leghorn, 21st Feb., 1845.

To Professor HOLLOWAY.—

SIR—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either.

Your most obliged and obedient servant,

(Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing.

Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.

SIR—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Aoklam, within four miles of this place, had been suffering from

Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c., &c.,

(Signed) THOMAS TAYLOR.

This wonderful medicine can be recommended with the greatest confidence for any of the following diseases:

Ague	Inflammation
Asthma	Jaundice
Bilious complaints	Liver complaints
Blotches on the Skin	Lumbago
Bowel complaints	Piles
Colic	Rheumatism
Constipation of bowels	Retention of urine
Consumption	Sore throats
Debility	Scrofula, or King's evil
Dropsy	Stones and gravel
Dysentery	Secondary symptoms
Erysipelas	Tie-doloureux
Female irregularities	Tumours
Fever of all kinds	Ulcers
Fits	Veneral affections
Gout	Worms of all kinds
Head-ache	Weakness from whatever causes, &c., &c.
Indigestion	

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines throughout THE CIVILIZED WORLD, at the following prices:—1s. 11d. 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

**WIT and WISDOM.—EVERY ONE**

wishing to be married: every one about to be married!! every one who is to be married!!! every one who has been married!!!! that is to say, every Spinster, Wife, and Widow, Bachelor, Husband, and Widower, should purchase No. 13 of CLEAVE'S GALLERY OF COMICALITIES! a penny broadsheet of broad humour, containing an original series of whimsical illustrations of the adventures and misadventures of Mr. and Mrs. Caudle, and other "right merrie" cuts; "too numerous to mention."

London: CLEAVE, 1, Shoe-lane, Fleet-street; and sold by all vendors of the "Sportsman's Magazine."

Now Publishing, in Weekly Numbers, price 1d., and in Parts, price 6d.,

**THE HISTORY OF THE CONSULATE AND EMPIRE OF FRANCE, under Napoleon, by M. THIERS, Author of the "History of the French Revolution, late President of the Council, and Member of the Chamber of Deputies."**

CONDITIONS.—The work will be neatly printed in two columns, royal octavo, from a new and beautiful type, and on fine paper. It will be uniform with "The People's Edition of Thiers' History of the French Revolution," forming, together, four handsome volumes.

On the completion of the work, a general Preface, introductory to the History of Napoleon, with Titles, Index, &c., will be given, thus forming a complete standard classical book of general reference, and interesting perusal.

London: G. VICKERS, Holywell-street, Strand.

Clark, Warwick Lane, Paternoster-row; Cleave, Shoe Lane; Vickers, Holywell Street; and Strange, Paternoster-row. Printed for the Proprietors, by JOHN WORTHAM, of 313, Strand, London.—Saturday, July, 19, 1845.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 11. FOR THE WEEK ENDING AUG. 2, 1845. THREE HALFPENCE.

WINDERMERE LAKE—CHAR-FISHING.

**W**OTTED as our "tight little island" is with lovely and enticing spots, with which few in the continental countries to which the tourist scampers, and whence the "travelled fool" returns with an ignorant contempt for home-bred beauty, few can claim superiority, though some may rival, the Lake of Winder, or Winander-mere, in the county of Lancaster. The shores of Devon and Derby may have their respective attractions, the one in its salubrious climate and park-like scenery, the other in its romantic dales, its sparkling streams, and, lastly, to the enthusiastic angler, as the favourite abode, during his latter years, of the good and venerable Izaak. The gratification of the tourist, however, is less strongly impressed upon his mind than when the eye rests for the first time on an irregular range of high and rugged mountains, whose peaks are made household words by poetry and tradition. But, if the craggy mountains of Cumberland and Westmoreland, visible by climbing the rocks which skirt the prospect here given, present features of grandeur to the contemplative, themes of inspiration to the poet, subjects of study to the painter, and of investigation to the geologist; they afford no less variety of amusement to him who seeks health and relaxation in the recreations of the field, or would lure the glittering tribes from the lakes which sleep in the bosoms of these eternal barriers.

By the true sportsman it is allowed that in proportion to the danger, difficulty, and fatigue attending the pursuit of game, in the same ratio is the pleasure we experience when our skill and labour are rewarded on the death of the quarry. Thus, then, your true man will shun the murderous battue as being at once a bastardized form of old English sport, and destitute of that excitement which, in a great degree, constitutes its chief de-

light. It cannot but be evident that the more frequently we are conversant with Nature in all her forms—whether in the Indian jungle, on the Alpine crag, or in her sweet-smiling aspect of the sunny south—the more humanized and real does the character become. By such sweet intercourse with our benign mother, the rust, the stain, that soils her fair handiwork in our contact with the world is obliterated, and the true and proper surface again shines forth in all its native comeliness and purity. Go where we may, even though it were into the black depths of the trackless forest, albeit the courage may flag, and the strength fail, yet in that very solitude there is a healing balm to the harassed soul, that whispers sweet comfort to the wanderer, and confirms in him the assurance that, although far removed from the busy haunts of men, he, at least, breathes not its contaminating atmosphere. There exists, therefore, another and more powerful reason why game should be pursued in their native wilds; and, we doubt not, a ready response will be accorded, in confirmation of the truth of the above speculations, by the heart of every reader. To a greater or less degree, sensations of this kind have been felt by all (for it is absurd to assert that even the most vicious do not retain some portion of their humanity); and to the poets, in particular, it has proved a source of rich and graphic illustration.

"Are not these woods  
More free from peril than the envious court?  
Here feel we but the penalty of Adam,  
The season's difference; as the icy fang,  
And churlish chiding of the winter's wind;  
Which, when it bites and blows upon my body  
Even till I shrink with cold, I smile, and say—

(Continued on p. 241.)

## DEER-STALKING—GLENARTNEY.

(Concluded from page 238.)

No person ever took such delight in, or more pains in breeding and improving the Highland deer-hound than the late Chieftain of Glengary. I am enabled to say some little concerning his method of breeding and training. I have before stated that, in my own opinion, these rough deer-hounds were of the same species originally as the Irish greyhound; their appearance is exactly similar; and I have seen likenesses of some of the Altamont breed. The only old notice of either I can find is the following:—"The Highland Greyhound, now very scarce, is of great size, deep-chested, and covered with long hair. This hound was much esteemed in former days, and used in great numbers by the powerful Chieftains in their magnificent hunting matches. It had as sagacious nostrils as the blood-hound, and was as fierce. The Irish greyhound, a very rare dog even in that kingdom, was probably the *Iorarius* or *Iyerner*, and these were probably imported into Ireland by the Danes."—The truth of the matter is, they were both used as *Iyenners*, as they were led in thongs—the word *Iyenn* signifying a thong. That, however, the Highland breed has degenerated (the Irish is nearly if not altogether extinct) may be gathered from the fact, that Glengary and the Duke of Athol both crossed them, and, as may be inferred from the crosses, for deficiency of nose, which was, says the above quoted extract, as good as the blood-hound. Hoyland, Glengary's late forester, told me, that during his time, the last twelve years previous to the latter's death, they had not been crossed; but Mr. Brown, in his work on Dogs, states, on Glengary's own authority, that he had at one period crossed them with the genuine Pyrenean wolf-dog; and I know that when Glengary (his name was Macdonnell, but the Scotch gentry are always called by the name of their estates) went with his dogs into Blair in Athol, they did not consider them to be pure bred, and moreover deemed them too heavy. Hoyland's information was, that in his day they were bred promiscuously from all and the nearest affinities, provided they were possessed of any signal qualification, or had distinguished themselves on any particular occasion. The principal care they took was to make them at first seize a weak wounded deer by the throat or ear, which being early and carefully attended to, they never after, when thus once fairly entered and confirmed, broke or tore any other part of the animal. When they happened to run in on a wounded one by themselves, who was too much hurt or exhausted to turn to bay, their early dispositions, or more properly attributes, were carefully watched, and they were trained for coursing or retrieving, as they indicated or evinced more or less tenderness of nose.

The mountains in Glengary's country, for it was of that extent it could be termed nothing else, are rugged and precipitous in the extreme. There is however, a good deal of natural wood in the glens, among which the deer at some periods more particularly harboured. This sometimes rendered the shots more difficult, and the deer were frequently only wounded. The manner of following them in such instances was this: one Highlander led a brace of good runners, in slips, while another put a staunch-nosed one on the track or spot, holding him in a rope attached to his collar, precisely after the fashion of the ancient *Iyerner*. The dog acknowledged the scent by a few whisks of his tail, and, thrusting his nose high and forward, went straight on, just as a pointer does, only more regularly and quickly, when drawing up on running birds, the man always holding him. When they came to fault, which the hound indicated by putting his nose to the ground, they allowed him to cast as he liked, though in hold, and he scarcely ever failed recovering. When they came to brooks and small rivers, which were frequent, the hound, when well entered and up to his business, instantly went up the side, and the moment he lost scent took the water at once; and my informant assured me that their sagacity, perseverance, and truth on these occasions beggared conception, and, that, long experience as he had, it continued to strike him with wonder and admiration to the last.

At night (for these followings sometimes lasted a day or two) a special mark was set down; and if there was a shepherd's hut, of which many were scattered over the hills, they made for it, and were sure to find a good peat fire, with plenty of milk, whiskey, and clean straw: they carried other provisions. After a hearty meal and plentiful libations, seasoned by some tremendous long yarns from the Chief—who to the great delight of the Highlanders, who adored him, was a grand *raconteur* in Gaelic—they all lay down together; the only extra luxury the Chief had being a pair of blankets, instead of, or rather added to, a *rachan* or plaid. Sometimes, no hut being near, they lay out on the mountain, where Glengary was always the first man to be asleep. For the convenience of crossing the rivers they all wore kelts, so that their limbs were comparatively dry. By day-dawn they commenced again, and, incredible as it may appear, the track-dog scarce ever failed, sooner or later, to take up the scent. To lose a wounded deer rendered Glengary furious; and as his anger was in keeping with the unceasing perseverance which actuated him in the pursuit of this one sport, and quite in character with his notions of his rank and power as a Chieftain—which were of the most antiquated and romantic die—his attendants, as well as his hounds, did all that in them lay to avert such a catastrophe, and it was of very rare occurrence that they were defeated. Sometimes they came upon the deer dead, or in so great a state of exhaustion as to secure it easily: at other times it was viewed

at a distance; and in this case the coursing hounds were slipped, and never failed bringing the quarry to bay. All the hounds were always rewarded with a share of the blood.

Such were the dogs crossed with the Pyrenean wolf-dog, and such the practice of one of the most indefatigable deer-stalkers, of modern days at least, on record. In the sporting line, though possessing all kinds of game in abundance, he did nothing else. He was the last of the Highland proprietors who attempted to keep up the old associations, &c. of Chieftain and clanship, which, though he was possessed of excellent qualities, hardly suited these our times, and sometimes rendered his conduct what might be termed even more than eccentric.

His death was in keeping with such associations. Passing up the Caledonian Canal in a steamer with two of his daughters, the boat was in danger of being wrecked near shore. One of the young ladies had been landed, when Glengary, thinking he could be of more assistance to the remaining one, cast himself into the water, but was dashed by a wave with such violence against a rock that he survived but a short time. The lady was saved.

I have before mentioned the Duke of Athol's system; but with respect to hounds he bred differently, crossing the Highland rough deer-hound with the modern stag or fox-hound, but never breeding again from that cross.

These methods of getting at and killing the red deer are similarly followed in the Old Royal Forest of Glenartney, though not so unceasingly prosecuted. The noble owner is an excellent rifle shot; the head forester, Cameron, though an old man, a skilful man in his craft.

On the opposite side of the Ruchill the moors extend in multiform heights and undulations through the solitudes of Fenderglen towards Dumblane, near where they join Lord Kinnoul's moors at Cromlix, a distance of nearly ten miles; while right and left they expand, under various denominations, to the Roman Camp and the Castle, in both directions in still greater range. The Loch Katrine moors I have already mentioned; Glentarkin, a wide tract of itself, lying between Loch Earn and Loch Tay, must be deferred to its own place. Vast as this—for any number of sportsmen almost, if they had tents, might migrate through these wilds, and shoot for days and days—it is in most years thrown open to many of the first shots in Britain, who experience at the Castle and Roman Camp a refined and commensurate hospitality.

Before taking leave of this glen, there is a feature in it, and in some parts a considerable one, which to some few of your readers would present no small attraction. This is the mountain-stream of the Ruchill, which at some periods only shows an almost dry, rugged, and rocky channel, in every variety of naked and almost savage rudeness, presenting to view what might scarcely be deemed even a trickling rill, occasionally intersected with deep pools; at others, after a flood, exhibiting a "torrent roaring loud," and foaming in impetuous eddies over all these time-furrowed impediments. As the waters begin to clear, when they first subside a little after these speats or floods, the Ruchill is then one of the best rivers in Perthshire for sea-trout, which, in this month particularly, force their way from the Tay up the Earn, to this favorite and sequestered haunt, for the purpose of spawning. The smaller sea-trout is always to be found and fished for in the neck, or most impetuous and strongest part of all streams, and none is too violent for it; while the larger fish, the *grilse* or *salmen*, as invariably lie in the quieter parts and tail of the stream. If they be the same fish, and it is said they have been marked when fry, and ascertained to return in each gradation to the parent stream, it is singular that they should prefer in their smaller and weaker state the torrent which they never haunt in their more advanced and matured strength: but that it is so, every old *Piscator* knows. These wild rocks, and being clothed with wood on both banks towards its lower extremity, renders the Ruchill an extremely difficult stream to fish. Take it all in all, there can be nowhere a more romantic glen than this, which, as the scene of the opening lines of the "Lady of the Lake," is in some sort familiar to most readers:

"The stag at eve had drunk his fill,  
Where shone the moon on Monan's rill,  
And deep his midnight hair had made  
In lone Glenartney's hazle shade."

## SONNET BY A COCKNEY ADMIRER OF SCOTTISH POETRY.

I stood upon Ben Primrose. It was morn.  
The wind was westerly; the day was fine.  
Far in the distance gleamed Loch Serpentine,  
Like patent-leather boot beneath the sun;  
Hard by thy chestnut-groves, Glen Kensington;  
Before me, like a giant steep'd in wine,  
Or kraken, slumbering on the Norway brine,  
Enormous London lay. There was I born;  
Ay, there, within the echoes of Bow-bells;  
And when I gaze upon thy dome, St. Paul,  
And think of Clapham, Islington, and all,  
With patriotic pride my bosom swells,  
And I exclaim, with lip serenely curl'd,  
"There's not a place like London in the world!"

Punch.

This is no flattery: these are counsellors,  
That feelingly persuade me what I am."

But the reader will be disposed to ask the *ad quem finem* of this exordium. We may, however, be pardoned for dwelling on a topic which must, or ought to be, a grand source of pleasure in the breast of every sportsman; and blest is he who, like Christopher North, can so mingle philosophy and sport, as to quaff large draughts of health, mental and bodily, by the same effort.

In general estimation, the lake district is peculiarly adapted for the residence of the wearied denizens of life's great theatre; and thither the politician, the *roué*, the college don, and the tourist, hasten, with eager steps, to emancipate themselves, each from his own peculiar demon of *ennui*. Whatever may be the disparity in rank, the entire crowd may be properly considered as of one class. For a time, their pursuits and pleasures are the same; as Nature is as kind and bountiful to the peasant as to the peer. But there is another class of lake frequenters, whose avocations are written on their backs as distinctly as shooting-coats, fishing-rods, and other sporting paraphernalia, are capable of demonstrating: there is, moreover, a *je ne sais quoi* kind of manner, an unmistakable expression, that distinguishes at a glance, your keen and knowing hand from the mere cockney in sporting clothes—the ass in the lion's skin. There is a sort of free-masonry by which men are enabled to distinguish the true from the untrue, the real from the would-be, in all that relates to the field; just in precisely the same manner as the habituated and observant eye detects the attempted fraud of the *parvenu*, through all his silly dazzle and glitter, who, with swaggering gait and exterminating look, would force the world into a belief of his transcendent magnanimity and importance. Such people, as Johnson remarked, are walking lies.

Let the reader imagine himself to be hovering about the lake Winandermere, Buttermere, or Ulleswater, amusing himself one while with the gun, another with the rod, and anon struggling up the mountain side, to breathe both himself and dogs; now searching for an extensive prospect from the summit of a bleak and perilous crag, and again following in its tortuous course the sparkling rill, as onward it rushes in its rocky and uneven bed—let him realize this in imagination, and he will comprehend the capabilities of the locality.

But a truce with dissertation and description. The "gunning" to be had hereabout we postpone to a fitter season, and conclude by speaking of the fishing, and of that peculiar fish "The Char," best known, we imagine, to most readers in its "potted" state, as a delicious addition to the breakfast table.

The CHAR, whose beauty is only exceeded by its excellence, is a fish of prey, hunting deep cool lakes, and is seldom found near the surface until late in the autumn. They will take either fly or minnow. The same flies may be used in angling for char as for the gwyniad (of which Welsh first cousin of the char, we will give a few words anon), and the smaller lake trout, treated on a few numbers since. Ground bait and trolling, however, are not generally successful, as these fish by no means bite freely. Sir Humphrey Davy, in his "Salmonia," says, "I have taken char both with the fly and minnow, even in summer-time, in one of those beautiful small, deep lakes in the Upper Tyrol, near Nazereet; but it was where a cool stream entered from the mountains, and the fish did not rise, but swallowed the fly under water." The char is always a very brilliant fish in its colour, but in different countries there are many varieties in its tint, though the form does not vary. The dorsal fin of the char has eleven spines, the pectoral fourteen, the ventral nine, the anal ten, and the caudal twenty.

Old Isaac, speaking of the char, observes in his quaint delightful phraseology: "Bat, scholar, there is a fish that Lancashire do much boast of, called a char, taken there, (and, I think, there only) in a mere called Winander-mere; 'a mere,' saith Camden, 'that is the largest in the nation, being 10 miles in length, and some do say, as smooth as the bottom as if it were paved with polished marble.' This fish never exceeds fifteen or sixteen inches in length, is spotted like a trout, and has scarce a bone but on the back. But this, though I do not know whether it make the angler sport, yet I would have you take notice of it, because it is a rarity, and of so high esteem with persons of great note."

On this we may observe, that tinctured as it is with the taste of our forefathers for the marvellous, so far as the fish is concerned the description is pretty accurate, that of the bottom of the lake where it dwells is more than apocryphal; and so far from Windermere being their sole habitation, they are found in several of the Cumberland and Westmoreland meres; and Professor Kennie says, he has dined deliciously on the piscatorial dainty of fresh char taken from Buttermere in Cumberland. There are two species of char, one called the turgoch, the other the case-char; both highly esteemed for the table. The turgoch has a scarlet red belly; the case-char has the belly a buff orange with pale red spots. The turgoch spawns in January, the case-char as early as Michaelmas. And now, having roamed so far from home to catch our fish, let us return to humbler, but not less pleasing sport; and leaving the higher regions of the art piscatorial, into which it is given but to the select few to soar, come back to "fishing for the million," and what can more aptly illustrate that sport than the subject of this week—THE GUDGEON?

## THE FISHER'S CREEL.

THE GUDGEON.

**BE**IT the *Gobio fluvialis*, as the learned call it, be but a small fish, yet is he, as Sir Thomas Browne would say, "a plenty and a good." To describe him is almost superfluous, yet as this comporteth with our plan, we will briefly do so. He is a fine shaped fish of the carp kind, of a silver colour, having black spots on his body and tail. He is leather mouthed, having his teeth in his throat, and as he bites freely, and is seldom lost when once hooked, is, as Isaac Walton says, "an excellent fish to enter a young angler," which the reader may understand in a double sense, both sporting and gastronomic, if he likes. Gudgeon delight most in gravelly and sandy ground, and in a slow stream; though they inhabit large rivers, and often little brooks, yet they are chiefly to be found in small rivers of a fine sandy gravel bottom: in the hot months they lie in much shallower waters, but all the rest of the year, from about Michaelmas till April, they dwell in the deepest places that are most sandy. They spawn in the latter end of April or May, and, as some say, three or four times in the year. They may be easily taken with small worms or maggots; by muddying the water and stirring up the sand with a pole you may draw them together in shoals, and by now and then throwing in a few chopped worms or maggots, you may take great quantities of them with a bait on or near the ground; they are usually scattered up and down the shallows of every river in the heat of the summer, but in autumn, when the weeds begin to grow sour or rot, and the weather begins to be cold, they keep together in the deeper parts of the water. If you angle for them with a float or cork, your hook must always touch the ground: but many fish for the gudgeon by hand with a running line upon the ground without a float, and this is an excellent way if you have a tender rod and a gentle hand; he bites all day long from March till Michaelmas, but will not bite in very cold weather, nor for some time after spawning, nor immediately after a shower or land-flood; he bites well in gloomy, warm, or hot sunshining weather, but seldom before sun-rising, commonly beginning at or about an hour after the sun rises, or after sunset, ceasing indeed, about an hour before the sun sets; for which, as Paddy says, "small blame to him," seeing he is but a delicate morsel, and runs a terrible risk of being "catawampously chewed up" by the bigger fish, which are just then ranging in search of provender.

WHAT IS LAW LIKE?—Law is a country-dance—people are led up and down in it till they are fairly tired out. Law is like a book of surgery—there are a great many uncommon cases in it. It is like physic, too—they that take the least of it are best off. It is like a homely gentlewoman—"very well to follow;" and like a scolding wife—very bad when it follows you. Law is like a new fashion—people are bewitched to get into it; and like bad weather—most people are glad to get out of it.

"I smoke as well as you," as the chimney-pot said to the counter-jumper.

"Be sharp, my blade," as the butcher boy said when grinding his knife. Why is Echo personified as a lady? Because, like a lady, Echo will have the "last word."

A VALUABLE CALF.—Last week (says the *Leeds Times*), a gentleman had a party of friends to see a fine (or rather superfine) calf; and while showing it off, he gave the interesting pet his hand to suck. On withdrawing it, he found, to his dismay, that his little finger was minus a handsome ring!

## BRITISH SONG BIRDS.—No. X.

## THE NIGHTINGALE.

(Continued from page 230.)

"The young of the nightingale bear a considerable resemblance to those of the garden fauvette, and female redpole, and I have seen the latter not unfrequently sold in the markets for nightingales. But the person who has any knowledge of the difference that exist between the two species, will at once see, even at this early age, that the bill of the true bird, is much larger, and that its tail, however short it may yet be, shows a dull red tint never seen on that of the fauvette. Again, when the nightingale has become of age, the female is often palmed upon the unknowing as a male, and I have often been amused by seeing how careful the vender of the female bird had darkened her prison with a green cloth, under the pretence that this species seldom sings unless in darkness. Now, reader, it has been my fancy to keep many nightingales in my youth, and although I never employed any trappings about their cages, they never failed to sing both at early and at late hours, but never at night, unless the moon was near its full, the weather calm, and the sky serene. Indeed it has never been my fortune to hear one of these birds sing at night, that is, at midsummer, from eleven to one o'clock, or at an earlier time from nine to three, for they always cease in an hour or so after sunset."

Thus far Audubon, on the manners, habits, and peculiarities of the wild bird; and we feel sure that the bird-fancier will thank us for this description, copied, as it is from one of the most delightful, accurate, and enthusiastic of modern writers, but whose works of necessity are beyond the reach of the many, from their extent and costliness. The next branch of the subject will be the nightingale in confinement, wherein the MODE OF TAKING, THE CAGE, BREEDING, THE FOOD, &c., shall be briefly and practically treated on, as in our former papers on birds.

**MODE OF TAKING.**—Nothing is easier than to catch a nightingale in the season of pairing. If a little furrow, smooth at the bottom, is dug in a dark soil, and some meal worms or ants' eggs are thrown into it, he will immediately fly to these delicacies. By putting also in the same place limed twigs, or a small net which may be easily dropped, he will soon be caught; it is even sufficient to fix over the furrow a bit of wood supported by a stick, which will fall as soon as the bird perches upon it. He is so unsuspicious that he observes the snare being laid, and then foolishly falls into it; when the bird-catcher has moved only a few steps from it; he will even allow himself to be led to it when at a little distance, if in a gentle manner. A birdcatcher may thus, in a few hours, depopulate a whole district of these delightful songsters. If, however, this is feared, there is a means of baffling his intentions, by anticipating him, and catching the nightingale we wish to preserve in our neighbourhood, either by a limed twig or in a net, and letting him go again. This experiment will prevent his falling so readily into the snare in future. In the greater part of Germany, indeed, it is forbidden, under a very heavy penalty, to catch nightingales. Another mode of taking them is by nooses and springs, and suspending for a bait, instead of berries, live meal worms; but there is one disadvantage attending it, while struggling the bird almost always injures his feet, especially in springs.

**THE CAGE.**—In confinement nightingales may be allowed to fly freely, as I have often permitted them; but they do not then sing so well as when in a cage, where they are less subject to interruptions, and where also they live longer and more healthily, from being fed with more care and regularity. The nightingale's cage, of whatever form, must not be less than a foot and a half in length, by about one in width, and one or more in height. The top should be made of linen or soft stuff, that when jumping and struggling, especially when first caught, he may not injure his head. The drinking-cup and feeding-trough are fastened on the outside, unless it is preferred to introduce the latter within, in the form of a drawer. The following are the best form and proportions for a nightingale's cage, that I am acquainted with:—Length, one foot and a-half; breadth, eight inches; height, fifteen inches in the middle; thirteen at the sides, because the roof is arched. The sides are made of osiers about a quarter of an inch thick; the bottom is made of the same material, but it is covered by a drawer an inch and a quarter in depth. In order to clean it more easily, I cover it with coarse paper, which I renew every time. The feeding-trough is introduced on one side, with edges high enough to prevent the bird's spilling too much of the food. In the middle of the front of the cage, and extending from top to bottom, is a cylindrical projection in the form of a belfry, in which is suspended a large drinking glass. The upper stick of the cage is confined here, terminating in a fork, or fixed to a semi-circle, that the projection may not be prevented from moving. This projection is made of osiers, like the rest of the cage. The middle and lower sticks are covered with green cloth, firmly sewed on, that the nightingale may have a softer perch, and not have his feet so soon injured, which is very common with imprisoned birds. The arched roof is also covered with green stuff, which is painted that colour with oil paint, as well as the whole of the cage. But it must be well dried, and quite free from smell before the bird is put into it.

My reasons for preferring this cage are, first, because being small, it occupies less room, without disadvantage to the bird or to the apartment;

second, because the size of the osiers leave small intervals for the admission of light, and it is consequently darker: third, because the bird can bathe without wetting his cage or his perches: and consequently his feet remain cleaner and more healthy.

**FOOD.**—When wild nightingales feed on insects, especially little green caterpillars, of which they clear the bushes and trees, small butterflies, flies, and beetles, and the grubs of insects hid among moss or in the earth, which are discovered by turning it up. At their departure, towards the end of summer, they also eat elderberries and currants.

In confinement, meal worms and fresh ants' eggs are the first things which should be offered to birds which are just caught; in place of these, when it is not possible to procure them, some persons prepare a mixture of hard eggs, ox heart, and white bread, some mouthfuls of which they force the birds to swallow, and then throw some meal worms on the rest, to induce the nightingale to eat it; but this artificial food is so unfit for these birds, especially at first, that it kills the greater number. They may also be injured by forcibly opening their delicate beak. When ants' eggs cannot be procured, it is better to set the birds at liberty than thus to sacrifice them. Their best food in summer is ants' eggs, to which are daily added two or three meal worms; when none of the former remain fresh they must be supplied by dried or rather roasted ox heart and raw carrot, both grated, and then mixed with dried ants' eggs. The carrot, which may be preserved fresh in sand in the cellar, prevents heat in the stomach and bowels; a little lean beef or mutton minced small may also be used sometimes; after different trials, it is in this way I feed my nightingales. The cheapest food is very ripe elderberries, dried and mixed with ants' eggs, in the same way as the carrots and white bread.

**BREEDING.**—Each nightingale has his little district; and if in the pairing season several males are found together, very angry battles take place, which end in the flight of the weakest.

The nest is built in a grove or orchard, among a heap of branches, or on a thorn bush, or the trunk of a tree surrounded by briars; or even on the ground when it may be hid by tall grass or thick bushes. Its form is simple and inartificial, on the outside dry leaves, on the inside hay, fine roots, with the hair of animals, is all the apparatus. The female lays from four to six eggs, of a brownish green, on which she sits a fortnight. The young are fed with small caterpillars and butterflies. As the low position of the nest exposes them to become the prey of carnivorous quadrupeds, they soon quit it, even before they can fly. Their plumage before moulting has no resemblance to that of the old birds except the red of the tail; the upper part of the body is of a reddish grey, spotted with yellowish white on the head and coverts of the wings; the under part is of a rusty yellow, spotted on the breast with dark brown; but after moulting the resemblance is so perfect that they can hardly be distinguished. If, therefore, any of these birds are caught towards the end of summer, they are carefully examined on the back of the head, round the eyes, and under the beak and neck, for, provided there remains in these places a small feather, or mere yellow point, it is sufficient to ascertain that they are young. As these are the only means of judging, if no marks appear, it is necessary to wait for a few days till the bird begins to sing. This, however, is not a sure sign, as the young females sing as well as the males, till the month of April, though in a weaker and more unconnected way, and without so visibly swelling their throats: it is by these nice observations that connoisseurs succeed in distinguishing them. It may also be remarked, as a help to those who wish to rear nightingales, that, when in the nest, those which are marked with white, and especially those which have a white throat, are males; the reddest and brownest being always females. The young, when taken, are fed with ants' eggs mixed with white bread, grated and moistened. The males begin to warble even before their tails are quite grown: if the father and mother are taken at the same time as the young ones, they will, when caged, continue to feed them as before.

**DISEASES.**—In general moulting amounts to a disease among nightingales: at this critical time they require a more succulent diet, and sometimes a spider by way of purgative. If their stomach is disordered they

\* The means of always having a plentiful supply of meal worms is to fill a large earthenware or brown stone jar with wheat bran, barley or oatmeal, and put into it some pieces of sugar paper or old shoe leather. Into each of these jars, of about two quarts in size, half a pint of meal worms is thrown (these may be bought at any baker's or miller's), and by leaving them quiet for three months, covered with a bit of woollen cloth soaked in beer, or merely in water, they will change into beetles. These insects soon propagate by eggs, which renew and increase the number of maggots so much that one such jar will maintain a nightingale.

† Many persons who are not in a situation to buy ants' eggs (improperly so called, since they are the pupae in their cocoons), will doubtless be glad to know the method used for getting them out of the ant-hill. A fine sunny day in summer is chosen, and, provided with a shovel, we begin by gently uncovering a nest of the large wood ants, till we arrive at the eggs; these are then taken away, and placed in the sun, in the middle of a cloth whose corners are turned up over little branches well covered with leaves. The ants, in order to protect the eggs from the heat of the sun, quickly remove them under the shelter which is prepared for them. In this manner they are easily obtained freed from dirt, and from the ants also. In the absence of a cloth a smooth place is chosen, around which some small furrows are cut, over which the branches are laid, which leads to the same result.

puff up their feathers, half shut their eyes, and remain for hours with their head under their wing. They are relieved and cured by ants' eggs, some spiders, and by giving them occasionally water impregnated with saffron till it is of an orange colour, to drink.

As to those diseases which they have in common with other birds, they are treated according to the directions given under the various species. It is especially necessary, every three months, carefully to remove the large scales from their legs and toes. A nightingale may be kept in confinement fifteen years; whilst in a wild state they are never observed to exist so long in the same spot, which seems to prove that they do not attain so great an age when exposed to all sorts of accidents, both from birds of prey and bird-catchers. I have an instance of a nightingale which has lived twenty-five years in confinement. When they have reached six years they begin to sing less frequently and long, with less brilliancy and ornament; it is then better to set them at liberty in the month of May. The open air often invigorates them so much that they regain their song in all its force and beauty.

### THE MOORS.

In the Highlands, in spite of the myriads of boxes of birds sent to the south, by land and water, every autumn, moor game of all descriptions continues steadily to increase. Individual ranges of shooting ground do occasionally get fearful sweeps towards the end of a lease; yet one year's jubilee generally puts things to right again; and experienced hands will rather "bite" at good grounds that have been well "shot," than grounds that have been "carefully preserved," and none allowed to shoot upon them without "written leave from the proprietor." It seems rather paradoxical to assert, that the killing of any sort of animal should tend directly or indirectly to the increase of its numbers; nevertheless, we believe it to hold good in regard to grouse, as the grouse in the northern counties have certainly increased under the murderous guns of our southern aristocracy. The fact, however, may be satisfactorily accounted for by the circumstance, that the moment a southern signs his lease of the shooting grounds, he engages his keepers and orders his vermin traps, and from that day declares war against every description of poacher, whether clad in hair, feathers, or hoddie grey. A regular sportsman, let his disposition be what it may, is a perfect tyrant in all matters touching his game, and would *jamb* the legs of the golden eagle—the monarch of the air—in a steel trap, as pleasantly as he would jamb the legs of his fellow-creature in the stocks, if caught with a gun in his hand and a bushel of birds in the corner of his plaid. In the north, this iron rule seldom fails to have the desired effect, and shooting grounds are comparatively unmolested.

It will thus be seen that a proprietor, in letting his shootings, only transfers the right to kill from one description of the *carnivora* to another, and that, whereas the eagle, the fox, the raven, the pole-cat, &c., &c., pay no attention to the term-days and other provisions of the game act, but pursue their sports and pastimes the whole year round, and in all weathers, the sportsman is circumscribed to three or four months in the year, and even this space is much curtailed by such contingencies as bad weather, sprained ankles, worrying dogs, &c. These things considered, the grouse have evidently exchanged rulers for the better; and this is seen, as in all well-governed realms, by the increased amount of population.

But besides the increase which arises from the destruction of the natural and direct enemies of the grouse tribe, other and less direct causes, called into play by the system of killing, undoubtedly, tend to the same end. Systematic and judicious sportsmen invariably pick out the old birds of a covey, and these, especially the old cocks, when past the age of breeding are generally believed to be hurtful to the rising generation, not only in breaking eggs, but in usurping the place of vigorous and young male birds. Again, some imagine, and perhaps with reason, that when a range is judiciously but sharply shot over, so many family compacts are broken up, and so many widows and orphans left desolate; that adventurous youths of both sexes are tempted from neighbouring districts to fill up the void, and a great infusion of fresh blood is thus added to the stock, which, as every naturalist knows, tends to add to the prolific properties of almost every description of animals. This may be quite imaginary in as far as relates to grouse; but if it be generally a law of nature, why should we doubt it in the case of the grouse? It is, however, enough for us to know, that under severe shooting, grouse will increase, provided the vermin be well kept down. All the disputes about burnt heather, which arise between the proprietor, the storemaster, and the lessee of the shooting, should at once cease, if this is rigidly done, as grouse naturally avoid rank heather as much as sheep do. They never feed upon and never seek shelter from it in stormy weather, at least if the weather be at all wet. In short, they only fly to it to avoid their natural enemies, and when these are destroyed, the shepherd should be allowed to burn away, as he will thus be serving both the storemaster and the sportsman, provided that he does it judiciously, and in the proper season.—*Inverness Courier*.

A CON.—When is a man really gone to the dogs? When he allows anybody to roll him in the kennel.

### A FEW WRINKLES ADDRESSED TO SPORTSMEN ON THE BENEFICIAL EFFECTS OF EXERCISE ON THE SYSTEM.

What can be a more splendid sight, or one more calculated to inspire us with a noble idea of our species, than the sight of a hale and hearty old man descending to his grave, the very reverse of Shakspeare's "lean and slippered pantaloon," but with a halo of health and robustness encircling his brow; yet in large and populous towns how rare are these sights! The cause of this is easily explained: men in large towns are generally mechanics, sometimes their work is of a sedentary nature, and when they are freed from their daily labour, instead of going out in the open fields and enjoying nature and her works, that she so bounteously offers to us, what do they do? They go into the tap-rooms of public-houses and there sit and drink, and smoke and return home, ten times worse in every sense than when they set out; and this is what they call "enjoyment." What can more aptly illustrate our subject than the following extract from the *Medical Times*—

"In proof of the influence which even temporary physical education exerts upon the human frame and its stamina, may be mentioned the following example:—In the summer of 1839, we had an opportunity of witnessing one of the trial races of Oacraft, at that time one of the swiftest runners in England. On the occasion we speak of he ran 120 yards in eleven seconds; his pulse, just before starting, beat 61 strokes per minute, and at the termination of his extraordinary feat, it beat only 94. \* \* \* \* Two months previously he had been taken from a stocking frame, and, by a process of merely careful training, was brought into the state of bodily condition alluded to."

Who can for a moment doubt the salutary influence on the body after this quotation from so high a medical authority?

How many persons, sunk into imbecility from actual lassitude, would be roused by the busy and cheerful objects of worldly enterprise; yet that would be but a temporary stimulant when contrasted with the effects of proper bodily exercise. How many persons have been hurried to an untimely grave through want of attention to this necessary of life, for we can regard it in no other view. The writer above quoted, gives a striking lesson to the man of business whose whole soul is centred in worldly gain: he says—

"We would fain teach the man too hardly attached to world's business, that with all his toil and care, and penury of time, that he is no gainer; he may appropriate to his idol object an hour that should be sacred to his own service, and in his so doing he is a loser of twain: let him husband his moments as niggardly as he will, there is a certain reckoning which he must daily have with himself, a certain time for his own rest and refreshment, and if that time be not granted, it becomes no matter of idle debtorship; day after day registers a fresh account against him, and at the end of a few years the unsuspected fact of old age is announced by decrepitude, decay, and—death."

After the able manner in which the matter is treated in the above quotation, further words would be unnecessary.

July 12th, 1845.

F. B. THOMPSON.

John Adams, ex-president of the United States, being called upon for a contribution for foreign missions, said, "I have nothing to give for that purpose. But there are here in this vicinity, six ministers, not one of whom will preach in the other's pulpit—now I will give as much and more than any one else to civilise these clergymen."

RECIPE.—HOW TO PROCURE A COLD.—First take an omnibus with a few ladies already in it, then seat yourself between the door and window, afterwards beg permission to open the window before mentioned for the lady next you, sit quiet, and the cold will be made. The process may be repeated if pleasant.

### CORRESPONDENTS.

\* \* The continued illness of our esteemed contributor Ned Rub, has prevented not only the continuation of his "HINTS TO CRICKETERS," but also a projected article of "A Day at Lord's," accompanied by portraits of the most celebrated cricketers; we hope shortly to "report progress."

22—The Official Return of the Target lists at the Great National Archery Meeting, are of such length that we have, of necessity, postponed it until the next number, in order that it and the conclusion of the article on Archery, may appear at one view.

"BURNLEY."—You will find the information you seek in "Darvill on Breeding for the Turf."

SPORTSMAN.—In the number after that containing Goodwood Races, we hope to obtain space; we will then devote a page to COCKING for some weeks in succession. Charles Freeman has little or no pugilistic pretensions, we have heard him admit as much; and his whilom friend and pal Ben Count, as well as Tom Spring, know that he was only saved by darkness from defeat in his first combat with the Tipton Slasher, himself a formidable rough, but a pigmy in comparison to the American, who is somewhere about a foot taller. In the second fight (we witnessed them both), the Slasher made no fight; he was over-clever, shifty, and cunning, and in attempting to reduce the big 'un by a protracted contest, he over did it, and lost the battle by palpably getting down without Freeman having let go his hand. The Slasher was not at all punished in either fight; a pretty conclusive proof, seeing that he is not much of a defensive boxer—that Freeman, with his 17st., and 8 foot 10½ inches, is nothing very formidable in the fist department of gymnastics.

DOUBLESIGHT.—NORTHAMPTON.—Any person shooting with a gun or pistol within fifty feet of the centre of a carriage-way, is liable to a penalty not exceeding 40s. and costs of proceedings, over and above any damage which may be done. Any person may prefer information, and produce a witness who saw the gun or pistol fired off.

W. SLEAY.—No. The article is not suited for this paper. Miles's Boy's pen has been busy in our columns, but not in his usual "veins," or rather that by which he is popularly known. He will take a series of "Lounges in London" very shortly, which shall be illustrated; at present though not "abroad," he is "out of town."

# The Sportsman's Magazine.

FOR THE WEEK ENDING AUGUST 2, 1846.

## GYMNASTICS.—NO. I SWIMMING.

HE present is the first of a series of illustrated Essays with which it is proposed to enrich the columns of the SPORTSMAN'S MAGAZINE; among which will be included, WRESTLING, BOXING, SINGLESTICK, FENCING, CRICKET, QUOITS, RUNNING, LEAPING, RIDING, and the most prominent and popular manly sports and exercises.

The scope and extent of these will, of necessity, be considerable; yet, as a body of information, we flatter ourselves, should the public lend us the encouragement we hope for, and will endeavour to deserve, that this series of papers will stand *nulli secundus* to anything of the kind hitherto attempted in any serial publication.

SWIMMING is incontestably one of the most useful exercises, and should form a part of every man's physical education: we say physical because, alas! the instructors of mankind are too generally priests and pedagogues. Ignorant, enfeebled animals, whom "too much learning hath made mad." Parchment-skinned bookworms, who estimate the value of a man's acquirements just as a spectacled virtuoso of the Society of Antiquaries would a coin—by its rust, worthlessness, and loss of currency. But we have not here taken up the pen to cast our "anathema maranatha" at the humbug that yet leads upright man; he who boasts—

"Erectos ad sidera tollere vultus,"

in the leading strings of the fatuitous and the feeble, so far as sport and exercise are concerned, but to indite a chapter ancient and concerning swimming.

### SECTION I.

#### OF SWIMMING IN GENERAL.

The different positions which the human frame necessarily takes in swimming cause the muscles of the inferior and superior extremities to be in play at the same time, particularly those of the arms and chest. The ancients placed a high value on the art of swimming; and it is probable that this exercise greatly tended to give the chest that full and rounded form (from the frequent exertion of the muscles of inspiration and expiration) so observable in ancient statues, and in many muscular men of the present day.

To urge the claim of swimming on the score of cleanliness would be superfluous—the cold bath is too well known as one of the most potent remedies for restoring health and strengthening the body. It is as a means, not only of self-preservation, but of high humanity and gratification, in enabling us to save less fortunate fellow-creatures from a watery grave, that we here advance its eminent claim to general adoption and practice. In a minor but more general point of view, swimming furnishes an agreeable excitement (the usual attendant of manly and brisk exercise), on account of the mastery which it gives us over an element for which the human structure is but partially fitted. The means which it affords of preserving our own lives, or those of others, in situations of peculiar peril, is also a great recommendation of this exercise, which may be easily learned wherever there is water of five feet depth, and there is no real danger connected with it.

There are those who maintain that man possesses all the required qualifications for exercising this noble art; and if we inquire of them how it is that all men do not swim alike? they reply that they render themselves incapable by yielding to fear and prejudice, as well as by impatience and disappointment at the slow progress they make, which are often increased by occasional hair-breadth escapes from dangers into which precipitation sometimes leads them.

We need only refer the reader for proof of this to those numerous instances of persons noted for the superior manner and dexterity with which they have exercised the art, and it will be found that they swam well from the first. Some of these performed extraordinary and surprising deeds, as Leander, for instance; and, in later days, we have imitators of these worthies, who perform things not less wonderful. As Leander crossed the Hellespont, that he might enjoy the society of his beloved Hero, so Byron, in emulation of this achievement, and without an object of such high magnetic power as drew Leander across, attempted and did the same, which he has recorded in a piquant couplet.

An Art at length has been formed, reducible into rules, which it is our object here to bring before the reader, and we hope that those who read will soon be able to perform the aquatic evolutions described, to their own gratification and profit.

Swimming is one of the most healthy and agreeable exercises in the world. After swimming for a short time in the evening, you will sleep coolly the whole night, even during the most ardent heat of summer. Perhaps this may be accounted for by the increased perspiration which the open state of the pores of the skin allows.

"SCOTICUS."—We this week give you an article on "Scottish Shooting Quarters;" in a week or two we will give you an illustrated article on the "GROUSE." We endeavour to blend instruction with amusement, as the school-books say.

HARRY STEVENS.—DOCKHEAD.—We should be very glad to insert the intelligence you wish, but it would come under the denomination of *news*; and the gentlemen at Somerset House, ycleped "The Honourable Commissioners of Her Majesty's Stamps and Taxes," would have us before them on the Stamp Act, and we should be liable to the small fine of ten pounds only for every sheet we printed that had not a small red stamp at the corner, signifying that we had paid one penny to the revenue of the kingdom for that same sheet of paper, over and above its commercial value. Now as we do not get (including the thirteen copies given with every dozen) from the wholesale vendors quite one penny per copy for this little miscellany, H. S. will perceive that we must give Government 1s. per dozen (of twelve) for stamps, sell thirteen for the same sum, and give in paper printing, engraving, and editing, which might be pleasant to the purchaser, but would certainly not get our petition through the New Bankruptcy Court, in case we got up before that tribunal.

PISCATUS.—MORDEN.—Thanks for the correction; the slip of the pen of "Protection Society" for "Preservation Society" is of no moment. It appears from PISCATUS's communication that we erred last week in stating that Coxen keeps the "Eelpie House," at Twickenham (it was a *lapsus memorie*); Mr. Mayo is host of that same; however, Richard Coxen has a bed and cooks for anglers, and (with his son) is, we perceive, the puntman of the place in the list printed by the Society. The sign of S. Kemp's house is "The Anglers." We are obliged for the "Report" forwarded, and regret that this admirable association is not better situated as regards its pecuniary resources. We daily see, however, that it is not the most praiseworthy attempts or the most laudable associations, that have the largest share of public support.

A WHITE NIGGER.—You're a funny chap; your hard toll don't seem to have saddened you. This is as it should be. In reply to your query—there is no "deep" at Isleworth, but there is capital fishing; and the puntmen's names are S. Styles and John Platt. They are civil fellows, and will put you in the way. At Hampton, either the Red Lion, or the Bell (Powell's) on which house you will find a few words by Miles's Boy, and a picture in No. 7 of this publication.

SAMUEL MEWBURN.—ISLINGTON.—You are a trump. We received your letter, although it was wrong directed. Publishers and Editors are very distinct persons; read the notice of last week.

A BATH CHAP IN LONDON.—The Lea is preserved for many miles, and to those parts an annual payment admits you, in some parts this is a guinea, in some half a guinea. It contains jack, pike, carp, tench, perch, barbel, chub, bream, roach, dace, bleak, gudgeon, eels, and occasionally, a trout is taken. In the Mole, which empties itself into the Thames at East Molesey, in Surrey, good sport may be had near Esher, Leatherhead, Chobham, Dorking, and Reigate. The Surrey Canal at Rotherhithe is a subscription water at one guinea per annum, or one shilling for a day's fishing. The Wandie, Roding, and Brent, are free in parts. The Wandie at Ackbridge, and Beddington Corner near Camshilton. The Roding has a good deal of free water; and jack-fishing (small) near Woodford Bridge. The Brent has a subscription water at the reservoir, at two guineas per annum, near Flury's (the Welsh Harp). But free fishing may be had in the above river both below the reservoirs and above on to Hanwell. Principal fish, Jack and perch. ENQUIRER.—Jem Ward fought Simon Byrne, July 12, 1841.

### OUR WEEKLY CALENDAR.

#### AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, July 27th.—TENTH SUNDAY AFTER TRINITY.—Robespierre beheaded, 1794.  
MONDAY, 28th.—Northfleet (near Gravesend) Regatta.—Lord Viscount Huntingtower makes his "first appearance" on the "boards" of the Bankruptcy Court; a wag declares that there is a literal error in his title, and that in future he should be printed in the peerage as Lord D-iscout Huntingtower.  
TUESDAY, 29th.—GOODWOOD RACES.—Spanish Armada destroyed, 1588.  
WEDNESDAY, 30th.—WYMOUTH REGATTA.—Leominster Races.—Charles X. de-throned, 1830.—The thieves' haunt in West-street, Smithfield, pulled down, and the materials sold, 1844; the auctioneer recommended the premises as "a capital plot for a Neugate novelist to build three stories upon."  
THURSDAY, 31st.—GOODWOOD CUP DAY.—Bridgnorth Races.—Greenwich Hospital foundation stone laid, 1836.  
FRIDAY, AUGUST 1.—Description of the Month.—This month was named in honour of Augustus Caesar, because in this month he was created Consul, thrice triumphant in Rome, subdued Egypt to the Roman Empire, and made an end to civil wars. Previous to the time of Caesar it was called Sextilis, being the sixth from March. The Romans placed this month under the protection of Ceres, the protector of corn and harvests.—The Gloucester Chronicle states, that "at a recent christening there were present, the child's mother, grandmother, great grandmother, and great-great-grandmother." This child was wrongly named if it was not christened "Morning Herald."—A Winkle about Wasps.—Professor Henslow has discovered that turpentine placed at the entrance of the nest is fatal to these insects. The mode of applying is to put the turpentine in a bottle, a small quantity, enough to wet the sides of the bottle, being sufficient; and insert the neck of the bottle in the hole which leads to the nest, and then plastering the sides of the orifice with dirt. It should be applied in the dusk of the evening, after the wasps are gone to rest, and if the orifice be pretty free the whole will be dead in the morning. The remedy will not fail unless the distance from the hole to the nest be considerable, or unless there be two holes, in which case discover and stop up the second.  
SATURDAY, 3d.—Wonderful Instinct.—A cat in this town (the editor of any country paper can fill up the blank at his good pleasure) having lost its kittens, was lately seen following a mutton-pie man and mewling most pitifully.—Battle of Blenheim, 1704.—Gardener's Calendar.—Sow onions, early cabbages, and parsley, for the succeeding year; and lettuces, spinach, brocoli, and cauliflowers, to stand the winter. Earth celery: hoe and thin turnips: transplant brocoli, savoy, and cauliflowers; and the principal crop of celery into trenches for blanching. Cut those herbs which are adapted for distillation or for winter use. Make mushroom beds, propagate kitchen herbs by slips, and take up all onions, garlic, and shallots, that are ripened in the stem. Continue to bud on fruit trees and roses so long as the bark rises freely and the weather is cloudy. To obtain new varieties, sow auricula, polyanthus, and anemone seeds, and mignonette, to blow in winter; as also the seeds of tulips, hyacinths, irises, and all the other bulbous-rooted flowers. Support and thin dahlias, to improve their bloom.

## SECTION II.

## ON THE SELECTION OF A SPOT TO SWIM IN.

Select a spot, when you purpose bathing, where the water is clear, without scum or froth on the surface. Ascertain the nature of the bottom, that there be neither weeds nor mud, as great annoyance, if not danger, may be the consequence of neglecting these precautions. The best bottom is gravel or smooth stones, so that you may stand as much at ease on dry *terra firma*, and escape sinking in the mud, or wounding the feet,—both which inconveniences are anything but pleasant. Observe also that the bottom be level, and not variegated by hill and dale; or rather, strewed with pits, some six feet deep, because it is very awkward on setting your foot over one of these to find yourself unexpectedly soused over head and ears with your mouth full of the delicious beverage. To ascertain this you may take a stick or a plummet, and carefully examine a given space, especially if you are a tyro, that you may make all the necessary efforts without danger or apprehension. And when you have found a fit place to learn in, do not venture elsewhere until you can "rule the element." The following, which is based on Dr. Franklin's method is the best way to acquire confidence in the water. The best place to learn to swim is where there is a shelving bank. Before you attempt to swim, rid yourself of the fear of sinking, which is a great hindrance, by ascertaining your own buoyancy in the water; and it is probable that in this experiment you may find you possess as it were, an intuitive knowledge of the mode of "striking out."

After having followed our directions as to the mode of entering the water, take an egg, walk into the water until it is up to your breast, then turn round your face to the shore, and throw the egg into the water between you and the shore; it will sink to the bottom, and you will easily see it if the water be clear. It must lie in the water so deep that you cannot reach to take it up but by diving for it. To encourage yourself to do this, reflect that your progress will be from deep to shallow water, and that you may at any time, by bringing your legs under you, and standing on the bottom, raise your head far above the water; then plunge under it with your eyes open, which must be kept open *before* going under, as you cannot open your eyelids afterwards with ease, owing to the weight of water above you; throwing yourself towards the egg, and endeavouring, by the action of your hands and feet against the water, to get forward, till within reach of it. In this attempt you will find that the water buoys you up against your inclination; that it is not so easy to sink as you imagine, and that you cannot, but by active force, get down to the egg. Thus you ascertain the power of water to support you, and learn to confide in that power, while your endeavours to overcome it and reach the egg teach you the manner of acting on the water with your feet and hands, which action is afterwards used in swimming to support your head higher above the water, or to go forward through it.

## SECTION III.

## HOW TO GO INTO THE WATER—PLUNGING.

Having given these few preliminary notices, intended chiefly for the juvenile and the tyro, we proceed to the best way of going into the water. This is unquestionably by leaping or plunging. Of this there are two methods—either with the feet or the head foremost. In the first, which is often used by good swimmers when the depth is uncertain, the feet should be kept together and the body inclined forwards, rather than backwards. In the second, which is here figured, and called the *headlong plunge*, the modes are various. The method we prefer is given in the cut beneath, (Fig. 1.) and is thus

THE HEADLONG PLUNGE.

effected. The swimmer takes his stand on the edge of the leaping-board (we presume him to be learning in a bath or swimming school) with his arms extended, his knees bent, and his body inclined forwards. When the head comes almost in a line with the feet, then the legs are rather stretched than impelled, the knees are kept very stiff, and the legs in their position impel forwards. The beauty of the headlong plunge is, when the swimmer so manages it as to plunge quite noiselessly into the water, and does not raise more bubbles or make more disturbance than a thin piece of wood falling perpendicularly would do.

Our second figure represents the

RUNNING PLUNGE,

in making which the swimmer flings himself from the leaping-place in the posture above figured. A third may be added of a rather more complex description, inasmuch as it can only be made from a small elevation. It is termed the *FLAT PLUNGE*. In this the swimmer flings himself as far forwards in a horizontal line as possible, and in such a manner that his head reaches the surface of the water before the impulse ceases. So soon as the swimmer touches the water, he must keep his head back, his loins hollow, and his hands, which are extended forwards, flat and somewhat erect. In this manner he will dart along for a considerable space, close under the surface of the water. This leap is to be recommended where the water is shallow or doubtful.

The last figure we shall this week present is that of the true position for *DIVING*. In

DIVING.

swimming under water, he may either move exactly in the same way (to be explained in our next number), varying his angle of descent according to his wish, or keep his hands stretched before him, which he will find materially to assist him in cutting the water, and also greatly relieve the breast. If the diver find that he approaches the surface, he must press the palms of his hands *upwards*, striking with them rapidly and repeatedly, whilst the feet are in a state of rest; and when he has attained a perpendicular position, he should stretch out his hands like feelers, and make the usual swimming motion with his feet; he will then descend with great rapidity. It is well to practice yourself in opening your eyes and keeping them open under water, at least in all places where the bed of

(Continued on p. 248.)

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE BATTLE OF CREE.

## CHAPTER III.—(Continued.)

HEN. (OR HENRY) PEARCE, THE GAME CHICKEN, CHAMPION OF ENGLAND.

Pearce displayed great science and courage throughout the fight: in point of strength, he was much superior to Belcher, as was shown by the tremendous falls which the latter received when they closed. The advantages were all on the side of the Chicken, excepting science, and Belcher's defective sight rendered even that of less importance every round. It was the serious opinion of Pearce, that twice in the fight he could have finished the battle, so exhausted and defenceless was Belcher. The Chicken now sported the blue spotted silk handkerchief, as the Champion's colour; and that handkerchief, which had so long been the fashion, and which had so often formed a part of the dress of the successful partisans, in compliment to their favourite hero, was placed in a secondary rank. But though, like the colours of an admiral, deprived of precedence when taken by an enemy, its honour remained unsullied, having been lost in a fair fight.

The Chicken had now proved himself a thorough bred Game Cock, and the walk might fairly be said all *his own*! But a gamekeeper of the name of FORD, who was dazzled with his own good qualities, rashly challenged him, but as he could not raise the stakes a forfeit was the consequence. This perhaps was a fortunate circumstance for him, as there is but little doubt he would have soon proved *blind* to his own interest.

Pearce, like too many of his predecessors of pugilistic notoriety, foundered on the same rock on which they had split. Examples, advices, and lessons, it should seem, all lose their effect on persons, who, in the bloom of youth, health and vigour, laugh at the idea of incurring any serious consequences from intemperance, till they find it out themselves, when, generally it is too late to be remedied. The Chicken, during his residence in the Metropolis, had made rather too free with his constitution; yet we have authority for observing, that it originated more from circumstances and place, than sheer inclination. His health became impaired, and he retired to his native place, to enjoy the comforts of domesticated life; and by the advice of his friends, the relinquished profession of a pugilist for that of a publican.

We are now arrived at an episode in the life of Pearce, which we would earnestly recommend to the perusal of "Craven," and other calumniators of pugilists and pugilism; we doubt if a similar deed can be recorded of many of the canters who decry prizefighters as "*inhuman savages*!" Let "Craven" chew upon this. In the month of November, 1807, a fire broke out at Mrs. Denzill's, a silk-mercer, in Thomas-street, Bristol, and the flames had made such rapid progress, that the servant of the house, a poor girl, who had retired to rest in the attic story, was nearly enveloped in flames before she awoke to her dreadful situation. Frantic with despair, she presented herself at the window imploring help—her screams pierced the hearts of the spectators, who appeared rivetted with agony to the spot, expecting every moment her threatened destruction. But none move; all are petrified with fear and horror. At length, Pearce, "the Prize-fighter by profession and the savage by nature," according to "Craven" appeared in the crowd; he sees the life of a human being in danger, and feels prompted to the perilous endeavour of an immediate rescue. By the aid of the adjoining house, he reaches the parapet, and hanging over it, firmly grasps the wrists of the wretched girl—the multitude are lost in astonishment, and never did a more, if such an interesting moment present itself—hope, fear, and all the higher emotions are on the rack at beholding the intrepidity of a man losing every thought of self to the hope of delivering a fellow-creature from a dreadful death. The additional weight, added to the height, from the parapet, was almost too much for the nearly exhausted exertions of Pearce.

"Cowards die many times before their deaths,  
The valiant never taste of death but once."

and so it proved:—his brave heart leaped within him, and with a noble effort he draws his trembling charge from the window, places her safe upon the parapet, and in an instant she is out of danger.—Universal joy prevailed. The delighted multitude was loud in their plaudits—and the almost lifeless sufferer clinging round the knees of her deliverer, invoked blessings on his name. This was the happiest moment of Pearce's life. The shouts of victory, and the flattering praises that had so often attended him in the field of honour, were mere shadows to his feelings—compared with that of an approving conscience.—Yet, this was the act of a pugilist!—one who had entered the field to obtain a purse of gold as a prize-fighter. Here was no gold to tempt him to risk his life: the smallest deviation of balance must have precipitated him headlong to destruction; and no opportunity of retreating from the consequences. The gallant soldier in mounting the forlorn hope, and the hardy tar in boarding the ships of the enemy, are stimulated by a thirst of glory and love of country, that prompts them to those deeds of heroism; but Pearce

was actuated by no other motive than that of *humanity*; and when that "recording angel," who dropped a tear and blotted out for ever the intemperate expression of my uncle Toby, shall turn the page of the evil deeds of Pearce, may be similarly obliterated, we sincerely trust.

A short time after the noble deed we have just narrated the Game Chicken again distinguished himself in rescuing one of the fair sex from insult and danger. In his way over Clifton-downs, near Bristol, Pearce perceived a young woman suffering much from the brutal attacks of three men. Regardless of the consequences, Pearce instantly interposed, when they fell upon him with fury; but the courage and science of Pearce soon made them severely repent of their temerity. The Chicken received their onset with such coolness and intrepidity, and so successfully planted his levelling hits upon their frames, that one of them, of the name of Hood, was so satisfied, in seven minutes, that he bolted, and left his companions to the care of Pearce. In a quarter of an hour, the Chicken so served-out Morris and Francis, the other two, that they declined the strife, and apologised for their rudeness: while the terrified female could only thank her gallant defender for his seasonable protection. It appears that, however Pearce might have been crowned with honour, gratified by the enviable title of Champion, and admired by his friends in general—yet still he was not happy. That source of true felicity and real consolation, to which a man flies to alleviate his troubles or participate in his honours, was unhappily polluted, and his wife's incontinence had rendered home so miserable, that he left his native place, never more to return.

Pearce now went to different country towns exhibiting sparring, and teaching the art of self-defence, and we need hardly say was much patronised. The Chicken was in the neighbourhood of Oxford when Jem Belcher and Cribb fought their last battle, and felt so anxiously upon the issue of the combat, that he set off in a post-chaise to witness the fight. On Cribb's proving victorious, he exclaimed, with great earnestness, "that he hoped he should get well, that he might teach Cribb how to fight!"

Pearce took a benefit at the Fives Court, on February 9, 1809, when some good sparring was exhibited. Every interest was exerted to give him support. Pearce was now the victim of palmarian consumption, and in the last stage of that afflicting disease; he was scarcely able to walk to the Court to thank his friends.

The appearance of the Chicken was much lar; his height about five feet nine inches; and the roundness of his chest and limbs denoted considerable strength, in some degree resembling the manly contour of the champion, Tom Johnson. During the time Pearce enjoyed sound health, his excellence as a pugilist was admitted by all parties; and he stood above all competitors. In uniting the courage of a lion with true kindness of heart, Pearce must command our praise. He was a tremendous hard hitter, and his left handed blow was so terrible in its effects, that his opponents have been seen in a complete state of stupor for several seconds, and often never recovered the proper use of their faculties during the fight.

As a proof that he was not fond of vainly courting the popularity of the multitude, or in making a show of himself, by figuring upon the box of some spoilt child of fortune's four-in-hand, immediately upon getting his clothes on, after his memorable fight with Burke, upon Wimbledon-common, he stole away unobserved; and being missed, a general inquiry took place among his friends, to know what had become of him. After considerable time being lost in search of the Chicken, some person recollected that he saw a man like Pearce run and jump up behind a coach; upon which information, his second, Bill Gibbons, endeavoured to trace him along the road, and, at length, observed the Chicken in a public-house at Chelsea, cooking himself mutton-chops at the fire, with the most perfect indifference. Pearce immediately invited Gibbons to partake of them, without alluding to his singularity in leaving the ground instead of making his return to town in triumph on some swell-drag, after the fashion of the days of which we are writing.

At the Coach and Horses, St. Martin's Lane, (now in the occupation of Ben Caunt, the Champion,) on Sunday, April 30, 1809, the Game Chicken departed this life. His fortune never forsook him, and, in the most trying moments, he displayed calmness and resignation; he experienced no terrors from his approaching end, expressing a wish to die in friendship with all mankind. He expressed a strong desire to be buried by the side of Bill Warr, in St. James's burying ground, Pancras; and this wish was complied with. Pearce was in his thirty-second year.

"Strength, too; thou surly, and less gentle boast  
Of those that laugh loud at the village ring;  
A fit of common sickness pulls thee down  
With greater ease than e'er thou didst the stripling  
That rashly dared thee to th' unequal fight."

"Silence gives consent," as the man said when he kissed the dumb woman.

## QUADRILLE DANCING IN NEW YORK.

Jest then cousin Beebe called out my name from t'other side of the room. I wish you could a seen how they all stared. It warn't more than ten minits arter that, afore eeanmost every one in there was at cousin Beebe to be introduced to me—the fellows with the brusties and all. The purtyest gals in the room kept a flocking round me as if they'd never seen a man that wrote for the newspapers afore. Talk about soft sodder!—there's nobody on arth can put it into a chap as smooth as a harnsome gal. Somehow they melt it with their smiles, till it sinks through his heart afore he knows it. I was talking with a rare peeler of a gal, with two of the brightest black eyes that I ever see, when somebody struck up a tune on the pianer-forte, and two or three couple got onto the floor as if they wanted to dance. "Do you dance quadrilles, Mr. Slick?" sez the black-eyed gal, as if she wanted me to ask her to dance. "Wal, I don't know," sez I; "I never tried them kind of things; but I rather guess I can, if you show me how." With that I took the tip end of her white glove between the fingers of my yaller one, and went with her into the middle of the room. I didn't know what they were a going to dance, but I warn't much afeard, anyhow; for there warn't a chap in all Weathersfield could beat me at a double-shuffle, or could cut so neat a pigeon-wing without music, as I could. Wal, the music began, and one of the fellers that had the hair on his lip began to slide about with his eyes half-shut, and his hands hanging down, and looking as doleful as if he'd just come away from a funeral. Did you ever see a duck swim in a mill-dam, or a hen turning up it's eyes when it's a-drinking? If you have, you can git some idee how the lazy oots danced. I thought I should go off the handle to see him; but the gals all stuck out their little feet, and pocked about jest in the same way. "Think," sez I, "when it comes to my turn, I'll give you a little specimen of genuine dancing. I only wish I had thought to put a little loose change in my pockets to jingle, if it was only jest to show how well I keep step. A young lady, with her hair twisted all up with little white flowers, balanced up to me jest as you've seen a bird walk, and then it came to my turn. I took two steps for ards, and then I cut a peeler of a pigeon-wing, and ended off with a little touch of the double-shuffle; but my trousers were so plaguy tight, that I couldnt make my legs limber, all I could do; besides, the music warn't much more like a dancing-tune than Greenbank or Old Hundred. At last, I went up to the gal that was playing, and sez I, "Look a-here—jest give us something lively—Yankee Doodle, or Monsey Muse, or the Irish Washerwoman, or Paddy Carey. I ain't a going to twist and pucker round in this way!" With that the young fellers with their hair lips begun to push their cambric handkerchiefs into their mouths, and the young gals puckered up their mouths as if'd done something to make fun at. But instid of sneaking off, and letting the stack-up varmint think they's scared me so that I dairen't dance, I felt me dander a getting up, and sez I to myself, "I guess I'll let 'em see that I warn't brought up in the woods, to be scared at owls, anyhow;" so I jest turned to the black-eyed gal that was my partner, and sez I, "Come now, miss, and let us show 'em how it's done;" and with that I began to put it down right and left like a streak of lightning. It warn't more than two minits afore I heard the gals a talking to each other, and a saying, "How odd! How strange! Quite the eccentricity of genius! These literary lions never do anything as other people do. I don't wonder Miss Beebe's proud of him!" The young fellers joined in the minit they begin to see how the wind was blowing up in my quarter; and when I finished off and led the black-eyed gal to one of the footstools, there was no end to the soft sodder they all put on to me. Sez I to myself, "Nothing like keeping a stiff upper-lip with those stack-up fashionables; for, arter all, they ain't more than half-sartin what's genteel and what ain't."

—Jonathan Slick.

A PARADOX.—Verily, children do put strange questions to their papas and mammas, to wit:—"Pa; why do you wear straps?" "To keep my trousers down, Jehn." "Pa; why do you wear braces?" "To keep my trousers up, Jehn." "Well, pa, that is funny."

A SLIGHT DIFFERENCE.—A pompous fellow made a very inadequate offer for a valuable property, and calling the next day for an answer, inquired if the owner had entertained his proposition. "No," replied the other, "your proposition has entertained me."

"DON'T ANSWER QUESTIONS, MY LAD."—It is well known that the jockies are not the most honest people in the world, and that they have to deal with turf characters of all sorts, even more dishonest than themselves. The father of a jockey brings his son up with instructions to be cautious, and the order to the student of jockeyship is, not to answer questions. A lad of diminutive size won a race at Ascot, completely felling his older competitors. The Queen, struck by the appearance of the youth, sent Lord Errol to bring him before her. This Lord Errol did, and on the youth arriving in the presence of the Queen, her Majesty began with, "Well, my little man, how old are you?" The boy replied, "Mussn't tell you, marm. Feyther could me to answer no questions." Her Majesty smiled, and thus ended the interview.

A MATRIMONIAL HINT.—"I am afraid," said a lady to her husband, "that I am going to have a stiff neck." "Not at all improbable, my dear," replied her spouse. "I have seen strong symptoms of it ever since we were married."

## THE ART OF SHAVING THE LADIES.

By an Old Shaver.

Many advertisements appear—"Wanted a Young Man of Genteel Address for an Assistant to a Linendraper." We now see what is meant by a "genteel address." It is that conversational art whereby the process termed "shaving the ladies" is effected.

"Shaving the ladies" is a very delicate operation; and a few hints as to its mode of performance may be acceptable to those whom they may concern:—

No sort of shaving can be effected without soap, except what is called "close shaving, as practised at workhouses and the Mansion-house. Without impertinently inquiring how drapers' assistants in general are circumstanced with respect to that article, we will at once present them with a little cake of it, premising that the soap which the ladies are to be shaved with must be particularly soft—*soft soap*, metaphorically speaking, is the rhetoric of the counter.

The first figure to be studied to this species of rhetoric is that called hyperbole, which is derived from two Greek words, signifying to overshoot a feat to be accomplished by the use of the long bow; that is to say, by telling enormous fibs. So when a lady asks, "Will this wash?" "Will that wear?" and so forth, no hesitation must be made in answering, or, if necessary swearing in the affirmative.

Be careful in laying on your soap. You must not do this too violently. Your situation, with respect to the lady whom you are to shave, is not such as to admit of telling her that those sparkling eyes, those raven or auburn tresses, that roseate cheek, that sylph-like form of hers will be set off to such advantage by this or that silk, satin, muslin, bombazine, or what not. You are only to insinuate all this. As thus—

"That pink lining, Miss, is lovely—really quite lovely—for any lady with a delicate complexion."

"These flowers, ma'am, are exquisite to match dark hair and a high forehead—I assure you they are considered so. If I might venture the remark, ma'am, they would become a lady like yourself extremely."

"This is an article, my lady, which I would strongly recommend to your ladyship. It is true that it would only suit a first-rate figure; but I am quite confident that it is just the dress for your ladyship."

You will find it advantageous, having named a sum considerably above the mark, to abate a little of it sometimes, and to lead a lady to suppose that she has won upon you so to do. As, for instance—

"Well, really, ma'am, this is seventeen and six; but to you—I don't mind saying sixteen."

You will also do well to practice a little on female apprehension and eagerness, as follows:—

"I assure you miss, 'pon my honour, that this article is the very last we have got: and I am certain you wont meet with it at any other establishment." The fact may be that both your master, and the man over the way are overstocked.

A CLEVER BOY.—A farmer's wife in speaking of the smartness, aptness, and intelligence, of her son, a lad six years old, to a lady visitor said, "He can read fluently in any part of the Bible, repeat the whole Catechism, and weed onions as well as his father." "Yes, mother," added the young hopeful with a broad grin, "and yesterday I licked Ned Rawson, throwed the cat into the well, and stole old Hineckley's gimlet."

Why are women indispensable in mining? Because there must be a chamber made at the end of each gallery.

Upon what supposition would you build a house with your pocket-handkerchief?—Supposing it be cambric (became brick).

HOMEBRED BULLS.—The Marquis of Clanricarde, an Irish peer, told their lordships the other day, that "the *Nation* newspaper was read to the people by those who could not read themselves!" Sir Robert Inglis, who represents Oxford University, being anxious that England should not be outdone by Ireland, subsequently asked the speaker of the House of Commons "whether any member, referring to another, had a right to express his unutterable contempt."

## DEED OF MEMORY.

When Jack was poor, the lad was frank and free;  
Of late he's grown brimful of pride and pelf.  
You wonder why he don't remember me.  
Why not? You see he has forgot himself.

A PORTENT APPEARED FOR A SLEEPY SHOPKEEPER.—About half-past eight o'clock one morning last week, the shutters of a certain shopkeeper, not far from the centre of Oldham, presented, to the surprise of all passers-by, the following choice morsel of poetry, written in chalk:—

"Dismiss your fears, we are not dead,  
But sleep securely on our bed;  
Should we awake in course o'th day,  
We'll open shop without delay."

A CANDID ENCOURAGEMENT.—"Sam," said one little urobin to another, the other day, "Sam, does your schoolmaster ever give you any rewards of merit?" "I s'pose he does," was the rejoinder; "he gives me a lickin' every day, and says I merits two!"

water will admit the light, as it will give confidence by enabling you to ascertain your position and depth.

In our next paper we propose to give General Pfuffel's method of teaching swimming by means of the pole and belt, which is taught in the Prussian 'swimming schools, and which is a modification of the plan made known to the British public by Captain Elias, in his "Gymnastic Exercises." (To be continued.)

### YOUNG REED,

THE ANTAGONIST OF GILL, ON JULY 22.

Alas! frail and uncertain are the prognostications of the "knowing ones." The reader is here presented with an accurate and life-like sketch of "Young Reed," whom we, as well as thousands of others, had reckoned on as the victor in Tuesday's tourney. But the fates proved unpropitious, and after a hard struggle, the details of which will be found in *Bell's Life* of the present week, the young one, whose previous exploits were a neatly won victory over young Clarke, at Maidenhead, December 14, 1841, and the conquest of Peter Stevens on the 11th July, 1843, was forced to succumb. Despite his defeat of Tuesday, we take it he will yet prove an attractive 8st. 10lb. little 'un, and have given his portrait, regretting that we cannot this week procure that of the victor Gill, of Coventry, to accompany the same.

### THE FERRET.

The ferret was originally a native of Africa. Strabo mentions its importation from that quarter of the world into Spain, from whence it

has become distributed over Britain, France, Italy, Germany, and other European countries.

The length of the ferret from the nose to the end of the body is one foot two inches, or, including the tail, one foot seven inches and a half. The eyes are fiery red or pink; and the body is usually of a yellowish colour, with more or less white intermixed, owing to the long fur being partly white, whilst the shorter is almost wholly yellow. Franzius describes the ferret of his time as having "a little head, a red back, and a white belly." (*History of Brutes*, translated by N. W. (1670), p. 216),—a description which, as far as it goes, would agree with the African fitch (*Putorius Africanus*, Desmarest).

In temperate climates the utmost care and great warmth are required to preserve this delicate animal. It is usually kept in a hutch or box containing wool, of which it forms a warm and snug bed for itself. It sleeps during the greater part of the day; but towards night it wakes up, and shows great impatience for a supply of food, which, in its domesticated state, generally consists of bread and milk. It is not difficult to be tamed, and then will permit itself to be handled and played with, and this appearance of gentleness and good temper sometimes leads to its being indulged with the run of the house. But no reliance can be placed on its conduct; for unless carefully watched, and well fed, it will make savage and indiscriminate attacks upon all around, if it should chance to smell or taste blood. It is easily irritated while in its hutch, and will then bite severely, diffusing at the same time a more strongly offensive smell than ordinary.

In its half-reclaimed state, the ferret is a useful animal to man; for he employs it to pursue and kill rats and other vermin, and to assist him in catching rabbits by driving them out of their burrows, for which purpose it was also used in the time of Pliny (*Hist. Nat. lib. viii. cap. iv.*). It was introduced into Spain expressly to reduce a most inconvenient superabundance of rabbits in that country. When it is required to assist in catching the rabbits alive, it is muzzled previously to its being sent down their burrows. The ferret being thus rendered incapable of injuring the rabbits, can still alarm them, so that in their fright they attempt to make a hasty retreat from the mouth of the burrow, where, however, they become inextricably entangled in the meshes of the net, which the warrenner has placed there to catch them. Should the ferret, while in the warren, get disengaged from its muzzle, it will seize the rabbits, gorge itself with their blood, and then fall asleep instead of returning to its master. When the ferret is guilty of this dereliction of duty, the warrenner has either to dig his way down to it, or to smoke it out. Sometimes, however, the ferret has been known to succeed in maintaining this state of liberty all the summer, regaling itself with the blood of the rabbits during the whole season; but when the winter has set in, it has either perished from cold, or been obliged to leave its lodging, and submitted to be recaptured. If permitted to seize a rabbit above ground, it generally seizes it by the neck, winds itself round it, sucks its victim's blood, and does not leave it until completely satiated.

Frequent attempts have been made to keep the ferret on board ship, for the purpose of killing the rats, which prove so destructive to vessels and their cargoes; but this mode of life appears so badly suited to it, that it seldom stands it for any length of time.

Besides rabbits and rats, it will feed upon pigeons, fishes, and milk.

The ferret breeds twice in a year, and the female goes with young six weeks. She has from six to nine at a litter, and is reported to bring forth more females than males. Sometimes she will devour her young as soon as they are born, and will breed again soon afterwards. "Warrenners assert," says Pennant, "that the fitch will intermix with the ferret, and they are sometimes obliged to procure an intercourse between these animals to improve the breed of the latter, which, by long confinement, will abate its savage nature, and become less eager after rabbits, and consequently less useful. The Rev. Mr. Lewis, vicar of Llansowel, in Caermarthenshire, had a tame female ferret, which was permitted to go about the house. At length it absented itself for several days, and on its return proved to be with young, and produced nine of a deep brown colour, more like the fitch than the ferret. What makes it more certain that they were begotten by a fitch is, that Mr. Lewis had no male ferret; neither was there any within three miles, and these closely confined." Buffon denies that these animals ever breed together, yet he has published a figure of what he calls *le furet putois*, or fitch ferret, which, as Pennant observes, has much the appearance of being the spurious offspring of such an intermixture. Professor Bell says, he can obtain no authentic verification of the assertion that the breeders of ferrets have recourse to the fitch to improve the breed; but Mr. Yarrell assures me that it is a fact, and that he has often seen ferrets whose coats were, consequently, of a brown colour. Goldsmith speaks of brown, blackish, and also parti-coloured ferrets. Mr. Blyth says, that "the stoat and pine-marten, in confinement, have been known to breed with the ferret, or domesticated fitch."

Goldsmith says, the ferret has been known to attack and kill children in the cradle; and Mr. Jesse relates, that at Kingston in Surrey, some years ago, a poor woman, having left her child (about six months old) in a cradle, while she went to market, a large ferret, which was formerly shy and gentle, made a ferocious attack upon the helpless infant. The neighbours heard the child's screams for more than half an hour; and it was not until the return of the mother, that it was found almost killed. She

carried the child to a surgeon, who found that the face, neck, and arms were dreadfully lacerated, the jugular vein and temporal artery were opened, and the eyes greatly injured. Having stopped the flow of blood, the surgeon accompanied the mother to her home, on entering which, the child, somewhat recovering from its exhausted state, began to cry, and in an instant the ferret rushed from his hiding place, and with his head erect boldly approached towards the infuriated parent, who still had the infant in her arms. The surgeon kicked the ferret, but the animal tried to seize his leg; and not until his back was broken by repeated kicks, did he discontinue his eager attempts to renew his sanguinary feast; and, indeed, whilst in the agonies of death, he seemed to make vain efforts to regain his prey.

"A bargeman, of the name of Isles, procured a ferret to kill the rats which did great mischief in his barge. Not seeing the ferret for a considerable time, and supposing that it was feasting on some of its prey, the man went to sleep, but was awakened early next morning by the ferret making a regular attack upon him. The animal had seized him near his eyebrow; and the man having vainly attempted to shake him off, at length cut off the body with a knife, but the head still stuck so fast as to be with difficulty removed."

#### DESTRUCTION OF RATS.

Dr. Ure has communicated to the Royal Agricultural Society of England, the following results of his experiments on the best mode of preparing phosphorus as a poison for rats:—In the *Journal* of the Royal Agricultural Society, there was published, several months ago, a prescription for preparing a poison for the above purpose, by an English gentleman resident in Germany. That preparation consisted essentially of phosphorus mixed with flour and sugar. It has been tried by a friend of mine in Derbyshire, who has a most extensive farm, and found to answer the purpose well; but there is a great difficulty in preparing it, from the insolubility, and even immiscibility, of phosphorus in water, attended with no little danger of fire. The process I have found to succeed perfectly is as follows:—"Melt lard in a bottle plunged in water heated to about 150 deg. Fah.; introduce into it half an ounce of phosphorus for every pound of lard; then add a pint of proof spirit of whisky: cork the bottle firmly after its contents have been heated to 150 deg., taking it at the same time out of the water-bath, and agitate smartly till the phosphorus becomes uniformly diffused, forming a milky-looking liquid. This mixture being cooled, with occasional agitation at first will afford a white compound of phosphorus and lard, from which the spirit spontaneously separates, and may be poured off to be used again, for none of it enters into the combination; but it merely serves to communicate the phosphorus, and to diffuse it in very fine particles through the lard. This fatty compound, on being warmed very gently, may be poured out into a mixture of wheat-flour and sugar incorporated therewith, and then flavoured with oil of Rhodium, or not, at pleasure. The flavour may be varied with oil of aniseed, &c. This dough, being made into pellets, is to be laid in rat-holes. By its luminousness in the dark, it attracts their notice, and being agreeable to their palates and noses, it is readily eaten, and proves certainly fatal. They soon are seen issuing from their lurking places to seek for water to quench their burning thirst and bowels; and they commonly die near the water. They continue to eat it as long as it is offered to them, without being deterred by the fate of their fellows, as is known to be the case with arsenical doses." My friend in Derbyshire bought a pot of Mr. Meyer's rat-poison, and found it to be an analogous phosphoric preparation. The present mode of preparing it is the result of my own experiments, made with a view of diffusing phosphorus through a mass of flour and sugar, &c., without the risk of fire.

**REWARDING HONESTY.**—A nigger servant, sweeping out a bachelor's room, found a sixpence on the carpet, which he carried to his master. "You may keep it for your honesty," said he. A short time after, he missed his gold pencil-case, and inquired of his servant if he had seen it. "Ees, massa." "And what did you do with it?" "Keep it for 'im honesty, massa!" replied Sambo, exhibiting his ivory. His master exploded.

"Oh, sing, again that melody," as the old woman said to her tea-kettle.

**A DANGEROUS POSITION.**—When Rabelais was on his death-bed, a consultation of physicians was called. "Dear gentlemen," said the wit to the doctors, raising his languid head, "let me die a natural death."

A very corpulent man being accosted by another, to whom he owed money with a "How d'ye do?" answered, "Pretty well, I thank you. You see I hold my own." "Yes," replied the creditor, "and mine too, to my sorrow."

**SHARE GAMBLING.**—The butler of a lady at the West end, with many a hum and a ha, lately requested that she would look out for another, as he was about to retire from "service" altogether. On being pressed for his reason, he said—'Why, ma'am, I have been rayther fortunate in rail-ways: I have made 4,000l.'" "But how could you have made so much?" "Why, ma'am, I dates my letters from your house, and it being a werry swelly situation, I gets my shares; for if they makes inquiries, you know, ma'am, I answers them myself."

#### THE DISAPPOINTED SPONGE TO HIS HOST.

I CALL'D on you, designing  
To stop and take pot-luck,  
On mutton you were dining  
When I expected duck;  
You had no currant jelly;  
Aha! how I was dish'd:  
Your soup was vermicelli;  
I for mock-turtle wish'd.

I for potatoes care not,  
Except they're mash'd or fried;  
And yours, confound you! were not,  
Nor had you greens beside:  
Then you were out of mustard;  
Your tart was fruit, not jam;  
Nor had you any custard,  
Of which so fond I am.

And Cheshire cheese succeeded;  
The proffered plate I wail'd;  
Stilton was what I needed;  
How badly you behaved!  
I hoped to taste your Sherry,  
That fav'rite drink of mine;  
But found, disgusted, very,  
You'd nought but ginger wine.

You've hurt my feelings greatly,  
You have, you have indeed;  
You never, until lately,  
Gave me so poor a feed.  
Oh! keep a better table,  
Or, though 'twill give me pain,  
I never shall be able  
To dine with you again.

**VERY LIKELY.**—"How is your husband this afternoon, Mrs. Squiggs?" "Why, the doctor says as how as if he lives till mornin', he shall have some hopes of him; but if he don't, he is afeard he must give him up."

**SUSPENSION.**—Why was the bridge from Hungerford to Surrey called the Suspension bridge? Because the public was so long kept in suspense upon the subject of its completion.

**THE LATEST CASE.**—The very latest case of modesty is that of a young lady who wore green spectacles, because she objected to looking at gentlemen with her naked eye.

**A HARMLESS THREAT.**—A physician, quarrelling with a neighbour, swore, in a great rage, that some time or other he would be the death of him. "No, doctor," replied the other, "for I shall never send for you."

**TIGHT SHOES.**—Corns are undoubted offspring of tight shoes; and tight shoes the proper punishers of human vanity. If the rules of society require that I should imprison my toes, it does not follow that I should voluntarily force them on the treadmill. The foot of man does not end in a point; its termination is nearly circular. Hence it is plain and obvious, that a pointed shoe will have the effect of forcing the toes into so small a space that one will lie over the other for want of room. By having always worn shoes suited to the form of my foot, I have now at sixty-two the full use of my toes.—*Waterton.*

**POTATOES.**—The *Edinburgh Weekly Register* says, a correspondent from West Lothian informs us, that one row of potatoes, twenty-three yards long, off which he pulled the bloom, produced 13½ lbs. weight more potatoes than any of the rows in which he left the bloom growing.

Why is a dog with a broken leg like a boy at arithmetic? Because he puts down three and carries one.

**SUPERSTITION AMONG COLLIERIES.**—Pitmen consider it unlucky to meet a woman or a pig on their way to work: of course they are on the look-out through the day for some untoward event, when that has been the case. That it always happens so, is more than I can vouch for, but there is no rule without exception.

A correspondent says—"Water has been so very scarce here in Lancashire, that farmers and graziers have been obliged to send their milk to the market genuine in consequence."

**WHAT TO PURCHASE, AND WHERE.**—Buy your penny trumpets of the *Herald*—your flags from the *Standard* (for the *Standard* is likely to flag)—your beer (no matter how small) from the *Tap-Tub*—your images of Cupid, at the office of the *Globe*—your kitchen-stuff from the *Post*—your eclipse (if ever you undertake to make darkness visible) from the *Sun*—your history of the past, from the *Chronicle*—and your news, knowledge, and intelligence of the present, from the *Times*.

"Mother," said a little square-built urchin, about five years old "why don't my teacher make me monitor sometimes? I can lick every boy in my class but one."

"My dear," said a wife to her husband, "did you ever read of the plague in London?" "No, I don't want to read it; it's enough to have a plague in my own house."

## ADVERTISEMENTS.

**WIT and WISDOM.—EVERY ONE** wishing to be married! every one about to be married!! every one who is to be married!!! every one who has been married!!!! that is to say, every Spinster, Wife, and Widow, Bachelor, Husband, and Widower, should purchase No. 13 of **CLEAVE'S GALLERY OF COMICALITIES!** a penny broadsheet of broadhumour, containing an original series of whimsical illustrations of the adventures and misadventures of Mr. and Mrs. Caudle, and other "right marrie" cuts, "too numerous to mention."

London: **CLEAVE**, 1, Shoe-lane, Fleet-street; and sold by all vendors of the "Sportsman's Magazine."

Now Publishing, in Weekly Numbers, price 1d., and in Parts, price 6d.,

**THE HISTORY OF THE CONSULATE AND EMPIRE OF FRANCE**, under Napoleon, by **M. THIERS**, Author of the "History of the French Revolution, late President of the Council, and Member of the Chamber of Deputies.

**CONDITIONS.**—The work will be neatly printed in two columns, royal octavo, from a new and beautiful type, and on fine paper.

It will be uniform with "The People's Edition of Thiers' History of the French Revolution," forming, together, four handsome volumes.

On the completion of the Work, a general Preface, introductory to the History of Napoleon, with Titles, Index, &c., will be given, thus forming a complete standard classical book of general reference, and interesting perusal.

London: **G. VICKERS**, Holywell-street, Strand.

### IMPORTANT TO ALL VENDERS OF CHEAP PUBLICATIONS.

All clean unsold Copies will be exchanged. A very liberal allowance to the trade. Lots of Fun for everybody.

Just published, No. 5 of

**BELL'S LIFE GALLERY OF COMICALITIES**, containing the greatest fund of Amusement, with Riddles, ever published at the price. Nos. 1 to 4 are now reprinted, and contain upwards of two hundred and fifty splendid Engravings, by Corkscrew, Chaffield, Alken, the late Seymour, and other celebrated characters. Only one Penny each. London: Published by **W. Cuffin**, 31, Oxford-street, near Mile-end-gate, and sold by every Bookseller and News-vender in the kingdom.

The following **SPORTING HANDBOOKS**, all uniformly bound in cloth, price 8d., or post free, 1s. each, are published by **W. M. CLARK**, 17, Warwick-lane, Paternoster-row, and sold by every bookseller in the United Kingdom.

**SPORTING SONGS**, Containing upwards of 100 of the most approved Sporting Songs extant.

Also, in One Volume, 8vo., handsomely bound, price 5s., with nearly Seventy Engravings, an entirely New Edition, (the fourth) revised, and nearly re-written, of the popular Romance of

**DICK TURPIN, THE HIGHWAYMAN.**

By **HENRY D. MILES**.

**W. M. CLARK**, 17, Warwick-lane.

**THE TRULY WONDERFUL CURES OF ASTHMA AND CONSUMPTION, COUGHS, COLDS, &c.,** Which are every where performed by

**DR. LOCOCK'S PULMONIC WAFERS**, have long established them as the most certain, perfect, and speedy remedy in existence for all disorders of the breath and lungs.

*Cures of Pulmonary Consumption in Newcastle-upon-Tyne.*

Dec. 5, 1844.

Gentlemen,—I can speak of your Wafers, myself, with the greatest confidence, having recommended them in many cases of *Pulmonary Consumption*, and they have always afforded relief when every thing else has failed; and the patients having been surfeited with medicine, are delighted to meet with so efficient a remedy having such an agreeable taste, &c.

(Signed)

**JNO. MAWSON**, Surgeon.

13, Mosley-street, Newcastle.

*Another extraordinary Cure of Confirmed Asthma.* Mrs. Gordon, of Flookerbrook, Chester, had long been given up as incurable, and was for many weeks confined to bed in the last stage of an asthma; she could not sleep for her difficult breathing, cough, &c. The first two Wafers she took relieved her cough, an hour after which she had a comfortable sleep, and in twelve days was able to walk out. Mrs. Gordon will be happy to reply to all inquiries. March 26, 1845.

*Remarkable Case of Improvement of the Voice.* From the celebrated Infant **Thalia**.

Jan. 15, 1845.

Sir,—My little girl, known as the Infant **Thalia**, suffered

late very severely from a cough, and relaxed uvula, so much so that she could not fulfil her professional duties. Various remedies were tried without success, until a friend recommended your *Pulmonic Wafers*; their beneficial effect was instantly apparent, and a cure speedily effected. The continued use of them, and material improvement in the tone and power of the voice. I could not let this very efficient cure pass over without informing you of it, in the hope that you might make it known for the benefit of others similarly suffering. I shall be happy to answer any inquiries.

S. SMITH.

49, Great Queen-street, London.

The particulars of many hundred Cures may be had from every agent throughout the Kingdom and on the Continent.

**DR. LOCOCK'S WAFERS** give instant relief, and a rapid cure of asthma, consumptions, coughs, colds, and all disorders of the breath and lungs.

**TO SINGERS and PUBLIC SPEAKERS** they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1jd., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by **DA SILVA & Co.**, 1, Bride-lane, Fleet-street, London. Sold by all medicine venders.

## THE EARL OF ALDBOROUGH CURED BY HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb., 1845.

To Professor HOLLOWAY.—

SIR—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either.

Your most obliged and obedient servant,

(Signed) **ALDBOROUGH.**

A Wonderful Cure of Dropsy of Five Years' standing.

Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.

SIR—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c., &c.

(Signed) **THOMAS TAYLOR.**

These truly invaluable Pills can be obtained at the establishment of Professor **HOLLOWAY**, near Temple Bar, London, and at most respectable Venders of Medicines throughout the CIVILIZED WORLD, at the following prices:—1s. 1jd., 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

**N.B.**—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and important edition of

**THE SILENT FRIEND; a Medical Work** on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Stricture, Secondary Symptoms, &c., are fully pointed out. Illustrated by Engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By **R. and L. PERRY**, & Co., Consulting Surgeons, London. Published by the Authors, and may be had at their Residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay & Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Parkiss, Compton-street, Soho, and all Booksellers.

OPINIONS OF THE PRESS.

"We regard the work before us, 'THE SILENT FRIEND,' as a work embracing most clear and practical views of a series of complaints hitherto little understood, and passed over by the majority of the Medical profession, for what reasons we are at a loss to know. We must however confess that a perusal of this work has left such a favourable impression on our minds, that we only recommend, but cordially wish, every one who is the victim of past folly, or suffering from indiscretion, to profit by the advice contained in its pages."—*Age and Argus.*

"The Authors of the **SILENT FRIEND** seem to be thoroughly conversant with the treatment of a class of complaints, which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—*Era.*

"This work should be read by all who value health and wish to enjoy life, for the truisms contained therein defy all doubt."—*Farmers' Journal.*

The **CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility, obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

The **CONCENTRATED DETERSIVE ESSENCE**. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

**PERRY'S PURIFYING SPECIFIC PILLS**, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammation, Irritation of the Bladder, &c., without hindrance to business.

Consultation-fee, if by letter, £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 11 till 9, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

Just Published, the **SIXTEENTH EDITION**, illustrated with cases and Full-length Engravings, price 2s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 3s. 6d.

**THE SECRET COMPANION. A MEDICAL WORK ON NERVOUS DEBILITY** and the concealed cause of the decline of PHYSICAL STRENGTH and the loss of MENTAL CAPACITY, with remarks on the effects of SOLITARY INDULGENCE, neglected GONORRHOEA, SYPHILIS, SECONDARY SYMPTOMS, &c., and Mode of Treatment: followed by observations on MARRIAGE, with proper Directions for the removal of all Disqualifications. Illustrated with Engravings, shewing the evils arising from the use of Mercury, and its influence on the body. By **R. J. BRODIE and Co.**, Consulting Surgeons, 27, Montague-street, Russell square, London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Parkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Bridge-street, Covent-garden; Gordon, 146, Leadenhall-street, London: and by all Booksellers in town and country.

OPINION OF THE PRESS.

This is a work of great merit, and should be placed in the hands of every young man who is suffering from past folly and indiscretion. It contains many valuable truths, and its perusal is certain to benefit him in many ways.—*London Mercantile Journal.*

**THE CORDIAL BALM OF ZEYLANICA; OR, NATURE'S GRAND RESTORATIVE,**

is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c. Even where Sterility seems to have fastened on the female constitution, this Medicine will warm and purify the blood and fluid, invigorate the body, and remove every impediment.

This Medicine should be taken previous to persons entering into the Matrimonial State, to prevent the offspring suffering from the former imprudence of its parents, or inheriting any seeds of disease, which is too frequently the case. Sold in Bottles, price 4s. 6d., and 11s. each, or the quantity of four in one Family Bottle for 33s., by which one 11s. Bottle is saved.

The £5 Cases may be had as usual.

**BRODIE'S PURIFYING VEGETABLE PILLS** are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 1jd., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of **R. J. BRODIE and Co.**, London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. BRODIE and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of £1, and in all cases the most inviolable Secrecy may be relied on. Only one Personal Visit is required to effect a Permanent Cure.

Observe—27, Montague-street, Russell-square, London.

**LONDON**—Published at the OFFICE, 42, Holywell-street, Strand, by **E. DITLEY**: Sold Wholesale by **W. M. Clark**, Warwick Lane, Paternoster-row; Cleave, Shoe Lane, Vickers, Holywell Street; and Strange, Paternoster-row; Printed for the Proprietors, by **JOHN WORTHAM**, of 313, Strand, London.—Saturday, August 2, 1845.

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE BATTLE OF ORIBE.

### CHAPTER IV.

TOM BELCHER.

**W**HILE engaged on the bright galaxy of fistic heroes which Bristol produced at the close of the last, and the opening of the present, century, we will take, though a trifle out of the order of strict chronology, the career of Tom BELCHER, many years "Mine Host of the Castle," and the worthy predecessor of the worthy Tom Spring, in that ancient head-quarters of the Fancy. Tom, who still survives in a green old age, first saw the light at Bristol, April 14, 1783. The descent of his family from Slack has already been noticed under the memoir of his brother James; and Tom, though not so pre-eminently successful, by no means disgraced the descent. On his earlier years we need not dwell, and where there is little or no authentic material, we hold nothing in deeper contempt than the system of "gagging" up a parcel of clumsy, apocryphal battles, after the fashion of "Boxiana," some of which never could have taken place.

Tom's first salaam in the ring (which, on this occasion, was forty feet instead of the present twenty-four) was made on the 26th of June, 1804. His opponent, on this occasion, was Jack Warr, son of the celebrated

Bill Warr, and the prize contended for was a subscription purse of fifty guineas, and the battle-ground was Tothill-fields. Warr was much the firmer set and stouter man; but Belcher had the advantage in the reach, and, upon stripping, the odds were rather in favour of Belcher, from the *prestige* of his family name, and the predilection of the amateurs from the school from which he came.

From the pedigree of both of the combatants, great expectations were formed in the sporting world as to their capabilities. It was a good fight, and every round was not only manfully but scientifically contested; the hitting of Warr was desperate, generally directed at the body of his opponent; while Belcher, on the contrary, fought at the head. The successes were alternate, and the betting various; and it was not till after thirty-three minutes had elapsed, and nineteen rounds had taken place, that Warr gave in. He was carried off the ground. Belcher obtained considerable fame by this contest.

Tom was next matched with Bill Ryan, (son of the celebrated Michael Ryan,) on November 31, 1804, for a subscription purse, on Wilsden Green. Belcher had for his second George Maddox, and as bottle-holder Joe Norton; Ryan was attended by Paddington Jones and Dick Whale. The odds were six to four upon Belcher.

## THE FIGHT.

1.—Anxious to commence offensive operations, sparring seemed out of question; hitting and stopping on both sides, the men soon got to work, but closed and fell.

2, 3, 4.—Several good exchanges, but mostly in favour of Ryan.

5.—A better round was never witnessed, nor finer courage displayed; at length, Belcher caught his opponent so severely on the temple as to knock him down. [Seven to four on Belcher.]

16.—For the eleven previous rounds no visible difference was discernible—both the combatants displaying courage and science, entitling them to the character of first-rate boxers. Tom put in a desperate blow over the mouth of his opponent, Ryan, in the return, knocked him down; and took the lead, in superiority of strength, till the

30th.—Belcher was now much exhausted, and he appeared to be contending against nature, but his display of the science was elegant and attractive.

31.—A few hits were exchanged, when Ryan put in a knock-down blow.

32.—Ryan repeated his hit.

33, 34.—Belcher felt the severe effects of his opponent's powers; he was levelled in both these rounds.

37.—Tom, full of heroism, nobly contended for glory; but it was against him, and he fell from weakness.

38.—Belcher put in an appearance, but it was only to be knocked down; upon which some little commotion took place, by the ring being broken, and the friends of Belcher declaring the last blow to be foul. The Umpire, however, decided to the contrary, and Ryan was declared the victor.

O'Donnell, "the Irish hero," fought Tom Belcher for a purse of twenty guineas, on Saturday, August 27, 1865, at Shepperton, Surrey. Considerable science was displayed by Belcher upon this occasion; and O'Donnell showed himself entitled to respectable attention. The Emerald was, however, thoroughly satisfied in fifteen rounds, and Belcher was proclaimed the conqueror.

Tom Belcher, anxious to recover the lost laurel, entered the lists once more with his late opponent, Bill Ryan, on June 4, 1866, near Chertsey, Surrey, for twenty-five guineas a side. Belcher had Tom Blake for his second; and Ryan was attended by George Maddox. The odds were considerably in favour of Ryan. The battle lasted fifty minutes, during which time twenty-nine rounds were spiritedly contested, but at the close Belcher was declared the conqueror, his opponent being heavily punished.

On February 8, 1866, Tom Belcher fought Dutch Sam, in whose memoir, which will form the fifth chapter in the present division, the detail of the battle will be found. Belcher's second contest with Dutch Sam, on July 28, 1867, which was declared a drawn battle, will also be found in Sam's career; in which also see Tom's third and last contest with his terrific opponent, August 21, 1867.

On April 14, 1868, Belcher fought Dogherty, in a twenty-one first roped ring, upon Epsom Downs, near the Rubbing House. Dogherty was seconded by Cropley, and had for his bottle-holder Dick Hall; Belcher was attended by Mendon and Clarke. Odds six to four on Belcher.

## THE FIGHT.

1.—Above a minute transpired before any blows were exchanged, both sparing to obtain the advantage. Belcher stopped his opponent's attempts with great neatness—a rally took place, when they closed, but broke away. Some trifling hits took place, they again closed, and Dogherty threw Belcher.

2.—Belcher stopped a terrible left-hander which Dogherty aimed at his head; the latter rushed in, but Belcher hit him off his legs.

3.—Skill and courage by no means deficient on either side: Dogherty tried to bustle his man, but Belcher was cool and prepared, he stopped his plunges, and put in some severe blows on Dogherty's face, who terminated the round by throwing Tom.

4.—The skill of both men was conspicuous in this round; but Belcher had the best of it. Dogherty received a tremendous fencer in endeavouring to plant a hit, and Belcher in settled in fine style: Dogherty convinced the spectators that he was no novice, by his dexterity in stopping—yet Tom, following his opponent round the ring, punished his head most terribly, and brought him down by a blow under the jaw. [Three to one on Belcher.]

5.—Belcher, with uncommon dexterity, broke through Dogherty's guard, and with his left hand planted a most dreadful blow in his throat, which so completely confused him, that he repeated the hit three times before Dogherty could recover himself, when they closed and fell.

6.—Belcher upon setting to dropped his opponent from the first two blows.

7.—Dogherty's efforts were completely scientific, and he stopped Belcher's blows with great neatness; nevertheless Belcher rallied him down.

8.—Belcher had enough to do in warding off the well-aimed hits of his adversary—who now went in full of impetuosity, yet not without science; in closing, Tom was thrown upon the ropes by Dogherty, and to all appearance, without difficulty.

9.—Several good blows were exchanged—but Belcher was not seen to so much advantage in this round; and in closing, Belcher fell underneath.

10.—Belcher, rather cautious, retreated; when Dogherty, coming living something might be gained by following him, put in two good hits; but, in closing the round, Dogherty was thrown.

11.—Belcher put in two fencers, when both the combatants fell out of the ring.

12.—Dogherty was again thrown; previously to which Belcher planted two good hits.

13.—Dogherty, full of pluck, rattled in, but Tom threw him with considerable force.

14.—Tom, evidently superior in this round, rendered the bustling of Dogherty unavailing, and again threw him violently.

15.—The game of Dogherty claimed admiration, his appearance commiseration—his head was terrible, and his strength was nearly exhausted, nevertheless he still forced the fighting; but his blows were of no effect, and he fell beneath the superiority of his opponent.

16 and 17.—In both these rounds the exhaustion of Dogherty was visible, and, to the honour of Belcher be it recorded, he declined taking any more advantage than was necessary to insure his contest. Such humanity ought not to be forgotten.

18 and 19.—Dogherty's spirits were good, but his stamina was departed—his blows did not tell, although he still stopped with considerable science. Belcher kept the lead in fine style; in closing both men fell.

24.—Up to this round it was evident that Tom must win; but his brave opponent was determined to try every effort while the least chance remained of success. Tom put in three desperate fencers, and followed them by so severe a body-blow that Dogherty fell quite bent and exhausted.

25—33.—Dogherty, still determined, contended for eight more rounds, but was nothing more than a mere object of punishment to his opponent, who continually hit him down, with ease; this could not last long, and in the 33rd round, at the end of forty-five minutes' sharp fighting, Belcher was declared the conqueror, who, upon hearing the welcome sound, threw a somerset.

Cropley now entered the lists with Tom Belcher, for a subscription purse of fifty guineas, on October 25, 1866, at Moulsey Hurst, in a thirty-foot roped ring. Cropley was seconded by Tom Jones; Dick Hall acted as his bottle-holder; and Belcher was waited on by Mendon and Dutch Sam. The combatants were looked upon as well matched, and considerable expectation of a fine display of the art was entertained. The odds upon setting to were in favour of Belcher. During a contest of thirty-four rounds, which occupied fifty-six minutes—and it is but justice to observe that a more real scientific fight was never seen—Cropley proved himself an excellent boxer, and possessed of undeniable game; but his attitude was bad; and his defeat was principally attributed to a knock of bringing his head too forward when putting in his blows. Belcher saw this advantage, and accepting the present thus made him, punished his face so dreadfully, that in the latter part of the battle Cropley was no longer recognizable. Tom's blows however seem to have been rather more showy than effective, for it was with the utmost difficulty that Cropley was persuaded to give in; and he was still steady and strong.

One FARNBROUGH, who rested his pretensions upon his game, had the temerity to fight Tom Belcher, on Epsom race-ground, in a thirty-foot ring, on February 1, 1866. He proved a mere pretender; and after the first round, Belcher treated him with the most perfect sang froid. In the course of twenty minutes, he so completely polished him off that Farnborough was glad to cry "enough," while Belcher was scarcely touched.

(To be continued.)

## ANTIQUITY OF HORSE-RACING.

The following extracts from "Mortimer's History of Wirral," may perhaps be interesting as an addition to your article last week upon "The Antiquity of English Horse-racing." It is taken from a work printed for private circulation, which, therefore, may not have reached you, and it occurs in the description of Leasowe Castle, the residence of the Hon. Sir Edward Cant—Yeats, &c.

Wallasey, Cheshire, July 13, 1845.

BUCEPHALUS.

"In the drawing room is, among other valuable pictures, a very ancient one of a horse-race that occurred here in the days of James I., including portraits of that monarch and his sons sharing in the sport, in which also a buxom lady, in a carriage driven by servants in the royal livery, participates. The Wallasey Leasowe is probably the oldest gentleman's race-course in the kingdom, being noticed by Webb as existing in the early part of the seventeenth century. The races at the Rood-eye, at Chester, or at Smithfield, and other places, were comparatively the sports of a mere fair, and could offer no rivalry to the aristocratic amusements of the Leasowe course, which in 1633, had rather an illustrious jockey, in the person of the famous Duke of Monmouth. Attended by a great retinue of gentry, the duke was on a tour, courting popularity in the western counties. At Chester he condescended to become sponsor to the daughter of the mayor of that city, and, amid the festivities attendant on that event, hearing that the principal families of the country had assembled at the Wallasey Races, he went thither and rode himself, which he won, and presented the prize to his infant god-daughter.

"In addition to the high antiquity and noble jockeyship of the Leasowe Race-course, it also claims to have once offered the highest prize in the kingdom; for, in 1721, the great families of the west entered into an agreement to subscribe liberally for a Sweepstakes, to be run for ten seasons on this course. In conformity with this arrangement the Grosvenors, Stanleys, Cholmondeleys, Egertons, Wynnes, and some others, subscribed twenty guineas each annually, and undertook that their own horses should be brought to contest the stakes. The last of these races occurred in 1732; they were then removed to Newmarket, where, for many years, the 'Wallasey Stake' formed a leading prize, but the Leasowe continued to be a trial or training course until the middle of the last century. An old building in the village of Wallasey, said to have been the Grosvenor Stable yet exists, on the doors of which the horses' plates remained until the last three or four years."

## THE FISHER'S CREEL.

THE CHAR.

**EST** the account of this beautiful fish, given in the last number in the article on Windermere and Char-fishing, should be deemed incomplete without a figure of the CHAR itself, we have procured an engraving of that fish, from a faithful drawing made by a Lancashire friend, which we trust will be an acceptable addition to the Series of British Fishes, which the numbers of the SPORTSMAN'S MAGAZINE will, in time, render perfect. With these few words we proceed to figure and give directions for dressing a few flies for the season.

## FLIES FOR AUGUST AND SEPTEMBER.

1. *The Ant Fly*.—This little insect is the female of several sorts of ants. It is a taking fly for grayling, as well as good sized perch, and if made small, the bleak. We give both the natural and artificial fly. The body is dubbed with blackish brown cow's hair, whipped with silk of the same colour; the wings from the feathers of a hen or landrail.

Ant fly: a, natural: b, artificial.

2. *The Gold Spinner*.—This fly appears about the middle of June and is well on until the end of August. Wings from a starling's feather, the body of orange silk, ribbed with gold twist; the legs of a red purple. It is a good fly for dull water and gloomy days.

3. *The Willow Fly*.—This fly appears about the end of August, and will be found to kill well until the close of the season. The wings are made of a dark grizzled cock's hackle, and the body of blue squirrels' fur, mixed with yellow mohair.

4. *The Whirling Blue*.—This fly appears about the beginning of August, and is in for the remainder of the season. The wings are made of the feather of a swallow, the body of pale blue fur mixed with yellow mohair, and a pale blue hackle for the legs.

## NIGHT FLY-FISHING.

**NE**ed hardly observe that the night feeding habits of fish may, in a great measure account for their capricious appetites during the day. And this is more especially the case with the larger and older trout; who lie upon the feed near the top of the water in dark nights, "watching," as Isaac says, the motion of any frog, rat, or watermouse, that swims betwixt him and the sky. It is to this habit that night fly-fishing owes its success." We cannot here resist, instead of transcribing the facts in our own language, giving the passage from Thomas "Barker's

Delight," (published in 1651, two years before the first appearance of Walton's Angler.) which contains the marrow of all that can be said on night-fishing.

"My lord sent to me at sun-going-down, to provide him a good dish of Trouts against the next morning, by six o'clock. I went to the door to see how the wanes of the air were likely to prove. I returned answer, that I doubted not, God willing, but to be provided at the time appointed. I went presently to the river, and it proved very dark: I threw out a line of three silks and three hairs twisted, for the uppermost part; and a line of two hairs and two silks twisted, for the lower part—with a good large hook. I baited my hook with two Lob-worms, the four ends hanging as meet as I could guess them in the dark. I fell to angle. It proved very dark, so that I had good sport; angling with the Lob-worms as I do with the flies, on the top of the water:—You will hear the fish rise at the top of the water; then, you must loose a slack line down to the bottom as nigh as you can guess; then hold your line straight, feeling the fish bite; give time, there is no doubt of losing the fish, for there is not one amongst twenty but doth gorge the bait: the least stroke you can strike fastens the hook, and makes the fish sure; letting the fish take a turn or two, you may take him up with your hands. The night began to alter and grow somewhat lighter; I took off the Lob-worms, and set to my rod a white Palmer-fly made of a large hook; I had good sport for the time, until it grew lighter; so I took off the white Palmer, and set to a red Palmer, made of a large hook: I had good sport until it grew very light: then I took off the red Palmer, and set to a black Palmer; I had good sport, and made up the dish of fish. So I put up my tackles, and was with my lord at his time appointed for the service.

"These three flies, with the help of the Lob-worms, serve to angle all the year for the night; observing the times (as I have shewed you,) in this nightwork; the white fly for darkness, the red fly *in medio*, and the black fly for lightness. This is the true experience for angling in the night, which is the surest angling of all, and killeth the greatest Trouts. Your lines may be strong, but must not be longer than your rod.

"Now, having taken a good dish of Trouts, I presented them to my lord. He having provided good company, commanded me to turn cook, and dress them for dinner."

This passage will show better than any precepts how right angling should be practised. The flies should be large and light-coloured, and the more clumsily they are dressed the better. I would always recommend a live caddis worm, or the body of some natural fly, to be put on the hook at the same time.

"Moth" or "Owl fly." a, natural. b, artificial.

The flies are usually termed "Owl" or "moth" flies, and the body may be dubbed with light bear's hair or any whitish fur, or white ostrich herl; the wings from the feathers of a white owl, or of a tawny owl; the hackle from a white or a pale yellow cock.

"These flies," says Taylor, "are most killing in warm, gloomy nights, after hot days; and when you angle this way, let out your line to be but a little longer than the rod. You may hear the fish rise as in the day time, and feel them when they take."

**FILING A BILL**.—A solicitor, who was remarkable for the length and sharpness of his nose, once told a lady that if she did not immediately settle an affair in dispute, he would file a bill against her. "Indeed, sir," said the lady, "there is no necessity for you to file your bill, it is sharp enough already."

**—TRAINED ANIMALS**.—A correspondent raises the question as to whether the pigs, sheep, and horses sent up to London by rail, may with propriety be considered as trained animals; and if the oil used to diminish the friction of the engines, &c., can be any other than train oil? And also, if civil engineers would not counteract any unpleasant occurrences upon cross lines?

## A SUNDAY IN LONDON.;

THE streets of London always present an aspect of quietness and desolation early in the morning, but on this day particularly so. All is still, save and except now and then, when the steps of the distant policeman are heard breaking with their echoes the death-like silence of the streets, or when a party of young "brother Bobs" pass by, carrying "shoulder arms" fashion, formidable apparatus, intended for the capture of roach and gudgeon, and baskets filled with provisions for the day, provided over night by their anxious mammas, who have the knowledge that they are out. Now and then some bacchanalian who has been offering at the shrine of his favourite, passes along, roaring out,

"We won't go home till morning,  
Till daylight does appear,"

with stentorian lungs, thereby much disturbing the peace of her Majesty's liege subjects; but as A. 91 is on the watch for the female cook at no 17, he lets him pass on.

The coffee stalls that on week days are patronised by artisans, have no business on this day, as the said artisans lie in bed for an hour or two longer than is their wont; at half-past seven the day may be fairly said to commence. The shrill voice of the vender of water-cresses is now heard; the milk-woman is going her rounds, she is a stout, rosy-cheeked, good-humoured Irishwoman, with a passing joke for the policeman; and for the servant-girl, an inquiry into the state of health of her "young man;" and gives sage advice to the maid-of-all-work at No. 10½, who disgusted at being brought to an account about a shoulder of mutton that only appeared once at table, resolves "to give that missis of hers warning (as she hates such stingy ways) this blessed day!"

The chimneys now begin to smoke, and the chandlers' shops in the poor localities open one by one. Down the narrow courts and alleys, windows are thrown open to let the chimney draw; and a confused mass of sounds composed of the rattle of cups and saucers, and the screams of little urchins who are undergoing involuntary ablutions. In a short time mothers are deep in the mysteries of making pies, while eldest daughters are ditto concerning the stuffing of legs of pork and peeling potatoes; and the fathers, after being knocked about by everybody, and made complete tools of—having been alternately set to hold the baby, pare apples, and sharpen knives—indignantly retire to the street door, where with their coats off and in very white shirt and trousers, smoke their pipes and peruse the "SPORTSMAN'S MAGAZINE," which they purchased "out and out" on the preceding night.

During the hours of morning service, the streets are as empty as in the early part of the morning; all those who set out for a walk before dinner form but a limited proportion to those that "go out for the day;" these generally consist of small parties who go down by rail or steamboat to that place of cockey resort, Greenwich, carrying their dinner in a big bellied basket, picnic-ing it under a chestnut tree, spending their afternoon in riding donkeys on Blackheath, or perhaps getting up along with some other party a game at kists in the ring. This is the time also chosen by the young shopkeeper, who, (shutting his eyes to the expense,) hires a gig for the day, and trusts himself and his "lady-love" with a drive to Harrow, Richmond, or Tottenham, or some such favoured place, where they dine at an ordinary; and after walking about in the neighbourhood, return at six to tea, which is served with great dignity by the young lady, whose great point of politeness consists in thanking the waiter separately for every service he performs.

There is another class of persons, who, aware of the fact that simple and economical amusements are often the best, both for pocket and pleasure, carry their family, and a friend or two, to Epping Forest in a taxed cart drawn by a tall bony horse, who is generally supposed to possess unlimited powers of *drawing*. When this party has arrived at its destination, a large basket is unpacked, and a cloth spread on the ground, and they all fall upon the good things before them with hearty appetites and merry laughter. After dinner a fire is made with dry sticks, and a small kettle of water is put on, which serves the double purpose of preparing the old gentleman's grog and making tea for the ladies and their intendeds. In the meantime the young ones stroll about, arm-in-arm, gathering wild flowers, and the old folks sit down together and talk of things that have been. Others, with their dinner in a handkerchief, repair to Hampton Court by means of a pleasure-van. Perfect magazines of fun are these pleasure-vans. Many an acquaintance begins in them which is destined to reach its climax at Hymen's union office. These pleasers look down with a sort of superiority on pedestrians, and many are the jokes and repartees bandied between the two as they pass.

Well, as has been said, it is eleven o'clock. The main streets that lead out of town are thronged with pleasure-seekers, and Mrs. Smith, having resisted for some time the importunities of the children for a fruit pie, to their great delight at length gives in, and hurries out for the necessary components, albeit with many misgivings in her mind, when she considers the quantity of sugar that will be necessary to make them palatable. Good managers, as they style themselves, put off the buying of their Sunday meat to this moment, in the hope that the butcher will sell it a half-penny a pound cheaper rather than keep it till the next day; but they

meet with the fate of most very good managers, and are often obliged to put up now with what they would have rejected last night. Little boys, with their jackets off, carry earthen dishes containing shoulders of mutton, with potatoes under them, to the baker's, feeling all the way in a state of nervous trepidation lest they should meet with some strong and unscrupulous man who might not have such a dainty for his dinner. Behind comes a little girl who is intrusted with the pie, and who, on her return home, gives her mamma an account of what all the neighbours are going to have for dinner. It is astonishing how penetrating girls are, especially if they are the eldest in the family. Boys neither know nor care about anything that is not in some way or other connected with marbles or leap-frog, but we never knew a little girl who did not know the names of all the people in the street, and more of their affairs than could be gleaned from any other source.

The church-bells are now ringing, well-dressed people are walking along with a quiet and serious air, carrying prayer-books in their hands, and making Mrs. Smith wish that she had done all her marketing on Saturday evening, so that she might not have been seen before she had "cleaned" herself. The shops are all shut, and in a quarter of an hour the streets are comparatively empty. The cabman, despairing of a fare for the next two hours, collect in groups opposite the coach-stand, and regale themselves with the feast of reason and the flow of soul, in lieu of better things; the public-houses, being rigidly closed until one o'clock, except—but we are no informers; while in St. Giles's and Seven Dials, Irishmen, dressed in blue coats with brass buttons, lean against posts, or, seated in rows on the kerb-stone, smoke in a state of apathy, occasionally addressing some monosyllabic observation to one another, which is answered with a grunt of assent.

It is one o'clock, and Mrs. Smith is dressed, and nursing the baby; and Mr. Smith, having finished his second pipe, and read the "SPORTSMAN'S MAGAZINE" through, advertisements and all, is indignant because he cannot think of anything to grumble at except the heat of the weather. The younger branches of the family individually seated on a chair, in order to preserve their muslin frocks and white trousers; but which, however, they are constantly leaving, in order to look if the people have come out of church, keeping their mother actively employed in reseating them. At last, however, the streets begin to fill. The clock strikes one, and out the young Smiths rush to the baker's, without stopping for bonnets or hats. If they did not get there before anybody else, who knows that somebody might not make a mistake and take away their pie? Such things have happened before, and it is a remarkable fact that the person who makes the exchange has always the best of it. However, on this occasion it is all right. The pork is well done, and is encased in a coating of such delicious crackling; the potatoes are nicely brown, and soaking in fat; and as for the pie, it is the *mutton in parvo* of the baking art. It is a fine sight, too, to see the stout woman handing the dishes over the counter, and receiving the money with an air of cool unconcern, as if a gooseberry pie were a mere every-day occurrence. During the time the dinner has been sent for, Mr. Smith has brought a pot of porter from the public-house at the corner, stopping every minute to drink a mouthful lest it should spill. On reaching home, he finds that his wife has laid the cloth with scrupulous neatness, bringing out to advantage the imitation ebony cruet frame that they have had ever since their marriage, and the best knives and forks, which had been a present from mother. The cloth is laid, too, on their best table, a small, round, unsteady, and somewhat dissipated-looking article, made of walnut tree. It is certainly rather a hard squeeze, but the other table will not do for Sunday; and Mrs. Smith takes the youngest boy on her lap, and Mr. Smith one of the little girls, and thus they all manage, somehow or other, to get within reach of the dainties.

The dinner is over, the things are put away, and everybody is dressed, and anxious to go out. So Mr. Smith goes for the children's "shay" from the back yard, and with great difficulty lugs it up the narrow steps, looking very red, and feeling very wrathful from his having whitened his best coat against the wall, and received a blow on the shins from the handle of the chaise. However, he cools down when three of the younger children are placed in the vehicle, and the party at length set out, three other children walking behind with his wife and the baby, while he himself draws the chaise, wrapped up in the enjoyment of a new clay pipe, which he had hid away over the clock, to be out of the reach of the juveniles. Through the streets they go, Mrs. Smith screaming out every moment to the children to get out of the way of the carriages; and herself, by way of setting a good example, running every now and then under the horses' heads, as is the usual custom with all timid ladies. They cross the New Road, down which crowds of people are making for Regent's Park, to sit down on benches or on the grass, or form a circle round one or other of the many peripatetic methodist preachers who there gratuitously hold forth; and perhaps after that to make a pilgrimage to Primrose Hill.

(To be concluded in our next.)

SCOTCH BULL.—At a benefit in Edinburgh, not long since, the play-bill stated, that the evening's entertainment would conclude with an *interlude*.

## CORRESPONDENTS.

- "SEVERENDROOG."—The height of St. Paul's is 386 feet, of St. Peter's at Rome, 432 feet. The length of the former 500 feet, the latter 653 feet.
- "A. FANCINIA."—The food of the Mistle-thrush, when wild, is insects and earth-worms, which it finds in abundance in fields and swamps during the spring and summer; in autumn and winter berries of all sorts make a great addition. In confinement it is not dainty. The universal paste, which you will find given in a former number, are very well liked, but it will put up with plain oatmeal, or even bran moistened with water. It is thus that our bird-fanciers feed it throughout the year, as well as many other large birds caught in traps, which they are obliged to keep as a lure for the snare. It is true, that if this meagre diet is sufficient to keep it alive, it will hardly serve to enliven it and make it sing; for this purpose it must be better fed, with bread and milk, meat, and other dishes served at table, none of which it refuses; and it must also be allowed to bathe, since nothing does it more good, or enlivens it so much.
- POOL.—A B and C play pool. C is striking (his stroke) B's ball holes A's in the centre pocket, and B's by the same stroke also goes in. Do A and B both lose a life?—They both lose a life to C.
- "BURNS."—Chelms.—A publican is liable to be fined if he allows billiard playing in his house for money, but not for amusement. There is no license for billiard-tables.
- R. BURNHAM.—If a coat, however, in delivering cash on my premises, should break a pane of glass, he is answerable for payment. The master must be applied to for the amount of the damage, he is answerable in law for his servant.
- "W. T. LONCH."—We have no recollection of the race alluded to.
- "N. R. L."—Metallic ran 180 yards in nine seconds.
- "B. C. C."—The duty on newspapers was reduced to its present rate on the 15th Sept., 1836, by the act 6th and 7th William IV., cap. 76.
- S. BURNHAM, Manchester.—Left feet a little in advance, shoulders squared, left hand a little in advance, and well up, right hand up, and ready to stop, both hands below chin. The new rules of the Ring are in "Fistiana," why should we copy them? Buy the book. You say, in one part of your letter, that "you don't mind a little expense, provided," &c.: prove it by expending a trifle on that work; in giving which advice we never had, nor ever shall have, the slightest pecuniary interest. But to ask us to accept it placemal in our columns is shabby on your part and insulting to us.—*John Ward bought Stamen Byrne July 12, 1881.*
- "E. R. D."—Thistlewood, the Calo-street conspirator, was executed at the regular place of execution in the Old Bailey, opposite the Debenhams.
- "A. THAMES ANGLER."—The gudgeon has been stated by many, who have written merely from a local knowledge of the few streams they have been acquainted with, to be found in almost every stream in the kingdom. This is perfectly erroneous; he is not to be found in one-third of the streams inhabited by fresh-water fish. In some parts of the midland counties they are very plentiful; in the north they are rarely to be found; but the greatest quantity I ever met with is in a river that runs through Frome, in Somersetshire. The keepers get them for their masters' tables with casting nets when they find a shoal; and they are used, when snails cannot be procured, as garnish for serving up turbot and other fish.
- A. J. LLOYD, Hereford.—Could you favour me with the meaning of the word "Entire," as placed after the name of brewers—as "Barclay, Perkins, and Co's Entire"?—Before 1730 the malt liquors in general use in London were called ale, beer, and a drink called twopenny. It was then customary to call for a pint or tankard of half and half, i. e., half of ale and half of beer, or half of ale and half of twopenny. In course of time it also became the practice to call for a pint or tankard of three-thirds, meaning a third of each, ale, beer, and twopenny, and thus the public had the trouble to go to three casks, and turn three casks for a pint of liquor. To avoid this inconvenience and waste, a brewer of the name of Harwood conceived the idea of making a liquor which should partake of the united flavours of ale, beer, and twopenny, he did so, and succeeded, calling it entire, or entire butt, meaning that it was drawn entirely from one cask or butt, and as it was very hearty and nourishing liquor, and supposed to be very suitable for porters and other working people, it obtained the name of porter.
- "R." Islington.—A heifer does not, properly speaking, become a cow until she attains her third year, although in common parlance she is called a cow on having her first calf.
- "HALIFU."—Apply to Mr. Little, of Fetter-lane. It is a paltry objection to take, and your friend don't deserve the name.
- "E. G. B."—Birmingham was first, and Priam second, for the Doncaster St. Leger, 1880. We gave the "Winnies" of the Derby a few weeks since.
- "LAWLACE."—R. Johnson rode Beswing for the St. Leger.
- "S. P."—Putting aside the p.p. rule, the odds alone (20 to 1) would make this a bet; the lawyer wins.
- CHUCKER.—NEMO asks us whether an umpire has not a right to destroy any bat that he may find to exceed the given proportions?—We should say that such an act would be clearly unjustifiable, and a decided violation of the rights of property. He asserts a proper exercise of power in preventing such a bat being played with, but in doing so he goes to the extent of his acknowledged duty.
- I. O. B.—The Players beat the Gentlemen last season by 36 runs. Martin did not play on that occasion.
- W. S. (Durham).—You had better apply to Caldecourt, at 1, Townsend-road, St. John's Wood; W. Burden is now at Sherbourne, in Dorsetshire, and Stalbridge, in the same county.
- QUEENIST.—The Earl of Winterton is a member of the Petworth Club, as is also E. Napper, Esq.—D. is out for having left his wicket. He should not have retired until the umpire had given his decision.
- G. L. R.—Continued and painful illness has alone caused the temporary discontinuance of "Hints to Cricketers," by NED RUS, who soon hopes to resume his duties in a description of "A DAY AT LORDS," embracing the progress of a crack match, with descriptions of the most celebrated players.
- M. complains that a match in which he played was described in *Bell's Life* as a "gentlemanly one." If he drops a line to that effect to the talented Editor of that Levithan of Sporting Journals, he will doubtless avoid falling into a similar error in future. We should have deemed it a compliment, but there is no accounting for taste.
- G. G.—Get a practised bowler to give them all to the leg, which he can mostly do; or, better still, practice to a catapults, which can be so managed as to give any number of any description of balls you may require without any difficulty or trouble.

## OUR WEEKLY CALENDAR.

## AN EPHEMERIS IN JEST AND earnest.

- SUNDAY, Aug. 3rd.—ELEVENTH SUNDAY AFTER TRINITY.—Borough and county lists of voters must be affixed to Church doors.—Mr. Green makes his first nestural ascent, 1836. He rises in the middle of the night, "wishing to be up with the lark."
- MONDAY, 4th.—Blackley Races.
- TUESDAY, 5th.—Banbury Races.—Newport Races.—The oyster season begins.—The Duke of York born, 1844.—The Bishop of London takes a special train to Slough, at 7 o'clock in the evening, to be present at the important event, but lo! he met "the Duke" and some other nob coming back, who chaffed him awfully, at being too late for the "royal mate!"—This joke is bad enough for royalty itself.
- WEDNESDAY, 6th.—Harwich Races.—Brighton Races.—Aberystwith and Great Marlow ditto.—The Members of Lincoln's Inn resolve on building a new Hall, 1842.—i. e., the Lawyers being determined to have another haul—out of the pockets of their clients.—Ben Jonson died, 1637.
- THURSDAY, 7th.—Edgware Races.—Beeches Races.—Dr. Lamb, aged 80, says the *Morning Herald*, has himself always abstained from meat, and brought up a numerous family on vegetable diet.—Ha, we see how this is: *Lamb and greens* agree well.—Queen Caroline died, 1821.
- FRIDAY, 8th.—Marshal Ney shot, 1815.—The Nabob of Surat visits the Court of Chancery, 1842; he does not stay there long. A good thing too, says Joey Hume, for if he had, he would certainly have had *nae bob* left.

SATURDAY, 9th.—Annual shower of meteors observed on the night between the 8th and 10th of August.—The last remaining Stocks in London removed from Portugal-street, 1830;—and several puffing linen-drappers have been selling off at "a tremendous sacrifice" ever since.—Accession of Louis Philippe to the French Throne, 1830.—Isaac Walton, the author of the "Complete Angler," and various admirable biographies, born 1693.—Lord Rosse completes polishing the large lens of his telescope, 1843.—Great commotion among the "skiey influences;" Venus consults her looking-glass; Mars blackleads his moustaches; the Milky Way is mopped down; Jupiter polishes his belts; Saturn rubs up his rings, and the Man in the Moon washes his poodle and mends his last quarter's rent in his smalls, expecting to be seen by a large company of very inquisitive people.

## NOTICE:

\* \* SEVERAL letters having been delayed from being directed either to the Publisher or the Printer (and in one instance to a vendor) of the SPORTSMAN'S MAGAZINE, the Editor begs to notify that all communications must be addressed to him at the OFFICE, 42, Holywell-street, Strand.—July 12, 1845.

## The Sportsman's Magazine.

FOR THE WEEK ENDING AUGUST 9, 1845.

## GOODWOOD.

RIGHT well do we remember when it was only by a journey of weary length and dreary tedium, that the dwellers in "great Babylon," could reach the lovely plain and bosky groves of Goodwood, but now among the latest additions to London suburbs, we may enumerate the lovely domain of Richmond's Duke.

Railroads have made Goodwood as practicable a racing locality as Epsom or Ascot. Shortly it will be quite so. Indeed, we opine that ere long, a whisk off to Saturn and Jupiter with the speed of their own transits, will be quite a matter of course, unless the mere fitness of this atmosphere to our lungs should induce us to remain within it till we discover the means of carrying it with us. Yet that mortal had been indeed ungrateful who, locally placed as ourselves, had desired any other abode than his own planet on the days of the unequalled Goodwood meeting. Never sun beamed more brightly than that which disclosed the beauties of art and nature on the table-land of gorgeous beauty, ycleped the race-course, as we surmounted the summit of the mountain whereon it stands (which we did just as the coursers were preparing to run for "the Craven")—the effect of the coup d'œil was unique in the calendar of sights. The extent of the prospect alone was worth much; the country now clothed in its richest luxuriance, the bold winding and circular sweep of the coast of the Isle of Wight traced like a map at our feet, the noble domain of the Lennox within our more immediate ken, these claimed at first much of our admiration. The brilliant racing, the show of the best horses in the world, the splendid equipages, the rank and wealth abounding, and the galaxy of beauty displayed in the Grand Stand, soon fixed it within the arena of this the most peculiar and picturesque race-course in England.

"If anything be set to a wrong taste  
'Tis not the meat here, but the month's displaced;  
Remove but that sick palate, all is well."

The selection of a view of the mansion of the Duke of Richmond, as an embellishment to this week's number, we take to be a "cut in season," inasmuch as we herewith give the winner of "the Cup," known as "the Goodwood" par excellence. Being only run for on the Thursday we have been tied for time, and are therefore prevented from adding to our engravings the trophy itself, of which and the Chesterfield Cup, we will anon present their delineations. But to return to our subject, of which, in the next page, is an accurate view from a sketch made on the spot, (including an outline of the stables on the left of the mansion,) is situated in the midst of a noble domain in Sussex, within twenty-one miles of the Fareham Station, on the South Western Railway, and nearly equidistant from that of Shoreham, on the Brighton line. The emulation of the rival lines, (one of which only was open in 1843), produced this year the usual public advantages of competition, by dividing the stream, or rather

GOODWOOD, SUSSEX, THE SEAT OF THE DUKE OF RICHMOND.

torrent of visitors, and also procuring increased accommodation for the visitors to this right princely festival. It is but just to state, that the directors of the railways liberally stepped forward, by starting special trains at such hours as the public would find most convenient for going or returning, and offering encouragement to coach proprietors, to place conveyances on the road from the station to the course, by conveying for next to nothing, horses and vehicles for that purpose.

Postmasters, and the owners of provincial conveyances quickly foresaw the value of these arrangements, and thus a regular line of communication was established productive of the best consequences to all parties, and which, in future years, will no doubt be more systematically matured. On Sunday a number of public carriages and horses were transferred to Fareham, and on Monday the bustle commenced—trains of immense extent were quickly filled—that at eleven o'clock consisted of 36 first-class carriages, with a large proportion of private drags and horses, was so unusually heavy, that although three engines were employed, it was nearly an hour and a-half behind time at Fareham, but from the facilities there prepared, no time was lost in getting on. The one o'clock train was equally full; and here again no difficulty was felt in obtaining vehicles to proceed to Chichester, at which the arrivals were never more numerous. Bognor was completely thronged, and all the hamlets and villages in the neighbourhood overflowed, while the active exertions of the postmasters in all directions were scarcely sufficient to meet the calls on them.

We will now turn from the demesne to the owner and originator of this important gathering on the Sussex shore, the Duke of Richmond, whose "royal" liberality (for barring the bar-sinister he is of royal blood,) gladdened the visitors of Goodwood, during the past week. Charles Gordon Lennox, Duke of Richmond, is descended from King Charles the Second, being the son of the "Merry Monarch," (a name in celebrity since last Epsom, but defeated on this very turf at this very meeting), by Louise de Querouaille, Duchess of Portsmouth. His grace has ten children. He is Duke of Richmond, in England, Duke of Lennox, in Scotland, and Duc d'Aubigny, in France; the French title was conferred on the fair Duchess of Portsmouth, with succession to her male heirs, by Louis XIV., in 1684, and was confirmed and registered by the Parliament of Paris in 1777, and by Louis XVIII., in 1816.

The Duke of Richmond entered the army at an early age, served as aide-de-camp to the Duke during the Peninsular war, and was in attendance on the Prince of Orange in the same capacity at Waterloo. His Grace sat in Parliament for Chichester (of which borough he is High Steward,) for several years, while Earl of March. He was Colonel of the Army, and is Colonel of the Royal Sussex Militia, as well as Lord-Lieutenant and Vice-Admiral of Sussex. He was a member of the Grey Cabinet, as Postmaster-General, but is understood now to be a Liberal Conservative. Without ever having been much on the turf, his Grace is the well-known patron of all good old English sports. Under his fostering

THE STABLES AT GOODWOOD.

**LORD C. BENTINCK'S MISS ELIS, WINNER OF THE GOODWOOD CUP, 1845.**  
(RODE BY ABDALE, TRAINED BY KENT.)

patronage, [Goodwood, Races] have attained a very great celebrity. His hospitality is proverbial, and, whether we view him as an hereditary legislator, an encourager of rural and national sports, the head of a fine family, or a resident landlord, it must be admitted that his Grace of Richmond may be held up to his "order" as an example.

The meeting at this paradise of racing places has this year surpassed all former gatherings and though the éclat of foreign princes may have given a more royal spectacle to those who go only to such places to sow their "gapesed," the Goodwood of '45 has never been exceeded in quantum of sport; and if less excitement existed as to the Cup, than usual, that falling off is amply compensated by the increased interest which the Goodwood Stakes Handicap exhibits, and which far exceeds anything previously witnessed on that race. A glance at the programme, occupying, as it does, no less than eight columns of the Racing Calendar, will be sufficient to indicate the amount of racing set before us.

Tuesday had no less than eleven races on paper; Wednesday, six races, two of them in heats; Thursday, eleven races, including the "Great Cup;" and Friday, six races, including the "Chesterfield Cup," and the March and Bentinck Stakes, rode in classes by "Gentlemen Jockeys." Here in sooth is racing enough both in quality and quantity to satisfy the most craving turf-goer. One word on the amateur jockeyship of gentlemen: of late years, (barring the drawback of weight), the performances of our patricians in this amusing branch of racing have so vastly improved, that leaving aside the question as to whether

"— it is a custom

More honoured in the breach (*breech?*) than the observance,"

we fearlessly assert that their riding, as riding, would not have disgraced professionals. Some persons may smile; but we consider first-rate horsemanship as an important acquirement, and cannot help viewing not only with leniency, but with pride these little outbursts of the right sort of spirit. Fun and merriment too, aye and harmless merriment are no trivial things in this "valley of penitengiousness and tears," as Sairey Gamp styles this gladsome and glorious world; and lastly, a great philosopher has said, "Qui vit sans folie nést pas si sage qu'il croit,"

which we translate "He who don't now and then make a fool of himself isn't much of a philosopher." "A friend of ours, who is somewhat splenetic, once said, "Why can't these amateurs have a day to themselves?" This reminded us of a rejoinder to an amateur in another

WEIGHING-HOUSE.

line, who, having broke down in his song, promised to be perfect next time—"Pray let me know when that will be, and I'll take care not to be there!" And here let us pay a deserved tribute to the high-spirited nobleman whose exertions have enhanced the attractions of this as well as other race-meetings; need we say we mean the indefatigable Lord George Bentinck, whose exertions to cleanse "the Augean stable" have been so eminently successful hitherto, and we trust will not be relaxed until the purity of the turf is restored? We have so frequently described the eccentricities of these assemblages that their repetition would be superfluous, but it is pleasing to state that from the exclusion of the thimble-rig and other swindling nuisances from the course, the visitors were saved from much of that annoyance which elsewhere forms so serious a drawback to the comforts of the more respectable class of visitors. Notwithstanding the fluctuating state of the weather, rain and sunshine alternating, the day proved more favourable than might have been contemplated, and, all things considered, few had to grumble at the trifling vicissitudes to which they were exposed.

Goodwood races are now about as near perfection as it is possible for them to be. When we consider the great advantages appertaining to them, the wonder would be if they did not command success: the liberality, and, consequently, great popularity of the noble Duke, the beautiful picturesque scenery of the course, and the indefatigable exertions of Lord George Bentinck, whose heart appears to be in the prosperity of the races, all tend to place Goodwood at the top of the list. The last meeting passed off without a single flaw to detract from the brilliancy of the whole: the mansion was filled with friends of the Duke, the ground crowded each day with spectators, and the racing first-rate, without a whisper of foul play or wrong doings. Limited time, space, and the number of embellishments, forbid us giving more than a sketch of the winner of the Cup, taking a preliminary canter in front of the GRAND STAND, with an accurate representation of which in the background, and of the WEIGHING HOUSE, we break off.

#### "CHEAP JACK."

There are few who have not heard of Hunt, of Sheffield and Birmingham-ware notoriety, whose humorous sayings have afforded much amusement in the principal towns throughout England. Lately, at a market-town in Essex, the following articles were offered by him for sale, viz., a quire of letter-paper, box of steel-pens, bottle of ink, stick of sealing-wax, and a seal; all these were offered at the low price of one shilling, with the following information, by way of commendation:—"Take a sheet of the paper, fold it carefully, and place it under your pillow, and depend on't all that you dream of in the night will be found written on it in the morning. The pens are so fast, and the ink so free, that you can scarcely commence a letter before they will run to the end. If, in the hurry, anything is omitted from the letter, it may be stuck in by the wax; and should any article be in the letter you desire not, it may be pressed out by the seal. If you think there are not enough for the money, I will add a slate, a pencil, and sponge, with this additional information—hang the slate in the most conspicuous part of your house; be careful to have the pencil along with it; now look as attentively at the slate as at your barometer when hoping for a change in the weather, and you will perceive your duty plainly written thereon; then take the sponge, and, if dexterously used, it will wipe from your mind all false impressions." All this is very well; but our countryman, honest Hunt, clever as he is, must yield the palm to Brother Jonathan, a dealer in razor-straps of great fame in the State of Kentucky, U. S. The *St. Louis Gazette* gives the following report of one of his harangues:—"Gentlemen, I am going to tell you something as happened me down the river at New Orleans. I was sellin' straps, and a gentleman came up to me; says he, 'Strapman, how do?' Sez I, 'Pretty well; how're you?' Says he, 'I'm a good deal better'n I was. Last night,' sez he, 'I was almost scared to death; and my wife, she was a plaguy sight wuss scared'n I was. Heard a noise in the night—waked me up—waked my wife—couldn't tell what 'twas—got up—struck a light—looked all round—couldn't find out where it was—looked out of the window—'twant there—looked in the table-drawer, and there my razor'd got loose, and was a-strapping itself on the strap I bought from you! I wouldn't a minded it, but I hated to have my wife scared so.' Now, gentlemen, that may be true what the gentleman told me, an't may not; I tell you just what the gentleman told me. If you want a good strop, &c."

**A SLIP OF THE TONGUE.**—"Martha," my dear, said a loving husband to his spouse, who was several years his junior, "what do you say to moving to the Far West?" "Oh, I'm delighted with the idea! You recollect when Mr. Morgan moved out there he was as poor as we are; and he died in three years, leaving his widow worth a hundred thousand dollars."

**LYING-IN AND LYING-OUT.**—A poverty-struck Hibernian, whose bank-pocket (to use his own phrase), had stopped payment, was forced to the sad necessity of perambulating the streets of Edinburgh two nights together, for want of a few pence to pay his lodgings, when accidentally hearing a person talk of the *lying-in* hospital, he cried, "By jakers, that's the very place I'm wantin, for here have I bin *lying-out* these two nights past."

## ARCHERY.

(Continued from p. 235.)

### THE TARGET (continued.)

The butts formerly used in this kingdom were generally composed of earth; but those of straw are at present more in fashion. The latter kind possess the advantage of being portable, so as to be moved with ease to any distance fixed on. Their manufacture is similar to that of the common straw bee-hives, and they are usually made about four feet and a half in diameter, that is, twice the length of the arrow. The front part is covered with cloth, sheeting, or fine canvass; painted in rings of different colours, in order to mark the respective degrees of merit each arrow is entitled to. The circles being described, that part which is enclosed within the circumference of the first circle nearest the centre, is usually covered with gold or silver leaf. Between the first and second circle is often a red colour, and the others are varied with white, black, and green. The target, thus prepared, is fixed on a frame of wood, so contrived that it may be elevated or depressed to any angle of the horizon, in proportion as the shots are intended to be more or less remote.

The butts used by the archers at Edinburgh are made on a very different principle, when intended for short lengths. They are of straw, laid endwise, and pressed hard with a screw; after which, the front is cut with a knife, in the manner here is traced. They are then covered with a little building, which serves at once to protect the straw from injury, and the shooters from the rays of the sun while drawing the bow.

The fashion of painting targets at the present day is as follows: besides the gold or centre, four other circles are described on it; and these are termed the red, inner white, black, and outer white, which latter is bordered by green.

The average value of each circle is now generally computed as follows, namely:

The outer white	. . . . .	1
The black	. . . . .	3
The inner white	. . . . .	5
The red	. . . . .	7
The gold	. . . . .	9

The actual value, however, according to the space apportioned to each circle of the target, differs considerably from the above estimate, namely:

The gold	. . . . .	9
The red	. . . . .	3
The inner white	. . . . .	2
The black	. . . . .	1½
The outer white	. . . . .	1

Target-shooting is generally conducted under the management of one particular archer, styled the Captain of the Target, who acts as umpire in all disputes or differences.

In shooting at targets, either at private or public meetings, the usual distances are fifty or sixty yards for ladies, and a hundred for gentlemen.

The following plan, suggested by Mr. Hastings as a desirable arrangement for a party of six ladies and as many gentlemen to shoot at targets, may be recommended as judicious; though we feel somewhat disposed to contest the point, as to whether it would not be more gallant to give the ladies the preference, by escorting them to their banner, in the mode prescribed, before any gentleman ventures to draw his bow.

"A pair of targets," says he, "placed opposite to each other, say at the distance of a hundred yards, would do for six gentlemen and as many ladies. Let the whole party assemble at one end; the gentlemen will commence shooting; and, after having discharged their pouch, or three arrows, let them escort the ladies to a mark, or two banners opposite to each other, placed halfway between the targets, from which they will discharge their arrows at the same target as the gentlemen did. Should the number of archers and archeresses exceed twelve, (i. e. six gentlemen and six ladies,) it would be advisable to have other targets, arranged laterally at convenient distances, and each set may be distinguished by a small silk banner. When all the arrows shall have been expended, (and not *all* them,) a simultaneous movement should be made by the whole party engaged, towards the opposite target."

The game may be counted, either according to the number of hits on the entire target, without reference to its circular divisions, or, according to the value assigned by the previous consent of the parties playing, to the several circles respectively. The usual mode of keeping an account of the game is by a card ruled after the fashion given at the end of this article, on which the hits of each shooter are scored, either with a pin, or a sort of needle termed a prickler.

Or, in preference to this plan, some archery societies use the *target card*, or a card of about two inches and a half in diameter, on which is painted an exact representation of the target itself. This being attached to the left breast of each shooter, the hits are pricked by a bystander.

As an appropriate conclusion, and a matter of interesting record of the skill of bowmen in the present year of our Lord 1845, we here append the official return of the number of hits during the two days' shooting at the great National Archery Meeting at York, June 26th and 27th, 1845:—

RECIPE FOR THE LOVESICK.—Hard boiled eggs are said to be a cure for love; they lie so heavy on the stomach as to make the sufferer forget the weight upon his heart.

"Look out for your head," as the hammer said to the nail.  
"We've met only to divide," as the guillotine said to the criminal.  
Why is a Cockney lover like a dog? Because he bows and sniffs.

## BATHOS BALLAD.

THE LAST REQUEST.

*Sentimental Song of a "Grand Stand."*

Alas! our joy is over, and our dream of wedded bliss;  
Long ago, how little thought we of a parting such as this,  
When our fervent vows were plighted, in the sunny days of youth,  
And time with rustling pinions, was a witness to their truth!

Oh! how my brain is tortured, when I think that we must part,  
And memory like a lava flood, comes rushing o'er my heart;  
Too truly do I feel, as remembrance stealth o'er me,  
My path must be away from thee—the wide world is before me!

Yes! fate hath doomed our parting, and with cold, relentless eye,  
Looks calmly on to see us each, fulfil its destiny;  
And like a streamlet that divides, in passing to the main,  
Our paths in life are severed, and we never meet again!

Farewell, farewell, mine eyes are dry, and feverish is my brain,  
This is the deepest cup of grief, that ever I shall drain;  
So just one word at parting let me whisper in your ear,  
HAVE YOU SIXPENCE IN YOUR POCKET? WILL YOU STAND A POT OF BEER?

**CELEBRATED IGNORAMUSES.**—In England, the Admiralty rejected the paddle-wheel steam boat invented by Mr. Bell, declaring in a lengthy report, that "it could be of no use in navigation." At Paris, the minister of marine, and the commission of naval officers to whom Fulton afterwards submitted the same invention, gave a similar decision; Napoleon, then first consul, declaring that the inventor was only a *charlatan* and an adventurer! and since then, Dr. Lardner, in his "Treatise on the Steam Engine" (the passage is cut out in the later editions) philosophically proved, that no steamvessel could ever cross the Atlantic, it being *physically and mechanically impossible*.—N.B. The "learned Theban,"—he is a Greek by birth—lived long enough to bolt to America in a steamer along with another man's wife! Oh, dear—these official personages, mighty men, and great *feelosofers*, pretend to a precious deal more than they really know, after all.

**REMARKABLE INSTANCE OF SAGACITY IN A DOG.**—Mr. Dennis O'Connell, cider presser, of Lismore, County of Waterford, in the year 1840 possessed a dog to which he was much attached. One day, having had business to attend to at Fermoy, County of Cork, which is twelve miles from Lismore, having concluded his business, he called at a friend's house, and after being there for some time, what was his surprise when he heard his favourite bark at the door, and upon its being opened, the dog, who was called Haro, rushed in and fawned upon him in the most affectionate manner; when he returned home he made inquiries, and found that the dog had left the house at Lismore two hours after himself, and that he had scented off his master for twelve miles!

**MILKING COWS.**—A farmer, writing to the *Stafford Advertiser*, says:—"Having read some of the recent works published on agriculture, and respecting the management of dairy cows, I was induced to try the milking of a cow three times a day, viz., morning, mid-day, and night; and I find that it has answered better hitherto, this dry hot weather, than under the old system of milking twice a day. More milk is obtained; and the cream on the mid-day's milking is twice as thick as on the morning's milk, and three times as thick as on that milked at night."

**FRENCH AND ENGLISH.**—A pugilistic encounter took place lately at Avaranhes, between a Frenchman and an Englishman! Need we record the result? From the extreme novelty of the exhibition perhaps some few particulars may be interesting to many of our readers. Johnny Crapaud, be it said in *limine*, was permitted the manly privilege of kicking in addition to the other systems of attack, whilst his antagonist, a John Bull pedestrian, named Cootes, confined himself to "the noble art of self defence" in all its purity. We subjoin an outline of the fight!—Round 1. Monsieur commenced by dancing à la Taglioni, round Cootes, kicking at the head and body, both of which Cootes avoided by stepping back; in the second attempt of Monsieur, Cootes met him with a tremendous counter with the left on the nose, which nearly floored him, and drew the claret in abundance, which made him look with amazement; again he rushed in, with his head down, when Cootes planted a heavy upper cut and grassed him.—Round 2. It was evident that the first round had nearly decided the affair, for Monsieur could not be gammoned to approach his man, but Cootes stepped up to him, hit out left and right, and again floored him.—Round 3. The Frenchman slowly advanced to the scratch, but planted a kick on the leg with little effect; Cootes again attacked him with his left, when the Frenchman cried out for mercy, and declined any further contention.—The fight lasted nine minutes.

**TO MAKE BRITISH GUANO.**—Take equal parts of horse and cow-dung, steep them in a tub or pan in treble their quantity of water for 24 hours, well stirring; then strain it through a sieve or colander. Water the roots of the flowers or plants with it, taking care not to water the leaves, as it is a very strong alkaline, it will be found superior to any other manure. If the pots are dipped into the liquid for a short time, they will appear as if new.

## CORRESPONDENCE.

## SPORTING COURTESY AND HARSH LANDOWNERS.

SIR,—A celebrated author has declared that there is an etiquette appertaining to all things. Then why should there not be one set of rules appertaining to sportsmen, and belonging exclusively to sporting?

A true sportsman requires no borrowed art; his manners are softened down with good humour; he has always got the ready smile on his lips, and a ready welcome for his companions.

But with all this there is still something necessary; for a man may just as well and just as easy act the gentleman in the field as at Almacks. We will take for example the proprietor of a shooting ground.

It is truly deplorable to see at the present time, the selfishness exhibited by some of these proprietors, (for there are some exceptions) and yet these men call themselves sportsmen! It is not out of place here to tell these gentlemen that they are not sportsmen. A true sportsman is devoid of all selfishness, and in them it is only an usurpation of the title. A true sportsman acts upon the golden rule of "Do unto others as ye yourselves would wish to be done unto;" and it is only by acting upon this rule that they can lay claim to the title.

These gentlemen prove a striking illustration of their fallaciousness by the manner in which they treat their tenantry, (and here again we must remark that there are some exceptions.

They prosecute them for the least deviation from arbitrary rules laid down by them; and it amounts to a felony\* for them to shoot or otherwise destroy the game that ruins their crops—their only dependence to pay these gentlemen their rent and provide for their families during the winter, and by this system the peasantry are driven to desperation and turn poachers, because they cannot see their wives and little ones starve before their eyes. And yet these gentlemen wonder! And this is produced by a non-observance of *sporting etiquette*; for, let me tell these gentlemen that it is most derogatory to them to display a *little of it even towards a peasant*.

There is many a man at Hobart Town or New South Wales, at the present time, that if he were questioned as to the cause of his transportation, would reply that it had been caused by the treatment he experienced from a merciless landlord. Think on this, ye sportsmen!

Odiham, July 27, 1845.

; R. W. S.

## GAME MONOPOLIZERS.

SIR,—A correspondent of the *Times*, speaking of the "Game Laws," observes:—"A friend of mine possesses an excellent wooded estate, stocked with game of all descriptions, and is so touchy on his 'rights,' as he calls them, that I verily believe he would put to death a cat whom he found destroying a field-mouse on his grounds." This is no solitary instance. At the present time there are many of these Sporting Dives to be found, who, for the consideration of the market value of half a dozen woodcocks or pheasants, would deprive a man of a day's sport. And yet we every day see the products of this bad—nay, vile—system: they (the monopolizers) are universally hated, and, as the phrase goes, "sent to Coventry," by all who know them.

The offshoot of all this is, that the person is no gainer who monopolises the free gifts of Nature.

What is the contrast between the two gentlemen we here take for example?

Mr. G— is a steady upholder of the good old plan, despising all modern innovations, and deals forth to all with an unsparing hand. A person may readily obtain his consent to a day's shooting over his preserve, and yet, with all his liberality, Mr. G— finds himself none the poorer.

On the contrary, Mr. S— is a monopolist, and deals to all with a gruff, unaccommodating manner; he would as soon eat his hat as allow anybody carrying a gun upon his estate, and by so doing he loses that respect in which he would otherwise be held, and gains nothing by his parsimony, for we can regard it in no other light.

July 18, 1845.

F. B. T.

**TO THE AFFLUENT.**—A young gentleman, who from a habit of dining out at parties, has acquired a taste for Champagne and other expensive wines, but whose means, alas! do not admit of his indulging in the same at his own expense, makes this earnest appeal to the benevolent and kind-hearted, in the hope that, through their liberality, his small but too empty cellar may be supplied. Even single bottles would be most thankfully received.—Please to address to the Hon. X. Y. Z., 92, Fleet-street.—*Punch*.

**A VILLAGE GREEN.**—Lord Lincoln could not define a "Village Green" the other night in the House. Robin Hood's uniform was Lincoln green—the green of the forest; but Lincoln green—or green Lincoln—could not understand "Village green" at all. We come to his rescue in the form of question and answer. What is a Village Green?—Any "Village" that is "Green" enough to put up quietly with the Commons' Enclosure Bill!

"I'm down with ye," as the fat alderman said, when he seated himself on the soft cushion of his easy chair.

\* It has been so decided at a late county quarter sessions.

## MY DANCING DAYS ARE OVER.

*By the Gentleman in the White Waistcoat.*

My dancing days are over now,  
My legs are just like stumps;  
My front of youth dried up, alas!  
Went answer to the pumps.  
Yet who so fond of jigs as I?  
Of hornpipes such a lover?  
Of gallopes, valses,—but, alas!  
My dancing days are over.

In feats of feet, what foot like mine  
(Excuse me if vain-glorious :)  
Like mine for grace and dignity  
No toe was more notorious.  
Oh! then what joy it was to hear  
*Roy's Wife* or *Kitty Clover*!  
But *Drops of Brandy* now won't do:  
My dancing days are over.

My feet seem fastened down with screws,  
That were so glib before;  
And my ten light fantastic toes  
Seem toe-nail'd to the floor.  
I cannot bear a hall-room now,  
Where once I lived in clover;  
Terpichore quite makes me sick:  
My dancing days are over.

I used to dance the New Year in,  
And dance the Old Year out;  
Ah! little did I then reflect  
That chaos I am gout.  
All summer thro' I skipped and hopped,  
At Margate, Ramsgate, Dover.  
The year was then one spring—but now  
My dancing days are over.

I'm eighteen stone and some odd pounds:  
So all my neighbours say.  
I'll go this moment to the scale;  
But I can't balance.  
When in a hall-room I appear,  
As soon as they discover  
My presence, off the girls all fly:  
My dancing days are over.

I'm quite as fat as Lambert was,  
Or any old maid's spaniel;  
And when I walk along the street  
They cry, "a second Daniel!"  
And if I go into a shop  
Of tailor, hatter, glover,  
They always open both the doors:  
My dancing days are over.

My college chums all jeer at me,  
And cry, "Lord, what a porpus!"  
Who'd take you for a Johnnie?  
You seem to be of Corpus!"  
The stage-coachmen all look as if  
They wished me at Hanover:  
The safety-cabs don't think me safe:  
My dancing days are over.

My great pier-glass that used to show  
My waist so fine and thin;  
Now, turn whichever way I will,  
— Won't take my body in.  
My form, that once a paragon  
Would always amply cover,  
A gig umbrella now requires:  
My dancing days are over.

In vain my hand I offer now;  
Away each damsel stalks;  
Chalk'd floors no longer may I walk,  
So I must walk my chalks.  
For me there is no woman-kind:  
None want me now for lover.  
Maid, widow, wife, all fly—they know  
My dancing days are over.

**SCHOLASTIC INTELLIGENCE.**—We have been requested to insert the following intimation to parents and guardians:—The Misses Whalebone take in a select number of young ladies to board, wash, and educate, at twenty guineas per annum. A coal merchant's daughter might be received on terms of mutual accommodation; the usual branches being considered as an equivalent for the best Walstead coals. The Misses Whalebone would be glad to meet with a butcher who would place a young lady under their care, and take out the amount of meat in the police accomplishments. A young greengrocer might also be finished in the piano as a compensation for the potatoes required for the use of the establishment. There is also an opportunity for a milkman to place a young lady, who may dance out the milk score, at the rate of 94 quarts for six lessons. There is still a vacancy for a parlour boarder; and any landlord having a large house might arrange to receive the rent, in the shape of lodging for one of his daughters, who could receive her board and education on the usual terms.—N.B. An assistant is required to superintend the school-room in the absence of the principals, and who would be expected to look upon her tuition in those branches she may be deficient in, as a compensation for her general services.—*Punch*.

**POLITICAL FESTIVITIES.**—On Thursday the Members of the Irish Tail, remaining in Town, dined together at the *Slap-bang Shop* in Roper street, and did not leave the establishment more than thirteenspence-halfpenny in debt. After depositing a small fragment of the blarney-stone in the hands of the waiters as security, they proceeded in a body to St. Stephen's, where they fell asleep over the debate on the Slave-trade;—Liberty—now that they are privileged from arrest having—ceased to interest them as citizens. On awaking for the division, they adjourned, on foot, to the Coal-Hole, the Cider-cellars, or the Piccadilly Saloon, each member, as a matter of course, diverging to the locality in which his credit was not quite exhausted.

**THE LATE THOMAS HOOD.**—Mr. A. H. Baily, the City publisher—and in those days given to the sport of book-printing in right earnest—was publishing the current, and re-publishing the past productions of Hood, and the poet used frequently to call upon his temporary Macnemas. It is fair, and we suppose no harm, to say that Baily was as much given to gossip, as was Hood to fun, and it was some time—pleasant fellow as he was—before a man could get away from him. Hood called one day, and had what an Irishman would call—an interminable interview. A few days afterwards he called, and had no interview at all—for the very excellent reason that Baily was out. Hood, who had tried and understood the practice of an attorney's office, made out, and left behind him the following bill of costs:—

A. H. Baily, Esq., Dr.

To Thomas Hood.

	£.	s.	d.
To calling upon you once when you were out .....	0	6	8
To calling upon you once when you were at home...	6	8	0
Total.....	6	14	8

Or, as Hood wrote it—"Please to remember, the last item is cheap at the infliction. The joke has endured against Baily up to the present hour.

**IMPORTANT TO ANGLERS.**—By the new Fishery Act all rivers in England and Wales are to be closed on the 18th of September in each year, and any person catching, or having in his possession any trout measuring in length less than seven inches from eye to fork, will subject himself to a penalty not exceeding £10 nor less than £5.

**HOW TO "RAISE THE WIND."**—Insert in a newspaper an advertisement of a tempting "situation." Request every applicant to enclose a postage stamp. The advertisement will cost about 6s. 6d. or 6s.; the applicants will be innumerable. An ingenious knave tried the experiment in the *Times*, and got 219 "*Rowlands*" for his "*Oliver*."

**A PALPABLE CONTRADICTION.**—A Taffy, advertising for a wife, says "money is of no consideration;" but, he economically adds, *Pre-pay* your letters.

An editor out west gives vent to his indignation as follows:—"He that steals my purse, steals trash; but he that stole my umbrella—cuss him."

**THE HISTORY OF MAN.**—A paper down east tells of a negro who proposed to write a book on Natural History. He commenced as follows:—"Man is de first animal in de creation; he spring up like a sparrow-grass—hop about like a hopper-grass—and die de same as a jackass."

**LONG, LONG AGO.**—A lady, who was very modest and submissive before marriage, was observed by a friend to use her tongue pretty freely after. "There was a time," said her friend! "when I almost imagined she had none." "Yes," said the husband, with a sigh, "but it's very long since."

**PORTICAL.**—I sat by the open window on a fine dewy evening. The stars shone out, and the moon flung her mild beams over the rocks that bounded my view. The birds had retired to rest—the wakeful frogs made music in the neighbouring marsh! and the fireflies bespangled the darkness. I looked out on the charming scene—I raised my eyes to the milky way, and recollected that I had not a clean shirt for Sunday.

**SECRETS WORTH KNOWING.**—Lawyers rarely go to law, and doctors seldom or never take medicine.

## ADVERTISEMENTS.

**THE NEW RACE GLASS,** to be had only of the inventors, **THOMAS HARRIS and SON,** Opticians, No. 52, opposite the entrance to the British Museum, London. The extraordinary magnifying power of this glass, with its approved adjustment, made to suit all sights, enables the possessor to keep the horses distinctly in view, the entire course, from "the start to the coming in." Caution: No. 52, opposite the British Museum, London, is T. H. and Son's only establishment. Established 70 years.—To prevent mistaking the house, notice the name, *Thomas Harris and Son*, and the number (52) is laid in *Mosaic pavement* in the footway contiguous to their shop.

**TO THE LOVERS OF ANGLING.—J. K.** Farlow, 5, Crooked-lane, London-bridge, being the actual manufacturer of Rods, Flies, Tackle, &c., is enabled to offer to his brother anglers, the following low list of prices: four joint hickory fly rods, 10s.; four joint best hickory fly rods, two tops, partition bag, double braided socket, spear, &c., &c., 21s.; three joint walking stick rods, 2s. 6d.; best hickory or cane punt rods, two tops, 15s.; the best town made taper fly line, twenty yards, 3s.; thirty yards, 4s. 6d.; thirty yards patent eight plat, 3s. 6d.; the best trout flies on Limerick hooks, dressed on the premises, 2s. per dozen; winches from 1s. 6d.; fly hooks from 9d.; best gut hooks 1s. per dozen; best gut lines 2d. and 3d. a yard. Lists of prices forwarded on application; country and export orders executed on the shortest notice; old netting for preserving fruit trees from frost, blight, and birds, or as a fence for fowls and pigeons, and can be had in any quantity at 3d. the yard, two yards wide, or 1½d. the square yard; the above netting being tanned, will stand exposure to the weather. Observe the address, 5, Crooked-lane, London Bridge.

**BROTHER ANGLERS.—HUTCHINSON and SMITH,** 67, Wood Street, Chapside, beg leave to offer to their Brethren of the Angle their unique Basket Seats, being light, commodious, useful, and a sure prevention against damp. Also their novel Glass Roach Floats, 6d. each, hermetically sealed; balance handle fly rods, 21s. warranted; cane roach rods, trolling rods, winches, lines, floats, cans, hooks, nets, and every article in the above line at the lowest prices, and best quality. Live and all other kinds of baits always fresh.

N.B. An excursion to the Hampton Ait Fishery every fortnight; Tickets 3s. 6d. each. Observe, 67, Wood Street, Chapside.

**THE CHAMPIONSHIP OF ENGLAND.** BEN CAUNT, Champion of England, respectfully announces his benefit for Monday, August 4th, at THE TENNIS COURT, Windmill-street, Haymarket, previous to going into training for his grand pugilistic tourney for 2001. aside, and the high honour of the CHAMPION'S BELT.

N.B. All the talents in the fistio world have promised their helping five. Masters of the Ceremonies, Jemmy Shaw. Boxes 3s.; pit 2s.; gallery 1s. Tickets to be had at every sporting house in London, and at Ben Caunt's, Coach and Horses, St. Martin's Lane.

Vivant Regina, et Princeps, et Kids!!!

**OKEY'S ST. LEGER SWEEPS ARE NOW OPEN.**

Three classes of Leger Sweeps divided as follows:—

	First.	Second.	Third.
97 at £2	2..... £112 0.....	£24 0.....	10 0
97 at 1	1..... 56 0.....	12 0.....	5 0
97 at 10	6..... 30 0.....	6 0.....	0 0

Each starter, £2 2s., £1 1s., and 10s. 6d.

N.B. The prizes go with the stakes. Disqualified horses not drawn. Post Office Orders to Mr. N. F. Okey, Hero of Waterloo Inn, Waterloo Road, London, will be duly attended to.

UNDER ROYAL PATRONAGE.

**DR. LOCOCK'S PULMONIC WAFERS.**—The truly wonderful Cures of Asthma, Consumptions, Coughs, &c., which are everywhere performed by this Invaluable Medicine, have now established it as the most certain and perfect remedy in existence for all disorders of the breath and lungs.

CURES IN MANCHESTER.

Extract of a letter from Mr. Lynch, chemist, Market-street, Manchester; October 22nd, 1844.

Gentlemen—I enclose you a letter received from a party who has derived great benefit from Locock's Wafers. I have no doubt if you were to advertise them in this town, the sale would be considerable, as we are constantly receiving testimonials of their efficacy.—I am, &c., J. R. LYNCH.

More astonishing Cures of Asthma, Coughs, Colds, &c., in Chester.

Read the following extract of a letter from Messrs. Platt and Son, 13, Foregate-street, Chester; dated March 25, 1846.

Sir—Your invaluable Wafers continue to perform wonders here. Since our last we could send you dozens of cases of the most astonishing cures. One gentleman, who had a bad cough for years, bought one box, and was cured before using the whole of it. He gave the rest away, and they were equally beneficial. One medical gentleman here is so convinced of their value, that, besides regularly recommending them to his patients, he had some a few days since for one of his children. One of our clergymen, also, who labours under an asthma, received such extraordinary benefit himself, that he

now gives many boxes away every week among the poor. Other persons almost daily call upon us, who had laboured under asthma, asthmatic coughs, consumptions, &c., for years, to thank us for recommending them this "instant cure," &c. (Signed) M. FLATT and SON.

Cure of Ruptured Blood Vessels of the Lungs. From H. Huntley, Esq., 15, Albion-terrace, Old Tiverton-road, Exeter. March 20, 1846.

"Sir—I ruptured a blood vessel of the lungs, about three months since, which, being partially recovered from, a most troublesome cough succeeded. I tried everything that my surgeon, friends, and self could think of, but without alleviation. It was at length suggested that your wafers might be useful. I tried them, and very soon their good effects were apparent; a single wafer taken when the fit of coughing was about to commence, never once failed of giving it a complete and instantaneous check.

"A lady also, a friend of mine, and who, by the bye, is in her 66th year, is, or rather was, troubled with a hard distressing cough. The good effects I derived from the wafers recommended them to her; she has used them, and wonderful was the relief she experienced. (Signed) "HENRY HUNTLEY."

The particulars of many hundred Cures may be had from every agent throughout the Kingdom and on the Continent.

Dr. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumptions, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1½d., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bride-lane, Fleet-street, London.

CAUTION.—To protect the public from spurious imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words DR. LOCOCK'S WAFERS in white letters on a red ground.

If purchasers will attend to this caution, they will be sure to get the genuine article.

Sold by all Medicine Vendors.

## THE EARL OF ALDBOROUGH CURED BY HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Masina, Leghorn, 21st Feb., 1845.

To Professor HOLLOWAY.—

SIR—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either.

Your most obliged and obedient servant, (Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing.

Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.

SIR—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Aeklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c., &c.,

(Signed) THOMAS TAYLOR.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicines THROUGHOUT THE CIVILIZED WORLD, at the following prices:—1s. 1½d., 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Fourteenth Edition of the "SILENT FRIEND" or Human Frailty, with coloured engravings.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and important edition of

**THE SILENT FRIEND; a Medical Work** on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The beneficial effects of solitary Indulgence, neglected Gonorrhoea, Gleet, Stricture, Secondary Symptoms, &c., are fully pointed out. Illustrated by Engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R.

and L. PERRY, & Co., Consulting Surgeons, London. Published by the Authors, and may be had at their Residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay & Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkin, Compton-street, Soho, and all Bookellers.

"The Authors of the SILENT FRIEND seem to be thoroughly conversant with the treatment of a class of complaints, which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—Era.

"This work should be read by all who value health and wish to enjoy life, for the truisms contained therein defy all doubt."—Farmers' Journal.

The CORDIAL BALM OF SYRIACUM is exclusively directed to the cure of nervous and sexual debility, obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

The CONCENTRATED DETERSIVE ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammation, Irritation of the Bladder, &c., without hindrance to business.

Consultation-fee, if by letter, £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 11 till 9, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

Just Published, the SIXTEENTH EDITION, illustrated with cases and Full-length Engravings, price 3s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 3s. 6d.

**THE SECRET COMPANION. A MEDICAL WORK ON NERVOUS DEBILITY and the concealed cause of the decline of PHYSICAL STRENGTH and the loss of MENTAL CAPACITY,** with remarks on the effects of SOLITARY INDULGENCE, neglected GONORRHOEA, SYPHILIS, SECONDARY SYMPTOMS, &c., and Mode of Treatment: followed by observations on MARRIAGE, with proper Directions for the removal of all Disqualifications. Illustrated with Engravings; showing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell square, London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkin, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges street, Covent-garden; Gordon, 146, Leadenhall-street, London: and by all Bookellers in town and country.

**THE CORDIAL BALM OF ZEYLANICA; OR, NATURE'S GRAND RESTORATIVE.**

is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c. Even where Sterility seems to have fastened on the female constitution, this Medicine will warm and purify the blood and fluid, invigorate the body, and remove every impediment.

This Medicine should be taken previous to persons entering into the Matrimonial State, to prevent the offspring suffering from the former imprudence of its parents, or inheriting any seeds of disease, which is too frequently the case. Sold in Bottles, price 4s. 6d. and 11s. each, or the quantity of 4 in one Family Bottle for 33s., by which one 11s. Bottle is saved.

The £5 Cases may be had as usual.

**BRODIE'S PURIFYING VEGETABLE PILLS**

are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes; including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 1½d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. BRODIE and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of £1, and in all cases the most inviolable Secrecy may be relied on. Only one Personal Visit is required to effect a Permanent Cure.

Observe—27, Montague-street, Russell-square, London.

LONDON:—Printed by JOHN WORTHAM, of No. 313, Strand, in the Parish of St. Mary-le-Strand; and published at the OFFICE, 42, Holywell-street, Strand, by E. DUFFLE.—Saturday, August 2, 1846.

## MY POINTER.

— "See my pointer stand:  
How beautiful he looks!—With outstretched tail,  
And head immovable, and eyes fast fixed;  
One foreleg raised and bent—the other firm,  
Advancing forward, presses on the ground."

**S**UCH is the whole-length portrait of "my pointer," as penned by Somerville; his head, as here pencilled, is we trust, as expressive as a whole length; does it not tell its own story? Can you not, readers, without any extreme sketch of imagination, imagine the volatile particles of airborne scent, the subtle effluvium of the crouching partridge, the closelying black cock, the cunning moorhen, streaming towards those quivering nostrils? If you cannot, you have not the sporting spirit strong within you. Of him

— "Whose joys awhile did sleep,  
And now his old companion calls again;  
With nose-sagacious pointer, and brown gun,  
Onward he hies, o'er moor or stubble plain,  
And startles the wild game, ere scarce appears the sun."

And now, to drop to a few sentences, of plain prose about the pointer in general.

Like the untutored savage, the wild dog hunts from necessity, to supply the cravings of his appetite; and perhaps it is not beyond probability to suppose he delights in the pleasure of the chase much in the same manner as the wild Indian, who occasionally amuses himself with the pursuit even when the calls of hunger are neither imperious nor even pressing. The domestic dog is equally inclined to hunting, and, so soon as he is able, pursues the hare, the rabbit, and also most of the lesser animals, and also birds, with headlong ardour. When reduced by discipline, and taught a system, far from testifying any unwillingness, the dog's alacrity seems to increase, and he appears to feel the greatest delight in administering to his master's amusement, though fully aware that, however successful the chase may be, he will not share the fruits of it. If we reason upon the matter, it exhibits the fidelity and good qualities of this invaluable animal in a most amiable and a most disinterested point of view; but instances are not wanting where the dog will not only manifest what we have just mentioned, but a degree of disappointment, truly astonishing, when ill success attends the exertions of the sportsman.

As an anecdote pertinent to this, we cannot resist transcribing an anecdote from a well-known contributor to the "Annals of Sporting."

"Some years ago, I was presented with a young liver-coloured bitch—she was eight or nine months old, but had never been broke or trained, yet as I clearly saw she was well bred, I did not hesitate (in the month of November) to take her out with an old steady dog, without any previous education. From some cause with which I was never acquainted, she testified considerable alarm at the sight of the gun, and it was not without some difficulty that I induced her to follow me to the field. I had no sooner, however, arrived on the ground than all obstacles vanished, for she instantly made a dead point near a bush, about two yards distance from the place where I stood, and continued her position all the time I was loading my fowling-piece. She stood steady as a statue, and on shaking the bush a pheasant rose, which I killed, which I suffered her to run up to and mouth for a few seconds. From this moment my bitch hunted with the utmost alacrity, she set or pointed also, and the only trouble I experienced in her education was in teaching her to range, and preventing her breaking fence. She proved an excellent dog, and I shot over her for five successive seasons. A gentleman, who happened to see this bitch out in the early part of last September, became anxious to purchase her, and I sold her to him accordingly. As she had never been used to any person but myself, and no home but my residence, (at least for upwards of five years,) I requested him to keep her chained up till she became reconciled to her change of abode. In about six weeks afterwards, however, on going out of the door one morning, the bitch presented herself and welcomed her former master with every possible demonstration of affection, and took up her old quarters with the utmost self-satisfaction and complacency. I immediately sent her back to the gentleman who had purchased her (15 miles distance); but the following week she paid me another visit, and indeed she has returned half a dozen times since. I have lately learned the following particulars:—happening to meet with the present owner, he informed me, that after he had taken the bitch to his residence, she became apparently reconciled to him, and he took her into the field, she followed him without the least hesitation, and manifested all imaginable eagerness for the sport; unfortunately he missed six or seven shots in succession, and the bitch became uneasy, whimpered, and in the course of the day caught a brace of birds which she happened to find in the hedge-rows, and returned at night by no means satisfied with the day's diversion. The gentleman candidly admitted that he was a very indifferent shot, and that the bitch uniformly became uneasy and apparently dissatisfied at his inability; she repeatedly ran in, evidently with the intention of seizing the game; and matters thus continued for several weeks. One morning he happened to meet with some pheasants, and after firing in vain for twelve or fourteen successive shots, the bitch dropped her tail, quitted the field in defiance of calling, whistling, &c., and made the best of her way to my dwelling. Even now she accompanies her master on his shooting excursions with reluctance; and to his very indifferent performance as a marksmen, I am indebted for her frequent visits."

That the pointer enjoys the diversion as much as its master, is a fact so generally known, and so incontestable, as to need no confirmation in this place; but what we have mentioned above seems extraordinary (though we have heard of occurrences somewhat similar), and clearly shows, not merely the attachment of the animal to the sport, but the interest it feels in the success of it. It is a common remark amongst sportsmen, that a bad shooter can never have a good dog; at all events, a bad shooter must very soon spoil such a one. "As to the bitch in question," says the narrator of the anecdote, "I never recollect being possessed of a better either as to temper or ability in the fields; I uniformly found her very sagacious, uncommonly steady; yet I have known her exhibit symptoms of discontent when I have missed several shots in succession."

**WESTMINSTER-BRIDGE.**—This unhappy old structure, which has long ago been condemned, on being tried by its piers, has been the subject of a conversation in the Commons. It seems that several engineers and two or three commissioners have sat upon it, and "the mercy is," as the old women say, that the rickety concern did not give way with them. We never see a loaded omnibus going over it without wondering whether it will get safe to the other side, and we are quite certain that a Life Insurance-office at the foot of the bridge at either end would be a profitable speculation. Everything has been tried with this dreary pile, but nothing seems to answer. It has been made to lower its proud head to the extent of several feet, but still it is almost as bad as climbing up a rock, and descending a precipice, to go on to the bridge at one end and off at the other. The first experiment was to scoop a lot of our mother earth out of the centre of the bridge, and the foot passengers are consequently walking on the heights while the vehicles are placed in a valley "down, down below;" but nothing answers the purpose. The crazy old concern is past mending, and the only remedy is that proposed in the House of Commons the other night, namely, to pull it all down, and build a new one.—*Punch*.

Why is a dandy like a dog? Because he has more collar than shirt.

## LAY OF THE LOCOMOTIVES.

THE NERVOUS OLD LADY AND THE INTREPID GUARD.

A DUETT.—AIR, "Fanny Grey."

OLD LADY.

So, so! well—here I am at last; thank goodness safe and sound, But with the bustle, my poor head is turning round and round, Don't bang the door so, my good man, it jars my very brain.

GUARD.

Now, ma'am, make haste, the engine's up, and hooking to the train. Now, ma'am, make haste, &c.

OLD LADY.

Dear me! I've dropp'd my spectacles! Policeman, look about, And see if you can find them—stay, I think I will get out.

GUARD.

You can't, ma'am, now, the bell has rung.

OLD LADY.

I'm frightened into fits.

Yes—these they are—bump the wheel!—and now they're crush'd to bits!

Yes, these they are, &c.

OLD LADY.

Stop, stop the train!—where is my box?—my luggage I can't find!

GUARD.

It's all right, ma'am, upon the track, two carriages behind.

OLD LADY.

No, that's it on the platform there! Policeman, stop the train!

GUARD.

Can't ma'am. They'll keep it safe until you comes this way again.

Can't ma'am. They'll keep it, &c.

OLD LADY.

But where's my darling little dog?—oh, tell me, I implore.

GUARD.

That's him, ma'am, yelping in the van; his tail's stuck in the door.

OLD LADY.

Ah! there's a jolt! what can it be; I really can't divine.

GUARD.

They've cut a man in two, ma'am, as was drunk upon the line.

They've cut a man in two, &c.

OLD LADY.

Good gracious, what a dreadful noise! the engine's going to burst.

GUARD.

No matter, ma'am, the third class falls will be blown up first.

And if it does, you'll finish the day's journey, my how.

By only going up to Heaven, instead of down to Slough.

By only going, &c.

OLD LADY.

Stop; let me get my ticket out—oh! there, it's blown away.

What must he do now?

GUARD.

Oh, nothing, ma'am; you'll only have to pay.

OLD LADY.

Thank goodness, here's the station: now, good man, undo the door,

I'll never try the rail again: no, never any more.

I'll never try the rail, &c.

**OUR NATIONAL DEFENCES.**—It is extremely gratifying to have had the assurances of Ministers, that in the event of war requiring the whole of our troops, England has still got the Chelsea pensioners to fall back upon. We understand that a review of the Chelsea pensioners will shortly take place, as a preliminary to bringing the veterans into active service. There may be some difficulty in obeying the words of command, for the ordinary operation of shouldering arms will be somewhat of a puzzle to those who have no arms to shoulder. "Recover arms" will be an evolution that many would be delighted to perform if it were practicable, and "Stand at ease" will be a suggestion that those who have lost their legs may find some difficulty in complying with. Whether the Chelsea corps is to form a portion of Her Majesty's Foot we have not heard, but the regiment of "No Foot" would perhaps be a more appropriate title to most of them. "Quick march" will, we understand, not be insisted upon as a part of the exercise to be performed by the veterans, who will be divided into rank and file, some of whom will rank as old files according to seniority. The guns dealt out to those who have no legs will be constructed on a principle that must prevent them from kicking, for it is felt to be hard on the old legless boys to have kicking guns given them, when it is out of their power to kick in return.—*Punch*.

Why is flannel like mahogany? Because it is made into drawers.

## CRICKET.

PILCH.

We subjoin a sketch of PILCH, the LION OF KENT, and must beg the indulgence of our readers for the continuation of "A DAY AT LORD'S," in consequence of a fatal accident that has befallen a bosom friend of NED RUN'S, for particulars of which we refer our readers to our Stamped Edition.

## THE DOG STEALING BILL.

[As this act is now attracting the attention of the public from the daily convictions taking place under its provisions at the police offices, we give the whole bill, as it has the singular merit of being very brief—for an act of Parliament.]—EDITOR.

*An Act for the Further Prevention of the Offence of Dog Stealing.*

Whereas, by an act passed in the seventh and eighth years of his Majesty King George the Fourth, intituled an act for consolidating and amending the laws in England relative to larceny, and other offences connected therewith, certain provisions were made for the prevention of dog stealing; and whereas it is expedient, for the further prevention of the said offence, that the provisions of the said recited act, so far as relates to dog stealing, and to dealing with the offenders in respect to the said offence, shall be repealed: Be it therefore enacted by the Queen's most excellent Majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present Parliament assembled, and by the authority of the same, that from and after the passing of this act the said provisions, so far as aforesaid, shall be repealed.

2. And be it enacted, that if any person shall steal any dog, every such offender shall be deemed guilty of a misdemeanor, and being convicted thereof before any two or more justices of the peace shall for the first offence, at the discretion of the said justices, either be committed to the common gaol or the House of Correction, there to be imprisoned only, or be imprisoned and kept to hard labour for any term not exceeding six calendar months, or shall forfeit and pay, over and above the value of the said dog, such sum of money, not exceeding twenty pounds, as to the said justices shall seem meet; and if any person so convicted shall afterwards be guilty of the said offence, every such offender shall be guilty of an indictable misdemeanor, and being convicted thereof shall be liable to suffer such punishment, by fine or imprisonment, with or without hard labour, or by both, as the court in its direction shall award, provided such imprisonment do not exceed eighteen months.

3. And be it enacted, that if any dog, or the skin thereof, shall be found in the possession or on the premises of any person by virtue of any search warrant, to be granted as is hereafter in that behalf provided, the justice by whom such search warrant was granted, may restore the same to the owner thereof, and the person in whose possession or on whose premises the same shall be so found, such person (knowing that the dog has been stolen, or that the skin is the skin of a stolen dog) shall, on conviction before any two or more justices of the peace, be liable for the first offence to pay such sum of money, not exceeding 20*l*, as to the justices shall seem meet; and if any person so convicted shall be afterwards guilty of the said offence every such offender shall be deemed guilty of a misdemeanor, and punishable accordingly.

4. And be it enacted, that if any person shall publicly advertise or offer a reward for the return or recovery of any dog which shall have been stolen or lost, and shall in such advertisement use any words purporting that no questions shall be asked, or shall make use of any words in any public advertisement purporting that a reward will be given or paid for any dog which shall have been stolen or lost without seizing or making any inquiry after the person producing such dog shall forfeit the sum of 25*l*. for every such offence to any person who will sue for the same, by action of debt to be recovered with full costs of suit.

5. And be it enacted, that any person found committing any offence punishable either upon summary conviction or upon indictment by virtue of this act, may be immediately apprehended without a warrant, by any police-officer, or by the owner of the dog with respect to which the offence shall be committed, or by his servant or any person authorised by him, and forthwith taken before some neighbouring justice of the peace, to be dealt with according to law; and if any credible witness shall prove upon oath before a justice of the peace a reasonable cause to suspect that any person has in his possession or on his premises any stolen dog, such justice may grant a warrant to search for such dog; and any person to whom any dog shall be offered to be sold or delivered if he shall have reasonable cause to suspect that such dog has been stolen, is hereby authorised, and, if in his power, is required, to apprehend and forthwith to convey before a justice of the peace the party offering the same, together with such dog, to be dealt with according to law.

6. And be it enacted, that any person who shall corruptly take any money or reward directly or indirectly under pretence or upon account of aiding any person to recover any dog which shall have been stolen, or which shall be in the possession of any person not being the owner thereof, shall be guilty of a misdemeanor, and punishable accordingly.

7. And be it enacted, that any justice may, if he shall think fit, remand for further examination, or may suffer to go at large, with or without sureties, upon his own personal recognizance, any person who shall be charged before him with any offence or misdemeanor punishable by this act, whether the same be punishable by summary conviction or as an indictable misdemeanor.

8. And be it enacted, that in every case of summary conviction under this act where the sum shall be forfeited for the value of any dog as is hereinbefore provided, or which shall be imposed as a penalty by the justices, shall not be paid either immediately after the conviction or within such period as the justices shall at the time of the conviction appoint, it shall be lawful for the convicting justices to commit the offender to the common gaol or house of correction, there to be imprisoned only, or imprisoned and kept to hard labour, for any term not exceeding two calendar months where the amount of the sum forfeited, or of the penalty imposed, or of both (as the case may be), together with the costs, shall not exceed five pounds, and for any term not exceeding four calendar months where the amount, with costs, shall not exceed ten pounds, and for any term not exceeding six calendar months in any other case; the commitment to be determinable in each of the cases aforesaid upon payment of the amount and costs.

COURT CIRCULAR.—On Thursday, Mr. Always Cut-and-run, of Never-stop Place, was unavoidably detained at home by his two pairs of trousers, —the cloth ones playing the truant at the pawnbroker's, and the ducks at the wash.

What is nothing? A footless stocking without a leg.

Why is a young lady like a bill of exchange? Because she ought to be settled as soon as she comes to maturity.

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

## CHAPTER VI.—Continued.

## DUTCH SAM.

Samuel Elias was born April 4th, 1775, in Petticoat-lane, Whitechapel. His first introduction to the pugilistic world at the age of 16, was occasioned by the following circumstance:—As Harry Lee was returning from Enfield on the day that Jem Belcher and Burke were to have fought, (Oct. 12, 1801), he witnessed a quarrel, followed by a turn-up between a man of superior size, of the name of Baker, and a youthful Israelite. It was a sort of bye battle arising out of a quarrel. In "FISTIANA," we find (we know not on what authority) the fight recorded as a regular pitched battle, and the sum of five guineas placed against it. Be this as it may, Lee was struck with the stripling's skill, quickness, and astonishing severity of hitting. He accordingly lent him the light of his countenance, and Sam appeared at various sparring exhibitions. With the exception of one Shipley whose pretensions Sam extinguished in fifteen minutes, in 1803, our hero does not seem to have been engaged in any public contest until August 7, 1804, when he met at Wood Green, near Hornsey, in the roped lists, the renowned Caleb Baldwin, the pride of Westminster, for a purse of 25 guineas. This battle excited great attention; that Caleb was well known we need hardly say, while the young Israelite's fame stood deservedly high among "the peoplesh." The odds on stripping were in favour of Baldwin. And here we cannot resist giving a specimen of the way in which the volumes on which the public are called upon to pin their faith, are vamped up. "The Historian," who conglomerated "BOXIANA," has insulted common sense, grammar, and fact, by the following fabricated account of this battle, which appears in vol. 1, page 310 of that work, under the memoir of Caleb Baldwin.

"First round.—The spectators were extremely anxious to witness on which side the first advantage appeared—great expectations were placed upon Caleb, whose experience, well-known bottom, and scientific accomplishments rendered him a finished pugilist; and Dutch Sam was an object of considerable attraction among the *Fancy* in general; after some displays of the art, Sam made a hit, which did not tell; but Caleb, eager for the fray, returned the compliment extremely sharp and put in a desperate facer, that levelled his opponent. Three to one in favour of Caleb.

"Second.—Sam felt impressed that he had a *trump* to deal against, and appeared rather shy of Caleb; when the latter, full of spunk, and knowing there was no time to lose when a favourable opportunity offered, punished away both right and left, treating Sam with a *prime taste* of his *millling* qualities, that levelled him once more with his mother earth.

"Third.—Sam displayed a little more confidence, and put in some hits; but the superiority of CALEB was now manifest, who dealt out punishment so severely upon his opponent's frame, that, upon the termination of this round, Sam positively declared to his second he was beaten, and must give in; but Bill Wood smothered the sound, and brought him forward again to face his man!

"The fourth, fifth, and sixth rounds were all in favour of Caleb, and Sam was so perfectly convinced in his own mind it was against him, that he declared once more to his second he could fight no longer; when Bill Wood clapped a handkerchief upon his mouth, and would not let him speak, and assisted by Pass, they again brought him up to renew the contest! which was continued with uncommon severity and both bleeding profusely, till the

"Ninth.—When, after the exchange of some good blows, Caleb put in a tremendous hit on Sam's temple, that brought him down instantly: and Sam appeared considerably depressed from its effects, and till the

"Thirteenth.—The superiority of Caleb was manifest to all the spectators; and with the experience of a veteran pugilist, endeavoured to improve every favourable turn that presented itself. Caleb displayed good science, and Sam considerable talent; and the judgment and bottom exhibited on both sides were of the first quality—stopping dexterously, and returning sharply were often discernible in both the combatants, till the

"Twentieth.—When Caleb for the first time began to show some slight symptoms of fatigue; and Sam seemed rather to be gaining ground till the

"Twenty third.—When the Champion of Westminster was considered something on the decline, and although he put in several blows, they were not of any serious effect; while, on the contrary, Sam appeared to increase in gaiety, and dealt out his hard blows with considerable success, till the

"Twenty-sixth.—When the decision of the battle was nearly left to the effect of chance, as both the combatants were so completely exhausted as not to be able to stand up at the appointed time—and in this precarious state of things, if any proper criterion could have been established to form a judgment, which was the most likely of the two to prove the conqueror, it was Sam, whose exterior did not appear quite so much disfigured as his opponent; and it ought not to be passed over here without honourable mention, that Sam's conduct was highly praiseworthy, and his humanity conspicuous, in nobly disdaining to hit his brave adversary, who was already stunned from a severe blow of his left hand, and nearly in the act of falling, when Sam, instead of following up the advantage with his right, with a manly feeling made no use of it.

"Thirty-seventh.—For the last ten rounds, Caleb was much distressed, and that true game which had been so much distinguished in all his other battles, here, if possible, showed itself greater than ever. From his exhausted state, the blows of Caleb, although well meant, lost their effect. And it was with

the greatest reluctance that his brave heart acknowledged that he was conquered, who had so long, and so often been accustomed to the shouts of victory.

"Sam, in proving the victor, had not much to boast of; and who was so severely punished, that he could not have lasted much longer: and so strongly was he impressed with the valour and hardihood of CALEB, (who was by no means in good condition, from bad health, at the time he fought,) that, upon being matched to fight in the ensuing September, at the particular challenge of BALDWIN, for twenty guineas, Sam forfeited his deposit and declined."

Surely such rubbish as this can hardly impose upon any man: it bears absurdity and improbability on the face of it, and when read in conjunction with the rest of the inflated and exaggerated accounts of the prowess of the "Westminster Champion," affords a pretty specimen of the impartiality of the concocter of this precious report. Sam "took the lead throughout the fight," says the only contemporary account which we can find of this battle, and surely this sentence is enough to show that the detail above given is an entire fabrication. We now pass to Sam's next encounter, which took place April 27, 1805, at Shepperton Common, Surrey; his opponent on this occasion was with Britton, of Bristol, for 50l. aside. Britton was a pugilist of considerable pretensions, and had fought a good battle with Jem Belcher, when that fistic phenomenon was in his prime. It was a well-contested fight, and after thirty rounds of sharp work, Sam was declared the conqueror.

Sam was next matched with Tom Belcher, for one hundred guineas, and the mill came off Feb. 8, 1806, at Moulsey Hurst, in a roped ring. Gully seconded Tom Belcher, and Dick Whale was his bottle-holder; the attendants upon Dutch Sam were Mendoza and Tom Blake. Betting was extremely brisk, but no odds offered.

## THE FIGHT.

1.—Great expectations were formed of a fine display of science. Sam made a feint, and tried to draw his man; but Tom was not to be had; he popped in a little one, which was quickly returned by the Jew; Belcher tried to get closer, but in making a hit overreached himself, and fell.

2.—Belcher extremely active, and got in right and left with good effect. Sam returned slightly, when they closed and fell.

3.—Sam tried to punish Tom's ribs; but Belcher's guard was too secure. After an exchange the men closed and fell. [Five to four on Belcher.]

4.—In this round Tom proved himself a first-rate pugilist, and appeared the readier man; notwithstanding Sam's rallying, he warded off his sharp hitting with great dexterity, and punished away with his right hand; Sam, by main strength, threw his opponent.

5.—No mischief done.

6.—Both the combatants resolved losing no time, and severe blows were exchanged, but in favour of Tom, who stopped the desperate hits of his antagonist with remarkable adroitness.

7.—Tom, in a rally, made his opponent's head rattle again; but Sam received the shock undaunted, and caught Belcher an astonisher on the eye; in closing, both down.

8.—Both pelling away; Belcher threw Sam. [Two to one on Tom.]

9.—Belcher a little the worse for his exertions, which Sam perceiving, ran in, and knocked him clean down.

10.—Belcher tried to punish his opponent's nob, but ineffectively, and fell through exhaustion, while Sam was busting him, and forcing the fighting. [The odds now shifted, and seven to four were offered upon Sam.]

11.—Sharp blows and neat stopping on both sides; in the close, Sam was uppermost.

12.—Belcher made the best of himself, and showed off rather gay; but his blows did not seem effective, and he fell, during a short rally, to all appearance weak. [Two to one on Sam.]

13.—Tom, somewhat recovered, made his opponent's head feel the effects of a rattling one, two, which rendered him so shy, that Belcher went in, and threw him.

14.—Belcher again looked up to; Sam still shy. [Even betting.]

15.—Sam rattled in fiercely, and endeavoured to serve Tom out, and followed him round the ring; Belcher, who fought on the retreat, gave him some ugly raps for his temerity.

16.—The science displayed by Tom in this round was truly excellent—his distances were well judged, and his blows told. [Odds six to five on Belcher.]

21.—In the last six rounds, Belcher took the lead—but both the combatants were on the decline, and though several blows were exchanged, they were not effective.

25.—Belcher, although weak, appeared so formidable in the eyes of his opponent, that Sam avoided in-fighting.

26.—Belcher, without hesitation, put in a good facer, and concluded the round by throwing Sam. [Tom the favourite, and the odds laid upon him.]

27.—In the last two rounds, Belcher continued to exert himself in the best manner, but still betrayed weakness.

In rounds 30 to 57 Belcher displayed much tact and undeniable game, but the tremendous severity of Sam's hitting, and the almost ferocious energy with which he concluded every round, on perceiving the slightest advantage, gradually wore down his opponent, and at the close of the 57th round Belcher's seconds gave in for him.

(To be continued.)

## NOTICE!

\* \* THE SPORTSMAN'S MAGAZINE, Part III., for AUGUST, price Sevenpence, in an embellished wrapper, is now ready. The Parts for June and July are also procurable. ALL the back numbers are now in print, and may be had through all booksellers. The Stamped Edition (free by post) price 2s. 6d., must be ordered a week in advance; or per quarter, 3s., (in advance) will secure its transmission to the subscriber's address. In the eighteenth number of this paper (the Stamped Edition only), will be given a full and faithful report of the GREAT PUGILISTIC CONTEST for the CHAMPIONSHIP of ENGLAND, exclusively by express. To prevent disappointment in the country, all orders must be given before September 10, as the number of Stamps printed will be regulated by the orders.

Office, 42, Holywell-street, Strand, where all communications for the Editor must be addressed.

## "MY FIRST BRUSH."

## A REMINISCENCE OF A FOX-HUNTER'S BOYHOOD.

BY R. T. VYNER, ESQ.

Long before I kept hounds myself, I was in the constant practice of beginning with the first morning's cub-hunting, and going out regularly, through the summer and autumn, with the pack which hunted my neighbourhood in Warwickshire; and many is the run I have seen in those woodlands, which would not have disgraced December, and many the fox killed when the lazy world were snoring away their time in bed. Even when a schoolboy, I never lost the opportunity, when it offered, of running on foot for miles to get a sight of the hounds, either as they were passing from one cover to draw another, or where they might be even seen for a few minutes on their return home from hunting; and as five of my boyish years were spent with a private tutor in the cream of the Pytchley country, it is not much to be wondered at that the innate love of hunting should have been cherished till it became "the ruling passion," and that the remembrance of those early and dearly-loved scenes round Hempslow Hills and Winwick Warren should be amongst the fondest of my by-gone days.

"My First Brush," that trophy so sought for and valued by the old school, now become by far too dirty and odoriferous for the white gloves of the modern fox-hunter, was gained in that Paradise of chase, Northamptonshire. It was late in the month of March, during the season of 1816 and 1817, when the quiet of Guilsborough was aroused from its accustomed tranquillity by the cry of the Pytchley hounds, at that time the property of Lord Althorp: they had run their fox, after a most brilliant burst of fifty minutes, from Nethercote's Gorse up to the gardens which surround the village, and amongst a most heterogeneous mass of cobblers, tailors, and snobs of ever grade, and curs of low degree, they killed him. Not having far to run from the house of my tutor, I was lucky enough to be in "in my place" at "the finish," and by the joint assistance of a large stick and a few kicks from the hobnails of a yokel, the fox was saved; and I bore him away in triumph into the middle of the next field. But where are the horsemen? Where is Charles King? Where is Jack Wood? Where is Mr. Bouverie? Where is Vere Isham? Where is Davy, *cum multis aliis*? In the middle of Naseby Field lost in a fog, and floundering their way through those far-famed receptacles for beaten horses, the Naseby Bogs. Why, the fox has been killed these ten minutes; but here comes one in a cap; is Jack Wood first; and five minutes more some "the field." It was a good run, and a good finish—all were delighted, and none more so than he who on that day gained his "first brush."—*Sporting Review for August, 1845.*

TO CURE THE ITCH IN HORSES.—We are assured, by a respectable farmer who has tried it, that the following is an infallible remedy:—White hellebore, powdered, 1 oz.; flour of sulphur, 1 lb.; oil of tar,  $\frac{1}{2}$  lb.; train oil,  $\frac{1}{2}$  lb., to be well mixed together and thoroughly rubbed into every part of the body, which the following day should be washed with soap and water, and the application be repeated as before. This method to be pursued until this troublesome and infectious disease is eradicated.

CURIOSITIES OF ADVERTISING.—An advertisement of cheap shoes and fancy articles has the following *nota bene*:—"N.B. Ladies wishing to purchase cheap shoes will do well to call soon, as they will not last long." This is candid; what follows is horrible.

A Liverpool farrier informs those ladies "who wish to have a really genuine article," that he will be happy to make them muffs, boas, &c., of "THEIR OWN SKINS!"

—GREAT SQUIRRELS.—A gentleman, waiting from the borders of Lake Champlain, confirms a statement made by Dr. Morse, in his work on geography, and which has, by some, been regarded as fabulous. He says:—"A word on the instinct of squirrels here. When they wish to move from one island to the other they watch the wind till it blows in the right direction, and you will see them in dozens coming to the beach, each with a large piece of bark in his mouth, which he launches, and then jumping on board, turns up his tail for a sail, and ever he goes to the port of his destination. I might have shot them while making sail, but it looked to me as something almost wicked."—*New York Spirit of the Times.*

## CORRESPONDENTS.

- S. WILLIAMS, Leeds.—Cousens beat Deaf Burke, Aug. 6, 1839; it is therefore more than fifteen years ago, and B wins the wager. There were four gipsy Coopers: the degrees of their relationship we cannot tell. Jack Cooper was the best known, he beat Scroggins, Cabbage, and West Country Dick, but was defeated by Bishop Sharpe, or Young Dutch Sam, (Young Sam also beat Tom Cooper); Jem Cooper, beaten by Owen Swift, (when Owen was a boy) is unknown to fame. George Cooper, beaten by Dick Curtis at Epsom, is also an illustrious obscure, being one of those more rough and ready "coves of the bush," who, when milling was in vogue, resorted to moss, &c., to fight for a purse gathered on the ground. You will see all about the celebrated George Cooper (the 12 stone man we mean) in the HISTORY OF BOXING now progressing in these columns.
- R. N., Northampton.—Blood-spavin is an unnatural enlargement on the *inside* of a horse's hock, proceeding from the distension of the vein crossing the internal junction of the inferior part of the thigh bone with the superior part of the shank: it more usually arises from a blow or kick than any continued exertion of speed. Bone-spavin is an ossified enlargement on the *outside* of the hock, and rather below the joint; it is a cartilaginous protrusion at first, which afterwards becomes callous, and at length as hard as bone itself. Blistering and afterwards firing may remove it in its earlier stages. It is an unsoundness, and makes a horse lame sooner or later.
- R. BULLOCK.—Mr. John Gully was born August 21, 1783; he fought three times in the ring, 1, beaten by Pearce, the Game Chicken (see under Pearce in our History of Boxing); 2, beat Bob Gregson, 200 guineas, at Newmarket, October 14, 1807; 3, again beat Gregson, 300 guineas, Market-street, Herts, May 10, 1808. He was champion, but declined the honour, whereon it descended to Cribb. He was elected M.P. for Pontefract, in 1832. His fistic career will follow Dutch Sam, now in progress.
- A GROOM.—Camphorated Spirit is a good remedy and useful embrocation in slight swellings, as well as to prevent the breaking of chilblains in the winter season. The following is the mode of preparation:—Take of spirit of wine, one pint; camphor, one ounce; shake until the camphor is dissolved. Camomile flowers are the best fomentation you can use in such a case as that you speak of.
- FOUR-A-BALLAGE.—We shall be happy to receive the articles on the terms mentioned. Would you be willing (as we suppose you have the necessary books of reference) to take the answering of turf questions?
- SIMON.—R. pater, or bay salt, two ounces; powdered gentian root, one ounce; white hellebore, half a drachm. Take a pint of warm water and beat up a strong lather of soap therein, then mix the above medicines in it and give it to the horse the first thing in the morning, fasting. This may be given to a horse in work, or even a mare in foal, with safety; and is an excellent remedy for worms.
- EDWARD, Liverpool.—We do not know the book you speak of. Where was it published, when, and the name of its author.
- R. M. C. B., Chesterfield.—Thanks for the offer, but we have the file papers for the year 1834; nevertheless, if it is not "*Bell's Life*," we shall be glad to receive it. You are a little mistaken as to the progress of the History of Boxing; we are now at 1805, or thereabouts, though of course we pursue each pugilist's biography to his death, or the present time (if surviving). Bendigo is, we believe, a native of Leeds.
- H. BROWN.—You may be an old acquaintance of Ben Caunt's but you are not "with him almost every evening," nor any evening at all, now or lately, as he is at his training quarters. We know Caunt well enough, and certainly cannot say much for the resemblance taken by the artist we employed. All we can say is, that we paid him for a likeness, which he pretended to take, and when it came from the engraver's we did not like it any more than yourself. That of Bendigo (from another pencil) was excellent; but if H. Brown was an editor (which stupidly happily shields him from) he would find, that like everybody else, he must buy experience. The likenesses of the men "in attitude," which shall appear in No. 18, will be from the pencil of an artist we have tried, and found skilful.
- SAMUEL GREEN.—You are not so verdant as your name would imply. The shooting season will of course next attract our attention. We will insert the FRAGON articles when we have done with the Partridge and Pheasant. Can you not see how we are crowded?
- R. EMDEN.—The Report of the Great Fight (which will be taken by an experienced ring reporter), cannot appear in the unstamped edition, until upwards of twenty-eight days after its taking place, under a penalty of £10 for every copy of the paper so printed without a stamp, recoverable upon information; so that a person buying twenty-five copies of this paper could lay an information and get us fined £250. Pray wait your turn with the GAMBOON, or we shall begin to think that sporting readers are without any conscience or toleration.
- \* \* The continuation of "SHOOTING AND PREMONITORY HINTS ON THE USE OF THE GUN," is unavoidably postponed until the next number.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

- SUNDAY, August 24th.—FOURTEENTH SUNDAY AFTER TRINITY.
- MONDAY, 25th.—Cricket Match, the M. C. C. against the Northern Counties at Nottingham. —Stourbridge Races.—Hawley Hill Races.—Last day to serve Objections on Voters or their Tenants; or Borough Objections on Overseers, or to claim Right of Voting in Boroughs.
- TUESDAY, 26th.—Egham Races.—Plymouth Regatta.—Huntingdon Races.
- WEDNESDAY, 27th.—Hereford Races.—Newport Pagnell Fair.—LEFT-ON CLOTHES.—Good housewives, instead of giving their husband's old clothes to poor relations, or necessitous neighbours, exchange them for China ornaments and black velvet chimney-sweepers. Mrs. Dix, of Prospect-place, assures us that she has elegantly decorated her mantel-piece with two old hats, a black satin waistcoat, and a monkey-jacket.
- THURSDAY, 28th.—Stockton Races.—Salisbury Races.—Tiverton Races.—Stirling Races.
- FRIDAY, 29th.—Welford Fair.—Uckfield Fair.—As this is the time when every body goes out of London that can't help staying in it, we quote from Punch his instructions in the Art of Packing:—"A carpet bag should be packed by placing the clean linen in first, including the frilled shirts. After which stuff in the coats and boots; garnish with shaving tackle, and ram down with hair-brush. If the packing is not then successful, insert your foot into the bag, and pull fiercely at the handles. It does not matter about the carpet bag being wide open at both sides, so as it is closed with a padlock in the middle.—Overseers to send Lists of Electors and Objections to Clerks of the Peace in Counties, or Town Clerks in Cities and Boroughs.
- SATURDAY, 30th.—Spalding Fair.—Last day for payment of taxes, (due on March 1st) by Corporation Burgesses.—Seven Penny Post Letter Carriers dismissed, 844, for opening several sporting gentlemen's letters. Same text right, the inquisitive penny-trailors (penetrators) of turf secrets. Is this joke worth a farthing—oh, reader!

# The Sportsman's Magazine.

FOR THE WEEK ENDING AUGUST 30, 1845.

## GYMNASTICS.—NO. I. SWIMMING.—(Continued from p. 281)

### SECTION VIII.

OF SEVERAL VARIETIES OF SWIMMING.

#### *The Fling.*

The swimmer lays himself as flat as possible upon the waist, draws his feet close under his body, stretches his hand forward, and with both feet and hands, at the same time violently beating the water. In this manner one may succeed in throwing one's self out of the water as far as the hips. This exercise is very useful as it enables a man to save himself by catching at a rope or any other object which hangs above the surface of the water from a ship, or the like, and to grasp a projection at a moderate perpendicular height.

#### *To Beat Water.*

This is a very pleasant exercise among other varieties of swimming. When floating on your back, you must strike the water with each leg at every successive extension, causing the water to fly into the air. Those who are most expert at this bring their chins towards their breast at each stroke; and others lift up their legs much higher, and strike the water sometimes with their left leg, and at other times with their right, at the same time turning the whole body. This last is a very agreeable mode. To achieve it you must keep yourself fully extended on your back, inflating and elevating your breast as much as possible, always keeping it out of the water; extend both your hands with the palms towards the bottom, for it is by them that you must sustain yourself while striking with your legs. Now, supposing your right leg to be lifted up, strike with that; throw up the left instantaneously, and turn at the same moment. This agility makes swimming easy and pleasant.

#### *The Thrust.*

At first, the swimmer lays horizontally upon his waist, and makes the common motions in swimming. He then simply stretches one arm forwards, as in swimming on the side, but remains lying upon the waist, and, in a widely-described circle, he carries the other hand, which is working, under the breast, towards the hip. (This circle is in its direction the very opposite of that observed in swimming on the side.) As soon as the arm has completed this movement, it is lifted from the water in a stretched position, and thrown forwards in the greatest horizontal level, and is then sunk, with the hand flat, into the water; while the swimmer thus stretches forth the arm, he with the other hand, stretched as wide as possible, describes a small circle in order to sustain the body; after this, he brings this hand, in a largely described circle, rapidly to the hip, lifts the arm out of the water, thrusts it forward, &c. During the describing of the larger circle, the feet make their movements. To make the thrust beautifully, a considerable degree of practice is required. This mode of swimming is applicable in cases where a great degree of rapidity is required for a short distance.

#### *The Double Thrust.*

In the performance of this, the arm is thrust forwards, backwards, and again forwards, without dipping into the water; in the meantime the stretched-forth arm describes two small circles before it begins the larger one.

#### *To Turn Back.*

To do this, turn the palm of your right hand outwards and strike from you, and draw the left arm inwards, as it were embracing the water.

#### *To Swim Forward on your Back.*

We swim backwards when, lying on our back, we propel ourselves by striking out the feet and legs; but if you would, on the contrary, advance forwards, you must, still floating on your back, keep your body in a straight line extended at full length, the chest elevated as much as possible, so that the back between the shoulders and the hips are concave, or arched, and your hands on your breast. Being then in this position, lift up your legs one after another, and draw them back with all the force you can towards your hams, letting them fall into the water, and this method will take you back to your starting place. This is a very pleasant way, affording much refreshment, and imparting new vigour to the system by the change of exercise.

#### *Suspension by the Chin.*

If you throw yourself on your back, near the surface of the water, you cannot continue long in that position without the proper action of your hands on the water; if you use no such action the legs and lower part of the body will gradually sink till you come into an upright position, in which you will continue suspended, the hollow of your breast keeping your head uppermost.

If in this erect position, you hold your head upright above your shoulders, as when you stand on the ground, the immersion will, by the weight

of that part of your head which is out of water, reach above the mouth and nostrils, perhaps a little above the eyes, so that you cannot long remain suspended in the water, with your head in that position.

Suppose that your body continues suspended as before, and upright; if you lean your head quite back, so that your face look upward, all the back part of your head being in the water, and its weight consequently, in a great measure supported by it, your face will remain above water, quite free from breathing, will rise an inch higher every inspiration, and be depressed as much every expiration, but never so low as that the water may come over the mouth. This is what we call suspension by the chin.

The knowledge of the fact just detailed is valuable to all; and, if a person unacquainted with swimming, falling accidentally into the water, could have presence of mind sufficient to avoid struggling and plunging, and to let the body take this natural position, he might continue long safe from drowning, till, perhaps help should come: for, as to the clothes, their additional weight when immersed is very inconsiderable, the water supporting it; though when he comes out of the water, he would find them very heavy indeed.

#### *To Swim like a Dog*

This mode of swimming is not so difficult as you may suppose; on the contrary, we have heard of several, who knew not how to swim before, having kept themselves above water by accidentally practising it. To swim, then, as the canine tribe do, you must, as it were, beat the water with each hand alternately, doing the same with your feet, observing that you draw the water to you with your hands, and drive it from you with your feet. Should you unexpectedly get among weed, this will be found useful in disengaging yourself therefrom.

#### *To Creep.*

The action of a man in this mode of swimming has been compared by some to the motion of creeping in reptiles. A snake, for example, resting with its fore parts, draws the rest of its body forwards. Creeping on the water may be found of great service in getting clear over a bed of

weeds. Swimming on your belly, you must cast your hands forwards, extending them as far from your breast as possible, your fingers close together, the palms of your hands a little curved inwards, and turned towards the bottom; then draw your hands and arms in again, and you will find that the resistance of the water to this motion, causes the rest of your body to advance, and this advance you will assist by softly throwing your feet backwards, but close together.

#### *To Sit in the Water*

Those who are expert in swimming can do whatever they please in the water. They can walk, stand still in an upright position, lie still, or sit down. If you would sit, you must take both your feet in your hands, draw in your breath, and so keep your breast inflated; holding your head as upright as possible.

#### *To Swim under Water.*

Dive with your hands close together, placed back to back; then spread them out with the utmost rapidity you are capable of, your thumbs turned upwards, and your fore-fingers towards the bottom. If you feel disposed to descend lower, you must strike your hands down lower in the water, as you spread them out. If you wish to re-ascend, keep the palms of your hands open, and your thumbs towards each other, as when you swim on your belly,—the palms of your hands being towards the bottom.

If you would swim between the top and the bottom, or in the middle, you must grasp the water before you with both your arms, as it were drawing it towards you, keeping your thumbs turned more towards the bottom than the rest of your hands. You may have occasion to swim thus when you are seeking for anything at the bottom of the water, or wish to pass unseen from one shore to another; and it may also be useful when a fellow creature is in danger of being drowned.

#### *Saving another from danger.*

Our last paragraph necessarily induces the present. It is important for every swimmer to know how to act in rescuing a drowning person, without himself becoming a victim, as so often happens.

The following rules must be borne in remembrance:—The swimmer must avoid approaching the person in front, lest you should be grasped by him; for whatever a drowning man seizes he holds with convulsive force, and it is no easy matter to get disengaged from his grasp. The swimmer should therefore seize him behind, and let the other loose the moment he turns towards him; his best way, therefore, is, to impel the drowning man before him to the shore, or else to draw him from behind. If the space to be passed over be too great for this, let him seize him by the foot and drag him, turning him on his back. If the drowning man has seized him at a disadvantage, there is no other resource for the swim-

mer than to drop at once for the bottom of the water, and there, preserving his presence of mind, break from his antagonist. The drowning man instinctively makes for the surface, and will usually loose his hold when he finds himself going down, more especially if his prey pretends to hold him under with all his power.

For two swimmers the labour of saving life is far easier, since they can mutually relieve each other. Captain Ollas gives the following method, and the accompanying engraving of carrying a drowning man to shore, a person unable to swim over a river, or of saving a person who has not quite lost all consciousness or presence of mind.

SAVING A DROWNING PERSON.

If the drowning person has still some presence of mind, they may seize him one under each armpit, and without any great effort in treading water, bring him along with his head above water, enjoining him earnestly at the same time to keep himself as much stretched out, and as motionless as possible. As a conclusion to this little treatise, we cannot do better than append, (for they cannot be too widely circulated.)

#### DIRECTIONS OF THE HUMANE SOCIETY, FOR RESTORING SUSPENDED ANIMATION TO PERSONS APPARENTLY DROWNED.

Send quickly for medical assistance. *Cautions.*—1, Lose no time.—2, Avoid all rough usage.—3, Never hold the body up by the feet.—4, Nor roll the body on casks.—5, Nor rub the body with salt or spirits.—6, Nor inject tobacco-smoke or infusion of tobacco.

#### Methods of Treatment.

1. Convey the body carefully, with the head and shoulders supported in a raised position, to the nearest house.
2. Strip the body, and rub it dry; then wrap it in hot blankets, and place it in a warm bed in a warm chamber.
3. Wipe and cleanse the mouth and nostrils.
4. In order to restore the natural warmth of the body,—Move a heated covered warming-pan over the back and spine. Put bladders or bottles of hot water, or heated bricks, to the pit of the stomach, the arm pits, between the thighs, and the soles of the feet. Foment the body with hot flannels; but, if possible, immerse the body in a warm bath as hot as the hand can bear it without pain, as this is preferable to the other means for restoring warmth. Rub the body briskly with the hand; do not, however, suspend the use of the other means at the same time.
5. Apply sal volatile or hartshorn to the nostrils.

#### General Observations.

On restoration to life, if the power of swallowing be returned, small quantities of warm wine or weak brandy and water may be given; the patient should be kept in bed, and a disposition to sleep encouraged. Great care is requisite to maintain the restored vital actions, and at the same time to prevent undue excitement.

The treatment recommended by the Society is to be persevered in for three or four hours. It is an erroneous opinion, that persons are irrecoverable because life does not soon make its appearance; and it is absurd to suppose that a body must not be meddled with or removed without the permission of a Coroner.

## THE NATURAL HISTORY OF SPORTING.

THE BLACK GROUSE.

**T**HIS bird which is the species best known as the prey of the Sportsman's tube, is pretty generally distributed over Europe, being met with in France and Germany, and even so far to the south as in Italy; and as we reach the north, in Russia, Norway, Siberia, Scandinavia, and in Lapland. In Britain it occurs in the two countries, being most sparingly distributed, however, in England; the New Forest in Hampshire, Somerset, Dartmoor and Exmoor in Devonshire; the wild parts of Staffordshire and Lancashire, and so on, until we reach the 'border,' where it becomes abundant in the wild districts which conduct us to its still more frequent haunts in Scotland. There it is abundant, and may be found in most of the districts which are suited for it, extending north to Sutherland, and to the islands of Mull and Skye. In Ireland, Mr. Thompson informs us, it long since became extinct, though in Smith's History of Cork (1749) it is mentioned as 'frequent.'

The favourite abodes of the black grouse are subalpine sheep countries, where there is, comparatively, little health, where there are moist flats or meadows, abounding with a rank and luxuriant herbage, and where the glades and passes among the hills are clothed with natural brushwood of birch and hazel, willow and alder, and have a tangled bottom of deep fern. These afford an abundant supply of food, with shelter from the cold at night, and the scorching rays of a midsummer sun.

The black cock is not larger than the common hen, yet it weighs nearly four pounds; its length is about twenty inches, its breadth, from tip to tip of the wing, two feet six to nine inches. The bill is black, the eyes dark blue, below each there is a spot of a dirty white colour, and above,

THE PTARMIGAN OR WHITE GROUSE,  
(In winter and summer plumage.)

a larger one of bright scarlet, which extends almost to the top of the head; its general colour, as its name implies is black, glossed with blue on the neck and rump. The greater wing coverts are white, so that when the wings are closed a spot of white appears on the shoulder; the wing quills are brown. The feathers of the tail are almost square at the ends, so that when the tail is spread it forms a curve at each side. The under tail coverts are pure white, the legs and thighs are of a dark brown, mottled with white, and the toes are toothed at the edges. In some specimens the nostrils are thickly covered with feathers, whilst in others they are quite bare; this may probably be owing to the age of the birds, though little ones are found feathered, and large ones bare, and vice versa.

The black cock is polygamous. In the warmer sunny days, at the conclusion of winter, and commencement of spring, the males, after feeding, may be seen arranged on some turf fence, rail, or sheep-fold, pluming their wings, expanding their tails, and practising, as it were, their love-call. If the weather now sometimes warm, the flocks soon separate, and the males select some conspicuous spots, from whence they endeavour to drive all rivals, and commence to display their arts to allure the females. The places selected at such seasons are generally elevations, the turf enclosure of a former sheep-fold, which has been disused, and is now grown over, or some of those beautiful spots of fresh and grassy pasture which are well known to the inhabitants of a pastoral district. Here, after perhaps many battles have been fought and rivals vanquished, the noble full dressed black cock takes his stand, commencing at the first dawn of day, and, where the game is abundant, the hill on every side repeats the humming call; they start around the spots selected, tuck their wings, inflating the throat and neck, and puffing up the plumage of these parts and the now brilliant wattle above the eyes, raising and expanding the tail, and displaying the beautifully contrasting white under tail coverts. He is soon heard by the females, who crowd around their lord and master. This season of admiration does not continue long; the females disperse to seek proper situations for depositing their eggs, while the males, losing their feeling for love and fighting, reassemble in small parties, and seek the shelter of the brush and fern beds to complete a new moult, and are seldom seen, except early in the morning or at evening, when they exhibit a degree of timidity, the very reverse of their former boldness and vigilance. The old males continue separate until winter, and afterwards seem to display an inclination to flock by themselves; but in many cases they join with the young broods, and all resort, morning and evening, to some favourite feeding grounds, spending the middle part of the day in rest, or in basking, pluming, or sporting upon some sunny hill side. Upon the females devolves the whole duty of rearing and protecting the young; the nest is made upon the ground, not far from water, and the young, when hatched, are conveyed to the low rushy hollows, where there is abundance of food, supplied by the tender seeds of the rushes and alpine grasses. The young are seldom full grown before the 1st of September; and even at this season, if they have been undisturbed previously, they will almost suffer themselves to be lifted from before the pointers. During summer, the general food is the seeds of the various grasses, and the berries of the different alpine plants; in winter, the tender shoots of the fir, catkins of birch and hazel, heath, and even the leaves of fern, and these often give their peculiar flavour to the flesh. But in the lower districts, where, indeed, this bird is most abundant, the gleanings of the stubble yields a plentiful meal. Fields of turnip and rape are also favourite feeding places, and the leaves supply a more grateful food during hard frost than they could elsewhere procure. In some places, flocks of hundreds assemble at feeding times, and, although at this time they are extremely shy and wary, the fences and enclosures often allow them to be approached within shot.

#### THE PTARMIGAN, OR WHITE GROUSE.

OUR series of Grouse would be incomplete did we omit this beautiful variety.

Our readers must understand that it is the pursuit of the red and white grouse alone that begins on the 12th of August, and not till the 15th (or eight days later) must we attempt bagging the smaller species of which we have just given the portrait. We call the black cock the smaller, inasmuch as he is the larger bird; nevertheless the red and white afford infinitely the best diversion. At the beginning of the season the black game lie like stones; but in a short time they become so wild as to be almost inaccessible, unless, indeed, by such stratagems to which good sportsmen rarely, if ever, are fond of resorting. However, under any circumstances, the red grouse is by much the more interesting object of our pursuit.

The white grouse, or ptarmigan, we are not aware that these birds are to be found in any part of Great Britain, except the Highlands of Scotland, where, on the gray tops of many of the high mountains, they may be met with. They resemble in colour the steepest Alpine heights they inhabit, which renders it difficult to see them, except on the wing, and which, probably, affords them the best protection against their fierce pursuers, the eagles, that are generally seen hovering over the wild spots the white grouse inhabit. Should any of our readers be disposed to pursue the ptarmigan, we would advise them to visit the neighbourhood of the beautiful Loch Leven, where, on the summits of some of the surround-

ing mountains, they may obtain diversion, we had almost said amongst the clouds.

But to return to the description of

“The ptarmigan,  
Which falls the prey of the Lapland man;”

and of which the cut that heads this article is a lifelike representation.

The ptarmigan is about the size of the red grouse. Its bill is black; and in its summer dress the upper parts of its body are of a pale brown or ash colour, mottled with small dusky spots and bars; the bars on the head and neck are somewhat broader; and are mixed with white; the under parts are white, as also are the wings, excepting the shafts of the quills, which are black. This is its summer dress, which in winter is changed to a pure white, excepting that in the male there is a black line between the bill and the eye. The tail consists of sixteen feathers; the two middle ones are ash-coloured in summer and white in winter; the next two are slightly marked with white near the ends; the rest are wholly black; the upper tail coverts are long, and almost cover the tail.

The white grouse is fond of lofty situations, where it braves the severest cold; it is found in most of the northern parts of Europe, even as far as Greenland, in this country it is to be met with on the summits of some of our highest hills, chiefly in the highlands of Scotland, in the Hebrides and Orkneys, and sometimes, but rarely, on the lofty hills of Cumberland and Wales. Buffon, speaking of this bird, says that it avoids the solar heat, and prefers the biting frosts on the tops of mountains; for as the snow melts on the sides of the mountains, it constantly ascends till it gains the summit, where it forms holes and burrows in the snow. They pair at the same time as the red grouse; the female lays eight or ten eggs, which are white spotted with brown. She makes no nest, but deposits them on the ground. In winter they fly in flocks, and are so little accustomed to the sight of man, that they are easily shot or taken in a snare. They feed on the wild productions of the hills, which sometimes give the flesh a bitter but not unpalatable taste; it is dark-coloured, and has somewhat the flavour of a hare.

The CAPERCAILLIE, or Cock of the Woods, is unavoidably reserved till next number.

#### GROUSE SHOOTING.

(Continued from page 277.)

IN the ground grouse roost, and, about day-break, leave their russet couch, and begin to call; soon after which they run or fly to their open feeding grounds, where they are chiefly to be found before eleven o'clock in the morning. These are, for the most part, those patches of young, green ling, of two years' growth from the burning, and where the stalk is sufficiently high to conceal the birds. To ground of this kind it is that the poachers resort; the heather there being even at the top, and the stalks not having yet become stubborn from age, yield to the net. On this account, on some moors in the north, these plots of feeding-ground are stubbed as regularly, and with as much care, as the grass enclosures are for the protection of partridges. About noon the grouse go to water, and then, retiring to the sunny side of some brow, or into hollows sheltered by hillocks, or masses of rock, under cover of the tallest heather, trim their feathers, bask, or sleep, “in all the delight of imagined security.” Though the seeming at mid-day is notoriously bad, yet you may, now and then, in such situations, stumble suddenly upon them, and catch them napping, when they will often rise in confusion, separate in different directions, and afterwards afford you good single shots. On these occasions you should hunt closely and slowly, and give your dogs the benefit of the wind.

Like other game, grouse have their favourite haunts according to the kind of locality they are in, the time of the day, the state of the season and the weather, &c.; and, as these vary, it follows that, universally, a thorough previous knowledge of the ground to be shot over gives one shooter, at all times, an extraordinary advantage over another who is wholly ignorant in this respect.

From the unvaried sameness and frequently apparent interminability of moorland districts, as well as from the similarity of their shades of colour to the plumage of the birds themselves, grouse especially, in certain states of the atmosphere, are much more difficult to mark down than partridges. Generally speaking, the nearer a man's eye is to the ground, the farther he will mark grouse, just as a man, when sitting or lying down in a canoe, will mark wild-fowl farther than one who stands erect. Always follow the course of the birds carefully with your eye, and, immediately on losing sight of them, stare well forwards in a lineal direction with the spot where you were last able to distinguish them, when you will often be agreeably surprised (just when about to say farewell) to catch a sudden sight of them again, in the act of flapping their wings to alight, as they are then not only stationary in the air for a moment, but often turn, and are thus rendered the larger and more conspicuous.

Whenever you lose sight of a cooey, just as they are whipping over the summit of a hill, keep your eye on the hindmost, or tail birds, because if the leaders turn, after they have topped the hill, the rest are sure to follow, and thus you will know the line of direction the whole have taken.

Grouse have longer wings, and, being stronger birds, usually fly farther and with much more rapidity than partridges.

If the birds divide and take different courses, your attendant marks one division, and you the other, and when one is out of sight, you both endeavour to mark the remaining one. The hand placed edgewise above the eyebrow—or both hands (where both are at liberty) placed winker fashion—by concentrating the view, and shading your eyes from the wind, are considerable aids in marking.

A telescope, with a large field of view, and which draws out but once, when in expert hands, will often be found far superior to the naked eye in marking grouse; of course, it should always be carried by a friend, or your follower, regulated to the proper focus, say—as the best distance—for three-quarters of a mile; it will be thus at all times ready to be applied to the eye in a moment. Were any one disposed to shoot for a wager, on a moor not very numerously stocked with game, I should be inclined to back, against any other plan, good markers, in heather-coloured caps, placed in *flight shooting-boxes*, sunk on the loftiest heights. The markers, of course, to be duly posted before the beating commences. Each marker might have two flags—one a red, and the other a black one—as distant signals.

As regards the best mode of ranging on the moors, it is an invariable rule, with many, to select a particular tract of ground, often lengthwise of a sloping ridge, or the steep side of a mountain, under the wind, and within gun-shot of the summit, and to beat that backwards and forwards, from end to end, all day long. This may be a very good plan where the plots of ling are generally luxuriant, and when there is a platooning carrying on in different parts of the moor; but at other periods, to my fancy at least, there is a sameness and a dull monotony in it but ill comports with that wild and romantic scenery, and those boundless prospects which the moors usually present to the eye, and seem to woo the contemplative man to partake of and to enjoy. A little departure “in bold disorder” from rigid or formal rules—a little roaming on the moors—add zest to the sport, albeit, at times, the bag may be somewhat the lighter for it. That man who, enjoying the cool elasticity of the mountain breeze, and walking on a carpet of purple heather, is yet withheld bent on slaughter only, may be a good shot, but he is a tasteless sportsman.

When you commence ranging a grouse mountain, always take the leeward side of the hill, and give your dogs the wind; such I believe to be the usual plan with experienced sportsmen. Nevertheless, I frequently range down wind for grouse, and invariably so in boisterous weather, for then the birds often lie closer, and keep their heads down, and, therefore, can neither see nor hear you so well; you also have a much more distinct sight of them, with the wind at your back, than when it is blowing a moorland blast full in your face and eyes.

Many sportsmen never think of going on the moors after August or September at the latest; whereas, if the birds have had a tolerable respite, as frequently is the case, they are much more easily found by the dogs in October, than during dry, sultry weather; will often lie as well on a fine day, especially one succeeding a black frost; and in point of size, fulness, and beauty of plumage, and excellence of flavour are incomparably superior to the birds of earlier date. Besides, all game are now well about, and occasionally seek the seclusion of the mountain dell, and the friendly shelter of the heather; green and golden plover, too, are also plentiful now on some moors, the latter deservedly in high estimation as a dainty; duck and teal, too, at times, are no strangers to moorland districts, which now and then supply the ornithologist, also, with “fine specimens” of rare birds (not game).

Towards the end of October, it is very well known that grouse, especially when much disturbed, become so wild and wary, that, to pursue them with any chance of success, the shooter must have recourse to stratagem of some sort. Most of these ingenious contrivances—such as circumventing and heading them—are but too well known; and some of them bear a close relationship to the occult sciences. The cut at the close of this article exhibits a somewhat novel mode of obtaining elevation when a wall is otherwise too high to allow the shooter when properly concealed, to fire over it. “A good stout-barreled gun, that carries a large charge, and one steady old dog, will be the most effective.” So says Lancelles, with whom I perfectly concur, being confident that, take one time with another, a stout, single-barreled gun, with a large bore, is infinitely preferable, at this late period of the season, to any double whatever, except on very strictly preserved moors, where the birds are comparatively tame; and if the shooter renew the sport after an early dinner, I should, for the afternoon, strenuously recommend a single, a pound or two lighter than the one used in the morning; partly because he will be by so much the worse than he was at first starting, and partly because the birds are always tamer as evening approaches. On these occasions, loose shot should never be thought of. Eley's cartridges must invariably be the order of the day, containing shot never smaller than No. 3, nor larger than B. I generally prefer the latter to any other size for this sort of shooting. Many sportsmen use No. 6 at the early part of the season; but, in my opinion, grouse should never be fired at with shot less than No. 5, either when loose, or in Eley's cartridge. A light gun is of but little use in grouse-shooting.

You have your attendant either three or four yards, or at a considerable distance behind you, as may be. A single knowing dog, accustomed

to the moors, for the morning, and another, of a similar stamp, for the afternoon, are now sufficient; the man leading one of them, clothed in a brown coloured sheet, or stripping him and letting him loose at your signal. If the dog be up to the trick of heading the birds, it will sometimes be found advantageous.

Unless you chance to come upon a reposing covey, huddled together in the middle of the day, nearly all your shots now will be snap shots. You must, generally, walk rather slowly, and have your gun full cocked, and in readiness to whip up to the shoulder as quick as thought. During the morning, the birds usually rise very wildly, especially if in packs; on these occasions never shoot at random, for it is neither sportsmanlike nor good policy. Small broods and single birds afford the best shots. Being now very strong on the wing, and their flight rapid, you must be extremely vigilant, and keep your eye well forward, as they rise at long distances, often in silence, and frequently steal away, barely clearing the top of the heather, so that, before you have fairly caught sight of them, they have flown at the least ten yards. Rise as they may, however, so long as they be within shot take them quick, and shoot high enough, and, if a cross shot, forward enough as well; but, above all things, I repeat, fire quickly; for the error of an inch or two in aim is of far less consequence here than half a second's delay, as it frequently happens, now, that a bird which rises within shot, is out of shot by the time he has flown five yards. In fact, none but a real good and quick shot has any business to follow this kind of shooting.

Grouse should always be closely watched on being fired at, as they are so apt to fly long distances after having been mortally wounded. At no time, perhaps, and certainly not under peculiar states of atmosphere, can you so clearly distinguish the momentary finching (on being struck) of a grouse as of a partridge. Again and again have I seen a grouse to all appearance untouched, after having been fired at, fly as far as the eye could carry one, though at no time a yard from the ground, and then suddenly drop; but, when picked up, the florid beak has told, alas! of recent death—the cause, a single blue pill. Perhaps the best way to destroy a wounded grouse, is to press the thumb upon the higher part of the back, until you feel the separation of the vertebrae.

The grand time for making sure of grouse, at this late season of the year, is towards evening, when, as has been already remarked, birds being on the feed are less wary, and are both slower in rising and in flying off than during day. Small, detached, walled enclosures of ling; low, steep hills clothed with heather; and such parts of a moor as abound in concavities, with fragments of rock and overhanging banks here and there, are the places for getting shots, as you may sometimes come upon the birds unawares. I would seldom use a dog now, except to recover a wounded bird: let, therefore, him and the follower keep aloof. You will find your account in having your own private marks as guides to the nearest points of approach to the birds. If, on being compelled to show yourself, you expect them to rise at some distance from you, proceed stooping, and with stealthy caution, and put your gun to your shoulder before you rise; but if you look for them springing just under you, as from the side or foot of a hillock, then, having silently advanced to the top of it, introduce yourself suddenly to their notice, or pop upon them, when they will be more likely to rise perpendicularly, like mallards or pheasants, than to skim away, and, consequently, present a nearer and a fairer shot; and if they be too near for a cartridge, which will rarely happen, you have only to give them a little time before you fire, and very little will be found sufficient, as they make very good use of it.

From the very nature of the moors, their boundaries cannot be so palpably defined as those of cultivated districts; it behoves the shooter, therefore, to be particular in ascertaining the prescribed limits of his range, as in the event of trespassing he may not always come off so well as did a relation of mine, whose Christian name is Tom. Early one twelfth morn, this worthy gent., who is remarkable for the large size and protuberance of his visual organs, made one of a shooting party on a friend's moors; but, having a natural taste for rambling, being an ardent admirer of the picturesque, and a little addicted to absenteeism withal, had not paid the attention he might have done to the boundary posts, and accordingly became a trespasser upon an adjoining and very strictly preserved moor. Here he met with capital sport, that is to say, got many shots in quick succession; for he is the very worst shot I ever saw, excepting none; when shortly afterwards up came a watcher, who lost no time in requesting his name, and in giving him to understand that “he must immediately inform of him as a wilful trespasser, he being then upon Mr. . . . Liberty.” “It's a liberty I've taken,” said Tom, gravely, inflicting his goggles the while upon the fellow. “O! indeed, sur,” replied the astonished and unconscious guardian of the preserves, doffing his catakin, and making his most submissive bow, “I humbly begs your pardon, sur, but I really did not know, as how, that you was the gentleman as had taken this here Liberty, but you'll find plenty of birds, sur, on that there broo side, sur.”

CIRCUMSTANCES AFTER CASES.—An attorney, about to furnish a bill of costs, was requested by his client, a baker, “to make it as light as possible.” “Ah!” replied the attorney, “that's what you may say to your foreman, but it's not the way I make my bread.”

## THE FISHER'S CREEL.

THE BLEAK.

**ALTHOUGH** we cannot say much for this fish, so far as *gourmandise* is concerned, we can give him a good sporting character. And he is deservedly admired for his beauty and activity; he is also by no means a bad fish (which is but negation commendation) if eaten as soon as taken.

The bleak is seldom more than six inches long; the head is small, and the skull transparent; the eyes are large, with a blood coloured spot on the lower side, the irides of a pale yellow, the under jaw the longest; the gills silvery; the body is slender, greatly compressed sideways, not unlike that of the sprat: the back is green; the sides and belly silvery; the fins pellucid; the lateral line rather crooked; the scales are large, and fall off very easily; the tail is much forked.

Some call the bleak the water swallow, on account of its nimbleness in catching flies; they are very restless, their haunts being sometimes in deep still water, at the sides and tails of streams, where the water shelves off, and makes a gentle eddy; at others in the streams, which may be observed by their swimming near the surface, and their very active manner of taking and diverting themselves with small flies, and insects. In angling for the bleak, the tackle must be very fine, with four or five small hooks, so placed above each other as not to entangle, and swimming by the assistance of a small quill float, rather deeper than mid-water, and baited variously, as with a gentle, bloodworm, caddis, the house-fly, (or any fly they are observed at the moment to feed upon,) and a very small bit of red paste, throwing in now and then some malt grains, or chewed bread, to keep them together; always remembering, wherever ground bait is used, it should be inferior to the hook-baits: thus two or three at a time may be taken, for they are so eager as to leap out of the water at the bait. Should the day be cold and cloudy, a single gentle, or caddis, upon the hook is then best, sunk about two foot under water.

Another way of taking bleak is by whipping from a boat, or the bank-side in fresh streams, with a rod six feet, and a line twice as long, using an artificial black gnat, a fly of a very sad brown colour, or the small dace-flies, they not only yield much sport, but are very instructive to the young fly-fisher.

## WALTONIAN TOPOGRAPHY.—No. II.

[In this department of his paper, the Editor respectfully solicits the communications of his "Brother Bobs," in carrying out his project of giving an angling topography of every stream of note in the kingdom. But must entreat "brevity" in their descriptions, without which their favours will be inadmissible.]

## THE MOLE.—SURREY.

This curious irregular river derives its name from the circumstance of its passing under ground for a considerable distance in the neighbourhood of Boxhill, in Surrey.

The Mole runs past Reigate, Dorking, Boxhill, Leatherhead, on through Stoke Pogis, Cobham, and Esher, entering the Thames in a divided stream near that plain memorable in *Fancy Annals* as "the field of a thousand fights," ycleped Moulsey (i. e. Mole-sea) Hurst. The character of this river is curious; in some places it is deep and still, with high overhanging banks, in others it is rapid and fordable. In many places in the vicinity of Boxhill it is quite still in summer, the above-ground current being stopped; the Mole then grubs its way under Boxhill, the village of Mickleham, and re-appears about a quarter of a mile above Leatherhead bridge. Near Mickleham are found what the country people call "swallows," and in truth they are so, as they "swallow" up every appearance

of a running stream. This is effected by the water draining away entirely from these holes. At this season vast quantities of fish are taken from the mud and flat slating stone which irregularly compose the bed of the river, between the cavities of which the water drains off. The villagers watch the slackening of the current, and when the stream ceases to run, the water soon disappears through the bottom of the holes. A scramble for the fish now commences, "first come, first served," is the rule, but might too often overcome right. In the neighbourhood of Dorking and Reigate there is good fishing for perch, tench, dace, jack, and roach, and I have heard that there are trout, but have never seen any.

At Leatherhead bridge the Mole is again a considerable stream, and in this neighbourhood are many trout; below the bridge on the right the fishing is free till you reach Randall Park; there is excellent fly fishing in this neighbourhood. In the pool or mill-head of Mr. Ellis's mill at Fetcham, within a few yards of the bank, you can perceive the water boiling out from the sand in sufficient quantity to supply the mill. I am inclined to think this is an irruption of the waters of the Mole, but some say it is a spring head, independent of the river, as the water is so hard no fish can live in it; however, it is interesting, and well worth looking at. Below Randall park is the old mill hole, further down the Devil's Hole, and on by Steers's farm, past what is called the creek, to Slyford mill. Below Steers's farm the water is heavy, and continues so through Cobham and on to Esher. I forgot to say that near the farm on the opposite side from Leatherhead, there is a famous hole, and many good trout are taken by bottom fishing, also at the old mill hole on to the orchard at Steers's.

Near Slyford mill is a Jack water; the roach hereabouts in the winter are taken a pound and a half each very frequently. Very large chub are taken in the Mole in the neighbourhood of the Copper mill at Esher, and in fact every other fish, excepting trout, which cease to be numerous below Slyford, though you may take now and then a large one at the mill tails. On the other hand, jack, perch, and white fish are taken in great quantities, all the way to the Thames.

The Mole near Esher is protected naturally by banks, bushes, trees, &c., so that there will always be good fishing, in spite of the enemies to fair angling. This river is a very uncertain one to fish, as it is so easily affected by rain, and thickens very soon, occasioned by the soil it runs over. Before you leave London to fish this river, the best way is to make inquiry of some one who may have seen it, as to the colour, and then to form your opinion according to the report and the state of the weather at the time. Near Moulsey one course of the stream turns Moulsey mill, the other runs by Ember Court, and this stream affords good fly-fishing for dace, chub, &c. To enumerate the different spots between Moulsey and Leatherhead would be impossible; as Salter says, "they are easily found by observing where others have fished before."

Before leaving the Mole, however, I will give my brother "Bobs" a short anecdote, for the truth of which I can vouch.

An angler fishing in the Mole, near the Copper mills, was much annoyed by a countryman who was in the river, feeling or groping for the large chub that hide, when the water is low, under the roots of the numerous willows and alders that grow on the banks at the above spot.

A sudden exclamation and violent splashing called the fisher's attention to where he observed the poacher scrambling up the bank with something in his arms; he soon stood on the margin of the river, and roared out to a companion, who had a gun, on the opposite side, "Oh! Jack, Jack, look here," (holding up an otter) "shoot him, shoot him, you devil, shoot him, I say."

In feeling up the holes for the fish, the otter had seized his hand, and in the agony of the moment he seemed to forget that the same shot which killed his enemy might probably deprive him of life also; however, Jack did shoot, and killed the otter, without doing his friend the least injury.

**A SMART BOY.**—A sportsman coursing lost a hare, and hastily accosted a shepherd boy—"Boy, did you see a hare run by here?" "A hare, sir?" "Yes, fool." "What, a hare, sir?" "Yes." "What, a thing that runs fast, with long ears?" "Yes." "That go loppety, loppety, lop?" "Yes, yes, my good fellow." "What, very long ears?" "Yes, doh." "Ah, then," said the boy, "I didn't see it."

**A GOOD TRY.**—A rich old maiden lady, who was notorious for her bad temper and for her perpetually scolding her servants, having died a short time since, the hatchment was put up against her house, under which was the following motto: "*Resquiescat in pace.*" The cook inquired of the coachman the meaning of the words. Coaches, proud of this appeal to his scholarship, after pondering over them for a moment, answered, "Oh, the motto in English is, '*Rest quiet cat, in peace.*'"

**AN ASTRONOMIC NIGGER.**—"Cuffee, which do you tink de most useful of de planets, de sun or de moon?" "Well, Sambo, I tink de moon orter take de fus rank in dat ar 'tickler." "Wha, wha, wha, why do you tink so, Cuffee?" "Well, I tell you—kaze she shines by night, when we want light, and de sun shines by day, when we do not?" "Well, Cuff, you is de greatest nigger I knows on—dat's a real fac."

"A sweet return," exclaimed the husband, when his wife threw the sugar basin at him.

## CORRESPONDENCE.

## SPORTING EXCLUSIVENESS.

Sir,—It is truly painful to view the system of exclusiveness that has, and at the present time exists, between the different beams that spring from one radius. Even the good old "Isak" was not free from this, as his "Complete Angler" will sufficiently show: His remarks (let not these observations offend the "Brother Bobs," as there are plenty of "motes" in the other eyes of the Sporting World), are very selfish and sectarian; he has no mercy on the other classes of sport; for though he says he "bears no malice," yet he shows a spice of it throughout his entire work. We are at a loss to conceive why these prejudices should exist. Why should not all the different species of sporting be amalgamated into one whole?

If it were done, sporting would assume a different character, and one that would be conducive to a right understanding of its principles? Until this is done, the bickerings which disgrace it will prevent the attainment of the object which they all seem anxious to further; yet while this system prevails, it much resembles the charwoman's ridicule, "Beginning to clean the house at the bottom." No doubt (and we say it without the least hesitation) there are many bright exceptions to this illiberality, and that there are some cosmopolitan sportsmen who can look with favour even on sports "they're not inclined to; yet, many as they may be, there are still more on the other side." The fox-hunter laughs outright, or sneers contemptuously at "calf-hunting," or "donkey-chasing," as he terms hunting the fallow deer; the stag-hunter feels no sympathy with the fisherman, and quotes the "stick and string" proverb; the "shooter" beats the cover and the turnip, and grins at the courser's "madness for a minute;" while hundreds only awake to the consciousness that there is such a thing as sport surviving on the week previous to the Epsom Derby, and close the account of fun with the "selling." And then, again "the Ring:" we would sentence all cravens and cowards to a month's perusal, six times a day, of Barber Beaumont's defence of that same, which he wrote some twenty years since, in the *Morning Post*, and if he answered its arguments satisfactorily within forty days, would have him appointed attorney general; but we have done. Without universal co-operation, the Sporting Community resembles a compass without its needle; or to speak universally and applicably, like a rudderless vessel attempting to make port.

No doubt many of your friends and subscribers pursue this system, and yet are unconscious of the evil. There are many others who act in precisely the same way.

All that is wanting, is to stir them up and rouse them to a sense of their position with regard to their fellow men, who, though not exactly of the same inclinations, are yet pursuing the same end, namely rational entertainment; and indeed narrow-minded must be that man who would make sporting a pretext for the vile purpose of thwarting the best descriptions of manly exercises and amusements of the people. Those pursuits which are best calculated to develop the physical energies, and inferentially, the intellectual health and most generous feelings of his fellow countrymen.

LUDOPHILUS.

## NEEDHAM'S SELF-PRIMING GUN.

Sir,—I was induced, upwards of a twelvemonth ago, to send a favourite double gun to Messrs. Needham, to be altered to their patent principle; and I feel it a duty to the public to say, in reply to Detonator's letter in the *Sporting Magazine*, that I have given the gun a full and fair trial, and can with confidence speak of the effectiveness of the invention. It stands its work remarkably well, and I can confidently bear out Messrs. Needham's statement, that the principle adds to the power of the gun, as mine shoots much stronger and quicker than before the alteration.

It is a satisfaction to myself to have the opportunity to say this much on behalf of the patentees, whose ingenuity has added so much to the convenience and comfort of the sportsman; and I shall therefore feel obliged by your giving this a place in your very useful Journal.

Clifton, near Bristol.

FUSIL.

## ANTI-SPORTING PHILOSOPHERS.

Sir,—There are some persons who would pick a hole in any honest man's sleeve, merely for the gratification which it affords them to display their base and dirty trickery; and exactly of this caste are our pseudonymous *Philosophers*. For ages have such men existed, making their hypocrisy their trade, and selling their denunciations to the highest bidder. At the present day, however, they fall harmless, and their books and tracts go to the butcher or the cheesemonger; but, yet, they are a race that all true sportsmen should exert their utmost strength in putting down. They are the moral snakes in the grass, and, like the leech, live upon the suction of their prey.

*Mawworm*, in the *Hypocrite*, was a prince in comparison to these gentry; he could do no direct injury to the community: but these are very devils—incarnate fiends—hellish, satanic, monsters, the very pests of society, who thrust their opinions, unasked for, into the very teeth of individuals. Yet they have as yet met with no direct opposition in their cankerous career; and they still go on, doing all the harm that lies

in their power, poisoning the minds of people against our sports, calling them brutal and debased.

The time has come for action—sportsmen master your forces! let your battle cry be "MANHOOD and its rights;" sweep them off from the face of the earth.

August 14, 1845.

F. B. &amp; T.

## THE SCHOOL OF DESIGN.

The papers, daily and weekly, have been making a terrible rampus about the School of Design. The following recent designs by eminent public artists we will undertake to back against an equal number of any of those produced by Professor Wilson's pupils:—

A design against railways in general, and those conveying penny-millers in particular, by the Editor of the Times.

A design of a young lady residing at Ramsgate to captivate the heart of a young gentleman boarding at the same place.

A design of Lord Brougham to get the seals—when he can.

A design of the Mark Lane "rogues in grain" to buy up all the corn, should the present wet weather continue.

A design of Prince Albert to go in great state to Saxo Gotha, and to let his poor relations see the style he does it in, in England; and an accompanying design of her Most Gracious Majesty the Queen, always to push along and keep moving.

A design of the Duke of Wellington to prevent peninsular veterans from reaping too great a reward of their valour.

A grand design of Mr. Polk to attach Oregon to the United States.—N.B. This is remarkable for its ingenuity, but did not get a prize.

A design of Mr. Ainsworth, to have his "Revelations of London" published whether they are read or not, by buying a magazine to bring them out in.

A design for a new railway between two unknown towns, or across the island of Tahiti, or through the bush of New South Wales, or cementing the eastern and western shores of Iceland, with wonderful accounts of traffic, highly imaginative, legends of the saving of time and the immense profits, or "short cut and returns," as they may be called; by Robert Macaire, Esq., and the Chevalier D'Industrie, two distinguished foreigners.

A design to start a new dance next season by the professors of dancing, to meet the depression experienced since everybody knew the polka.

A design against the knockers of Gower-place, by the medical young gentlemen of the London University, to come into action next October, when they re-assemble for their winter studies.

A design of Mr. Bunn to cashier Shakspeare, and to prove that the ballet is the true legitimate dramatic entertainment of England, with an accompanying design of the Drury-lane Committee to support him in his intentions.

A design of Mr. Sergeant Talfourd to make the Times report his name with his speeches; and a design of the press generally to bring the bar to its senses.

A last design of Daniel O'Connell, to collect as many shillings as he can from the ropalors of Galway. N.B. A failure.

A design for an oven of an improved construction, to enable the cannibals of remote savage islands to cook their human banquets, by Colonel Pelissier.

A design of several hungry French journalists to fasten the crime of firing the dockyard at Toulouse upon the English.

IF HE DON'T HE OUGHT TO.—One day, in the county of Limerick, a gentleman of humane feelings and religious principles saw a man lashing his horse at a most furious rate, and at the same time uttering oaths and curses at the poor animal with each fresh application of the whip. "My good friend," said the gentleman, stepping up to him, "my good friend, do you not know that it is not only very cruel to be lashing your horse in that way, but very absurd to be making use of those oaths to him; for the poor animal does not understand a single word of that sort of language?" "An' sure then, yer honour, it's his own fault if he doesn't, for he hears enough of it every day."

METHOD OF PRODUCING AN ARTIFICIAL STAR ON THE FOREHEAD OF A HORSE.—The mode of effecting this is as follows:—Make two holes through the skin at two inches distance from each other, and two more holes at the same distance right across the middle of the two first. The holes must be sufficiently large to admit a thin and round piece of ivory or bone through them, which must be worked about until the skin be parted (in the same manner as a rowel) from one hole to the other, then take out the ivory or bone and let two pieces of steel wire covered with packthread, be placed in their stead, taking care to leave about half an inch of each wire sticking out of the holes. This done, lay a plaster of pitch over the whole and let it remain on for three or four days. Then take out the wires and dress the wounded parts with equal proportions of honey and roses, pressing the honey into the wounds, repeat this once every day until the parts are cured. By pinching the skin in the above manner it loses its nurture, when the hair falls off and the parts afterwards become white.

# ADVERTISEMENTS.

**THE NEW RACE GLASS**, to be had only of the inventors, **THOMAS HARRIS and SON**, Opticians, No. 52, opposite the entrance to the British Museum, London. The extraordinary magnifying power of this glass, with its approved adjustment, made to suit all sights, enables the possessor to keep the horses distinctly in view, the entire course, from "the start to the coming in." Caution: No. 52, opposite the British Museum, London, is T. H. and Son's only establishment. Established 70 years.—To prevent mistaking the house, notice the name, *Thomas Harris and Son*, and the number (52) is laid in *Mosaic pavement* in the footway contiguous to their shop.

**TO THE LOVERS OF ANGLING.—J. K. FARLOW**, 5, Crooked-lane, London-bridge, being the actual manufacturer of Rods, Flies, Tackle, &c., is enabled to offer to his brother Anglers, the following low list of prices: four joint hickory fly rods, 10s.; four joint best hickory fly rods, two tops, partition bag, double brazed socket, spear, &c., &c., 21s.; three joint walking stick rods, 2s. 6d.; best hickory or cane punt rods, two tops, 15s.; the best town made taper fly line, twenty yards, 3s.; thirty yards, 4s. 6d.; thirty yards patent eight plat, 3s. 6d.; the best trout flies on Limerick hooks, dressed on the premises, 2s. per dozen; winches from 1s. 6d.; fly hooks from 9d.; best gut hooks 1s. per dozen; best gut lines 2d. and 3d. a yard.

Lists of prices forwarded on application; country and export orders executed on the shortest notice; old netting for preserving fruit trees from frost, blight, and birds, or as a fence for fowls and pigeons, and can be had in any quantity at 3d. the yard, two yards wide, or 1½d. the square yard; the above netting being tanned, will stand exposure to the weather.—Observe the address, 5, Crooked-lane, London Bridge.

**BROTHER ANGLERS.—HUTCHINSON and SMITH**, 67, Wood Street, Cheapside, beg leave to offer to their Brethren of the Angle their unique Basket Seats, being light, commodious, useful, and a sure prevention against damp. Also their novel Glass Roach Floats, 6d. each, hermetically sealed; balance handle fly rods, 21s. (warranted); cane roach rods, trolling rods, winches, lines, floats, cans, hooks, nets, and every article in the above list at the lowest prices, and best quality. Live and all other kinds of baits always fresh.

Gentlemen supplied with every information of any fishing water within 20 miles of London.—Observe, 67, Wood-street, Cheapside.

**BATHE'S ST. LEGER SWEEPS, Green Dragon, Fleet-Street.**

Subs.	1st Prize	2d	3d	Starters
97 at 40s.....	£120 0.....	£50 0.....	£15 0.....	£9 0
97 at 20s.....	60 0.....	20 0.....	10 0.....	7 0
97 at 10s.....	25 0.....	12 0.....	5 0.....	6 10
97 at 5s.....	12 0.....	8 0.....	4 10.....	0 0

5s and 10s Sweeps for the Leamington Stakes drawn on Monday and Thursday next.

All money divided, less 5 per cent.—Post-Office orders, payable to Mr. John Bathe, will be punctually attended to.—Drawing night, Monday and Thursday.—Money paid as judge places.

**OKEY'S ST. LEGER SWEEPS ARE NOW OPEN.**

Three classes of Leger Sweeps divided as follows:—

	First.	Second.	Third.
97 at £2 2.....	£112 0.....	£94 0.....	10 0
97 at 1 1.....	56 0.....	12 0.....	5 0
97 at 10 6.....	30 0.....	6 0.....	0 0

Each starter, £2 2s., £1 1s., and 10s. 6d.

N.B. The prizes go with the Stakes. Disqualified horses not drawn. Post Office Orders to Mr. N. F. Okey, Hero of Waterloo Inn, Waterloo Road, London, will be duly attended to.

**WM. TURPIN, Old Essex Serpent**, King-street, Covent Garden, begs to call the attention of the public to his **SWEEPS** for **THE GREAT ST. LEGER**.

	1st home.	2nd.	3rd.	starters.
98 at 42s. 0d.....	£110 0.....	£40 0.....	£25 0.....	£20 0
98 at 26s. 0d.....	70 0.....	25 0.....	12 0.....	10 0
98 at 12s. 6d.....	35 0.....	12 10.....	6 0.....	5 0

98 at 3s. 0d.....	7 10.....	3 0.....	2 0.....	1 10

All dead and disqualified horses will be omitted.

A 12s. 6d. St. Leger will be drawn on Thursday next, August 28; also 5s. 6d., 12s. 6d., and 21s. sweeps for the Leamington Stakes; and 3s., 5s. 6d., 12s. 6d., and 21s. sweeps for the Great Yorkshire Handicap.

Draws take place every evening. Money paid the day following the Race. **WM. WRIGHT, Secretary.**

Post-office Orders (payable at Charing Cross) punctually attended to.

**THE NAUTILUS LIFE-PRESERVER and SWIMMING BELT.**—No Lady or Gentleman should cross the water or go to the seaside without obtaining this small, simple, and valuable apparatus, unsurpassed for buoyancy, portability, and efficiency, and approved by the Admiralty, and all nautical and scientific men. The Nautilus may be procured, of any size or quality, at the Office of the Company, 12, Wellington-street, Strand.

**LITERARY COMMERCIAL PHENOMENON.**  
Early in September, will appear, price **TWOPENCE**, **STAMPED.**

**THE ADVERTISER AND TRADER'S GAZETTE**, a Select Family Newspaper and Tradesman's Protector, containing **ALL THE NEWS OF THE WEEK**; Railway Intelligence, state of the Markets, Shipping News, and every feature of a full priced Weekly Newspaper. Quarterly Subscriptions 2s. 6d. (to be paid in advance), for which it will be forwarded per post, free of expense, every Saturday morning.

Published at the Office, 49, Holywell-street, Strand, and all News-vendors throughout the Kingdom.

**UNDER ROYAL PATRONAGE.**  
**DR. LOCOCK'S PULMONIC WAFERS.**  
—The truly wonderful Cures of Asthmas, Consumptions, Coughs, Colds, &c., which are everywhere performed by this Invaluable Medicine, have now established it as the most certain and perfect remedy in existence for all disorders of the breath and lungs.

**CURES IN MANCHESTER.**  
Extract of a letter from Mr. Lynch, chemist, Market-street, Manchester; October 22nd, 1844.

Gentlemen—I enclose you a letter received from a party who has derived great benefit from Locock's Wafers. I have no doubt if you were to advertise them in this town, the sale would be considerable, as we are constantly receiving testimonials of their efficacy.—I am, &c., **J. R. LYNCH.**

More astonishing Cures of Asthmas, Coughs, Colds, &c., in Chester.

Read the following extract of a letter from Messrs. Platt and Son, 13, Foregate-street, Chester; dated March 25, 1845.

Sir—Your invaluable Wafers continue to perform wonders here. Since our last we could send you dozens of cases of the most astonishing cures. One gentleman, who had a bad cough for years, bought one box, and was cured before using the whole of it. He gave the rest away, and they were equally beneficial. One medical gentleman here is so convinced of their value, that, besides regularly recommending them to his patients, he had some a few days since for one of his children. One of our clergymen, also, who labours under an asthma, received such extraordinary benefit himself, that he now gives many boxes away every week among the poor. Other persons almost daily call upon us, who had laboured under asthmas, asthmatic coughs, consumptions, &c., for years, to thank us for recommending them this "instant cure," &c. (Signed) **M. PLATT and SON.**

**IMPORTANT TO ALL WHO SING.**—Read the following letter, just received from **S. PEARSALL, Esq.**, of her Majesty's Concerts, and Vicar Choral of Lichfield Cathedral.

Dated Lichfield, July 10, 1845.

Gentlemen—A lady of distinction having pointed out to me the qualities of **DR. LOCOCK'S PULMONIC WAFERS**, I was induced to make trial of a box, and I find that by allowing a few of the wafers (taken in the course of the day) to dissolve, my voice becomes bright and clear, and the tone full and distinct.

They are decidedly the most efficacious of any I have ever used.

(Signed) **SAMUEL PEARSALL.**  
Cure of Ruptured Blood Vessels of the Lungs.  
From H. Huntley, Esq., 15, Albion-terrace, Old Tiverton-road, Exeter. March 20, 1845.

"Sir—I ruptured a blood vessel of the lungs, about three months since, which, being partially recovered from, a most troublesome cough succeeded. I tried everything that my surgeon, friends, and self could think of, but without alleviation. It was at length suggested that your wafers might be useful. I tried them, and very soon their good effects were apparent; a single wafer taken when the fit of coughing was about to commence, never once failed of giving it a complete and instantaneous check.

"A lady also, a friend of mine, and who, by the bye, is in her 66th year, is, or rather was, troubled with a hard distressing cough. The good effects I derived from the wafers recommended them to her; she has used them, and wonderful was the relief she experienced.

(Signed) **HENRY HUNTLEY.**"

The particulars of many hundred Cures may be had from every agent throughout the Kingdom and on the Continent.

**DR. LOCOCK'S WAFERS** give instant relief, and a rapid cure of asthmas, consumptions, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1d., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by **DA SILVA & Co.**, 1, Bride-lane, Fleet-street, London.

**CAUTION.**—To protect the public from spurious imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words **DR. LOCOCK'S WAFERS** in white letters on a red ground.

If purchasers will attend to this caution, they will be sure to get the genuine article.

Sold by all Medicine Vendors.

**THE EARL OF ALDBOROUGH CURED BY HOLLOWAY'S PILLS.**  
The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Masina, Leghorn, 21st Feb., 1845.

To Professor HOLLOWAY.—  
Sir—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either.

Your most obliged and obedient servant,  
(Signed) **ALDBOROUGH.**

A Wonderful Cure of Dropsy of Five Years' standing. Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.—  
Sir—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c., &c.,  
(Signed) **THOMAS TAYLOR.**

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines throughout THE CIVILISED WORLD, at the following prices:—1s. 1½d. 2s. 9d., 4s. 6d., 11s., 25s., and 35s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

Just Published, price 2s. 6d., Free by Post (in a sealed envelope), 3s. 6d., a new and important edition of

**THE SILENT FRIEND; a Medical Work** on the infirmities of the Generative System in both sexes; and on the less of the reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Stricture, Secondary Symptoms, &c., are fully pointed out. Illustrated by Engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By **R. and L. PERRY, & Co.**, Consulting Surgeons, London. Published by the Authors, and may be had at their Residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay & Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

"The Authors of the SILENT FRIEND seem to be thoroughly conversant with the treatment of a class of complaints, which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—*Era*.

"This work should be read by all who value health and wish to enjoy life, for the truths contained therein defy all doubt."—*Farmers' Journal*.

The **CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility, obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 35s., by which 11s. are saved. The Five-pound cases may be had as usual.

The **CONCENTRATED DETERGENT ESSENCE**. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

**PERRY'S PURIFYING SPECIFIC PILLS**, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammation, Irritation of the Bladder, &c., without hindrance to business.

Consultation-fee, if by letter, 1s. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 11 till 9, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

**LONDON:**—Printed by **JOHN WORTHAM**, of No. 313, Strand, in the Parish of St. Mary-le-Strand; and published at the **OFFICE**, 42, Holywell-street, Strand, by **E. DIPPLE**.—Saturday, August 23, 1845.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 16. FOR THE WEEK ENDING SEPT. 6, 1845. THREE HALFPENCE.

[Sent Free by Post, Twopence-halfpenny.]

## THE FOWLER'S DAY—THE FIRST OF SEPTEMBER.

Ah! nutbrown partridges! ah brilliant pheasants!  
And ah! ye poachers!—"Tis no sport for peasants.—BYRON.

**W**HERE I desired to point out from the three hundred and sixty-five days which compose the calendar of the year, the one which interests the greatest number of sportsmen, and whose arrival is the most anxiously desired, I should, without the slightest hesitation, name the first of September. Christmas has certainly, its delights for all ages and every class of mankind: the old, at that jovial season, rejoice in the presence of their children's children, whilst the young see hardly a paradise beyond the plum-puddings, minced-pies, and the escape from scholastic thralldom, those rarities that the season warrant; even the poor now decorate their dwellings with the show of gaiety, and the semblance of luxury. But, alas! the excitement over, they who have seen "three-score years and ten" begin to feel that every return of Father Christmas is another sand-glass run-out: the school-boy views in the decay of the holly berries, and the fading of the mistletoe, emblems of the discolouring of his happiness, and presage of *Black Monday*; whilst the labourer, the mechanic, and the artizan, find their emptied barrels, and thinned cupboards, and worn holiday suits tell-tales of the necessity of renewed labour, and of bread procured by the sweat of their brows. Then there is the completion of harvest to the husbandman—that also is a jovial, grateful time, and for one happy evening, there is nothing like the "merry, merry harvest home;" but it is of brief duration, and passeth away as soon as the spirit of the liquor the o'ercome rustics swallow. Summer, too, for some, winter for others, have their hours of beautifully and benignantly distributed gratifications and delights; in short,

"Each season has pleasures, and blessings in store;  
Be content, and we're happy, if rich or if poor:  
And know the best season, to laugh and to sing,  
Is summer, is winter, is autumn, is spring."—

But for the pleasing anticipation it causes, the amusing castle-buildings it creates, the intoxicating dreams of success it infuses, the preparation it requires, the importance it spreads about, and, the activity it demands; of all the days in the year, give me that on which partridges are doomed to die, and hares to be bagged—give me the fowler's day—the first of September.

And this is the eve of that day which has been so eagerly looked for by thousands, for which pointers have been exercised, game has been preserved, guns have been cleaned, Mantons purchased, and all that belongs to a practised shooter's duty has been burnished and fashioned, to render as effective as may be the homage of the hour.

Do you think, brother sportsmen, there will be any sleep to-night for yonder Tyro, who is so anxiously examining that double-barrel which the gamekeeper has brought from his fond grandfather's mansion that you see just peeping above the trees? He is no convert to the old Colonel's late-in-the-day doctrine, and, depend upon it, he will be at the lodge-gate by sunrise, and will go to bed in his shooting gaiters, that he may be so. It is not so palpably visible, yet I think there is almost as much anxiety for the morning in that older sportsman's demeanour by the youth's side. He is eager to try the performances of that beautiful pointer that is looking so coaxingly at his face, and he is all alive to find if another year has unsteadied his hand, or dimmed his eye, or if his game-watcher has protected the birds, so that they have escaped the clutches of those two

fellows, who live in yonder crazy cottage, without any visible means of employment. Depend upon it, he will be as busy as his young friend in the field, and will give him no shots for favour, nor think of the goat-fit he is barely yet free from.

And see, there are some carriages rolling past the park lodge; they, too, bear devotees to field-sports and friends to the trigger, who are come to open the season with eclat upon my lords's well-stocked home manors, and afterwards, throwing aside the austerity of courts, and the formalities of drawing-rooms, to enjoy themselves at his well-filled tables. That mild looking personage, he over whose face early sorrow seems to have passed, and one of the first gentleman-shots in the country, though he does not attend pigeon-matches, nor shoot for wagers: you shall see him to-morrow—for his aristocracy does not warp his love of fellowship—bring down, in a brief while, his thirty brace, and that without resorting, like the barbarous battue of —, to haunts where the birds are driven in crowds to the muzzle of his tube. At table you shall hear him toast "the plough and the shuttle," and "live and let live;" and if you go away without filling a bumper of his never-to-be-omitted "Sir John Barley-corn," he will be as vexed as though his favourite dog had run in upon the covey, his Manton had missed fire, or he had failed to hit with his left-hand barrel. In short

"He is of those, as royal Harry was,  
Who at the board, the field, could play his part  
And do good deeds, and win a feast of joy,  
Yet wish the same to all——"

And there are others, too, in that goodly company not more famous for their birth than for their devotion to, and patronage of sport; they who deem all the descants upon the plain-song of walking, which honest old Thomas Fuller recommends, most "excellent exercises." It is the first of September that has brought these, and the like of these, together, and started a numerous race of anxious sportsmen again upon their favourite and peculiar course, rejoicing in hope, and feeding upon anticipation.

"Bestir thee, boy, buckle thy harness on;—  
Look out, behold the eye of jolly morn  
Peeps o'er yon hill-tops, tipping it with gold,  
And shaming drowsy snorers with his rays,  
Who rather should at such an hour as this  
Rival the husbandman. I tell thee youth,  
Thy sire would aye have left thy mother's couch,  
To rouse the feather'd quarry in his fields,  
Ere yon bright planet put its glory on,  
Were it his honey-moon."

Tasteless, then, is he who loveth not September; even for its fall orchards and delicious sweets, its ripe fruits yielding to the willing touch; let us reflect too, that

"An English autumn, though it hath no vines,  
Blushing with Bacchant coronals along  
The paths, o'er which the fir festoon entwines  
The red grape in the sunny land of song,  
Hath yet a purchased choice of choicest wines;  
The Claret light, and the Madeira strong."

But most of all I love September (I expect I shall have but a pitiful minority against me), for the license it brings to expectant sportsmen. It is, in fact, the key-stone of the arch over which they march to their triumphs; the advanced guard of their array: the pioneer clearing the way from every obstacle to their success. August has already called the grouse-shooter to the field, and the red game and black cock have fell upon the moor, the lowland, or heathery hill; but 'tis not till now that the fastian is generally mustered; not till September's primal day breaks upon the morn that, from every part, we brush through the rustling stubble or the dewy turnip field; that each fowler whistles his faithful "Don" and his steady "Ponto;" mounts his quiet cob, trained to stand fire—and, full of hope and expectancy, ranges over those well remembered spots where the covey has been marked in the unlicensed month; fearful, all the while, lest the previous, and plundering, and unceremonious gamster should have already netted the prize; or the old bird been unconsciously, yet, perhaps, carelessly, destroyed by the scythe of the husbandman.

Well do I remember my commencing essay on the first of September, 'twas some score years ago. I had tri'd my hand at a trigger before; had been the death of many a blackbird—thrush—lark—field-fare, and "such small deer;" had shot at a card and counted the garnish; had even brought down a rook flying—a species of black game I thought a good deal of at the time; but it was a totally different and distinct affair to prove my skill, for the first time, upon game, truly and really so called by authority: to shoot (as well as my father and the gamekeeper) at a partridge! To walk up to pointers, or await, with tremulous anxiety the truth of their points, the faithfulness of their backing, the steadiness of their range. All this was new to me. Something I had never before half understood: the dawning of a new era—the birth of a freer life to us. Its anticipation was almost painfully pleasing. On the night of September's eve I longed for bed-time that I might forget all the world,

and dream only of to-morrow. I made an excuse to get to my night-cap earlier than usual. Silly one that I was! I slept not a wink: and I bustled on my new shooting-jacket at five o'clock in the morning, little fitting for a long day. But the pleasure and novelty of the sport brought me through.

My honest brother sportsman! I dare say this picture is familiar to you. I would venture a few odds that, practised as you are, you feel something like it even now; I should be ashamed of you if you did not. At all events I must believe that you rejoice with me in the arrival of the "fowler's day," and I will not doubt but that you will join me in one of my simple chants in its cheerful praise.

Assist me, therefore, in

#### A SONG FOR SEPTEMBER.

"It returns delightful, like the melody of an old tune, upon us"

The encampment of sheaves are borne from the field,  
Their sickles the reapers have ceased to wield;  
The scythe—labour's weapon—has cleared us a plain,  
And the season commands us to open our campaign:  
Then, trained well our pointer, well fashioned our gun,  
"Up, up and be doing," as erst ye have done.

'Tis September, how gloriously breaks his rich morn,  
As, lusty in manhood, he bears plenty's horn;  
At his tread, fruits in ripeness, gush forth, whilst, around,  
Showering grapes, in profusion, empurple the ground:  
Oh! let others praise climes that are "nearer the sun,"  
But our own, and September, for us of the gun.

How mild dawns the day, and how fresh is the air,  
As the gray of the morning commands us prepare;  
Whilst the voice of good housewife, in sanctum below,  
Gives earnest of breakfast ere onwards we go:  
Whilst with duty he deems it degrading to shun,  
Groom saddles the pony for us and our gun.

Oh! what can they be but mere creatures of scorn,  
Who love not the fragrance upspringing from morn:  
Who delight not, who doat not, (as we joyed) to hear  
The lark's early song and the shepherd-boy's cheer?  
If such there can be, let them prudently run  
From a commerce with sportsmen, with dog, or with gun.

'Tis healthful to brush from the green leaf the dew,  
All besilvered and spangling with Sol's youngest hue;  
To start the weak leveret from early found seat,  
To hear the crisp stubble re-echo her feet;  
Yet withstand (since for harriers a burst may be won)  
Her destruction by pitiful triumph of gun.

To watch with an eye (ay, more anxious by far  
Than the mariner turns to his course-guiding star)  
The range of our dogs, till, like statues, earth-bound,  
They prove, nature taught, that the covey is found:  
Oh! that is a joy which is equalled by none,  
And which we only know who use dog and sport gun!

Then, on to the field—'tis September's blithe dawn,  
(Ye are not stanch shooters not now to his on.)  
Downy beds may be pressed, woman's sweet voice be heard,  
When you've brought out your pointer, and brought down your bird:  
So this morning our sports far abroad shall be done,  
In the evening, at home, toast our dog and our gun.

IMPROVEMENTS AT EPSOM.—We hear that so extensive will be the alterations and improvements on the course at Epsom, that next year its frequenters will hardly know it again. All the arrangements which at Ascot and Liverpool are found to conduce most to the comfort and accommodation of the public in general, and to the convenience and satisfaction of the racing community in particular, will be adopted, but on a scale of increased magnitude. Meanwhile, it is most gratifying to know that the plans will embrace most of the suggestions which we have from time to time found it necessary to throw out: particularly in regard to saddling the horses in front of the Grand Stand—to an adjoining betting enclosure—to a suitable weighing stand—and to proper conveniences for judge, clerk of the course, jockeys, and gentlemen of the press. Several of the stakes will, we understand, be greatly enriched, and some new stakes proposed. Let but the meeting be limited to three days, and under the new regime, we have no doubt they will be found three glorious days indeed! In a few days we hope to be able to furnish our sporting friends with full particulars of the projected improvements.

DEATH COMPARATIVE.—An ironmonger, who kept a shop in the High-street of Edinburgh, a d sold gunpowder and shot, when asked by an ignorant person in what respect patient shot (at that time a novel article) surpassed the old kind, "Oh, Sir," he would answer, "it shoots dead."

## THE NATURAL HISTORY OF SPORTING.

THE PARTRIDGE.

**Y**OUR notice of the Partridge, will be chiefly confined to the bird itself, as in other departments of the SPORTSMAN'S MAGAZINE, the sport to which it ministers is so fully expatiated on. The length of this bird is about thirteen inches. The bill is light brown; eyes hazel; the general colour of its plumage is brown and ash, elegantly mixed with black; each feather is streaked down the middle with buff colour; the sides of the head are tawny; under each eye there is a small saffron-coloured spot, which has a granulated appearance, and between the eye and the ear a naked skin of a bright scarlet, which is not very conspicuous but in old birds; on the breast there is a crescent of a deep chestnut colour; the tail is short; the legs are of a greenish white; and are furnished with a small knob behind. The female has no crescent on the breast, and her colours in general are not so distinct and bright as those of the male. Partridges are found chiefly in temperate climates; the extremes of heat and cold are equally unfavourable to them, they are nowhere in greater plenty than in this island, where, in their season, they contribute to our most elegant entertainments. It is much to be lamented, however, that the means taken to preserve this valuable bird should, in a variety of instances, prove its destruction: the proper guardians of the eggs and young ones, tied down by ungenerous restrictions, are led to consider them as a growing evil, and not only connive at their destruction, but too freely assist in it.

Partridges pair early in the spring; the female lays from fourteen to eighteen, or twenty eggs, making her nest of dry leaves and grass upon the ground. The young birds learn to run as soon as hatched, frequently encumbered with part of the shell sticking to them. It is no uncommon thing to introduce partridges' eggs, under the common hen, who hatches and rears them as her own, in this case the young birds require to be fed with ant's eggs, which are their favourite food, and without which it is almost impossible to bring them up; they likewise eat insects, and, when full grown, feed on all kinds of grain and young plants. The affection of the partridge for her young is peculiarly strong and lively; she is greatly assisted in the care of rearing them by her mate; they lead them out in common, call them together, point out to them their proper food, and assist them in finding it by scratching the ground with their feet; they frequently sit close to each other, covering the chickens with their wings like the hen. In this situation they are not easily flushed; the sportsman, who is attentive to the preservation of his game, will carefully avoid giving any disturbance to a scene so truly interesting; but should the pointer come too near, or unfortunately run in upon them, there are few who are ignorant of the confusion that follows; the male first gives the signal of alarm by a peculiar cry of distress, throwing himself at the same moment more immediately into the way of danger. In order to deceive or mislead the enemy, he flies, or rather runs, along the ground, hanging his wings, and exhibiting every symptom of debility, whereby the dog is decoyed, in the too eager expectation of an easy prey, to a distance from the covey; the female flies off in a contrary direction and to a greater distance, but returning soon after by secret ways, she finds her scattered brood closely squatted among the grass, and collecting them with haste, she leads them from the danger, before the dog has had time to return from his pursuit.

A hen partridge came out of a ditch, and ran along shivering with her wings, and crying out as if wounded and unable to get from us. While the dam acted this distress, the boy who attended me saw her brood,

which was small and unable to fly, run for shelter into an old fox-earth under the bank. So wonderful a power is instinct.

It is not uncommon to see an old partridge feign itself wounded, and run along on the ground fluttering and crying before either dog or man, to draw them away from its helpless and unfledged young ones. I have seen it often, and once in particular I saw a remarkable instance of the old bird's solicitude to save its brood. As I was hunting with a young pointer, the dog ran on a brood of very small partridges; the old bird cried, fluttered, and ran tumbling along just before the dog's nose, till she had drawn him to a considerable distance, when she took wing and flew still farther off, but not out of the field: on this the dog returned to me; near the place the young ones lay concealed in the grass, which the old bird no sooner perceived than she flew back again to us, settled just before the dog's nose again, and by rolling and tumbling about, drew off his attention from her young, and thus preserved her brood a second time. I have also seen, when a kite has been hovering over a covey of young partridges, the old birds fly up at the bird of prey, screaming and fighting with all their might to preserve their brood.

Partridges manifest great caution in choosing the place where they intend having their nest. I have observed them to remain near the same spot for some weeks before the female lays her eggs; and if in the meantime they should discover the retreat of any animal in the neighbourhood, which is likely to be injurious to them, they shift their quarters. I have generally noticed that partridges lodge themselves at night near the middle of a field, probably being aware that they are safer in this situation from the attacks of stoats or weasels, than if they got nearer hedges, under the roots or banks of which these animals conceal themselves.

THE CAPERCAILLIE.

**T**HAT this noble bird was once indigenous in the British Islands, and till lately lingered in the Highlands of Scotland and some districts of Ireland (viz., in the county of Tipperary, 1760), has been clearly proved; but the forests which once sheltered it have been thinned or cut down, and from this cause and others it appears to have been entirely extirpated; we say "to have been," because for some years past various attempts have been made to introduce the species again into the woods of the Highlands, and with considerable success.

The Capercaillie is abundant in Norway, Sweden, Russia towards Siberia, the north of Asia, and some parts of Germany and Hungary, wherever pine-forests of sufficient extent afford it a home. It is found in several parts of the Alps. The male is equal in size to a turkey, weighing from eight to twelve pounds, or even more; some have exceeded fifteen. The female is considerably smaller. The breeding-season commences early in the spring, before the snow is off the ground; at this period the cock stations himself on a pine, and commences his call to the females, or "play," as it is termed in Sweden. This, says Mr. Lloyd, is usually from the first dawn of day to sunrise, or from a little after sunset until it is quite dark. The time, however, more or less, depends upon the mildness of the weather, and the advanced state of the season.

During his play, the neck of the capercaillie is stretched out, his tail is raised and spread like a fan, his wings droop, his feathers are ruffled up,

and, in short, he much resembles in appearance an angry turkey-cock. He begins his play with a call something resembling *pellor, pellor, pellor*; these sounds he repeats at first at some little intervals, but as he proceeds they increase in rapidity, until at last, and after perhaps the lapse of a minute or so, he makes a sort of gulp in his throat, and finishes with sucking in, as it were, his breath.

During the continuance of this latter process, which only lasts a few seconds, the head of the capercaillie is thrown up, his eyes are partially closed, and his whole appearance would denote that he is worked up into an agony of passion. At this time his faculties are much absorbed, and it is not difficult to approach him: many, indeed, and among the rest Mr. Nilsson, assert that the capercaillie can then neither see nor hear, and he is not aware of the report or flash of a gun, even if fired immediately near to him. To this assertion I cannot agree, for though it is true that if the capercaillie has not been much disturbed previously, he is not easily frightened during the last notes of his play; yet, should the contrary be the case, he is constantly on the watch, and I have reason to know that, even at that time, if noise be made, or that a person exposes himself incautiously, he takes alarm and immediately flies.

The play of the capercaillie "says Mr. Lloyd," is not loud, and should there be wind stirring in the trees at the time, it cannot be heard at any considerable distance. Indeed, during the calmest and most favourable weather, it is not audible at more than two or three hundred paces.

On hearing the call of the cock, the hens, whose cry in some degree resembles the croak of the raven, or rather, perhaps, the sounds *gock, gock, gock*, assemble from all parts of the surrounding forest. The male bird now descends from the eminence on which he was perched to the ground, where he and his female friends join in company. The capercaillie does not play indiscriminately over the forest, but he has his certain stations (Tjador-lek, which may perhaps be rendered his playing-grounds). These, however, are often of some little extent. Here, unless very much persecuted, the song of these birds may be heard in the spring for years together. The capercaillie does not during his play confine himself to any particular tree, as Mr. Nilsson asserts to be the case, for, on the contrary, it is seldom he is to be met with exactly on the spot for two days in succession."

The female makes her nest upon the ground, and lays from six to twelve eggs; her brood keep with her till the approach of winter, but the cocks separate from the mother before the hems. The food of this bird consists of the leaves of the Scotch fir, of juniper-berries, cranberries, blueberries, and occasionally in winter of the buds of the birch. The young are sustained at first on insects, and especially the larvae of ants. In the male the windpipe makes a loose fold of two curves before it enters the chest, gaining by this contrivance great increase of length. The tarsi are hairy; the toes are rough beneath, with horny points, enabling the bird to rest securely on the smooth or slippery branches. The general colour of the males on the upper part is chestnut brown, irregularly marked with blackish lines; the breast glossy greenish black, passing into the black on the under surface; elongated feathers of the throat black: tail black. In the female the head, neck, and back are marked with transverse bars of red and black: the under surface is pale orange-yellow barred with black. Professor Nilsson assures us that the capercaillie is often reared up in a domestic state in Sweden, and is bold and disposed to attack persons, like the turkey-cock; and both this naturalist and Mr. Lloyd affirm that these birds will breed, with due care, in confinement; in fact they give several instances by way of proof.

In the early part of the spring the London market is supplied with the capercaillie in abundance from Norway; and, owing to the rapidity of steam navigation, the birds are almost as fresh as if just shot, keeping well for many days; the flesh of the females is excellent. To those who wish to enter into the exciting details of wood-grouse shooting, we recommend Mr. Lloyd's work on "Northern Field-Sports."

### A RAILWAY HALF-CROWN!!!

[The following case discloses a dodge which would not discredit Charley Bates. It is the report of a case recently heard at the Middlesex Court of Requests, Kingsgate-street.—EDITOR.]

Richard Thompson, a young gentleman who might well be designated a twin brother to the "Smike" of Box, was summoned by a Jew-looking gentleman named John Morris, for the sum of 2s. 6d. Mr. John Morris (who certainly claimed no acquaintanceship with Lindley Murray), at once plunged "in medias res":—

"This ere long thin wagabond as —"

Mr. Dubois—No abuse, sir, if you please, no abuse.

Morris—Well then, sir, this, this skinny warmist (great laughter)—he's kept a half crown a mien as I wouldn't take nutthink for—no, not this ear blessed at full o' golden suv'rins (laughter).

Mr. Dubois—How did he get possessed of it?

Morris—Ah, that's just the pint—I goes inter his shop and orders a cup o' caffee and a muffin and a couple o' heggs—gets em and eats em in course, you'd a done the same—well yer honner when I'd done—just as you might do, I puts down half-a-crown, good and lawful. (Laughter.) Master Skinny ear picks it up, and ses, ses he, "What's this car?"—just

so. "Why, half a bull," says I. (Laughter.) "I must have another," says he—"this year wont pass no where!" "Spose I aint got another," ses I?—just so, same as you'd a spoke't yourself—(roars of laughter)—"Vy, in that case," ses I, "I must howe you for the caffee, the muffin, (and it had werry little butter on it), and the heggs"—(laughter);—and what do you think, my Lord, this year yard and a half o' tape said to that 'ere?—vot d'ye think—vy, if so be you sots there all night—or till such times as I comes again—I'll bet you a pot to a pint you don't hit it?

Mr. Dubois, irresistibly joining in the general laughter, acknowledged his inability to "hit it," but begged Mr. Morris to "cut it short."

Morris—He kept my good and lawful half-crown, and ses, ses he "Ven you brings another one, then I'll give the change, and not till then." (Laughter.) I ups and naterrally says—"I'll see you d—d first." (Roars of laughter.)

Richard Thompson was invited to explain. Si-ar (said the defendant, with a most ludicrously-provoking stutter)—th-is m-m-mam kic-cue-came to m-my sh-sh-sh-wop f-for some co-o-offee and wo-woo-o-whiles, and after he'd been she-she-ser-ved, he gay-gave me a bad half-cuo-cuck-crown, and I said I'd kic-kic-kuc-keep it to-to till I go-o-ot ano-ther. (Roars of laughter.) I go-hot a w-w-witness as knows him.

Mr. Dubois—Call him.

"Here I is," said a short bull-necked worthy, carrying a stout stick and accompanied by a cross-bred sort of a bull dog, between whom and his master there appeared a considerable degree of family likeness, "Here I is," and then turning short round upon Morris, he said, "This comes o' your making such a d—d fool o' yourself. You thort to chisel me, did you?"

Mr. Dubois demanded an instant explanation.

Witness—Don't care if I does; "in for a shilling in for a pound." This ere Jack Morris—my name's Jemmy Brown, my lord (laughter)—this ere Jack Morris and I 'greed last Good Friday, as was just afore Tappin was hung, to go pardners in a *hartful dodge* (laughter).

Mr. Dubois—A what, sir?

Witness—Lord, you knows werry well (renewed laughter)—not as how I thinks you're up to this 'ere. Well, my lord, we gets a half-crown—borrowed it, in course—sprinkles it over with a trifle of gravel and puts it on the railway rail—werry good; by and by the train comes up and goes slap over it—and as a natarral consequence, makes Queen Victoria look a deal more ugly, and broader and bigger—(Roars of laughter)—and looking as if she'd just laid in with the small-pox—(Renewed laughter.) Well, my lord, we 'greed to work this railway half-crown.

Mr. Dubois—Work it—how work it?

Ah (said the witness), I thort you warn't up to that dodge. (Laughter.) Werry next morning we tried it on.

Mr. Dubois—Tried it on? How and where, sir.

Witness—Oh, you know werry well, the Plough and Harrow, Seven Dials. (Laughter.) We goes in and calls for a pint of puri.

Mr. Dubois—Puri! what is that?

Witness—Dog's nose, with a bit o' sugar in it, sixpence a pint made hot—and werry good it is, I can 'sure you—(roars of laughter.) Well, we drinks it in course—and then we had a drop o' summat short—don't you understand, two three-haporths o' gin! Why, you know werry well, a pint o' puri's a tanner, and two three-haporths o' gin comes to ninepence—(great laughter.) Well, to cut this ere matter short, when we'd done drinking, we hands over this year identical half-crown—or, to speak more corrector, half-bull!—(laughter).

Mr. Dubois—Well, sir, and what then?

Witness—Landlord says, carnt take that ere. Vy not, ses Jack Morris, as innocent as you is—(laughter). It's a werry good half-crown, ses I; and if so be you won't take it only because it's ugly, why, you're worses than Prince Albert himself—(roars of laughter). So, ses I, if you won't—you won't, and we must call in and pay the next time as we're passing this way.

Mr. Dubois—Very cool, indeed; and did the landlord let you go?

Lord, yes, and took the walley of puri and gin clear out in swearing, and said if so be we ever come into his house again, vy he'd kick us out, so in course we never went to pay the ninepence, cause both on us don't like kicking. (Laughter.)

A Jurymen—And pray, sir, how long did you work this same half-crown?

Witness—Oh, ve got on hadmirably till such times as we made a split on it. We done the landlord of the Bag o' Nails at Pimlico—we chiselled the Hare and Hounds in Vitechapel—made it all right at the King and Keys—dropped into Ben Johnson, and—(Great laughter).

Mr. Dubois—Pray stop, sir—the defendant says he is ready to return you the half-crown if you pay the expenses!

The proposition was eagerly agreed to, and the artful dodge is now again in circulation, and as a person in the court observed—

"Licensed witlers, have a care,  
Of the Railway coin — beware!"

DOMESTIC AGRICULTURE.—We heard of a gentleman, who, last year, planted his onions close to his poppies, and the consequence was, they grew so sleepy that he never could get them out of their beds.

## NOTICE!

\* \* THE SPORTSMAN'S MAGAZINE, Part IV., for SEPTEMBER, price Sevenpence, in an embellished wrapper, is now ready. The Parts for June and July are also procurable. ALL the back numbers are now in print, and may be had through all booksellers. The Stamped Edition (free by post) price 2½d., must be ordered a week in advance; or per quarter, 3s., (in advance) will secure its transmission to the subscriber's address. In the eighteenth number of this paper (the Stamped Edition only), will be given a full and faithful report of the GREAT PUGILISTIC CONTEST for the CHAMPIONSHIP OF ENGLAND, exclusively by express. To prevent disappointment in the country, all orders must be given before September 10, as the number of Stamps printed will be regulated by the orders.

Office, 42, Holywell-street, Strand, where all communications for the Editor must be addressed.

## CORRESPONDENTS.

S. R.—Caunt never fought Freeman, the American giant. We have answered this question before.—Spring's fighting weight was 13 stone and a pound or two: Bendigo's is 12 stone and a pound or two. You ask us an unfair question: we, ourselves, should not have hesitated in betting moderate odds, much less in taking them, that Spring could have beaten Adam—we answer you but not the public, for it is a mere opinion, the correctness or fallacy of which can never be proved.

"A CONSTANT READER." Bermondsey.—Read our numbers; you are not "a constant reader."—The same to W. S. T., who actually asks us "if we can tell him the date and place of Gully's fight with the Game Chicken?" Oh, dear, what "constant readers" the ink is scarcely dry wherewith we printed the pugilistic doings of "the Game Chicken" and his portrait!

L. E. P.—Caunt and Nick Ward fought twice. See No. 12.

SUMMERS, Leeds.—We are certain of it. Will you send us the paper?

E. J., Whitechapel.—Call on Farlow, in Crooked-lane, Cannon-street; he is a first-rate tackle-maker. Trolling is treated on in one of the early numbers.

T. S. O. T. T.—Your proposal is obliging, but we do not think it practicable. The information proffered would come under the denomination of "news," and could only be inserted upon payment of the stamp duty. Now, our stamped edition (which contains the latest betting at Tattersall's) would not be attainable post-free within the bills of mortality (according to Post-office regulations). Thus, you see, the object of a "Derby Circular" would be defeated, as the law has fenced round these matters. If we insert "news" without a stamp, we are liable to ruinous fines, and if with a stamp they do not deliver us post free within the limits known as "the old twopenny post." Nevertheless, we shall be happy to receive your note, and if, upon legal advice, we can insert its contents in our three-half-penny edition it shall be done.

A. COCKNEY.—A COVEY of partridges consists of the cock, the hen, and the produce of that year, before they are broken, and so continue to be called till they are thinned in number, or dispersed too far to merit the appellation. They are then distinguished as two brace (four); a leash (three).

"TROT."—The following is an excellent ground bait for general fishing:—Crumb of new bread, four pounds; bran, three pounds and a half; oatmeal, one pound and a quarter. Mix up with half a gallon of water; then strain off through a linen or horse hair sieve, and let it set for a day; then knead it, and it is ready for use.

SPREX.—Flogging a horse is a vulgar, commonplace, inartificial process, used among low dealers. It is effected by privately introducing a piece of ginger, previously bitten, into the *apophyseal* and, which, by its painful stimulus, so irritates the animal that, by the deceptive spirit of his action, the erection of his ears, and the cocking of his tail, he appears of more value than when the artificial stimulus has subsided. It is a poor coarse expedient, calculated for the meridian of a horse-market, or low-priced cattle fair. The female offspring of a horse and a mare is called in stable language, a *filly* foal the first year; a *yearling* the second; and a *filly* till four years old.

NUMSKULL.—Your signature is by no means valorious. Aloes is a resinous gum, extracted from the tree whose name it bears. It is chiefly brought from Barbadoes. The Socotrine aloes is the mildest and dearest sort, and is supposed to come from Socotora, an island of the southern extremity of Arabia. Aloes is singular, and you are incorrect.

ROBIN HOOD.—Alice Hawthorn has won 48 races, Beeswing won 50. Catharina 79.

PISCATOR.—We really cannot decide the question. "Doctors differ." Whitebait, even it be an adult fish *sui generis*, which seems more than probable, is certainly, in general, much mingled with all sorts of little 'uns.

H. J., Glasgow.—"British Boxing," which is one of the Sporting Handbooks advertised, may be had of Clark, in Warwick-lane, free by post, upon forwarding twelve stamps. It is not a "History of Boxing." The cheapest and only "History of Boxing" — and that comes down no later than 1822 — is *BOXIANA*, in five volumes 8vo., price 18s. per volume, which may now be had for £2 12s. 6d., we believe. The "History of British Boxing" appearing in this Magazine is digested, written, and compiled from Capt. Godfrey's book (published in 1787); a set of the "Gentleman's Magazine," 1782, downwards; the various files of newspapers—the "Daily Advertiser," "World," and "Oracle;" from "PANCROST," a history of the Ring from 1790 to 1815, published by Chapple; "BOXIANA," already mentioned; and subsequently, to 1822, from the files of the "Bell's Life," "Sunday Herald," and other sporting papers dead and living, which are duly preserved in the library of the BRITISH MUSEUM. No money would buy the books and papers made use of in the compilation, insignificant as it may appear.

## OUR WEEKLY CALENDAR.

## AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, August 31st.—FIFTEENTH SUNDAY AFTER TRINITY.—"St. Sebastian stormed, 1813," says the Almanack. If the Saint stormed it was very unbecoming of him.

MONDAY, Sept. 1st.—PARTRIDGE SHOOTING begins:—

Let gay ones and great  
Make the most of their fate;  
From pleasure to pleasure they run;  
Well, who cares a jot?  
I envy them not

While I have my dog and my gun.—Old Song.

The Surrey Turnpike (Westminster-road, &c.) abolished, 1844; "that's the ticket!" —Roach, gudgeons, chub, eels, tench, bleak, minnows, barbel, bream, ruff, (which we this week figure) pike, trout, perch, and grayling, are in season.

TUESDAY, 2nd.—Great fire of London broke out, 1666.—Things to be remembered in Sept. 1 and 8. (Two Sundays preceding the 15th).—Lists of objections to county electors, and claims and objections for borough lists to be affixed to church doors. 5. Overseers of parishes and boroughs to make out burgess lists under Municipal Reform Act, which must be delivered to town-clerk this day. 8. Town-clerks in boroughs to cause the burgess lists to be fixed in public places in boroughs, from this day till 15th. 15. Claims of persons omitted in the burgess lists, and objections to persons improperly inserted, to be given to the town-clerk in writing on or before this day; notice of the objection also to be given to the person objected to. 22. Constables, churchwardens, surveyors, and rated householders, to meet, and prepare lists for selection, by the justices, of way-wardens or surveyors of highways. 24. Lists of claimants and of persons objected to, to be fixed by town-clerk in some public place of each borough, from this day till October 1.

WEDNESDAY, 3rd.—Two thousand two hundred and fifty pheasants, hatched under common domestic fowls, were turned down in Windsor Park preserves, 1844; "now, gentlemen," as the table keepers used to cry, "make your game!" —Battle of Dunbar, 1649; Battle of Worcester, 1651; Death of Cromwell, 1658.

THURSDAY, 4th.—Licenses.—Members of Parliament have the privilege of abusing one another, without paying for the license. Retail beer-shops are licensed to "be drunk on the premises;" and during the after-dinner sessions at the Old Bailey, the Judges and Jury used to have a license allowed them by law to do the same thing, until Sir James Paul Fry Graham stopped the liquoring.

FRIDAY, 5th.—Mails taken, 1830; first American Congress, 1774.

SATURDAY, 6th.—A coal-heaver applies to Sir Peter Laurie to know if he required a certificate to shoot. Sir Peter replied "of course, feller." "Then," replies the fustian, "I 'sposse this here 'wender's ticket' won't do to shoot your coals with." Sir Peter told him to take aim at the round hole in the pavement, and he'd abide the consequences.—An easy method of prognosticating the weather without a barometer.—Take a single young lady, and place a looking-glass before her, when you will find the glass indicate "fair." There will be an indication of "change" should a young gentleman be assiduous in his attentions; if broken off, her eyes will foretell "much wet."

## The Sportsman's Magazine.

FOR THE WEEK ENDING SEPTEMBER 6, 1845.

GYMNASTICS.—NO. II.  
SINGLESTICK.

**AMONG** the various defensive exercises that of the basket-hilted stick, as used in the broadsword exercises, and in the scientific rural play of singlestick, deservedly occupies a prominent place.

We know full well that there is a class and a large one, who would fain decry every manly sport and exercise which is attended with risk, pain, or inconvenience; such drivellers are not only useless to themselves and their fellow-creatures in time of peril, but instead of receiving credit for "good motives" and "humanity," should be despised as hypocrites and poltroons.

"The whole history of man has shown," says an author, himself a philanthropist; "that it is his nature to seek his own aggrandizement at the expense of his neighbour. The truth is not the less unimpeachable on account of its seeming harshness; and the most cruel oppressors and barbarous despotisms have flourished most where effeminacy and cowardice have most prevailed, a bold, brave, hardy people has rarely been a cruel one." How true this is let the rule of priests and tyrants tell.

This may seem irrelevant to many, yet in it may be traced a "kernel of philosophy." The canters and humanity-mongers mouth from the pulpit and scribble in the press against every manly sport, and what they term "brutal recreation," "vulgar" and "cruel" sports, and the like, yet these mealy-mouthed ~~spout~~ suppressants can coolly, nay, exultingly read of thousands of brave peasantry slain (in red coats and blue), to defend their own scurvy carcasses and homes from the spoil and violence of the invader. When the peasant is at home crush him, police him, and lawyer him down to a poor spiritless thing, but when you want his thews and sinews in the fight, dress him up like a peacock, hire drums and fifes, clap him on the back, tell him "he's a fine fellow," "a brave fellow," and take credit to yourselves as you read the accounts of his brave exploits by sea or by land, that you too are "bold Britons." Is not this absurd and inconsistent? Ought not the manly sports and exercises of the people to be encouraged rather than repressed? And do not such publications, as the little one we here offer to public patronage and encouragement deserve support, as humbly ministering to and fostering that love of fair play and bold encounter which has long characterised, and we trust will ever distinguish, the natives of the "tight little island?"

"The power of resistance," says the historian already quoted; "checks injustice and spoliation. No state robs another which it believes to be equally strong, and possesses arms, and the courage and skill to use them. Still less will a small class think of robbing a greater one thus prepared; by the former, therefore, arms are sought to be confined to the hands of hirelings, and those sports which smack of independence, and the practice of self-defence, save under control of the authorities. Governments know this, and for the sake of selfish objects willingly hazard national destruction, rather than resign the power of oppressing while they may. Universal skill, in the arts of defence, and the protection of a country by its males from nineteen upwards, are therefore, in aid of general know-

ledge and facility of internal communication, the surest guarantees of freedom and peace, and the efficient check of the invader."

May we not add to this, that manly sports and healthy gymnastics, though not unattended with occasional endurance of pain, are the best things to produce a bold population, which should be a country's pride.

Self-defence is essential to the safety of man as a member of a national family, nor is it less requisite to him as an individual.

In the play of Singletstick the sticks used are somewhat heavier and stouter than in broadsword exercise, and the players usually strip to the shirt. In some parts of the country, Wilts, Berks, and Somerset, pad-dings are used to save the arms, particularly the point of the elbow; but this is not usual in London.

FIG. 1.—THE POSITION.

The left hand grasps a handkerchief or band which is passed round under the left thigh; the elbow is elevated and thrown forward to protect the head. Our best players stand with the right foot forward, but some very difficult men to get at prefer the left. The right arm is held nearly straight, the hand above the level of the shoulder, and opposite the forehead; some good players keep it considerably higher, the stick slanting towards the left side.

This is undoubtedly the best and most defensive position, as the head is thoroughly protected. This is the principal point of attack, as first blood from it, or the neck, above the level of the under jaw, is decisive of a game.

Now, before you can cleverly get the head of your adversary, it is clear he must be got somehow or other out of this position. The ordinary method is by attacking him under the arm, on the end of his elbow, or upon the ribs. Some players prefer waiting until they are attacked, and then try to strike in upon their antagonist's head before he can recover his guard.

ATTACK.

The tyro must be careful always to strike by means of the wrist, the great science of the play being shown in making the blow as quickly as possible, and getting back to the first position before your competitor can drop in upon it.

The simplest and most usual blow at the head is here represented (fig. 2.). The right hand is suddenly reversed by a twist of the wrist, the outer edge of the hand (which in the first position, was uppermost), is now brought underneath by a half turn of the wrist, the point of the stick describing a half circle round the head.

To foil this kind of intent raise the hand a few inches diagonally. (Fig. 2.) To return the compliment the movement precisely resembles the attack.

Striking at the ribs, or "whipping" as it is provincially termed, is generally adopted with a view of fatiguing and wearing out the adversary, and of inducing him to bring down his hand, in such a way as to expose his head. The right is the only side attacked, the ribs on that side of

FIG. 2.—ATTACK AND DEFENCE OF HEAD.

the corpus alone suffering by the onslaught. The majority of players guard against this unpleasant visitation by throwing the stick down and outward, but we have seen many of the best players, Stone, (of Somerset), Stacey, Davis, and especially Harlott, jun., of Berks, entirely despise the guard, and at once follow up an attempt at whipping by going straight in at the head. At the Windsor Revel on Monday last, (August 18th), in a set-to of great skill, (and some ill-temper) young Harlott stole a march on the oldstanding champion Stone of Somerset, and got at his head for the first time; the veteran thus losing first prize and his temper together.

The cut (fig. 3.) represents the blow at the ribs and its guard;

FIG. 3.—BLOW AT THE RIBS AND ITS GUARD.

and figure 4, the counter hit on the nob.

FIG. 4.—COUNTER HIT ON HEAD FOR BLOW AT RIBS.

What is called "striking over" is done when through fatigue, or by oversight, the adversary suffers his hand to sink below the level of his head. This blow is made by sharply and suddenly bringing the stick about a quarter turn, so as to pass it close over your opponent's hand; but be careful not to twist the wrist too much. It is best managed when the stick, having reached the level of the player's head, moves altogether horizontally, and then makes a slanting drop from left to right. It is a complicated movement but an effective one, and the arm moves considerably. The step for this is raising the hand suddenly, a little inclining to the left; and an instant return may be effected by striking smartly at the side of the face, a retort which is by no means easy for one to parry who has thus laid himself open.

Fig. 5 represents STRIKING OVER; figure 6, the retaliation.

FIG. 5.—STRIKING OVER.

FIG. 6.—THE RETURN TO THE "STROKE OVER."

The right elbow and fore-arm are also very favourite points of visitation. A smart rap on the inner side of the elbow, just in the cavity formed between the joint bones, is marvellously unpleasant, as most persons have experienced. This is owing to the deadening of the ulnar nerve, which produces a tingling numbness in the third and little fingers. This not only disturbs a man's philosophy, but often prevents, however great a stoic he may be in despising mere pain, the player from feeling his stick; hence the annoying "tingulation" is followed by the more serious evil of a cracked crown.

We here lay down our pen, trusting that in this brief sketch we have made singlestick tolerably plain to the humblest capacities. Further observations would be superfluous, as we shall have much to say on movements akin to singlestick when we come to treat upon FENCING and the BROADSWORD, which we also propose, by the sporting public's favour, to describe and illustrate in our columns.

### THE FISHER'S CREEL.

THE POPE, OR RUFF. (see cut opposite.)

**T**HE POPE OR RUFF is a gregarious fish, found in most but not all of the English rivers; it is abundant in the Tame, the Mole, the Yare, the Cam, the Isis, &c., haunting slow-running water, and deeps with a gravelly bottom. He is, says Walton "much like a perch for his shape, and taken to be better than a perch; but will not grow bigger than a gudgeon. He is an excellent fish, and no fish that swims is of pleasanter taste."

The Ruff will take almost any bait, but a red earthworm or small branding is its favourite morsel. They usually lie in swarms, rather than shoals, in some quiet spot, where there is deep water, and "an easy angler, when he has found their resort, may catch forty or fifty, or twice as many at one standing." Some use a paternoster line, with five or six hooks according to the depth of water, but when a little muddy the ruff will bite at all depths. Groundbait before casting in your line with two or three handfuls of fresh earth.

### JOLLY ANGLERS.

Amongst the lighter pursuits of cultivated men, angling appears to be an especial favourite. If great names were wanting to show how the piscatorial art was sanctioned by men of the highest rank, genius, and talents, the lives of hundreds of great and good personages would confirm it. Walton is justly proud of the name of Dr. Howell, Dean of St. Paul's,

THE RUFF PERCH.

Sir Henry Wootton, Provost of Eton; Sir John Offley, and many others. Gay alternately wrote his poetry and caught his trout, at Amesbury. Tobin the author of the "Honey Moon," was at once an excellent writer and an ardent fisher. Mr. Coleridge, "the powerful poet of the lakes," also adds to its votaries a distinguished member. Dr. Pacey was so enthusiastically fond of the sport, that when asked by the Bishop of Durham, when one of his most important works would be finished, replied with much *naivete*, "My lord, I shall work steamily at it when the fly-fishing season is over." The heroic Lord Nelson, we are told by Sir Humphry Davy was a good fly-fisher, and as a proof of his passion for it, continued the pursuit even with his left hand, having, as is well known, lost his right in the service of his country. The shield of fly-fishing is emblazoned with the names of Sir Walter Scott, Sir Humphry Davy, and Dr. Babington, and we believe, the exquisite little volume, "Salmonia," owes its origin to a party proposed between Sir H. Davy, Dr. Babington, and Dr. Frank, to visit the lakes. Mr. Blaine justly observes—"The very play of men like these must have afforded an intellectual treat." Amongst the other high characters who have practised fishing with avidity, we may notice that most amiable lady, the late Duchess of York, who used to declare that it was a great treat to her to fish for perch in Virginia Water. It was in these waters that George IV. erected a sumptuous fishing temple, and thus added himself to the list of royal anglers.

### NETTING THE SERPENTINE.

[The following letter, addressed to the Editor of *Bell's Life in London*, exposes an abuse which we trust to be better informed of, for the benefit of our numerous angling readers.—ED. SPORTSMAN'S MAGAZINE.]

Sir—Knowing that you are anxious to correct, by exposing grievances of any kind, I venture to call your attention to the following statement:—That long looked-for enjoyment of carp fishing in the Serpentine has just now set in, and those who have waited for weeks were expecting a return for their trouble, when, "tell it not in Gath!" the long man of the water issued his edict. "Drag the serpentine on next Wednesday evening, at ten o'clock." "Nonsense (said I), why, that would look very like poaching." However, to my great regret, I find it literally true, "But why (said I), in the night time?" "Because the fish by constant netting, are grown too wary for the day-netting. Besides, we only want a few carp for her Grace the Duchess of Cambridge." Alas, alas! I fear her good ladyship sees very few carp from this source. Now, Sir, I contend that the well-known urbanity of his royal highness, if the Serpentine anglers represented, by address to his grace, their grievances from this wanton destruction of fish, would so far regulate the dragging, as to insist on the keeper paying his helpers in money, not in kind, as bream are well known to be very cheap after such an occasion. The weeds are mown down in the Kensington Gardens, thereby depriving the fish of their ordinary refuge, and driving them into the meshes of this leviathan of the river.

Pray, Mr. Editor, give our best friend, "Ephemera," this; a few hints from him may, perchance, catch the eye of that nobleman, to whom we are indebted for our orders, and in whose power alone lies the remedy. I dread the issue of this night-dragging, but will, if possible, report progress in time to you.—Yours respectfully,

August 19 1145.

"Mat, I want another porter." What *ales* the one you have, Dick?" "He's dead." "Gone to his bier, eh?" Hang you, Dick, your wit's always a broad-cider.

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

## CHAPTER VI.—Continued.

## DUTCH SAM.

The friends of Belcher were not satisfied as to the result of the above battle, and Tom was backed for two hundred guineas to fight Dutch Sam, on July 28, 1807, at Moulsey Hurst, in a twenty-eight feet roped ring. Sam had for his second, Mendoza, and Bitten for his bottle-holder; and Belcher was attended by Bill Warr and Watson.

1.—Eager to commence offensive operations, Sam attempted to plant a severe blow on his opponent's ribs; but failed, when Tom nipped him twice with great severity, and got away. Some sparring followed, while Sam went in determinedly, and in the close was uppermost.

2.—Sam, although incorrect in his distance, put in a severe right-handed blow on Tom's loins, which Belcher returned by a tremendous fencer, sparring again, when Sam put in a severe blow upon his adversary's throat, that brought him down.

3.—Sam firm and confident, and Belcher equally game, both pelting away, and good judgment displayed on both sides; in closing Belcher was thrown.

4.—Both the faces of the combatants betrayed visible alteration—Belcher's nose bled copiously; and Sam's eye was much swelled. Belcher put in a hard fencer, and Sam, in closing, threw his adversary with great violence.

5.—A better round was never witnessed in any fight whatever—science, activity, and game in emulous perfection—Sam rattled into a rally, and many good hits were exchanged. The men closed; but, on disengaging themselves, Tom let fly right and left, nevertheless he had the worst of it, and went down from a slight blow from his opponent. [Five to four on Sam.]

6.—Both on their mettle, and good hits exchanged.—Belcher stopped some severe blows, but fell rather weak. [Six to four on Sam.]

7.—Rather an irregular round; but, in closing, Sam threw Belcher on his head.

8.—No mischief done.

9.—Belcher planted two severe hits, right and left, in his antagonist's face, and threw Sam desperately.

10.—Sam balanced the account; and, after putting a heavy body blow, threw Tom.

11.—Belcher stopped his antagonist's lungs with great skill; in closing, Sam went down.

12.—Belcher on the look-out, anxiously endeavouring to save himself; but Sam followed him fiercely, and hit him down.

13.—Tom stopped two blows with great neatness, and returned a most desperate hit; the effects of which Sam felt severely, and soon after fell to avoid.

14.—Sam's eyes were now in mourning, and Tom's left side showed the marks of his antagonist's fist; Sam put in a severe ribber, the men closed, and Sam went down.

15.—Very irregular—retreating, hugging, &c. Tom fell, from weakness. [Seven to four on Sam.]

16.—Counterhitting, and several severe blows were exchanged; in closing, Belcher threw his opponent.

17.—Hard fighting; both the combatants, trying for superiority at arm's length, fell from each other's blows.

18.—Sam put in a blow on his opponent's nose; but, in closing, went down.

19.—The conflict was now desperate; hitting and stopping without delay; rather in favour of Sam.

20.—Belcher showed himself master of the science, by his dexterity in stopping and returning with severity.

21.—Belcher on the decline; his friends anything but sanguine. Sam hit him three desperate blows on his already punished side; nevertheless, Tom threw his opponent.

22.—Belcher fell from a severe hit upon his head. [Three to one upon Sam.]

23.—The science of Belcher still evident; but he wanted strength to second his efforts, and was thrown.

24.—Sam's eyes were nearly darkened; but he was still gay; in the rally he knocked Tom down. [Four to one upon Sam.]

25.—Tom now convinced the spectators that he was not only entitled to the character of a scientific, but a game pugilist—his courage was admirable; but the chance was positively against him, and Sam was no stranger to the circumstance.

26.—Belcher fell from weakness during the hitting.

27.—Tom's exhausted appearance was manifest; but his brave heart, still anxious to contend, although Nature refused to second his efforts, he fell from mere weakness and inability.

28.—and last. This round terminated in a manner quite unexpected—Tom, in making a hit at his opponent, fell upon his knees; and Sam in returning struck him—upon which cries of "foul" were immediately heard. It was a sort of straw to catch hold of, and advantage was taken of the circumstance. The umpires, in giving their opinion, were in opposition to each other; it was finally decided in favour of Sam, subject to future consideration. After considerable arguments at various meetings, and precedents resorted to, upon similar occasions, it was finally decided as a drawn battle, and that a third appeal should be made to the genius of Victory.

This came off on Friday, August 21, 1807, on Lowfield Common, near Crawley, in Sussex, in a thirty-feet roped ring; and it was agreed that the following article of Broughton's rules was to be rigorously enforced:—

7.—That no person is to hit his adversary when down, or seize him by the ham, the breeches, or any part below the waist: a man on his knees to be reckoned down.

[A very proper decision, ever since adhered to, down to this present year 1845.]

Dutch Sam was seconded by Mendoza, Bitten was his bottle-holder; and Tom Belcher was attended by Gully and Ward.

1.—Considerable anxiety was manifested upon the combatants setting to, and large sums awaited the decision of this third contest between those distinguished pugilists. Sam made a feint with his left hand, and endeavoured with his right to reach Tom's ribs; but he was stopped, and Belcher returned feebly with his left, in closing, Sam was under.

2.—Sam going in to rally, Tom nailed him right and left, in closing, Belcher was thrown. [Betting now began—Five to two on Sam.]

3.—Sam extremely cautious till he had got his proper distance, when, after making a left-handed feint, he put in a terrible blow under Belcher's left eye, that brought the claret in abundance; it was so severe, that Tom was confused, and in endeavouring a return was thrown. [Three to one on Sam.]

4.—Sharp in fighting, a break, and exchanges at arm's length—no advantage on either side; but the strength of Sam was superior in the close, and he threw his opponent.

5.—A most excellent round; but rather in favour of Belcher. Sam rallied, but without effect, as Belcher hit him off; notwithstanding, Sam closed, disengaged, and commenced another rally, when Tom put in a most tremendous blow upon the left eye of his opponent, and also threw him a heavy fall.

6.—Desperate fighting—both exhausted, and fell together.

7.—Belcher put in two slight hits; when they closed irregularly, and fell.

8.—Rallying; good science prominent on both sides—hitting and stopping in good style, till both fell. Belcher manifested first weakness.

9.—Sam incorrect in his distance, his blows did not tell; Belcher gave him a severe fall. [Four to one on Sam.]

10.—Belcher hit his opponent slightly; Sam threw him.

11.—Sam, full of strength, rattled in desperately; Tom, nothing loth, met him, and a furious rally ensued, but in favour of the Jew. Sam's blows were dreadful, and Belcher's face and body suffered materially; he fell from weakness.

12.—No blows worth naming, Tom ran himself down. All betters, but no one sanguine enough to take.

13.—Sam followed the steps of his opponent, and ran himself down.

14.—Belcher somewhat shy from the severe beating which he had received, fell from two of Sam's right-handed body blows.

15.—Belcher made every effort to put in some good hits; but they were too feeble to do any execution; he fell from weakness during half-arm hitting.

16.—Of no importance; both the combatants, after closing, appeared to go down to husband their strength.

17.—Belcher, in attempting to hit his opponent, was stopped; in closing, Tom fell between his adversary's arms on his knees: but Sam was too strongly impressed with the articles, and held up his hands, to show that no foul blows should put an end to this contest.

18.—Sam, in closing, got his opponent's head under his arm, and fished Belcher so severely that he dropped.

19.—Tom fell on his knees, coming the artful, but Sam was on his guard, and only smiled.

20.—Sam beat his opponent to the ropes with considerable ease.

21.—Belcher still suffering under Sam's superior strength.

22.—Belcher, rather recovered, obtained some little advantage.

23.—Belcher, still livelier, contended spiritedly, till they both fell, and lay on the ground.

24.—Belcher completely astonished his friends by his fine game and resolution; he obtained considerable advantage in a desperate rally, when both men fell quite exhausted.

25.—Tom's excellence as a boxer was truly conspicuous in this round, his blows were well directed, but not effective.

26.—Belcher still first to fight, and Sam, to avoid Tom's favourite right-handed body blow, threw himself on his face.

27.—Sam received a fall after some irregular fighting.

28.—Belcher claimed considerable attention from the fine style in which he endeavoured to get the lead; he gave Sam a severe fall.

29, 30.—Sharp rallies, but it was evident to the most prejudiced spectator that the Jew's star was in the ascendant. Belcher's heaviest shot was fired, and the Jew fairly fought him down.

31.—36.—It was evident to the spectators that Belcher could not win. The ferocity of Sam was tremendous; he followed his opponent to all parts of the ring, putting in fencers and body blows, and dealing out punishment, till his brave opponent fell quite exhausted, when his brother Jem took him out of the ring in the most feeble state, and placed him in a gentleman's chariot. Sam's principal injury was a blow under the left eye, and some trifling marks; he dressed himself with perfect indifference before he left the ring.

Sam entered the lists with Bill Cropley, on May 10, 1808, in Sir John Sebright's Park, Hertfordshire. Cropley was a fine well-made young man, of great strength, and possessing stamina of so fine a quality, that an opinion was entertained by several of the amateurs that Sam would never be able to defeat him. It was a well-contested battle for twenty-five minutes; but Sam was the favourite after the first three rounds, and not declared the conqueror till Cropley was quite exhausted.

## A SEASONABLE DITTY.

BY THOMAS HAYNES BAYLY.

*Don't talk of September.*

Don't talk of September!—a lady  
Must think it of all months the worst;  
The men are preparing already  
To take themselves off on the first:  
I try to arrange a small party,  
The girls dance together—how tame!  
*I'd get up my game of écarté,*  
But *they* go to bring down *their* game!

Last month, their attention to quicken,  
A supper I knew was the thing;  
But now from my turkey and chicken  
They're tempted by birds on the wing!  
They shoulder their terrible rifles,  
(It's really too much for my nerves!)  
And alighting *my sweets* and *my trifles*,  
Prefer my Lord Harry's preserves!

Miss Lovemore, with great consternation,  
Now hears of the horrible plan,  
And fears that her little flirtation  
Was only a flash in the pan!  
Oh! marriage is hard of digestion,  
The men are all sparing of words;  
And now 'stead of *popping the question*,  
They set off to *pop at the birds*.

Go, false ones, your aim is so horrid,  
That love at the sight of you dies:  
You care not for *locks* on the forehead—  
The *locks* made by MANTON you prize!  
All thoughts sentimental *exploding*,  
Like *flints* I behold you depart;  
You heed not, when priming and loading,  
The load you have left on my heart.

They talk about patent percussions,  
And all preparations for sport;  
And these *double barrel* discussions  
Exhaust *double bottles* of port!  
The dearest is deaf to my summons  
As off on his pony he jogs:  
A doleful condition is woman's;  
The men are all—*gone to the dogs*!

## KING LOUIS PHILIPPE'S PATRONAGE OF THE TURF.

We have often had occasion to notice the commendable perseverance and patronage which the present French government affords to the encouragement of the turf, and the consequent improved breed of their horses, a desideratum which the inferiority of their cavalry regiments, when opposed to the British and others, better mounted, have, on many important occasions, in addition to that of Waterloo, impressed upon them how highly it ought to be prized. The King of the French has recently caused to be constructed, at the beautiful royal demesne of Neuilly, a hippodrome of a most enormous extent, which is capable of conveniently accommodating, as spectators, 30,000 persons. The term hippodrome, it may be as well to premise, is derived from the two Greek words, meaning horse and course. *Hippodromus*, in antiquity, meaning a list or course, where chariot and horse-races were performed, and horses exercised. The olympian hippodrome, or course, was a space of ground of 600 paces in length, surrounded with a wall, near the city Elis, on the banks of the river Alpheus. It was uneven, and in some degree irregular, on account of the situation. In one part there was a hill of a moderate height, and the circuit was adorned with temples and other embellishments. Constantinople had a famous hippodrome, which was begun by Alexander Severus, and finished by Constantine. This circus, called by the Turks *Atmeidan* is 400 paces in breadth. At the entrance of the hippodrome there is a pyramidal monolith obelisk of granite, about 50 feet in height, terminating in a point, and charged with hieroglyphics. The Greek and Latin inscriptions on its base show that it was erected by Theodosius.

Having alluded to the hippodrome of the ancients, we will briefly state the modern one, which was opened in the king's presence about the 15th of July last. It is 130 metres in length, and, a French metre being a fraction above an English yard, it consequently will be in extent upwards of 390 or nearly 400 feet in length; and the extent of the Champ d'Exercice is alone 104 metres. The principal walls are raised, as also five rows of upper seats, and a first and second gallery which bear some affinity to our first and second tier of boxes. The inauguration was honoured by the presence of the king and the members of the French court.

## THE LAND OF SPORTSMEN.

It does not appear when the sportsman first sprang into existence, "There is no corresponding word in any ancient language," says a learned writer, "since that could not be called a sport which was a necessity." The pursuit and destruction of wild animals for security, food, clothing, or pastime, have been amongst the occupations of men in all ages, since the primeval race overspread the earth—

"And wild in woods, the noble savage ran."

Before the more refined arts are introduced into any country, the chase is a necessity and the chief business of life. The stronger and more noxious animals are destroyed for individual safety, the weaker for food. It is not till civilisation and her handmaid, luxury, have seated themselves that the chase becomes a pastime.

It is probable that in the earliest stages of society the dog was the sole agent employed by the hunter. Afterwards various weapons—manual, missile, and projectile—as the club, the dart, and the arrow, were used by the hunter and fowler. Then would follow springs-traps, nets, and all that class of devices for the capture of beasts and birds, *fera natura*, comprehended in the term toils. As dogs were employed to hunt quadrupeds, so, in process of time, hawks were trained to bring down birds for the service of their master. The arbalest, or cross-bow, preceded the match-lock, which, however, could scarcely be called an implement of the chase, but which, in the order of succession, brings us down to the rifle and original fowling piece, with its long heavy barrel, and flint and steel lock; and, lastly, we arrive at the double barrel and detant locks of the modern sportsman.

It has been remarked that England (i. e. Great Britain) is peculiarly the "land of sportsmen," the very name being unknown in all other countries. The observation is in a great measure true, for if we look around the globe we find that wherever wild animals are killed for the sake of sport, it is mostly by the Englishman. In Sweden the Englishman alone kills the bear for sport; the natives kill it for the sake of reward, or to rid themselves of a noxious neighbour. In Asia the only sportsman that encounters the royal tiger is the Englishman; the native *shekerrie* shoots the tiger for profit. There, also, the buffalo and the boar are hunted by Englishmen alone. In Africa it is the Englishman who hunts the lion, the hippopotamus, and the giraffe. And, in America, it is the Englishman, or English settler, who hunts the panther, the bison, and the bear for sport; the natives do so from necessity. Since, then, the Englishman is the universal sportsman, it behoves the officer, the emigrant, and the tourist, to make themselves acquainted with the sports peculiar to the countries to which they are preceeding.—*Blaine*.

STRANGE, IF TRUE.—"Well, if it aint true, I'm dumfuxed. 'Twas on the banks of the Potomac, at the fall—not of the river, stranger—but of the leaf—not the leaf, though, of your Achilles, hem! Uncle Ben and I were out a gaming. No sport. Returning at evening we fired off our charges in despair, when, jist at that moment, a bison appeared at the opposite bank, quenching his thirst. "Hell and rattlesnakes!" cried Uncle Ben, "I'll walk into that ere warmint!" We both charged our rifles and fired together. And what do you think, stranger? I looked for Uncle Ben and saw only his ramrod stuck slantendicularly in the ground. I looked across the river and there I saw nuncks on the baste's horns. He had rammd himself down instead of the ball, and went off *memmerically*!"

POWER OF HORNETS.—I have seen six companies of infantry, with a train of artillery, and a squadron of horse, all put to the rout by a single nest of hornets, and driven off some miles, with all their horses and bullocks. The officers generally save themselves by keeping within their tents, and creeping under their bedclothes or their carpets; and servants often escape by covering themselves up in their blankets, and lying perfectly still. Horses are often stung to a state of madness, in which they throw themselves over precipices, and break their limbs or kill themselves. The grooms, in trying to save their horses, are generally the people who suffer the most in a camp attacked by such an enemy. I have seen some so stung as to recover with difficulty; and I believe there have been instances of people not recovering at all. In such a frightful scene, I have seen a bullock sitting and chewing the cud as easily as if the whole thing had been got up for his own amusement! The hornets seldom touch any animal that remains perfectly still.—*SLEWMAN'S Rambles and Recollections*.

## A COMIC SONG FOR YOUNG LADIES.

And do you really want, mamma, to know my lover's name?  
It is too bad of you, mamma, indeed 'tis quite a shame.  
His name begins with W, the second letter's A;  
The next to that is L, mamma; and then, mamma, comes K.  
And after K comes E, mamma; there's yet one letter; well,  
Letter the last is R, mamma—that's all I have to tell.—*Funch*.

COMMODORE NAPIER'S CONUNDRUM.—When does a ship's gun get out of harbour and into conversation? When it gets out of *Portsmouth*, and into *Chat'-em*!

## RACE-RIDING.

BY COTHERSTONE.

O arrive at perfection in this very difficult art is not the attainment of a day; much less is it to be acquired by the perusal of any directions, however clear and voluminous they may be. It is of all occupations in life one of those which must be learnt by constant attention, and, when learnt, requires very considerable practice to perform with credit: nevertheless I am prompted to put these observations together; in the first place, because I feel assured that something on this subject would be expected; and, in the second place, under an impression that they may fall to the notice of some persons to whom they may prove acceptable.

It is certainly a beautiful science, one in which very few men are found to excel, and may truly be considered the *æ plus ultra* of horsemanship. There are many who can ride who may be considered as having attained a certain rank; but there few, very few, who can be extolled as having gained pre-eminence. Like painters, many of whom can delineate the style, figure, and countenances of living subjects, or who can represent the scenery which they behold; but ages have only produced a very limited number who could give the master-touch, represent nature in her true character, and imitate those beauties which man is at best only many allowed to copy. Such men as Rubens, Claude Lorraine, Vandyke, and some few others of their class, have only appeared throughout a lapse of centuries. So it is with the jockey: *artistes* comparable with the late Francis Buckle, Samuel Chifney, and James Robinson, are seldom to be met with. By watching their riding, it may be discovered that there is a delicate touch required "at the finish," which frequently wins or loses the race, according as it may be brought into effect at the just "nick" of time; in other words, there is a period when too much exertion required from a horse may be the cause of his defeat, and there may be another when his energies being called forth may make the race his own. These events, as a matter of course, refer to instances when the power of two or more are very nearly equal; they may be casually produced by moderate riders, but with such they are more the effect of chance than judgment.

One great object to be acquired in the difficult art of race-riding is a familiar knowledge of the power and capability of the animal, so as to call forth its efforts at the proper moment; that is, to apply his powers of speed or stoutness, according to his qualifications and the relative qualifications of his competitors, judging from the action, condition, and faculties of each. Superiority on such occasions must result from experience, practice, and observation.

It is commonly considered the province of the trainer to direct how his horse is to be made use of; but, beyond the fact of whether speed or stoutness be the animal's *forte*, the rider is by far the most competent judge, being guided by circumstances which cannot be preconceived before the race begins.

That there are very few men who excel in this calling is not to be wondered at, when it is taken into consideration how many attributes are essential. To begin with, a man's stature must be small, and yet muscular; he must be good-tempered and patient without being rash, he must possess good nerve; and, above all things, he must have a disposition guarded with honour to defend him from temptation. There is not a more dangerous occupation than that of a jockey, unless his mind is fortified by honesty. The opportunities which may present themselves of obtaining money by acceding to nefarious arrangements, may appear too glittering for weak minds. But let me here remark, that there is scarcely a man in prosperity at the present moment whose character has ever been tarnished even with the blemish of suspicion, much less who has lent himself to disreputable practices; the detection of which is invariably followed by exposure, and exposure by ruin. However deeply laid and cunning a man's schemes may be, sooner or later the public are sure to discover them; and, when once only suspected, it is no easy matter to appease the opinions which have arisen.

The instinctive faculties with which the horse is endowed, is one of the first studies which a jockey should take into his most serious consideration; it will enable him to compare "causes and effects," and thus lead him to account for many circumstances which otherwise appear inexplicable. In order to urge the animal to his utmost speed, the whip and spur are made use of, and, by the judicious use or the improper abuse of these instruments, he is either induced to increase his efforts or the reverse, according as his temper may be affected, or his physical powers may permit of his repeated exertions; but, if the former object is not attained, an evil arises by the application of these weapons, which thoughtless persons fail to recognise, an act of cruelty is perpetrated, and a foundation laid for much future disappointment. Having obtained the horse's greatest efforts by the use of the whip and spur, they may sometimes be necessary, to a certain degree, to induce the animal to continue his exertions until the termination of the race; but, in this, the disposition and power of the animal must be consulted. It is one of the great features in a jockey's skill to be enabled to discriminate whether it is want of power or temper which prevents the horse which he is riding from augmenting his exertions when called upon; and, if temper, whether that be not the result of previous punishment. The instinct of the animal is such, that, when his

powers of speed are forced to their utmost, if he continue to be punished by the whip and spur, is it not natural to suppose that he imagines he is being goaded for his exertions, and consequently that he will relax them? That such is the case in many instances, and those of much more frequent occurrence than the casual observer is wont to recognize, I am perfectly persuaded. Long-continued punishment will cause the gamiest horses to stop, and not unfrequently long before their powers are exhausted. The ignorant and unmerciful rider too frequently continues to punish the already distressed animal; who, from the effects of pain, torture, and defeat, is ready to run anywhere to escape the unmerciful infliction, and is consequently condemned as bad tempered. So long as a horse is found to improve his speed by their use, so long is a jockey justified in the moderate and necessary administration of his whip or spur; but the instant he finds that they fail in their effects, that instant he ought to keep them quiet. The continued application of them, when horses are beaten, commonly causes them to stop, or, as it is generally termed in racing language, *to shut up*, the moment they are called upon, arising from nothing but the reminiscences of the severe punishment, which they had been subjected to on former occasions. If it could be even allowable to pass unnoticed the cruelty of such treatment, interest alone should dictate the absurdity of punishing a horse at such a crisis.

I have known jockeys make answer, upon having it observed to them that they had made use of unnecessary punishment, that they were aware of it, but that they felt compelled to do so, or the public would condemn them on suspicion that they did not try to win. Such charges, under such circumstances, could never be substantiated. Men never need to feel such apprehensions. So long as their actions are guarded by integrity, the ridiculous imaginations of a few ignorant spectators can never injure their credit if they be truly honest.—*Sporting Review for August.*

## THE POETRY OF THE RAIL.

(From Punch.)

We have already pointed out the alteration likely to be made in poetry and song-writing by the introduction of railroads, and we this week give another specimen of the probable effect of the change. We shall hear no more now of the Lily of the Vale or the Village Rose, but the Pearl of the Refreshment-room and the Daisy of the Rail will supersede the once popular maidens alluded to. The following touching ballad is supposed to be addressed by one of the luggage superintendents to one of the female waiters at the same station, and may be called—

## THE PORTER TO HIS MISTRESS.

Oh maiden, but an instant stay,  
And let me breathe my vow;  
I know the train is on its way,  
I hear its thund'ring row.

Another moment crowds will stand  
Where now to thee I kneel;  
And hungry groups will soon demand  
The beef, the ham, the veal.

Turn not away thy brow so fair,  
'Tis that, alas! I dread;  
For thou hast given me, I swear,  
One fatal turn a-head.

I've linger'd on the platform, love,  
My brow with luggage hot;  
A voice has whisper'd from above,  
"Porter, take heed, love knot!"

O'er thee mine eye doth often range:  
I've mark'd thee take the pay  
From those who, ere you bring their change,  
Rush to the train away.

Turn not, &amp;c. &amp;c.

PROPOSED RE-ESTABLISHMENT OF DERBY RACES.—We understand that a memorial is now in course of signature to the Mayor and corporation of Derby, requesting permission to establish annual races over the corporation land adjoining the Nottingham road. The expense of forming the ground is estimated at about 150*l.*, which is proposed to be raised by public subscription. The extent of the course will be about a mile and a half in circumference; and, if the project succeeds, it is thought that the race ground will be one of the finest in the kingdom. The promoters of this measure are anxious that all low gambling and other disreputable practices which have so frequently prevailed at races, shall be strictly prohibited, and every means adopted to render the races deserving of general support. It is thought by many persons to be a very likely plan to supersede the objectionable game of foot-ball. If the races are established, it is proposed, we are told, to hold them annually towards the latter end of August.—*Nottingham Journal.*

"I never had this pain before," as the man said of the lumbago.

## SHOOTING.

(Continued from page 271.)

1. Never purchase or shoot with a gun that is not perfectly sound in all its parts, and especially in the inside of the barrels, and in the construction of the locks; and, whether new or second-hand, be well assured of its having been manufactured (*bona fide*) by a respectable gunmaker, and not merely got up for sale, with a deceptive exterior, and a pirated name upon it.

2. "Never suffer a gun, at any time, to be held for a moment, or even carried, so as to be likely to come in the direction of either man or beast."—*Hawker*.

3. Never put your hand or arm upon the muzzle of a gun; nor lean over it.

4. Never blow into the barrel of a gun, whether loaded or unloaded.

A fatal instance of this common but dangerous habit is recorded by Major Bevan. "It appears," says the Major, "that he (a shooting companion), had snapped at a bird, but the piece hung fire: he took it from his shoulder to examine it, and, as was his custom, blew into the muzzle of his gun. The agitation of the air ignited the dormant spark, and he received the whole charge in his mouth."—*Thirty Years in India*, vol. ii. p. 261-2.

In an ancient work, entitled—"The Complete Marksman; or, the Art of Shooting Flying"—a poem, by the Hon. Robert Coot—this same caution is given in very definitive terms, thus:—"Never blow at the mouth of your piece, after it has missed fire, lest some latent spark discharge it through your head."

5. Never use a gun for any other purpose than the one for which it is obviously intended; and especially as a hammer, or mallet, a walking or bush-beating stick; as a hook to draw the boughs of a thorn or tree towards you; as a staff to "hang dog," to lean upon, or to support yourself; to assist your fat friend up a bank, over or out of a ditch, or as a prop or leaning-pole, to help yourself over hedge or ditch: nor is there any occasion to take flying leaps with it in your hand, however anxious you may be to display your agility.

6. Never take a loaded gun into a house, unless the caps, or primers, be first removed, and the tops of the nipples rubbed with a glove or handkerchief, the gun be kept in your own hands, or immediately placed under lock and key. But the safest plan, of course, is to make the first eight words of this caution a rule absolute.

Guns kept constantly loaded in a bed-chamber, for defence against nocturnal depredators, ought always to be placed under lock and key in the morning; especially where there are children. A very idle and inefficient substitute is sometimes resorted to, viz., that of sticking a card, or a piece of foilsap, between the ramrod and the muzzle, with the cautionary word—**LOADED!** inscribed upon it. But, if a phial of prussic acid be left in the way of a child, or of a servant who cannot read, it is no security to write POISON on the label, how conspicuous soever the letters may be!

7. In firing, never rest your gun on a stone wall, or other hard or rugged substance.

8. Never flash off a copper-cap or primer, when a gun is empty, but always have gunpowder in the barrel at the time, with a tight-fitting wadding upon it; and never let the hammer be down upon the unexploded cap, or primer.

9. Never load your double gun in a hurry, lest you should forget to put wadding over the powder or shot; or should put two charges of either, or both, into one and the same barrel. You may, however, instantly detect the latter blunder by putting the ramrod down each barrel, and by then measuring with your hand (on edge), or your eye, how much of the rod appears above the muzzle. A shallow ring filed (with a fine-edged file) round the rod, shows at once the proper height of the charge.

10. Whenever a loaded gun has been cocked, but not fired, uncock it with the muzzles up; and if one barrel only have been fired, the other ought to be uncocked immediately, to avoid all danger, and especially that of loading with a barrel cocked.

11. "When uncocking a gun, never remove the thumb from the cock until, after having let it pass down by the half bent, and gently raised it again, the sound of the sear is heard catching the tumbler."—*Daniel*.

12. Never load a gun unless the cocks be down; and (whatever be the mode of ignition) never prime before you have loaded.

13. When loaded with loose shot, always place the prepared, or some other stiff-punched wadding (fitting the calibre of the gun nicely upon it; which will generally keep it from moving in the barrel, provided you be not guilty of carrying the gun muzzle downwards. And, after having fired one barrel of a double, on reloading that barrel, ram the charge again in the other barrel, whilst you have the ramrod in hand, in order to make all compact.

14. Beware of the muzzle of the gun being kept hanging downwards; when so carried the shot is apt to force its way from the powder, and thus create a vacuum in the barrel; in which case, there is danger of the gun bursting if fired with the muzzle at all inclined downwards; to say nothing of the danger (from a casual discharge) of shooting men, horses, or dogs, when the gun is carried in the before-mentioned pendulous manner.

15. After having got through a thick covert, or a hedge, always examine

whether a branch have accidentally palled the cock to the full; and, if any one be about to follow you with gun in hand, step aside so as to be clear of the muzzle, or counsel him to carry it through stock foremost:—but you will be the safest by always allowing your friend the honour of taking precedence of you on such occasions.

16. "In shooting with a stranger, who perhaps keeps his gun cocked, and muzzles usually pointed to the left, plead for the right hand station, and urge that you cannot hit a bird flying to the left; with a gamekeeper, take the right hand without ceremony."—*Daniel*.

17. "If you should have fired one barrel, and, while in the act of reloading it, other game should be sprung, beware of firing the other barrel until you have either put the flask in your pocket, or thrown it on the ground."—*Hawker*.

18. Beware of firing too near to the farmer's teams, when the corn is being led, in September, lest the horses should take fright, and run away with, and upset the load of corn, with the man on the top of it.

19. Beware of firing through, or near the corners of, hedgerows—especially when immediately contiguous to public roads and foot-paths—for fear of shooting a casual passenger, or that shock-headed lad who is "tenting pheasants fra' th' corn," a not uncommon employment for such in some parts of England.

20. Beware of firing too near to rick-yards and out-buildings, as, by so doing, you may occasion an awful "flare-up;" which is bad policy, though the premises be insured, and worse if they be not.

21. Beware when and where you fire, at all times. Never attempt to display skill by firing close to the head of either man or beast, whether a companion's, or a favourite pointer's; and be particularly circumspect when a number of shooters are spread in various directions, and especially in covert.

22. 'Ware mad-brained shooters, such as beat bushes with their guns, and especially when cocked; who are utterly ignorant of many proper precautions; and who, if they were not so, would not adopt them; for—"All their madness none can know!"

23. Beware of shooting at, or of shooting your dog; for the former is cruel, and the latter brutal: and never allow yourself to be overcome by the turbulent gusts of a fiery temper, because a man, in a passion, is certain to commit himself in some way or other (*ira furor brevis!*) and nothing is more likely to unhinge your nerves, and spoil your shooting for the rest of the day.

24. Beware in what part of a house you keep gunpowder; where and how you dry it; and what sort of powder-flask you use; and never bring gunpowder near fire or candle.

25. Before getting into, or out of a boat, or vehicle of any sort, with a loaded gun, always take off the copper-caps, or remove the primers.

26. Unless on the sea-coast, or where the coast is clear for several hundreds of yards (as on a sterile or interminable heath), when loading with Eley's cartridges, never put a wadding of any kind upon them, for fear by this means they should "ball."

27. In shooting alone, when you come to a gate that is locked, first put your gun through the bars, and rest it firmly against the wall, or post, with the muzzles inclining from you, and then get over it. On coming to a wall, especially if rather a high one, and built of loose stones, first place your gun longitudinally on the top, with the muzzles pointing from you, and then get over the wall, two or three yards from the stock of the gun; so that if the wall give way, as sometimes is the case, the gun may not be injured, or thrown down. Of course, if you have a follower with you, and he be "up" at the time, let him get over first, when you can hand the gun to him.

28. Beware of abusing your constitution by fatiguing too hard; for *nil violentum est perpetuum* (nothing violent is lasting). In short, beware of all excess: because that—not to invade provinces which belong to other and graver consuls—is ever injurious; whilst universally—"Moderation is the law of enjoyment."—*Knor*.

29. In travelling or touring in "whiskey, buggy, gig, dog-cart, curicle, or tandem;" or, it may be, in your new "drag," never, by way of a lark, attempt to spoil the picturesque appearance of the cooey, feeding within gun-shot of the roadside, by raking them; or be tempted to molest other game; for such is not exactly a gentlemanly mode of proceeding; nor is it a very safe one, if the keeper on horseback should happen to be overlooking your movements.

30. In case of fresh or salt water, snow, mud, &c., having got into the barrel, never attempt to fire the gun; but, having first removed the caps, or other primers, and let the cocks down, draw the wadding which is on the shot, when, if it appear necessary, the whole charge must be taken out; and in strict accordance with the above rule (No 3) the palm of the hand must never be played over the muzzle with a view to catch and save the shot; and least of all should the butt be inverted and struck against the top of a gate, or room—at all times a most dangerous plan.

31. Beware of "accidents by night in wild-fowl shooting, from random shots and opposite gunners. Recollect 'the Suffolk farm-r.' mentioned by Scott, who accidentally, and 'at one shot with a shore gun, shot both his father and mother stone dead!' In puni-shooting, and especially at night, beware how you fire your big gun, lest haply you should shoot your best friend whilst enjoying his night thoughts "*ecce in futuro*"—or your bitterest foe in the shape of a rival gunner.

(To be continued in our next.)

# ADVERTISEMENTS.

**THE NAUTILUS LIFE-PRESERVER**  
and SWIMMING BELT.—No Lady or Gentleman should cross the water or go to the seaside without obtaining this small, simple, and valuable apparatus, unsurpassed for buoyancy, portability, and efficiency, and approved by the Admiralty, and all nautical and scientific men. The Nautilus may be procured, of any size or quality, at the Office of the Company, 12, Wellington-street, Strand.

**THE NEW RACE GLASS,** to be had only of the inventors, **THOMAS HARRIS and SON,** Opticians, No. 52, opposite the entrance to the British Museum, London. The extraordinary magnifying power of this glass, with its approved adjustment, made to suit all sights, enables the possessor to keep the horses distinctly in view, the entire course, from "the start to the coming in."

Caution: No. 52, opposite the British Museum, London, is T. H. and Son's only establishment. Established 70 years.—To prevent mistaking the house, notice the name, *Thomas Harris and Son*, and the number (52) is laid in *Mosaic pavement* in the footway contiguous to their shop.

**TO THE LOVERS OF ANGLING:—J. K. FARLOW,** 5, Crooked-lane, London-bridge, being the actual manufacturer of Rods, Flies, Tackle, &c., is enabled to offer to his brother Anglers, the following low list of prices: four joint hickory fly rods, 10s.; four joint best hickory fly rods, two parts, partition bag, double brazed socket, spear, &c., 21s.; three joint walking stick rods, 2s. 6d.; best hickory or cane punt rods, two tops, 15s.; the best town made taper fly line, twenty yards, 3s.; thirty yards, 4s. 6d.; thirty yards patent eight plait, 3s. 6d.; the best trout flies on Limerick hooks, dressed on the premises, 2s. per dozen; winches from 1s. 6d.; fly hooks from 9d.; best gut hooks 1s. per dozen; best gut lines 2d. and 3d. a yard.  
Lists of prices forwarded on application; country and export orders executed on the shortest notice; old netting for preserving fruit trees from frost, blight, and birds, or as a fence for fowls and pigeons, and can be had in any quantity at 3d. the yard, two yards wide, or 1½d. the square yard; the above netting being tanned, will stand exposure to the weather.—Observe the address, 5, Crooked-lane, London Bridge.

**BROTHER ANGLERS.—HUTCHINSON and SMITH,** 67, Wood Street, Cheapside, beg leave to offer to their Brethren of the Angle their unique Basket Seats, being light, commodious, useful, and a sure prevention against damp. Also their novel Glass Roach Floats, 6d. each, hermetically sealed; balance handle fly rods, 21s. (war-ranted); cane roach rods, trolling rods, winches, lines, floats, oars, hooks, nets, and every article in the above list at the lowest prices, and best quality. Live and all other kinds of baits always fresh.  
Gentlemen supplied with every information of any fishing water within 20 miles of London.—Observe, 67, Wood-street, Cheapside.

**BATHE'S ST. LEGER SWEEPS,** Green Dragon, Fleet-Street.  
Subs. 1st Prize 2d 3d Starters  
97 at 40s. £190 0 0 £50 0 0 £15 0 0 £9 0 0  
97 at 20s. 60 0 0 20 0 0 10 0 0 7 0 0

All dead and disqualified horses will be omitted.  
A 12s. 6d. St. Leger will be drawn on Thursday next, August 28; also 6s. 6d., 12s. 6d., and 21s. sweeps for the Leamington Stakes; and 3s., 5s. 6d., 12s. 6d., and 21s. sweeps for the Great Yorkshire Handicap.  
Draws take place every evening. Money paid the day following the Race. **WM. WRIGHT, Secretary.**  
Post-office Orders (payable at Charing Cross) punctually attended to.

**T. PARISH, of the White Horse, Fan-street, Aldersgate-street, has the following Sweeps open:—**  
**GREAT ST. LEGER.**  
1st prize. 2nd. 3rd. starters.  
97 at 2s. 6d. £7 10 0 £2 9 0 £1 0 0 £1 10 0  
**LEAMINGTON STAKES.**  
1st prize. 2nd.  
14 at 2s. 6d. £1 5 10s.  
**YORKSHIRE HANDICAP.**  
1st prize. 2nd. 3rd.  
26 at 2s. 6d. £3 0 0 £1 0 0 10s.  
To be drawn on Thursday next. Prizes paid as the judge places, 5 per cent less.  
Post-office orders attended to.

**E. HOEY, Anchor and Crown, King-street, Westminster, begs to inform the Subscribers to his £2 St. Leger Sweep that it will be drawn on Monday evening next, September 1st.**  
49 Subscribers 2 horses each.  
1st horse, £70; 2nd, £30; 3rd, £5.  
A 5s. 6d. sweep to be drawn on Tuesday evening. 5s. 6d. favourite sweeps will also be drawn every Monday, Wednesday, and Friday evenings previous to the race. Sweeps drawn for all the principal races throughout the year.  
Post-office orders to E. Hoey duly attended to.

**EVERY MAN HIS OWN LAWYER!**  
No. 1, Price One Penny.  
Just Published, Barth's edition of the  
**NEW ACT FOR THE RECOVERY OF SMALL DEBTS,**  
Containing the Clauses, Schedules, &c., &c., without the slightest abridgment.  
London: W. Barth, Brydges-street, Strand; Vickers, Holywell-street; E. Dipple, Holywell-street; Cleave, Shoe-lane; Purkiss, Compton-street, Soho; Strange, Paternoster-row, and all Booksellers.

Now publishing, the Fourth Number of  
**THE ADVERTISER AND TRADER'S GAZETTE,** a weekly, commercial, literary, and family paper, price 1d.  
The *Advertiser and Trader's Gazette* is established to advocate the cause of Early Closing.  
Published by E. Dipple, 42, Holywell-street, Strand, and sold by all vendors of periodicals in the kingdom.

Just Published, the **SIXTEENTH EDITION**, illustrated with cases and Full-length Engravings, price 2s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 3s. 6d.

**THE SECRET COMPANION. A MEDICAL WORK ON NERVOUS DEBILITY** and the associated cause of the decline of **PHYSICAL STRENGTH** and the loss of **MENTAL CAPACITY**, with remarks on the effects of **SOLITARY INDULGENCE**, neglected **GONORRHOEA**, **SYPHILIS**, **SECONDARY SYMPTOMS**, &c., and Mode of Treatment: followed by observations on **MARRIAGE**, with proper Directions for the removal of all Disqualifications. Illustrated with Engravings, showing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell square, London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

**THE CORDIAL BALM OF SYRIANICA; OR, NATURE'S GRAND RESTORATIVE.**  
is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c. Even where Sterility seems to have fastened on the female constitution, this Medicine will warm and purify the blood and fluid, invigorate the body, and remove every impediment.  
This Medicine should be taken previous to persons entering into the Matrimonial State, to prevent the offspring suffering from the former imprudence of its parents, or inheriting any seeds of disease, which is too frequently the case.  
Sold in Bottles, price 4s. 6d. and 11s. each, or the quantity of 4 in one Family Bottle for 33s., by which one 11s. Bottle is saved.  
The 5s. Cases may be had as usual.

**BRODIE'S PURIFYING VEGETABLE PILLS** are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Sympoms, Strictures, Seminal Weakness, Deformity, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.  
Price 1s. 1½d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.  
Messrs. BRODIE and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning till Eight in the Evening, and on Sundays from Eleven o'clock till Two.  
Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of £1, and in all cases the most inviolable Secrecy may be relied on. Only one Personal Visit is required to effect a Permanent Cure.  
Observe—27, Montague-street, Russell-square, London.

**THE EARL OF ALDBOROUGH**  
CURED BY  
**HOLLOWAY'S PILLS.**

The Earl of Aldborough cured of a Liver and Stomach Complaint.  
Extract of a Letter from the Earl of Aldborough, dated Villa Masina, Leghorn, 21st Feb., 1845.

To Professor HOLLOWAY.—  
SIR—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either.  
Your most obliged and obedient servant,  
(Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing.  
Copy of a Letter from Mr. Thomas Taylor, Chemist, Stock-ton, Durham, 17th April, 1845.

To Professor HOLLOWAY.  
SIR—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.  
I am, Sir, yours, &c., &c.,  
(Signed) THOMAS TAYLOR.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines THROUGHOUT THE CIVILIZED WORLD, at the following prices:—1s. 1½d. 2s. 9d., 4s. 6d., 11s., 25s., and 33s. each Box. There is a considerable saving by taking the larger sizes.  
N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.  
Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and important edition of

**THE SILENT FRIEND; a Medical Work** on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Stricture, Secondary Sympoms, &c., are fully pointed out. Illustrated by Engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and L. PERRY, & Co., Consulting Surgeons, London. Published by the Authors, and may be had at their Residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay & Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

"The Authors of the SILENT FRIEND seem to be thoroughly conversant with the treatment of a class of complaints, which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—*Rev.*

"This work should be read by all who value health and wish to enjoy life, for the truths contained therein defy all doubt."—*Farmers' Journal.*

The **CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility, obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

The **CONCENTRATED DETERGENT ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Sympoms.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammation, Irritation of the Bladder, &c., without hindrance to business.

Consultation-fee, if by letter, £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 11 till 9, and 5 till 8. On Sundays from 10 till 12. One personal visit only is necessary to effect a permanent cure.

LONDON:—Printed by JOHN WORTHAM, of No. 313, Strand, in the Parish of St. Mary-le-Strand; and published at the OFFICE, 42, Holywell-street, Strand, by E. DIPPLE.—Saturday, September 6, 1845.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 17. FOR THE WEEK ENDING SEPT. 13, 1845. THREE HALFPENCE.

[Sent Free by Post, Twopence-halfpenny.]

## THE GAMECOCK.

### INTRODUCTION.

**I**f it is the intention of the writer of this series of papers to dwell chiefly on the practical portion of his subject, he will make no apology for being extremely brief on the historical and literary fact which usually occupies the greater portion of treatises on this noble and spirited bird.

That the Greeks and Romans were passionately devoted to cockfighting every schoolboy knows, and it has been supposed by some writers that as a sport it was introduced by them to this island. The bird, however, was here before the landing of Julius Cæsar. We have no record of cockfighting earlier than the time of William Fitzstephen, who wrote the life of Archbishop à Becket, in the reign of King Henry II., A.D. 1100. From this time it fluctuated sometimes in high vogue, at others as a pastime limited to the lower orders. It was prohibited 39 Edward III., also in the reign of Henry VIII., and again in 1569. It has been called a royal diversion, and the cockpit at Whitehall was erected by a monarch for its more magnificent celebration. The site of Drury Lane Theatre was also the Royal Cockpit in Drury-lane, and the pit in Jewin-street, Aldersgate-street, was very much celebrated. The sport of cockfighting was forbid by statute in the time of Oliver Cromwell, March 31, 1664, as well as "stage plays and interludes of musick." Subsequent statutes have repealed this, and others re-acted it.

Fowls of the game breed are too well known to need description. Their plumage, particularly the red, is most beautiful and rich; their size is somewhat below the common domestic breeds, and their symmetry and delicacy of limbs may be compared with those of the race-

horse or the deer, or are rather in strict analogy with those of the wild species of their own tribe of birds. The ancients kept gamecocks for the same purpose as the moderns, and there is a game breed yet much esteemed in India; I have not however, been able to obtain any precise information on the origin of our game breed, except that it has been established for many centuries in this country and is probably indigenous.

The flesh of the game fowl is beautifully white, and superior to that of all other domestic breeds in richness and delicacy of flavour; but the extreme difficulty of rearing the chickens from their instinctive and natural pugnacity of disposition, which shows itself almost as soon as they have left the shell, deters most breeders except those for the cockpit. Mowbray, in his "Treatise on Domestic Poultry," observes, "I have many times had whole broods, scarcely feathered, stone-blind from fighting, to the very smallest individuals; and the rivals couples moping in corners, and renewing their battles, so soon as they regained a glimpse of sight. On this account few can be reared, and as this instinctive pugnacity, to a certain degree, also prevails in the half-breed, it prevents crossing with the game cock, which otherwise would be a great improvement. The game eggs are smaller than common, finely shaped of a higher colour, and very delicate.

"Philanthropists," says the same authority, "are in the habit of declaiming loudly against the practice of cockpit battles, the cruelty of the sport, will be found, however, among the least of those wherein the feelings of animals are concerned; it is a voluntary combat, a natural, inherent and irresistible passion in the gamecock, and can never take place against his will. And those engaged in regular combat would fight without a spectator, and with equal ardour were they to meet in the desert. Another and similar mistake is that relating to the use of armed spurs: its only

effect is to *lessen* the sufferings of the combatants and render them less lingeringly fatal.

## SECTION I.

## BREEDING.

It is generally admitted, that a cock is in full prime and vigour at two years old. But how frequently we find that cocks are continued with hens until they are six or seven years old. At three years old it is well known that he begins to lose that sprightly bloom he wears at two; his length of plume increases, and his hackle exhibits too loose a texture, dangling over his throat. When this is discerned, we ought to substitute another in his stead; for he will become inactive, languid, and balk his craving partners—and you may breed in vain. The hens may in general be held to a longer date, as they retain the power to propagate beyond the period allotted to the cock. If this opinion is granted, the impropriety of the continuing them beyond that period may account for the slow and inactive cocks so frequently met with.

To elucidate the foregoing remarks, in order to enable you to judge of the constitution of the brook-cock you mean to select, he should have every apparent feature of health: such as ruddy complexion—his feathers close and short—not cold or dry—flesh firm and compact—full breasted, yet taper and thin behind—full in the girth—well coupled—lusty and springing—a good thigh—the beam of his leg very strong—a quick large eye—strong beak, crooked and big at setting on—not more than two years old, put to early pullets, or a blooming stag with two-years-old hens—and when a cock, with pullets of his own getting. Great experience justifies me in vouching for the prosperity of the practice. In order that you may attain a sufficient number of them in and for your establishment hereafter, in March, April, and June, if they have met early together, are the months to propagate: the latter month will not be too late for two-years-old cocks. For the two first days of a long main very early chickens have their inconveniences; and if you have none at hand till April they will probably be esteemed sufficiently early, as the springs are not so congenial for breeding as formerly.

In the choice of your hens let them be rightly plumed to your cock: nor let your choice fall upon those that are large but rather suffer the cock to make up deficiency in the hens being small: their shape should be similar to the cock—lusty necks—short and close feathered. A true blood hen is seldom or never gummy in the base of her leg, but clean, sinewy, and, in length, proportionate to the rest of the body, with a well-set thigh, long, clean, and taper toes, so that they may, as far as is practicable, be as near in every respect to your original brood, as the nature of breeding will admit of. Deviation will take place in feathers, &c. instances of which have frequently occurred with me, when Dame Nature has interfered in her varying change: that notwithstanding every well adapted system, she will prevail in surprising us with some productive alteration which inexperience is at a loss to account for. "Fifteen years or more," says Mr. Skelchley, whose minute and able treatise is here principally made use of, "I had enjoyed an invariable production of the most complete black-reds bred by any amateur, without a single instance of deviation during that period, but on the sixteenth year I had several light Piles in one hatch;—no change of eggs could possibly take place—or was there a shadow of doubt of interference with any other cock, but a strong recurrence to the Pile at that distant period. A well regulated account of my cocks enabled me to ascertain that there had been a Pile in the cross five years previous to my having them out of Shropshire; so that they held highly regular for twenty-one years, not only in plumage but in every desired requisite. To have gone on with this deviation would in the end have produced spangles, &c. Of course the pullets were cast aside, and the cock fought off. By a persevering conduct in selecting the darkest, or those most resembling your original attachment, is the surest criterion you can possibly pursue in keeping up, not only their feathers, but constitution."

Let then no recommendation, however high, induce you to breed from cock or hen (when you find it necessary to make a cross) either with one or the other, that differs essentially from your old brood; for notwithstanding every judicious caution in the selection of that choice, the introduction of a new cross (though every way similar) may prove more injurious than the evil you are endeavouring to correct; therefore in this case your inquiries and ocular demonstration should be your peculiar care.

Your brood now selected under every due consideration, I should recommend from four to six pullets or hens, being as great a number as should be put to a cock, (probably only four hens to a stag) and should always prefer a maiden cock to a fought one, of the same sort; the former suffers no inconvenience in being fed and tendered by hot meals, close covering, clipping, ruffled temper, loss of blood, and receiving unknown injuries,—whereby the intention of breeding may be materially frustrated. On the contrary, they are endowed with nature's best gifts, and of course best calculated to answer the desired end. I should advise their being put together as early as November or December, that the cock may be perfectly at ease on his walk, and have ample time for ingratiating himself with his new acquaintances. Every gentleman has an opportunity of selecting proper places for breeding, where they can experience as little interruption by dogs and vermin, as possible. The distance from

any other house where fowls are kept should be at least half a mile—the situation, a dry gravelly soil: and it would be better if they could enjoy a constant spring of clear water, and shade, the nearer you breed-place the better. A situation where cocks are liable to interfere with your hens has too frequently occasioned the failure of supposed brothers in the same hatch, and has been the cause of greater derangements in the course of breeding than any other circumstance whatever. Another necessary caution is, not to suffer any hens different in breed to be turned down with any set of sisters; for notwithstanding every caution in selecting eggs, you may be deceived, or held dubious, and ruin every well projected plan. Have a marked attention to see that your brood cock bears himself well to all his hens. It frequently happens that one or more labours under his displeasure, an antipathy we are yet at a loss to account for; in that case they become useless and should be removed. If his general conduct be severe, I should suspect him of cowardice, for several cocks of this description in the course of my breeding have turned out but indifferent. You will find that those hens under this plumed bashaw's arrogant dislike are generally held at an awful distance, and are seldom or never attendant upon him, but are reclusive and solitary. This may account for the many unprolific eggs in extensive breeding. Whenever you have occasion to remove any, be the cause what it will, do not disturb the repose of the rest by turning down a fresh hen; for by such a change I have been deprived of the use of the whole for that season, nor should it be practised at any brood department or elsewhere where valuable hens are, without observing their conduct towards each other. Such has been the conflict upon those occasions, that they have never recovered their usual gaiety and constitution, but gradually pined away.

(To be continued in our next.)

## THE NAUTILUS SWIMMING BELT AND LIFE PRESERVER.

We hold it a duty we owe to our readers in the case of any meritorious invention, which falls within the scope of this miscellany, to lay it before them; and of the numerous inventions for the prevention of casualties to which all are more or less liable, we hold the one the name of which heads these observations, as one of the most simple, efficient, portable and economical ever placed before the public.

All former air-filled belts were tedious of inflation, and when inflated (which they could rarely be when most critically required,) were in imminent danger of puncture or rupture. Many years ago, Sir Columbine Danville received a medal from the Society of Arts for a sort of German sausage blown like a bladder, which it was afterwards shown was some centuries old both in design and construction; and since that ancient quack bamboozled the society, life-preservers, soapbenders, life-buoys, &c., some of no use, and others cumbersome and unhandy, have been rife. For the first time we here find, in the NAUTILUS (which we can heartily and sincerely recommend to yachtsmen, amateur aquatics, and all who "go down to the sea in ships," an invention which obviates all the objections to former preservatives from drowning. It is light, portable, elegant, instantaneously put on, as instantaneously inflated, and defies puncture. We cannot, however, give the reader an idea of this interesting and useful invention, better than by describing it in the words of the little bill which accompanies it.

The Nautilus Life Belt consists of a silk or linen case, varying in length from 4 to 6 feet, and about 15 inches circumference, which is rendered impervious to air and water by a thick lining of Forster's patent waterproof varnish. Within this is placed a flat spiral spring; light, strong, oval in form, and consisting of from 20 to 30 coils, and united by four broad tapes running down the four sides from end to end, strongly sewn to every coil at intervals of two inches; to each end of this spiral is rivetted a wooden cap, on which is screwed a spring valve, closing on a circular air-hole about an inch in diameter. This spiral spring having been extended through the case, the ends are brought over the wood cap, and an external plate of polished metal or tin, with a lip about half an inch deep is then attached to protect and render the extremities of the belt airtight. A broad flat spring hook, and staple, are firmly fixed, one on each metal plate, whereby the belt is secured round the person, and an elastic band, attached by hooks and rings, passed round the neck to prevent the belt from slipping below the centre of gravity.

By pressing the forefingers on the valves at either end, and at the same time extending the arms, the belt can be inflated in a second, and by a similar process the air may be expelled when required, and the belt being pressed together, and the silk or linen case placed in folds between each coil, the whole apparatus can be reduced to so small a compass, as to be carried without inconvenience in the pocket, or in a lady's muff or reticule.—Reader, if you are given unto aquatics, or in the habit of "riding the waters," and would shun dying the death of a blind pup, provide yourself with a NAUTILUS.

Daniel O'Connell says that the great bell for York Minster is remarkable like the Irish mob, because it won't kink up a row till it's told'd.

A PLAIN COOK.—The Times is full of advertisements of plain cooks. We suppose pretty cooks have no occasion to advertise.

## THE FISHER'S CREEL.

THE EEL.

**Q**

**OST** Naturalists are agreed that but little is known of the mysterious and serpentine fish which heads this column, and where "doctors differ who shall decide?" The eel is evidently a link in animated nature between the fish and the serpent, but unlike the former it can live a long time out of water, which its nocturnal migrations prove, though probably a certain degree of moisture on the grass is necessary to enable it to do this.

The haunts of the eel are among weeds, under roots, stumps of trees, in holes and clefts of the earth, both in banks, and at the bottom in the plain mud, where they lie with only their heads out, watching for their prey; they are also to be found under great stones, old timber, about bridges, flood-gates, weirs, and also mills, except when the water is rendered thick by rains, for then they come out and will bite eagerly. They are in best season from May until July, a running line should be used, which must be very strong, and the hook No. 3, or 4, with a plumb or pistol bullet upon it. They are to be angled for on the ground, and two or more rods may be employed (if ground bait be thought necessary, it should be the same as for the barbel); the prime bait is the lob-worm, and they bite eagerly all day, in dark cloudy weather, after showers, attended with thunder and lightning, when the water is high and discoloured; but those who venture upon night angling, will have far greater success when the weather is warm and the night dark. They are then to be angled for upon the shallows, where there is a current, or by the side or tail of a stream with a sandy or gravelly bottom, with the bait on the ground; they will be felt to tug sharply when they seize the bait, give time (which is necessary both in day and night angling), and there will be no doubt of sport from night-fall until day-break, when they directly flee to their hiding places.

The largest eels are caught by night-lines. It is of little consequence where they are laid, as they will succeed in streams (where the eels rove in search of prey), as well as in still waters, and they will take frogs, black snails, worms, roach, dace, gudgeon, minnows (which two last are best), loaches, bleaks, and millers' thumbs. A sufficient quantity of links of twelve hairs should be doubled, and a hook tied to each link; these are to be noosed at proper distances to pieces of cord of fifteen feet long; bait the hooks by making an incision with the baiting needle under the shoulder and thrusting it out at the middle of the tail, drawing the link after it; the point of the hook should be upright towards the back of the baitfish; fasten one end to the bank or a stub, and cast the other into the water, but not to the extent of the line (as eels will run a little before they gorge): the lines should be taken up early in the morning; such of the lines as have eels at them will be drawn very tight. Dark nights in July, August, and September, are the best for this kind of fishing.

Another method of taking eels, when the water is clear and low, is called snigling, and is performed with a stick about a yard long, with a cleft at each end, and a strong needle well whipped to a small whipcord line from the eye down to the middle. In baiting, run the head of the needle quite up into the head of a lobworm, letting the point come about the middle; then put the point of a needle into the cleft at either end of the stick, and taking both stick and line together in one hand, put the bait softly into holes under walls, stones, &c., where eels hide themselves; if there be an eel there, he will take the worm and needle out of the cleft. Draw back the stick gently (having slackened the line), and give time for his swallowing the bait; then strike, and the needle will stick across his throat. Let him tire himself with tugging previous to any attempt to pull him out, for he lies folded in his den, and will fasten his tail round anything for his defence. The largest eels are generally taken about the hollow stone-work of old bridges (the angler being in a boat, and are sometimes caught in considerable numbers.)

A third plan for taking eels is by what is termed bobbing, which is best managed in a boat. This is done by taking a quantity of well

scoured lobworms; have a long needle, with three lengths of worsted slightly twisted together; put the needle lengthways through the worms, and draw them down on the worsted. When there is two yards thus prepared, then fold them up in links, and tie them to about two yards of good twine, and make a knot on it eight inches from the worms; and slipping a piece of lead, with a hole in it (weighing from a quarter to three quarters of a pound, according to the current fished in), down the line to the knot; fasten the line to a manageable pole, and let the lead lie on the bottom in thick, muddy water, when the tide runs up strong, or near the mouth of some river. When the eels nibble at the bait, they can be felt; give some little time before it is pulled up, which must be gently until near the surface, and then hoist out quickly. The worsted sticking in the eels' teeth, prevents their loosening themselves until the line is slackened by throwing them into the boat, or on the ground. So soon as they are disentangled, throw the bait in again. Frequently great quantities are thus caught, especially of grigs. Eels are also to be snared in the same way as the pike, and in the fens numbers are speared by an instrument with three or four forks, or jagged teeth, which is struck at random into the mud.

Sir Humphrey Davy says, "The most extraordinary peculiarity in the natural history of the eel, is its double migration, one up and one down rivers, one from and the other to the sea; the first in spring and summer, and the second in autumn or early in winter. The first, of very small eels, which are sometimes not more than two or two and a half inches long; the second, of large eels, which are sometimes three or four feet long, and weigh from ten to fifteen, or even twenty pounds. There is great reason to believe, that all eels found in fresh water are the results of the fresh migration. They appear in millions, in April and May, and sometimes continue to rise as late even as July and the beginning of August. I remember this was the case in Ireland, in 1823. It had been a cold backward summer, and when I was at Ballyshannon, about the end of July, the mouth of the river, which had been in flood all this month, under the fall, was blackened by millions of little eels, about as long as the finger, which were constantly urging their way up the moist rocks by the side of the fall. Thousands died, but their bodies remaining moist, served as the ladder for others to make their way; and I saw some ascending even perpendicular stones, making their road through wet moss, or adhering to some eels that had died in the attempt. Such is the energy of these little animals, that they continue to find their way, in immense numbers, to Loch Erne. The same thing happens at the fall of the Bann, and Loch Neagh is thus peopled by them: even the mighty Fall of Schaffhausen, does not prevent them from making their way to the Lake of Constance, where I have seen many very large eels.

## CORRESPONDENCE.

## THE UNICORN.

SIR—I have been at considerable pains to collect the following opinions from different authors on this very benighted subject of natural history, and I hope the result of them may be deemed sufficiently interesting to be admitted in the columns of the SPORTSMAN'S MAGAZINE.

KOTZEBUE, in his "Travels in Switzerland," mentions a convent having a statue of a unicorn placed over the gates, and throws out a smirking remark or two, as to the equivocal meaning of that emblem. It struck me, upon reading his conjectural jibes, that the only way of coming at the true orthodox significance of the emblem, was to have a dip into the Fathers; and as I had some point to settle with myself respecting the Passeyite controversy of surplises, and the old Judaical heterodoxy concerning Aaron's breeches, I resolved to consult the original text. This singular animal has been the favourite hobby of middle age naturalists, who deal in wonders, and certainly, as we see him in our royal coat of arms, he is a wonderful beast. There, however, his horn is gilt, and does not seem likely to possess the singular quality which the holy father I am about to quote ascribes thereunto, and which, it strikes me, may amuse some of your readers. Here is the extract:—

"This animal is only to be met with in Arabia Petrea," and, after describing the fabulous beast as it is generally represented by heralds, says, "in a state of repose the horn hangs flabbily down, but when excited it becomes suddenly erect, and he becomes irresistibly formidable to all human beings, *except a virgin*, whom alone he will suffer to approach and caress him. Therefore, when the haunt of an unicorn is discovered, a virgin

"Chaste as the ice that hangs on Dian's Temple,"

is despatched from the nearest spot, whence the others of the hunting party can safely lie concealed with proper materials to secure him, which is easily done, as after her fondling he becomes as passive as a pet lamb."

What could the reverend old gentleman mean by this funny story? Never mind, the schoolmen were fond of mysticisms and types; and I suppose this was one of them. The father, he it observed, was an inhabitant of the district near the desert, and perhaps he used to take young virgins out unicorn hunting. So be it. However, he says nothing about the virgin's age, and as we perceive there is a "DESERT RAILWAY" prospectus out for the purpose of facilitating our communication with India across Africa, I should not wonder at some "Aunt Mary," who has the

organs of faith in the Fathers strongly developed, starting off, for a day or two, when that notable project is completed, just to handle and caress one of these interesting animals, and bring it home to the utter consternation and dismay of other "Aunt Marys," who may not be able to surmount their natural timidity of so strange monster. M. P. H.

### THE CAPERCAILZIE.

[The following communication (extracted from Sir W. Jardine's Naturalists' Library) has been forwarded by a correspondent, in relation to our query respecting this bird.—ED. SPORTSMAN'S MAGAZINE.]

SIR—Seeing that you solicit information respecting this noblest of the British feathered game; whose attributes of size, strength, and beauty have proved his destruction, I take the liberty of forwarding you a little information extracted from Sir W. Jardine's book, with a few additions of my own.

In ancient times the capercaillie was tolerably abundant in the forests of Scotland and Ireland.\* From the latter they appear to have been entirely extirpated at a very early period, while in Scotland their destruction was more gradual, but they dwindled away, and the last specimen is recorded to have been killed in the neighbourhood of Inverness, more than sixty years since. The species is being again introduced into Scotland, by the exertions of some of our Highland nobility. Lord Fyfe attempted to naturalise the cock of the wood at Mar Lodge. The first importation from Sweden was accomplished in 1827 or early in 1828, but was unattended with success, owing to the death of the male bird, most probably from harm received during the transportation. In the year following, fresh birds were imported, and young were successfully reared after several attempts. These, in 1831, it was intended to turn out, so soon as they were sufficiently advanced; but we have been unable to trace whether this was done, and what was their fate. At a later period, 1833—1839, Lord Breadalbane received from Mr. Loyd no fewer than forty-four capercaillies, some of which were turned out, while others were retained in confinement. Both have succeeded; and Mr. Yarrell states that, in 1839, seventy-nine young birds were known to be hatched. The Duchess of Athol had some birds sent to her at Blair, and some have been hatched in the aviary at Knowsley. Thomas Fowl Buxton, Esq., has succeeded in rearing them in confinement in Norfolk; and it is evident that, with ordinary attention, there is little difficulty in their propagation in confinement, whence, in a few years, a stock could be settled in some suitable locality, where there was a strict protection. In various parts of Northern Europe, also, we have the authority of Mr. Loyd, Nilsson, and others, for their being not unfrequently domesticated.

"In its habits in a wild state, all our accounts agree in stating their close alliance to those of the black cock. They frequent forests, and those wild tracts of country, which, we imagine, are partially interspersed with native brushwood, intermingled with patches of old timber, where they feed on the tender shoots, the buds, and berries which those regions furnish. In breeding time the male attracts the females by his call, on some eminence or open spot, and, after that season has passed, retires and skulks to undergo the process of moulting; the female alone performs the duties of incubation, and the brood continues with her until the males begin to change their plumage. Such, at least, is the information we draw from the works of those gentlemen who have had occasional opportunities of observing them. The poulterers in London and Edinburgh now import them in considerable quantities along with the other northern grouse, after the season has terminated here, and we rather think that many must be then procured after the season of courtship has commenced. In this present spring (1844) several pairs were for sale in the latter city, and in very good condition, and one guinea was the price asked for a male in a tolerable state of plumage. We have also received specimens from Newcastle, where, we understand, the importation is frequent at a similar period. They may be brought to table as a curiosity, but those we have tasted were coarse and highly flavoured with the fir; but during summer they may lose this, and the young birds may be very palatable."

I remain, Sir, yours,

Edinburgh, August 26.

TETRAOPHILUS.

\* "Smith, in his history of Cork, completed in 1749, remarks, that this bird is 'found rarely in Ireland since our woods have been destroyed.'"

### NOTICE!

\* \* THE SPORTSMAN'S MAGAZINE, Part IV., for SEPTEMBER, price Sevenpence, in an embellished wrapper, is now ready. The Parts for June and July are also procurable. ALL the back numbers are now in print, and may be had through all booksellers. The Stamped Edition (free by post) price 2½d., must be ordered a week in advance; or per quarter, 3s., (in advance) will secure its transmission to the subscriber's address. In the eighteenth number of this paper (the Stamped Edition only), will be given a full and faithful report of the GREAT PUGILISTIC CONTEST for the CHAMPIONSHIP OF ENGLAND, exclusively by express. To prevent disappointment in the country, all orders must be given before September 10, as the number of Stamps printed will be regulated by the orders.

Office, 42, Holywell-street, Strand, where all communications for the Editor must be addressed.

### CORRESPONDENTS.

J. M. R.—The first volume will be complete at the end of one year, or 52 numbers—as it will be profitable to our subscribers not to have a frequent recurrence of binding, and of title-pages and indexes, we shall give title and index at the end of the year's numbers. We will issue a case for binding them, at a price hereafter to be determined upon.

E. H. W.—*Worms in Dogs*.—The treatment for worms is two-fold: the one directed to expelling them by means of purgatives, (which is uncertain and very often inefficacious), the other by killing them in the body. Purgatives, even the most violent, must evidently fail, unless along with the faeces we could expel the mucus of the bowels: the remedy, therefore, is worse than the disease. For the purpose of destroying the worms, substances possessing spiculi or small points have been found most efficacious, by abrading their external surfaces, and that without, in the slightest degree, injuring the patient. Glass, very finely powdered, is at the head of this class of remedies. If this should be objected to (from a groundless fear), you may try the following:—Take cowhage (*delichos pruriens*), half a drachm; tin or iron filings (made with a very fine file), four drachms. Form into four, six, or eight balls, (the latter number in your case), and give one every morning; after which a mercurial purgative will be proper. Moderate daily doses of Epsom salts or mild mercurial purges will sometimes remove the tape-worm; and the ascarides, or small thread-worms may be got rid of by a dose of oil of turpentine. But, remember the dog can bear very little turpentine; half a drachm mixed with the yolk of an egg, is as much as your little dog can stand, for a beginning: though if great constitutional disturbance does not follow, the slightest degree, the patient may be increased. If it was our case, we would rely on the powdered glass, made into a lapping ball.

N. W., Colchester.—Clark's "Cricketer's Handbook," written by the Editor of this paper, is the most modern, portable, and cheap treatise. It will be forwarded for 1s. post-free.

H. CLELAND.—You will find the late Judge Orton's book, "Orton's History of the Turf," contains a chapter or two on the subject; also, "The History of the British Turf," by John Christie Whyte, 2 vols. 8vo., £1 8s. There is Darvill's book on "Training and Breeding for the Turf," all of which can be procured by order from any bookseller. Many of these sort of books go out of print, and their price is then arbitrary, sometimes half their original price, and occasionally double the same. The editor will procure you the circular of the college, and send it to your address.

"Thomson."—We cannot read your signature. We are really sick of repeating that "news" requires a stamp. Read the leader in this day's paper. Our Stamped Edition gives the Derby and Leger betting.

R. M. BURNIE, Chesterfield.—Thanks for the extract. We see, on reference, that it is merely a reprint of the report in the *Morning Chronicle* of January 8, and *Bells Life* of January 12, 1824. The error was a typographical one in a single figure: it was 1823, and should have been 1824. Mr. Gully, the owner of Weatherbit and Old England, engaged in the present Leger, is the same gentleman who figured in the Senate and the P.R.—Newspapers beyond twenty-eight days' date of publication do not go free.

CRICKET.—STPHAX.—Our contemporary must have led you into error, or you mis-state your case. After a ball has been played you may defend your wicket with the bat or any part of the person. "EXCEPT THE HAND." See rule 24.

P. T. W.—Both balls being off, it was a bad wicket, and therefore, according to the 21st rule, a stump must be struck out of the ground. This will also be an answer to the lachrymose complaint of PETER.

P. S.: NEMO: JUBA, and others, will receive answers per post, as desired.

"49, 66, 19."—When a man takes upon himself to advise, he should first know something about the matter he advises on. "49, 66, 19" should be, from his numerical signature, "like Michael Cassio, an arithmetician." What does he think, then, of such a speculation as this, for the sale of ten thousand papers?—

DISBURSEMENTS.		£	s.	d.
Paper, (at 1l. per ream of 500 sheets) 20 reams .....		20	0	0
10,000 Stamps at 1d. each, or 4l. 3s. 4d. per 1000 .....		41	13	4
Machine-printing at 10s. per 1000, or 5s. per ream .....		5	0	0
Compositor's work, (this is set down at mere journeyman's wages, four pages being reset) .....		6	0	0
Designs and Drawings on wood .....		2	2	0
Engravings (this has, on several Nos., been 10s. and upwards) .....		5	5	0
Editing, travelling 200 miles, and a special report .....		0	0	0

£80 0 4

If our correspondent can reduce any one of these items one shilling, we will give him the difference whatsoever it may amount to. Now, per contra, let us try the receipts, at 1½d., as our correspondent says it is extortionate to charge 2½d., as three half-pence will pay very well."

### RECEIPTS.

As we give thirteen to the dozen, there are twenty-six to the quire; there are in each 1000 copies 77 dozen (wanting one); our price for them is 1s. per dozen to the wholesale vendors, i. e. 3l. 17s. per 1000, (minus 3 per cent. for publishing expenses). 3l. 17s. multiplied by 10 gives ..... £38 10 0

So, O most astute and acute "49, 66, 19," we should only lose 42l. in one week by your clever and self-sufficient proposition. With regard to the penalties see our leading article.

### OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, September 7th.—SIXTEENTH SUNDAY AFTER TRINITY.—Battle of Borodino, 1812.

MONDAY, 8th.—*Radcliffe Bridge Races*.—*Cheadle (Staffordshire) Races*.—*Scientific*.—ON THE MANAGEMENT OF THE SPONGE.—The best way to manage a sponge is to be "at home" only on cold shoulder days. A house in the country is a protection against the frequent appearance of the sponge, especially if the omnibus fare is equal to a coffee-house dinner. Should the riding charge, however, be a plate of soup under the price of an "ordinary," the sponge may be looked for with certainty. "An excellent mode of emulating the sponge is to wear a temperance medal round your neck, which will excuse you placing anything stronger than toast-and-water upon the table; and as sponges are invariably wet and thrive like fungus, best in a cellar, you will find the "pledge" an admirable cold water cure.

TUESDAY, 9th.—GREAT FIGHT BETWEEN CAUNT AND BENDIGO, for 2000' aside and the Championship, reported especially for this paper, and published on the next day but one.—*Rocheater Races*.—*Abingdon Races*.—*Lichfield Races*.—*Edgeware Hurdle Races*.

WEDNESDAY, 10th.—*Leicester Races*.—*Woodford Bridge Races*.—*Charlbury Fair*.—*Discovery of an Interesting Relic*.—The widow at the Red Lion was discovered—in the bar-parlour—sipping off pig's fry, along with Sergeant Sly, of the C. division.

THURSDAY, 11th.—*Royal Mersey Yacht Club Match*. We publish our stamped edition containing the report.

FRIDAY, 12th.—*Lee Green Races*.—*Sabbary Fair*.—*Wilton Fair*.—*The British Queen* advertised for sale at Antwerp, 1844; we should like some of the *snug berths* about her.

SATURDAY, 13th.—Her Majesty goes up the Frith of Tay to Dundee, 1844. "Och, then," says an Irish Repeler, "It 'ud have been quite as pleasant, and a mighty dale more becoming, to have bin at the Hill of Howth a-drinikin' whiskey, like her uncle George the Fourth, than sakin' Tay on her way to Scotland!"

## The Sportsman's Magazine.

FOR THE WEEK ENDING SEPTEMBER 13, 1846.

## A FEW WORDS OF EXPLANATION ABOUT STAMPED AND UNSTAMPED.

**W**HEN a man is himself thoroughly informed in any trade, profession, or handicraft, he is somewhat apt to assume that others are, or ought to be, in some measure acquainted with its details. Indeed, he talks and acts as if he did not give himself time to inquire how far his auditors or readers may be able to follow him. This has almost always been the failing of learned and scientific men, and it pervades even mechanical science. The profound philosopher prates in the "unknown tongue" of metaphysics, on entity, quiddity, ideality, sensuousness, and so forth; the doctor writes in dog-latin; the lawyer in a strangely cur-bred lingo, a treble-cross of Norman-French, middle-age Latin, and half-intelligible English; while the mechanic and artisan gabble of their crafts in technicalities that have no equivalent words in the speech of the people at large.

Now, we know not whether the public generally is in the like predicament as regards ourselves: perhaps they may be, and really, from the pertinacious misapprehension and obstinate persistence of several of our correspondents, we begin to suspect it. Thus, when in answer to those who put questions to us, we use the words "Newspaper," "Stamped Edition," "Editor," and "Publisher," we may have been talking Greek without knowing it, taking our speech, in the innocence of our hearts, for plain English, when the cabalistic words we made use of convey no definite ideas to those to whom they are addressed. Molière's "COUNTRY GENTLEMAN" talked "prose" all his life without knowing it, and we, from having been some score of years "on the press," talk of a "newspaper," without knowing that nine-tenths of the world attach no precise meaning to the word. But we will quit banter, and tell "44, 66, 19," and a dozen other correspondents, who complainingly ask us why we don't give them the fight in the three-halfpenny edition," the reason in unmistakably plain language, although it of necessity involves some tedious roundaboutness.

This paper, as its title implies, is a SPORTING MAGAZINE, or MISCELLANY; now as such, and while containing only "articles and matters of general information, tales, essays, treatises, commentaries, and the like"—is as the lawyers phrase it "taken, holden, and esteemed for and as" a "magazine, weekly pamphlet, miscellany and general paper, not containing news," and therefore not amenable to the stamp laws, nor requiring a tax to the crown of one penny per sheet of paper before printing the same. Of this class are the *thesaurus* and one publications from fourpence down to penny—*fractious*, as *Punch* and *Joe Miller*—literary, as the *Athenæum* and *Literary Gazette*—*romantic*, as the *Penny Sunday Times*, *Lloyd's Weekly Volume*, and the *thrilling*, soul-harrowing, startling, petrifying, horrific, fearful, flummuxing, *sublimating*, romance of the Murdered Manglewoman, or the Friend of the *Fin-iron*—*pius*, as the issues of the London Tract Society—*legal*, as the *Law Observer*, &c.—*medical*, as the *Penny Doctor*, &c.—and lastly, *Sporting*, as ourselves, and ourselves alone. Perhaps from this little catalogue of *unstamped* publications "44, 66, 19," may gather negatively what is not a newspaper.

In this class, (which the law allows to be published without a stamp) stands our three-half-pence edition; a miscellany of sporting matters duly embellished, which we flatter ourselves is *multi secundum*, and which for cheapness, quality of paper, engravings and matter, take it as a class publication, has never been even approached. Thus much of the *unstamped*; now for the *stamped*; and we think that, when he has carefully read this, no candid subscriber will again trouble us by insinuating or asserting that we "*slap on a penny*," which most people will consider an extortion,"—we take the phrase, in substance, from several London letters.

The object of taking out a stamp is twofold: firstly it entitles the party so doing to insert news, and secondly it gives him the privilege of being carried post free, by Her Majesty's mails to all parts of the kingdom, and foreign countries, at a mere nominal charge. But as several correspondents appear to be singularly obtuse, as to the meaning of the word "news," we will take the definition as we find it in 6 and 7 Wm. IV. cap. 76, which whose violates, even in ignorance (for the law supposes all men cognizant of its provisions), shall pay 20l. for each offence (or three months imprisonment).

A newspaper, then, is (see schedule p. 699, of 7 and 8 William IV. cap. 76),

"Any paper containing any public News, Intelligence, or Occurrences printed in any part of the United Kingdom to be dispersed or made public."

"Also, any paper printed in any part of the United Kingdom, containing public News, Intelligence, or Occurrences, or any Remarks or Observations thereon, printed for sale, and published periodically, or in parts or numbers, at intervals not exceeding twenty-six days between the publication of any two such Papers, Parts, or numbers respectively, shall be liable, 'for every sheet or other piece of paper whereon the said newspaper shall be printed, to the duty of 1d.'"

Surely, after this, we need not tell our subscribers that we get nothing at all by our stamped edition, save the convenience of postage. We charge the wholesale publishers two shillings for 26 copies (in trade parlance, a *quire*) of the 1d. edition; this is not quite 1d. each, our paper costs 1s. per quire (of 24 sheets only), and we refer the reader to an answer in the Correspondents' column for the expenses of getting up the paper; for we love to be candid and above-board.

At the risk of being tedious, and to satisfy some who will perhaps still ask for more whys and wherefores, we may observe that we give 26 stamps as 24, though government charges us 2s. 2d. for that quantity, and makes no abatement.

Having now explained what is a newspaper, we proceed to the penalties incurred by giving, on *unstamped* paper, the account we propose to publish in the next number at an extra cost to ourselves, of 10l. for travelling expenses and report; 3l. for type setting; 3l. for drawing and engraving; and 10l. for posting bills, handbills and advertisements; and this we shall do in the words of the act above quoted, for "regulating and amending the laws relating to newspapers and advertisements."

XVII. And be it enacted, that if any person shall knowingly and willfully print or publish or cause to be printed or published, any newspaper on paper not duly stamped according to law, or if any person shall knowingly and willfully sell, utter, or expose to sale, or shall dispose of or distribute, any newspaper not duly stamped as aforesaid, or if any person shall knowingly and willfully have in his possession any newspaper not duly stamped as aforesaid, every person so offending in any of the cases aforesaid shall for every such newspaper, and for every copy thereof not duly stamped, forfeit the sum of twenty pounds; and moreover it shall be lawful for any officer of stamp duties, or for any person appointed or authorised by the Commissioners of Stamps and Taxes in that behalf, to seize and apprehend any such offender as aforesaid, and to take him or cause him to be taken before any justice of the peace having jurisdiction where the offence shall be committed, who shall hear and determine the matter in a summary way; and if upon conviction such offender shall not immediately pay the penalty or penalties in which he shall be convicted, such justice shall forthwith commit him to prison for any time not exceeding three calendar months nor less than one calendar month, unless such penalty or penalties shall be sooner paid; provided always that if any such offender as aforesaid shall not be apprehended and proceeded against in the manner hereinbefore directed, then the said penalty or penalties incurred by any such offence as aforesaid shall be recoverable by any other of the ways and means provided for the recovery of penalties incurred under this act.

One word at parting. An EDITOR is quite a distinct person from the PUBLISHER, printer or vender. One rather pragmatical correspondent who shall be nameless, persists in addressing his letters by name to the Publisher, and one or two direct by name to the Printer; now, as the former individual is in the habit of receiving some scores of letters respecting matters of business, country orders for books, papers, publications, &c., letters so addressed are opened by him as a matter of course. When he finds, instead of a handsome order or remittance, they contain some sporting question, he throws them aside, and should he happen to see the editor, within a day or two, and then think of it, amid the press of business, he exclaims—"Oh, ah, here's a letter about something; I opened it as it was addressed to me." Once for all, then, Sporting Correspondence is to be addressed to "the Editor of the SPORTSMAN'S MAGAZINE, 42, Holywell-street, Strand, London."

## CRICKET

## A DAY AT LORD'S.

(Continued from page 285.)

"Who is that portly gentleman who seems to lead the party coming from the pavilion?"

"That, Tom, is the far famed and redoubtable Alfred Mynn, Esq. an excellent batsman, and one of the two fastest bowlers in England; and so great is his pace that the term, 'terrific,' applied to it by the gentleman who does the needful (I mean of course in notes and not in gold) for 'Bell's Life,' is far from misplaced. This is, I believe, 'the first match he has played in this season, at least on this ground, and he seems 'like a lion refreshed.' He is accompanied by his brother Walter, Messrs. E. Swann, N. Felix, C. G. Whittaker, and C. Harenc, whom you perceive are about to be joined by the less aristocratic but not less skilful portion of the Kent eleven, who proceed from the vicinity of the modest hostel to which I introduced you. Yon tall, square-shouldered, shallow-tiled man is the far-famed Lion of Kent, Fuller Pilch, and he on the left is Tom Adams, mine host of the Russell Arms, Gravesend, and a lashing hitter: then we have Martin Dorrington, (a most excellent batsman, field, and wicket keeper, and one of my specials for the uniform obligingness and suavity of his manners) and 'last, but not least in our dear love,' Hillyer, in our opinion, the most scientific and effective of England's bowlers, and in which opinion we do not stand alone."

"And who then, are the hardy eleven who venture to compete with this galaxy of talent, Master Ned?"

"They are chosen from all England, and are, as you will soon see, well worthy to contest the laurel with them. In the first place, they have

little Lillywhite, alias Lilly, alias the Little Wonder, alias the Nonpareil, as he is alternately called in our clever contemporary's columns, and a wonder no doubt he has proved, being at an advanced age one of the first bowlers in the world. Then there are Sir Frederick Bathurst, a lashing hitter and fast bowler. Mr. C. Taylor a scientific batsman and splendid field, indeed, the first gentleman player in England in my humble opinion; little Dean, the Sussex bowler; Barker, Guy of Nottingham, (not of Warwick) and Sewell, a powerful trio of bats; Martingell, Dakin, and Bushby, the latter a comparatively young, but most successful player, and lastly the far famed Tom Box, the celebrated wicket-keeper, and host of the 'Cricketers' and Cricket Ground at Brighton. With such a team as this, Tom, England I think, need not fear the result. But see, the field is put out, and England takes the bat, Lillywhite and Barker going to the wickets."

"Is it my fancy, Ned, or does the taller of the two, (Barker, I think you call him) go rather lame?"

"In some slight degree he possibly does, in consequence of his having broken his leg a season or two since, which prevented his playing some time. He is much and deservedly respected both as a player and a man, and I am always much pleased to see him successful in the field. He is a most excellent bat:—But hark! Caldecourt, he of the shadowy visage, has called 'play,' and the sport begins. Hillyer has the ball, and Lilly is preparing to receive him. Well played, little man:—What! they have put on Adams in Mynn's place, but still you see, without success, for the 'Nonpareil' hits him for four to the leg. Ah! Barker; Hillyer has out-generalled you, causing you to play the ball into your wicket. Never mind, old flick, you have played steadily, and added fourteen to the score, no mean number against such bowling. Here comes Guy, the pride of the Nottingham bats, and there goes the 'little wonder,' caught at slip by Hillyer. Sewell now comes in, and Box succeeds Guy without scoring, plays the ball from his leg into the wicket, and is succeeded by Bushby. There are now four wickets down, and 63 runs obtained, to which Sewell has contributed 16, "so I do not fear Tom to back England at 6 to 4; what say you?"

"I am too great a novice in the game to calculate its chances, however, for the honour of the land of hops, I will take you in crowns, Ned."

"Done!—Oh, by Jove, there goes Bushby, bowled by the Kentish giant for a score of five. Mr. C. Taylor succeeds him—thank you for missing that catch, 'Master Walter'—for had you made it, my friend Tom, here, would have lost some most beautiful batting, though perchance it would have gone far to win his bet. Mr. Harenc, that catch at short slip adds one more laurel to thy crown, but puts six of mine in jeopardy; but I forgive thee, Dakin, I put some trust in thee—ah—out first ball! merciless Hillyer! to have no compassion on a brother bowler; but here comes Martingell,—ah; and there goes Sewell from one of Mynn's flying balls. Who next? oh, Sir Frederick Bathurst, and now, Tom, you will see some lashing hitting: there he goes, you see, two threes in succession, and that fine hit for four. That's generous of you, Tom, but I do not see how any one could well refuse to join in that enthusiastic cheer, although the reward of an adversary. But see, Dorrington has caught him manfully off Mynn, and here comes the last man, the renowned Dean of Dunckton," start not, Tom, he is no church dignitary, albeit he hath 'a fair round belly, with good capon lined;' and see, there he goes, a victim to the cunning hand of Hillyer! According to my calculation, the score is 114, but we will drop into the tavern for confirmation and a glass of wine, for I see Caldecourt and his co-adjutor have repaired there. 'What's the score, Caldecourt?' 'Why, sir, as they say in my part of the country, a score is twenty: or a public-house account; but as I suppose you mean with respect to the game, I have the pleasure of informing you that England scores 114.'"

"Thank you, thank you; I see you can play on words as well as on the greenward. May your shadow never be less!"

"Well, Tom, another glass, and then—hey! they are at it again: the two Mynns at the wickets, and hitting away like the arms of a windmill; mark the preparation of Alfred the Great, he means it, and see, he has made a splendid

OFF HIT.

Come along to our old station. Lillywhite and Martingell appear to be sticking them up, and compelling them to play rather cautiously. Well hit, Mr. A. Mynn, a three and a four in succession off little Lilly is no joke; but he is even with you, for he has caught you off Martingell. Here comes Adams but alas! after adding three to the score Dean dismisses him to make room for the redoubtable Pilch, for a portrait of whom, Tom, I refer you to No. 15 of the "Sportman's Magazine." He's at it, you see. There, that is a model you may safely follow—that is a perfect

LEG HIT.

He well deserves those cheers for the last two threes to the leg; they are trying Sir Frederick in the place of Dean, but without effect, and Dean resumes, when Sir Frederick catches Mr. W. Mynn at the leg, after scoring twelve runs, who is replaced by Mr. Swann. Oh! Lion of Kent, thy runs are numbered, that splendid catch of Martingell's at short slip has sealed thy fate for to-day. You see they have drawn the stumps, and not without reason, for the rain seems coming on in earnest. So Tom, the best thing we can do is to follow the example of others, and seek the friendly shelter of the hostel, where I will personally introduce you to some of those players whose prowess you have so much admired. How looks our bet?—four wickets down for 54 runs:—well, there's not much harm done on either side, and I hope you will not have any occasion to repent having passed in my company, A DAY AT LORD'S."

NED RUB.

## BRITISH BIRDS.—NO. XI.

THE STARLING.

THE Stare or Starling is one of the most common and most beautiful of British birds, it is about the size of the common thrush, of a compact form, rather stout, with the body ovate, rather deeper behind than before; the head of moderate size, ovato-oblong, flattened above, narrowed anteriorly; the feet rather short and strong; the wings of moderate length; and the tail rather short. In form it bears a greater resemblance to the jackdaw than to a thrush, and when mixed with a

flock of crows, might seem, to a person unacquainted with it, to be of the same family.

The bill is shorter than the head, straight, rather slender, tapering, pentagonal, towards the end depressed; the upper mandible with its dorsal outline nearly straight, convex and decedinate towards the rather sharp tip, the ridge very narrow at the commencement, flattened over and beyond the nostrils, then convex, the slides sloping at the base, convex toward the end, the edges sharp and overlapping; lower mandible with angle narrow and pointed, the sides sloping outward and concave on the crura, the dorsal line straight, the edges sharp. The gape-line ascends, at the base, and is afterwards direct, the lower jaw being a little bent in the middle.

Its length is about nine inches. The bill pale yellow, in old birds deep yellow, the nostrils surrounded by a prominent rim; the eyes are hazel brown, and the whole plumage glossed with green, blue, purple, and copper, but each feather is marked at the end with a pale yellow spot; the wing-coverts are edged with yellowish brown; the quill and tail-feathers dusky, with light edges; the legs are of a reddish-brown. Few birds are more generally known than the starling, it being an inhabitant of almost every climate; and as it is a familiar bird, and easily trained in a state of captivity, its habits have been more frequently observed than those of most other birds. The female makes an artless nest in the hollows of trees, rocks, or old walls, and sometimes in cliffs, overhanging the sea; she lays four or five eggs, of a pale greenish-ash colour; the young birds are of a dusky-brown colour, till the first moult. In the winter season these birds fly in vast flocks, and may be known at a great distance by their whirling mode of flight, which Buffon compares to a sort of vortex, in which the collective body performs a uniform circular revolution, and at the same time continues to make a progressive advance. The evening is the time when the starlings assemble in the greatest numbers, and betake themselves to the fens and marshes, where they roost among the reeds; they chatter much in the evening and morning, both when they assemble and disperse. So attached are they to society, that they not only join those of their own species, but also birds of a different kind, and are frequently seen in company with red-wings, fieldfares, and even with crows, jackdaws, and pigeons. Their principal food consists of worms, snails, and caterpillars; they likewise eat various kinds of grain, seeds, and berries, and are said to be particularly fond of cherries. In a confined state they eat small pieces of raw flesh, bread soaked in water, &c.; are very docile, and may easily be taught to repeat short phrases, or whistle tunes with great exactness, and in this state acquire a warbling superior to their native song.

Colonel Hawker, in his work on the Gun, says, "The time to shoot starlings by wholesale is just before the dusk of the evening, when they come down to roost among the reeds. Here they assemble in swarms that darken the air; and for some time keep up a chatter which even surpasses that of Frenchmen in their warmest political debates.

"Having swept down some dozens with your duck-gun, let their heads be immediately pulled off; as this will, in a great degree, prevent their having a bitter taste.

"Starlings are very good when stewed with rice, or made into a curry.

"Before I conclude under the head of starlings, I must ask leave to become my own trumpeter, in order to name a shot that I made at these birds, which will give some idea as to the manner in which they swarm together. Happening, in the early part of last winter, to have put my punt afloat on Lord Rodney's pond, at Alresford, I loaded my new double swivel gun with a pound of small shot in each barrel, and a little before day-light paddled across to a retired part of the pond, where the reeds were literally swarming with these birds. Having placed the punt "stern on," so as to command the eastern light, and shot well clear of the reeds, I gave a little signal, as previously agreed on, to Mr. Macilwain (who, with Captain Hill, was in another punt behind) to discharge both barrels of my little double gun. On hearing this report up sprang the whole army, consisting, I should say, of every starling in Hampshire, and making the valley echo like a peal of thunder. No sooner had they cleared the reeds than I opened my battery, and cut such a lane through them, as I could scarcely have thought possible, and the quantity of feathers which came flying back to leeward, I could compare to nothing but a fall of black snow. What number were killed and wounded we never could ascertain, from the extreme difficulty of getting the birds that fell among the reeds and quagmires, but we fairly bagged 243, as fast as they could be picked up, and the workmen, when the reeds were cut down, declared that they found between two and three hundred more: for this, however, I have only their word, though there is no reason to doubt it, for we all felt confident that at least 500 fell in this one volley."

These birds are occasionally a little quarrelsome when two or more individuals happen to come into contact having a worm or other object in view; but their feuds are not deadly, and in general they live very peaceably together; nor do they molest any other species of bird. They are sometimes preyed upon by the smaller hawks, especially the sparrow hawk and merlin.

The flesh of the starling is not much inferior to that of a thrush, although tougher, and as a considerable number may be occasionally obtained at a single shot, this bird is not unworthy of the attention of the

animal designated by the name of sportsman. The Hebridian shooters always twist off its head the moment they get hold of it, alleging that in the blood of that part there is something of a poisonous nature. Others maintain that the bitter taste which they attribute to the starling's flesh resides in the blood, and that this affords the true reason for the decapitation practised. For my own part I never could perceive any difference between the flesh of a starling merely shot, and that of another both shot and beheaded; and all that I can state on the subject is that both are very good, and not at all inferior to the flesh of the wild pigeon.

In the Hebrides the starlings begin to form their nests in the end of April or the beginning of May, selecting suitable spots in the crevices of rocks, in caverns, or under large blocks in situations as inaccessible as possible. I have found them also in large winding holes in grassy banks on an unfrequented islet, which I conjectured to have been originally formed by rats, and afterwards enlarged by the starling. It appears, however, that they also dig holes of themselves on the grassy shelves of the rocks. The nest is bulky, composed of grass and portions of plants of various species, with a rude lining of feathers and hair. The eggs, which are from four to six, are of a somewhat elongated or regular oval form, glossy, and of a delicate very pale greenish-blue. They vary in length from an inch and a quarter to an inch and two twelfths or a little less, and in their greatest breadth from three fourths to ten twelfths of an inch.

The starling is easily tamed, and may be taught to whistle tunes, as well as to pronounce words. Almost all authors are agreed in reducing its natural notes to "a harsh scream and a chatter or twitter;" but I have certainly heard them enunciate what to me, who am more sentimental than musical, appeared to be a very pleasant little song. As a specimen of an accomplished starling, I may here introduce one visited by Mr. Syme. "We went, one morning, with a friend, to see a collection of birds belonging to a gentleman in Antigua-street, Edinburgh; and among these were some very fine starlings—one, in particular, which cost five guineas. Breakfast was ready before we entered the room. When the bird was produced, it flew to its master's hand, and distinctly pronounced 'Good morning, Sir,—breakfast—breakfast.' It afterwards hopped to the table, examined every cup; and, while thus employed, it occasionally repeated, 'Breakfast—breakfast—bread and butter for Jack—pretty Jack—pretty Jack.'"

Mr. Weir gives a similar account of another individual. "Mr. Paton, carver and gilder, Horse-wynd, Edinburgh, had one a few years ago, which I have heard pronounce most distinctly the following sentences. When I entered the shop, he said to me, 'Come in, Sir, and take a seat—I see by your face that you are fond of the laases—George, send for a coach and six for pretty Charlie—Be clever, George, I want it immediately;' and many other sentences to the same purport. He was taught by a shoemaker in Stewarton, Ayrshire."

Yorick's starling, and his "I can't get out!" is too well known to need more than an allusion."

## WRINKLES FOR THE GROOM.—NO. II.

### ON THE TREATMENT OF HORSES IN SUMMER.

It is too much the practice, in turning horses out in summer, to choose the richest pastures, as if the intention of giving them this indulgence were to fatten them. Many inconveniences result from this practice, and not unfrequently much injury is done to the animal, and great difficulty found in getting him into working condition when he is taken up. The best time for turning out a horse is the latter end of May or beginning of June. High land is better than meadows, especially such as adjoin rivers, or are otherwise wet. Short sweet pasture should be chosen; it is better, indeed, to have it rather bare than abundant; and if there should not be sufficient, some hay and oats should be given. If the nights are cold he should be taken up at night, and put into a cool airy box, where he should also be kept during the day, when the weather is very hot and dry. A small field, or paddock, is better than a large one; and if there is a stream of water, or a pond, and the horse has been accustomed to drink immoderately, it should be fenced off, and a moderate quantity given twice a day with a pail. A moderate quantity of vetches may be given with advantage in such a situation; taking care not to give them soon after they are cut, or with the dew upon them. By keeping a horse in this manner for a month or six weeks, in the situation I have described, he will receive all the benefit to be expected from a run at grass, and avoid the inconvenience which so often results from the method commonly pursued. Another important advantage will be obtained by it; for, when the horse is taken up, there will be no difficulty in getting him into good working condition in a short time. If there is no convenience for managing the horse as I have described, it will be better to soil him with vetches, or short sweet grass, in a large airy box, for about a month, than to turn him out in the manner generally practised. In soiling, only a moderate quantity of green food should be given at a time, and a small quantity of hay and oats should also be allowed.

### EXERCISE.—TRAINING.

Exercise must be considered under two heads: first, that which is necessary to preserve the horse in health, and make him capable of ordi-

nary exertions, or moderate work; secondly, that which makes him capable of extraordinary exertions, such as hunting or racing. Exercise of the last kind is commonly named training, which term, however, includes also the mode of feeding necessary to raise the muscular power to the highest degree it is capable of attaining. The horse was evidently designed for exercise, and for the use of man. His vast muscular power, and the impenetrable defence attached to his feet, were certainly not given for his own use only. If kept in a stable, without exercise, his muscular power declines, his digestive organs become diseased, and so do the organs of respiration. The hoofs grow, and there is no wear; for the little that may be worn off, merely by the pressure of his own weight when standing still, is prevented by the shoes. The toe being thus elongated, the back sinews are often strained; the foot becomes hot and inflamed, its horny covering contracts; the frogs become rotten, and incapable of performing the office for which they were designed; in short, the whole body becomes diseased. Exercise, then, it is evident, is essential to his health, and even existence; and every part of his structure and economy appears to demonstrate that he was intended for the service of man. His powers, however, are limited, and so should his exertions be: but it is a fact, which must be regretted by all considerate persons, that the immoderate work in which he is often employed, so far from being salutary, or proportionate to his strength, as undoubtedly it was designed by his Creator that it should be, is injurious, and even destructive in a very considerable degree. And what greatly aggravates the mischief is, the early and premature age at which he is commonly employed.

When a horse is brought in for training, after having been kept in the manner described in the preceding chapter, he should be fed with hay and oats; and if greedy of water or hay, or if he appears inclined to eat his litter, he should be limited in hay and water, and be muzzled the last thing at night. For the first week he should have walking and gentle trotting exercise for an hour or two every morning. The stable should be kept clean and cool. The second week his exercise may be increased a little, and so may his oats. Should he appear, however, rather dull, the membrane of his eyes rather red or yellow on lifting the eyelid, and the dung hard, in small knobs, and shining or slimy, it will be advisable to bleed moderately, and give a mild dose of physic, for which he should be prepared by giving two or three bran mashies a day for two days. The fourth week he may be worked moderately; and, if wanted for hunting, he should be put into a canter, or hand-gallop, once a day; and, after this, it will be necessary to increase his pace twice or three times a week, so as to make him sweat freely; taking care that he is walked for some time afterward, that he may become cool before he returns to the stable, when he must be well dressed, fed, and watered, have a good bed palced under him, and be left to his repose. When a horse has been brought up from rich pasture he is generally loaded with fat, and requires a great deal of walking exercise and careful feeding. He may be trotted gently, however, after the second week, but will not be fit for a quicker pace for a month at least. During this time he should have two or three doses of mild physic, and, when first taken up, such horses sometimes require to be bled. When a horse is not taken up till the latter end of July or

beginning of August, he has often a troublesome cough, which sometimes proves incurable; and sometimes dropsical swellings of the hind legs, which are not easily removed. Such horses give a great deal of trouble, and it is a considerable time before they can be got into condition. It must be obvious, that, when a horse is taken in for training, the treatment to be adopted must depend upon the state of the horse's condition at the time, and the manner in which he has been previously kept; and whether he is wanted for hunting or racing, the principle to be kept in view, during the process, is to keep him in a state of health, and gradually raise his muscular power and wind to that degree which may be necessary for the work he is to be employed in. This can be done only by proper exercise and feeding, giving, however, a little mild physic when necessary.

Although there is little mystery required in getting horses into good condition, considerable care and constant attention are necessary. To give bulk and strength to the muscles, a good supply of nutritious food is required; but, in order that this should not produce superfluous fat, as well as flesh, plenty of exercise, and occasional sweating, is necessary.

A fine glossy coat is next essential, which can only be obtained by heat, assisted by plenty of grooming and hand-rubbing. The stable must be kept moderately warm; but it must be borne in mind that, though warm air is useful, foul air is injurious: ventilation, therefore, must not be neglected. The necessary heat to produce a fine coat must be principally obtained by an abundance of clothing. Warm cordials and stimulants will assist in producing a glossy coat, though it is better, if possible, to avoid them: this is owing to the intimate sympathy between the skin and the stomach.

"The practice of clipping and singeing," says Mr. Spooner, in his last edition of "White's Farriery," has been introduced, and, it must be confessed, with considerable advantage. Where a fine coat can be obtained by the means before-mentioned, clipping is not required; but many horses will carry a long thick coat in the winter, in spite of all grooming; and in others, it is impossible to bestow the necessary attention and expense required. In these cases, by removing the coat with the scissors, the horse that before could not travel a mile without sweating, can now perform a journey with neither inconvenience nor loss of condition; and, when he comes home, he can be cleaned in the course of an hour, instead of remaining wet all the night. Two things, however, must be borne in mind. The horse must have additional clothing to supply that which is removed; and care must be taken that he does not stand still when without it, as, of course, he is more likely to take cold from this cause than before. The fact is, the horse must have a temporary coat instead of a permanent one; one that can be removed when at work, and supplied when at rest.

The advantages of clipping are unquestionable; many horses can thereby be kept in condition throughout the winter, that cannot by any other method.

The chief difference between singeing and clipping is, that by the former the hair is removed more completely; by the latter, it can be done several times during the season.

(To be continued in our next.)

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELLCHER TO THE LAST BATTLE OF CHIEF.

### CHAPTER VI.—*Concluded.*

#### DUTCH SAM,

A slight episode occurred in Sam's career of contest with pugilistic stars, by a match made between Sam and a respectable tradesman, of the name of Medley, for two hundred guineas, who was a much heavier man than Sam, had crept into such favour with himself, that upon some slight altercation, he challenged Sam, and proved his confidence by putting down his own stake: as a sparrer he had given convincing proofs of his knowledge of the science, but his manhood had never been practically put to the test: Sam, however, did not view him with indifference—and in the first instance forfeited a deposit of two guineas. The mill, which excited great interest in the sporting world, came off on Moulsey Hurst, May 31, 1810. Sam was seconded by Harry Lee, and Pass was his bottle holder; Medley was attended by his brother Phips, and Gribb. The odds were greatly in favour of Sam. Throughout a long fight of forty-nine rounds, Sam obtained the superiority—the punishment he dealt out was dreadful in the extreme. Medley's science was by no means superficial, and his game would have done honour to the first-rate boxer, but his blows, however well-directed, were not effective—they were showy instead of telling. Although he proved himself game, and a gluttonous receiver, he never could turn the tide of victory in his favour. Sam's humanity was nobly exemplified in the contest, and much as his abilities were admired, his feeling claimed higher applause.

Sam fell into a casual turn-up, which occasioned some gossip, inasmuch as in his laurels were in danger of being wrested from his brow. In passing over Wimbledon Common, near to which he was in training, he met with a butcher, of the name of Jem Brown, of Wandsworth, and some words having passed between them, an appeal was made to the fist.

The butcher, most certainly, had the best of it, and floored his opponent two or three times—when Sam declined proceeding any further at that time. Whether from inability, or from feeling the impropriety of risking the issue of a private row, which might have prevented him from fulfilling his engagement, and in the event of it, perhaps, made him lose that battle, can only be decided by himself—but a tolerably general opinion was entertained that Brown, in a regular contest with Sam, would soon be disposed of; at any rate, after much chaff, no match was made.

In the vicinity of St. George's Fields, a stout fellow of the name of Jones, a painter, and a neighbour of Dutch Sam's, who valued himself upon his milling qualities, publicly declared that he was the champion of that quarter, and frequently had importuned Sam to have a set-to; the latter always declined. It happened that one evening Sam was regaling himself at a public-house, and glass succeeding glass of Deady's brilliant fluid, had nearly obliterated all worldly things from Sam's pericranium, when Jones, learning the circumstance, entered the premises, and endeavoured to provoke him to a combat, but in vain. At length Jones struck him. This was too much, the staggering Sam returned it, and inquired, "whether he was doing right or wrong to defend himself?" An adjournment to the street took place, when Sam, notwithstanding his intoxicated state, appeared to have the advantage, until Jones, seizing him by the hair of his head, threw him down, and struck him violently upon the stones. This unmanly act appeared to have a most unusual and electric effect, for it awoke Sam to a recollection of what he was about; and to the surprise of the spectators, the Israelite started up, exclaiming—"Take care, take care, I'm coming now!" put in such a bodier as nearly deprived Jones of his breath, and following it up by a slashing hit over his eye, levelled the brute with his congenial mud. Utterly flabbergasted by the severity and impetuosity of Sam's hitting, he fairly bolted. Jones weighed thirteen

stone six pounds; and, though destitute of propriety, was not without pretensions to science; this lesson taught him summarily the folly of vain boasting, and the superiority of a master in the art.

Five years had nearly passed away in reckless dissipation and intemperance upon the part of Sam, since his battle with the game Medley, when he, for the last time, entered the ring with Nosworthy, at Moulsey, December 8, 1814.

The good advice of the poet had been totally unheeded by him:—

Though I look old, yet I am strong and lusty;  
For, in my youth, I never did apply  
Hot and rebellious liquors in my blood;  
Nor did I, with unbecoming fondness, woo  
The means of weakness and debility;  
Therefore, my age is as a lusty winter,  
Frosty but kindly.

Four to one had been betted on Sam previous to this fight, and it is certain that he was backed when fighting till near the end of the battle, by the best judges in the pugilistic circles, that he must ultimately win. This defeat (which will be found detailed in the next chapter under NOSWORTHY,) ruined him, and he sunk under dejection, misery, and want. Like many others of their headstrong race of hard drinkers, he was infatuated with the idea that nothing in the shape of excess could harm his iron frame. Indeed, Sam has been heard insanely to boast that he could train on "three glasses of gin, three times a-day." What wonder, then, that he fell? Excess, pride, and conceit destroyed his vigour and stamina, and on this occasion he might exclaim with the poet,

I've touch'd the highest point of all my greatness,  
And from that full meridian of my glory,  
I haste now to my setting.

We now hasten to conclude with a few anecdotes from BOXIANA.

Sam's integrity was a bright jewel, and it was undoubtedly of the first water; he was once tampered with by a large offer to lose a fight (*Egan* says 1000*l.*), but he at once disclosed the affair to his backers. If all our pugilists had displayed the like integrity, the ring would be in a very different state.

Sam's skirmishes would fill a volume. Passing through Wapping, one evening, when it was almost dark, he observed a poor Jew and a sailor fighting, and, upon inquiring the cause, he was soon recognised by the unfortunate Mordcaï, who had been several times flogged by the rough son of Neptune. Sam stooped to pick up his Israelitish brother, when the latter whispered in his ear, "So help my Cot, Sam, I can't fight any more!" "Hold your tongue, you fool," replied Sam, at the same time falling down by his side: "you get up, and pretend to pick me up, I will let fly at him." This imposition was practised with success, and Sam, staggering on to his legs with well feigned grogginess, went bang in with his one-two to the Jack Tar, in such style that he saluted mother earth in a twinkling. The sailor, upon getting upon his pins, roughly exclaimed, "D—n my —, this isn't the man I was fighting with, it's another. Shiver me, but his blows are like the kicks of a horse, I'll have no more of this," and instantly sheered off, while Sam and his friend stepped into a neighbouring gin-shop to laugh over the trick.

It is impossible correctly to ascertain the number of bye-battles in which Sam was engaged; but it is certainly within compass to assert, that he fought above one hundred.

When stripped Sam had more the appearance of a twelve stone man than one of nine stone eight pounds, which was his fighting weight. His shoulders were remarkably square, and his arms exceedingly muscular and hard: his hands positively seemed of iron, never failing in the tremendous punishment he inflicted on his antagonists. His quickness of eye and fierceness of rallying were unexampled.

Bill Shipley, the hero of the Broadway (or tossing-up ground), Whitechapel, a man weighing nearly fourteen stone, was one of Sam's earliest antagonists. Shipley had beat every one opposed to him, and was a scientific fighter. He laughed at the presumption of Sam in offering to box with him—and treated the Jew in the most contemptuous manner, by making Sam a present of five shillings to stand before him for only ten minutes. The Jew pocketed the cash with the utmost sang-froid, and, after a contest of fifteen minutes, Shipley experienced such severe punishment that he was compelled to acknowledge the vast superiority of the arm of this iron-like pugilist. Warren, a boxer of some note, was also beat, with great ease, by Dutch Sam.

It is curious to remark, that the first four rounds of the fight between Sam and Britton were well contested; but Sam recovering from rather an inebriated state, and understanding that Britton was a plant upon him, dealt out his punishment so rapidly upon his opponent, that he was ultimately finished in style. Sam's conduct throughout this fight was truly singular:—in milling Britton down, Sam, in a manner peculiar to himself, frequently went off his legs, in order to get alongside his opponent on the ground, then, patting Britton on the back, exclaiming, with a smile, "what, you are a plant, are you? s' alp me Cot, I'll soon plant you!" And once during the battle, when Britton was rushing in to mill Sam, the latter treated him with the utmost contempt, by holding up both his hands, calling out to the spectators—"See, see, this plant wants to kiss me!" and then, with the most perfect indifference, hit Britton cleanly down.

As a hard hitter—we except no pugilist whatever—Gully never struck with more force, or Cribb with greater ponderosity than Sam, whose blows were truly dreadful to encounter: and it has been the publicly expressed opinion of one of the most experienced and scientific pugilists in

England, that he would be a complete match for the mighty Cribb, provided they were only to strike blow for blow. Cropley, who entered the lists with Tom Belcher and Dutch Sam, has since declared that he would sooner receive half an hour's milling from the former, than five minutes' punishment from the latter boxer.

Sam's constitution originally was of the finest quality, and his strength amazing. The day he fought with Cropley he asserted that he was able to attack an ox. The Game Chicken once affronted Sam, when the latter informed that formidable boxer that he could not beat him in a quarter of an hour. In private life, Sam possessed a good deal of comic humour; and he passed much of his time, latterly, in the service of Saunders, the equestrian, of Bartholomew-fair notoriety.

He suffered considerably in his illness, and died in the London Hospital, on Wednesday, July 3, 1816, in the forty-second year of his age, and was buried on the 4th of the same month, in the Jews' burying-ground, Whitechapel.

As a boxer, "take him for all in all," while he lived, he had no equal. But, latterly, his stamina was utterly ruined by excessive indulgence in ardent spirits.

(To be continued.)

## SHOOTING.

(Concluded from page 309.)

32. Never put a ramrod down an empty barrel after it has once been fired; for by thus loosening the scales, or feculent matter, and forcing them into the chamber, the nipple becomes choked up, and hence a misfire.

33. In case of your ramrod head sticking fast in the gun, never attempt to pull it out by force, or allow any one else to aid you in so doing; but, having first removed the cap, or primer, invert the gun, and press the end of the ramrod home upon the charge, when, in all probability, it will be easily extracted, especially if it have been wedged there by means of a stray shot-corn. But, observe, this pressure must not be with the hand, but against a tree root, or otherwise.

34. Never drag a gun after you over a fence, especially by the muzzle.

35. In reaching a gun to a companion on the opposite side of a ditch, or drain, having poised it horizontally in both hands, pitch it to him in that position, when he, of course, makes a neat catch of it. But if he can easily reach the butt-end, as soon as he has got good hold of it, throw the muzzle up to the perpendicular, of course taking care that it at no time points towards yourself. But never allow your friend to assist you with his gun in crossing ditch or fence.

36. In public pigeon-shooting, a bird sometimes escapes suddenly from the basket, or from the trapper; on such occasions beware of firing precipitately, as bystanders may be in the way.

37. On returning from shooting, if any part of your apparel, and, above all, if your feet be wet, put on dry clothes, stockings, and shoes forthwith. But, wet or dry, the safest and best plan, on coming home, is to make an immediate and thorough change an invariable rule.

38. When taking refreshment in the field, or on the moors, beware how you place your gun; not as one sometimes sees it, with the muzzle pointing directly towards the shooter's own sacred person, or that of his friend.

39. When shooting in covert, especially at rabbits or hares, it sometimes happens that your friend, or a marker, by stooping or lying down, may enable you to take a shot over him, which otherwise could not have been safely taken. In this case the person crouching ought never to attempt to arise from his bended position until he either have heard the report of both barrels, or the word of command, "Up!" from the shooter himself: otherwise, in case of the gun hanging fire, or of the shooter being about to take a second shot, the rising individual may fall to rise no more. But, remember, as this is a hazardous experiment at best, the safest plan is never to try it, and, least of all, if you do not know your man.

40. Never send any specimens of detonating caps, tubes, &c., when charged with powder, per post, in a loose state, as, in stamping the letters, explosion might take place, and mischief ensue; but, if resolved to run all risks—having first wrapped them in cotton wool—enclose them in layers of best velvet cork, tied round with thread.

41. Persons unpacking grouse, or any other game, in a very high or putrid state, should be careful not to suffer the virus to touch any sore or wound they may have on their hands, or other parts of their persons, as serious consequences have resulted from such contacts.

42. When a summer party are enjoying a marine shooting excursion, and some of them are placed before, and others (as in a cable) behind the sail, the latter should be very careful in what direction they shoot, lest any one of the former should at the same time be popping his head forward on either side the sail. In fact, the greatest possible caution should be observed by the whole party, especially if there be any "sea on." Recollect, if an accident take place in a boat at sea, it might often prove fatal, where the same would not be attended with a similar disastrous result on land.

Neither let any one deem this or any other of these CAUTIONS as needless, frivolous, or groundless; for there is scarcely any one of them from a neglect of which the most formidable accidents have not occurred; and the fatal consequences which have resulted from a neglect of some of them have been painfully numerous. I should shudder at the relation of no more than the catalogue of serious and fatal gun accidents, from

various causes, which have come within the limited sphere of my own immediate knowledge, or ocular testimony; and what are these compared with the hundreds which take place every year, and the thousands which have taken place.

Towards the latter part of the season, and in a wild country, I always prefer hunting with one active stanch dog only, or if more accompany me, I would have all but one taken up where game was either pretty certain to be found, or was actually known to be; for, at such times, how stanch soever in company the dogs may be, the fewer down at a time the better, because the less show and noise. Nay, where a covey has been marked down to a yard, it is sometimes advisable to go up without a dog at all: to take a shot or two, and make a silent signal to your follower to loose the dog when you want him; and though some sportsmen may be disposed to smile at the assertion, I am confident that both the size of a dog, and the style of his ranging and going up to his game, when birds are wild, have often a good deal (more than his colour, though there may be something, too, in that) to do with his obtaining shots for his owner. A great big setter who gallops high, lashes his tail about like a lion, and walks upright to his game, will often raise the birds, when a low dog, that gently steals away, and crouches close to the ground, the instant he touches on the scent, will "have" them!

Whenever a dog points, the shooter should endeavour to spring the birds so as to secure the fairest shots he can, and especially for the second barrel. From the dog's manner (and this his master should study, as equally good dogs vary in their modes of indicating their approach to game), and the direction of his head, he may generally form a good idea whereabouts the birds are, and will go directly up to them, will head them, or will walk across between the dog and them, according to circumstances; generally facing the wind himself, and, therefore, flushing them against it, which causes them to rise with greater reluctance and difficulty, and, therefore, slower, thus allowing him more time to perceive the probable direction of their flight, and to select his first shot accordingly. The caution observed by the most cognoscent of the gentlemen of the trap, when they have to deal with "a pair of old blues," and have to face the wind blowing across, is to shoot at that bird first which has the wind the most in its favour; because the volume of smoke is blown clear away from, instead of across, the shooter's vision, or into his eyes; by which means, not only is his sight of the second bird unclouded, but the bird itself, meanwhile, has been "detained," more or less, "by contrary winds." And this plan is also well deserving a place in the memory of the game-shooter.

In still weather, as most shooters can hit a bird flying to the left, better than one crossing to the right, it will generally be found advisable to fire first at the latter, especially if a cross shot to the left be immediately afterwards likely to present itself: but, in nearly all cases where birds are wild, *quickness* (for if you hesitate you are lost) in firing the first barrel is the grand secret in killing double shots in brilliant style; unquestionably, at once the most difficult, interesting, and beautiful feature in all shooting.

But the shooter should not only endeavour to spring the birds in a way the most likely to prove favourable to his getting present shots, but should also strive, by intercepting them, to divert the direction of their flight from covert to "vantage ground"—such as turnips, small patches of gorse, young plantations, with long, dry grass at the bottom, ling, fern on warrens, &c., where he may shortly afterwards have the pleasure of popping at them again and again, as they get up singly; and not improbably, at last, may be able to give a very satisfactory account of the whole covey.

At the same time, when birds are wild, the shooter ought, generally, to spring them as he considers best for the immediate shot, regardless of the course they may afterwards choose to take. For, "one bird in hand," &c. But as there are exceptions to all rules, so are there cases, even where birds are wild, when actual forbearance from shooting at all, or, in other words, letting the birds go quietly away, will prove the shooter's best policy.

In countries where birds are exceedingly scarce, and such are becoming more and more numerous every season, it is a good plan, whenever a single or "odd bird" rises within shot, or even as a long shot, to fire, without waiting for a nearer rise, or for the expected remainder of the covey springing at your feet; because it frequently happens that the wild rising bird is an orphan, and, it may be, the sole survivor of a family of sixteen; and, if more be left, you still have your second barrel in reserve. By attending to this rule, I have frequently bagged my brace or two of *oddings* in a day, where many shooters, on coming home, would have declared they had not had the chance of a single shot. Two halves are equal to a whole, and a brace of birds is no bad morning's work for the latter end of the season, at least in countries where shots, at best, are "few and far between." These odd birds are as generally as erroneously considered old ones, which, after October, is rarely the case.

• Although no advocate for a host of mobbing markers, yet when birds are wild, and game is much wanted, I see no harm in making your only attendant useful. You will often find your account in planting him on a gate or eminence as a marker; and, when it is more convenient or advisable to have him near to you, he may sometimes be placed as an auxiliary to turn the birds in the direction you wish them to go. Various little preconcerted signals, also, should be mutually understood betwixt you, so that you may telegraph to advantage at a distance.

## REVIEW.

THE PRACTICE OF ANGLING, PARTICULARLY AS REGARDS IRELAND.  
By O'Gorman. 2 vols, small 8vo. Dublin: 1845.

ANOTHER new book upon Angling! Verily, thought we, in the words of King Solomon (who no doubt was an angler), of "the making of books there is no end." And in this temper did we sit down to perform our promise of reviewing this work, as we propose to do all new ones of an exclusively sporting character. But soon our critical bile assuaged, impatience gave way to interest, and we became absorbed in the pages of Mr. O'Gorman, constrained to their perusal by force of their intrinsic merits.

Mr. O'Gorman, who chooses to sink his military titles (for he was a gallant soldier,) in the Milesian patronymic, is a first-rate practical angler; and his book, as far as it goes, will well repay the study of all who are desirous of practising his favourite craft upon the rivers in the south and west of Ireland. Of the northern Irish rivers he does not appear to have any knowledge; nor yet of the lake-fishing in Westmeath. But we can vouch for the perfect correctness of the "communicated" information which he gives respecting the Bann, a river celebrated by Spenser for the quality and the multitude of its trout, and upon which the angler, who is skilful and can "hide his time," may have inexhaustible amusement. Our author's first essay at salmon-fishing we give in his own words. It was as follows:—

"At the time I am about to write of, I had many relatives living in Limerick, with one of whom I was on a visit. I was a good trout-fisher—could throw a line well and far—had killed a trout of six pounds weight, and had even fished a day creditably on the lake of Inchiquin—knew something of cross-fishing; but as to mending a rod, tying a splice, or making a fly, was entirely helpless, and dependent on Corney, our fly-tier, already mentioned. It was, I think, on or about the 15th of February, I strolled up the banks of the Shannon, and had walked about two miles when I was stopped by a very large drain, at the other side of which was a high steep bank, partially planted with quicks. This was a boundary between two farms. You will soon perceive the reason of my being so particular. I was obliged to walk a considerable way round, before I could get across, after which I continued along the bank, till under Castle Troy, where I saw two men fishing in a boat, whom I hailed, and they very civilly came to shore. They were dragging for salmon—which mode of angling I must again explain.

"The boat or cot is brought to the head of a current, and the lines let out with flies or baits attached, viz. salmon fry, gravelin, or loach, commonly called callaghrroo. On this occasion, there were three very large ugly rods, great iron wheels, and very strong hempen lines, large flies tied on six or seven twisted gut. After the lines are at the designed length, the boat is rowed and paddled across the river, the fly or bait always dropping before the boat, the lines about the handles of the wheels, and every turn the boat drops down a little. In this mode of fishing you never see a salmon rise; it is always a pull, and generally a very hard one. I asked to be taken on board.

"Can you play a salmon, or have you ever killed one?"

"No; but I am a good trout-fisher."

"Well, come along. Will you pay your footing if you hook a fish?"

"Certainly." "Can you row, as the current is strong?"

"Right well." "Will you take a fly or the callagh?"

"The half-black and orange fly—I like the hook."

"Very well; take the right-hand oar."

"We had taken seven or eight crossings at hard work, and were feeling gloomy, when my rod got a pull that made it squeak, and the little pin the rod lay against was snapped, but before it was taken quite straight, I had it in hand.

"Don't take the line off the handle till the rod is well bent."

"I obeyed orders."

"Now, my boy, see what you can do. I believe you have the old one!"

"We made towards the shore—the fish showed, and appeared large, but very distant.

"Give me the rod, sir," said Darby Shaughnessy, brother to the famous Daniel—"the fish is large, and you may lose him."

"I took from my pocket a half guinea, and put it on the seat of the boat, saying—"If I lose him, take the half guinea." "Done."

"I stepped ashore, and set lugging at a famous rate: he ploughed across the stream, and showed himself at about seventy yards distance—put his broad side to the current and down he went, followed close, and well held. I tried every way of turning him, to no purpose. When, appalling sight!—the large ditch appeared in view. I called to the paddle-man—

"Run for your life—get round the ditch—I fear I can't cross it; and if he continues, all will go."

"Nearer and nearer still! I was at last obliged to step up the bank of the ditch—no drain at my side; the leap was large, and no run; I got my feet together among the quicks, tried again to turn him; he was nearly striking fire out of the wheel, and part of the axle began to appear. I made a desperate effort, got one foot on the bank, the other went down—I was pulled on my face—not two yards of line on the wheel; when the paddle-man came just in time, took me up, and saved all.

"I had now tolerably fair play, and killed shortly after. He was a most lovely spring fish."

"DARBY—Sir, you behaved well. We would never have crossed that ditch. The fish is yours, though he were worth ten pounds."

"Very well—shan't we go out again?"

"We fished for more than an hour after, but only met a poor sisk. We then returned to town, went into a shop, and weighed the fish I killed. It weighed *thirty-nine pounds*; and though I have killed larger fish, I never saw such a beauty—it was very little more than a yard in length."

"Well, Darby, don't you think him cheap for half-a-guinea?" To the shopman—"What is salmon a pound?" "Two shillings."

"No matter, sir," said Darby, "you are welcome to him."

"No, Darby, I won't take your salmon, and here is my footing," giving him five shillings; "but I must get the fly," which I took with much pride.

"I was now entered, and quite proud of the skill and decision I evinced, and next day set about my future appointments."

Of rods, wheels, and lines, our author treats with the science of experience. He has tested every rule which he lays down, and been led to the adoption of it by the accidents and mischances of which every angler has had his share, although few have turned them to such account for their own and others' instruction. The following observations upon the size, the structure, and the materials used in the construction of the salmon rod, evince great practical judgment, and cannot be too heedfully attended to by the angler who may have to deal with heavy fish.

"The two-piece rod is undoubtedly the best; the but of it should be in one piece; the top should be composed of two pieces, permanently spliced together; the first piece of the top should be good West India hickory; the upper piece, lancewood, which is a most invaluable timber for the purpose, being tough, elastic, and retentive of its form. The butts of all two-piece rods are formed of one stick, which should be of well-seasoned crag-ash, without splice—a spliced but always fails. Spear-wood is also, often used, but it is difficult to procure a piece long enough for a good sized rod, and it is heavy, though it keeps its form well."

"I will now point out the different lengths I approve of for salmon, pike, and trout."

"For salmon, a great deal will depend on the river you fish, but in general from sixteen to twenty feet will be sufficient. In the Shannon, for spring fishing, the rods do not exceed the latter length;—ten and a half feet in the but, and nine or nine and a half in the top; the Limerick rods are often made on a very mistaken principle, having too much spring in the but which endangers them, particularly if you throw underhand, (which method I will hereafter explain,) or against a strong wind, and no rod is worth a farthing which you cannot use so; nor any angler good for any thing who cannot get his fly out, even with a strong breeze in his teeth. In fact, every rod should be tolerably strong for eighteen inches above the wheel, which should be, in my opinion, invariably placed twelve inches from the thick end of the but; this I have found the best distance in all cases—one hand can be placed below the wheel, the other above, when you are fishing; always holding the line between the fore-finger and thumb of the upper hand."

"The top of a salmon-rod should be proportioned to the kind of line you fish with; if the line be very strong, the top should not be too fine to the whalebone. Indeed, there should be two tops to all rods, one lighter than the other; as, when the season advances, you generally adopt finer tackle and smaller flies."

Nor is he less happy when he would teach the young angler how the rod is to be used:—

"I now suppose you arrived at your fishing-ground, and commencing at the head of your course or current; and now—*mind yourself*."

"Always begin with a short line, keeping a proper distance from the river; fish first near you; lengthen your line by degrees (never stirring from your first position till you have thrown as long a line as you can tolerably master); always throw rather down and across, but so as that you can be satisfied that no fish can avoid seeing your fly: don't raise your hand too suddenly after throwing out; then draw your fly gently, if the current be rapid, and occasionally shaking your hand, particularly whenever the fly comes into an eddy, or smooth part of the stream; then fish down step by step, never holding your hand too high, lest, if a fish rises, you should not have sufficient power to strike him."

"It often happens, particularly in the early season, that you are taken under water: now, in either case, whether the fly is taken under or over, always, if possible, strike low, that is, with the top of your rod as near the water, either right or left, as circumstances will admit of. I am convinced it is a much better method than raising your hand high."

"Don't strike a salmon too quickly—let him get nearly out of sight after his rise before you pull at him, which you must do with strength proportioned to the size of your fly, never with a short snap, but with a fine, strong, long pull."

"When you have him firm, lean on him at once, fairly bending the rod, till he runs out; let the line run between your fore-finger and thumb till he stops, then be at him again. He is a fish that, if you give him any respite, and if he has a rock or stump to get to, and that if he has a slack line, will be round it in double-quick time; so be always on the alert."

\*A fine imposed when you kill your first fish on any lake or river.

"If he comes to the surface, and keeps tumbling and splashing, then for your life hold him as hard as your tackle will bear; if you do not, ten to one that he either shakes out of the hook, or gets his tail across the line, which he will by that means endeavour to break. Lug him fairly, and if you do so with strength and judgment, always taking care not to hold too hard when far from the bow of your rod, it is more then probable you may bring him to the gaff, but be always at him, particularly when near you. I need not observe on the folly of holding a fish in his race; don't attempt it; but after his spring, or whenever he stops, then give him no time for consideration—in short, literally obey the above instructions."

"It often happens, that one occupies a position from whence there is no such thing as following a fish: in that case if your line is nearly run out, take your finger off the wheel, raise your rod high, and behind you, and throw it forward. This is what we call giving a slack: it often happens that the animal thinks himself at liberty, when he generally turns back. If such should happen wheel him up softly, holding your rod low to the water, till you get him again under your bow—then lug at him, butting him fairly; and if he gets away again, you have only to try which is the strongest, always endeavouring to avoid letting him come too near the surface; to prevent which, almost dip the point of your rod obliquely in the water, never changing from right to left till he is again wheeled up, after which, again lug at him, until his resistance is at an end; and the moment he is gaffed, let him be priested before you take the hook out; then throw your fly into the water, and whisk it two or three times into the air; examine it, and see that the fly and the point of the hook are not injured; if the latter be blunted, and that you have not an exact match, take a small, half-round, very fine-cut file, which you should always have in one of the pockets of your book, and sharpen the blunted part carefully; then look to your links and line, recollecting Franklin's advice—'Leave nothing to chance.'"

The following directions and observations could proceed from no "practice hand" in the gentle art—they evince the accomplished angler:—

"If you fish the rapids of the Shannon, (those streams that cannot be dragged,) such as several of the Donnas and Castleconnel waters, take care to provide the best and most experienced cotmen, of whom there is no want, and who will place you in the positions best adapted for throwing the various currents. This you must do, standing up in the boat, which is always well held by means of the poles already noticed; and here it will be expedient that you be very steady, and have your sea-legs well in requisition."

"You commence, as usual, at the head of the stream, with a short line, gradually lengthening until you throw the largest quantity of the line you can master, always noticing, that as the fly comes round into the eddies, the hand is to be well shaken, but not so much in the very rapid parts of the current. As the flies you fish with at this time are very large, when you want to throw out, you must suffer the current to take the fly almost straight from the top of the rod, which must be then almost level with the water. You then gradually raise your rod, till you judge the fly is near the surface, when, with the quickness of lightning, you throw the fly behind you, till you either find it check you a little, or judge that it has attained its due distance. You then throw it with sleight and strength from your elbow and wrist only, ever taking care not to throw your body with it. In this way you fish to the end of your reach; and let the day be as it will, there is little danger of your feeling cold after fishing two or three of those streams as I direct."

"It sometimes happens, that in the very act of whipping the fly out of the water, and with strength and quickness, a detainer is laid on you by a very large fish; in that case, he gets it well, and there will not be much harm in the angler's looking principally to his footing for a few seconds. You can't throw those very large flies with the wind in your back, but the cotmen, particularly as the angling is carried on in the middle of the river, will place you in the best positions."

"When (in the fishing phrase) you '*rise*' a salmon, should he miss the fly, observe how he comes to it; if he shows himself well and eagerly, you may almost depend on hooking him; but don't throw over him for a few seconds, let the fly go deeply and slowly by him at first; you may then shake your hand a little, but observe that after rising he may fall down a yard or so, in which case, you must lengthen your line a little, or fall down a step; if he should not then take, let him alone for about five minutes, and change your fly to one of a smaller size, and not so gaudy as the one you commenced with; try him again, but do not dog him; three or four casts will determine whether he will take or not."

"If the river is narrow, and you can get over to the off side, throw from thence, so that the fly may come over him the reverse way to that he first observed, and it is ten to one he will then have you. I have witnessed the most decided success from this method, both in my own case and in that of others with whom I have angled, and who have tried this practice."

"If all fails at that time, and you purpose returning to where you had risen him, which may not be much out of your way, let him alone, till, in the common phrase, the *sun goes back of him*, for in the early spring, 'tis full time to commence at ten A.M., and from two to four or five P.M., is certainly the best part of the day. When the season advances, early and late tell best, often till quite duskish in May or June."

(To be concluded in our next.)

# ADVERTISEMENTS.

**THE NAUTILUS LIFE-PRESERVER**  
and **SWIMMING BELT**.—No Lady or Gentleman should cross the water or go to the seaside without obtaining this small, simple, and valuable apparatus, unsurpassed for buoyancy, portability, and efficiency, and approved by the Admiralty, and all nautical and scientific men. The Nautilus may be procured, of any size or quality, at the Office of the Company, 12, Wellington-street, Strand.

**THE NEW RACE GLASS**, to be had only of the inventor, **THOMAS HARRIS and SON**, Opticians, No. 52, opposite the entrance to the British Museum, London. The extraordinary magnifying power of this glass, with its approved adjustment, made to suit all sights, enables the possessor to keep the horses distinctly in view, the entire course, from "the start to the coming in." Caution: No. 52, opposite the British Museum, London, is T. HARRIS and SON. Established 70 years.—To prevent mistaking the house, notice the name, *Thomas Harris and Son*, and the number (52) is laid in *Mosaic pavement* in the footway contiguous to their shop.

**TO THE LOVERS OF ANGLING.**—**J. K. FARLOW**, 5, Crooked-lane, London-bridge, being the actual manufacturer of Rods, Flies, Tackle, &c., is enabled to offer to his brother Anglers, the following low list of prices: four joint hickory fly rods, 10s.; four joint best hickory fly rods, two parts, partition bag, double breasted socket, spear, &c., &c., 21s.; three joint walking stick rods, 3s. 6d.; best hickory or cane punt rods, two tops, 10s.; the best town made taper fly line, twenty yards, 3s.; thirty yards, 4s. 6d.; thirty yards patent eight plat, 3s. 6d.; the best trout flies on Lime-riek hooks, dressed on the premises, 2s. per dozen; winches from 1s. 6d.; fly hooks from 9d.; best gut hooks 1s. per dozen; best gut lines 2d. and 3d. a yard.  
Lists of prices forwarded on application; country and export orders executed on the shortest notice; old netting for preserving fruit trees from frost, blight, and birds, or as a fence for fowls and pigeons, and can be had in any quantity at 3d. the yard, two yards wide, or 1½d. the square yard; the above netting being tanned, will stand exposure to the weather.—Observe the address, 5, Crooked-lane, London Bridge.

**BROTHER ANGLERS.**—**HUTCHINSON and SMITH**, 67, Wood Street, Cheapside, beg leave to offer to their Brethren of the Angle their unique Basket Seats, being light, commodious, useful, and a sure prevention against damp. Also their novel Glass Roach Floats, 6d. each, hermetically sealed; balance handle fly rods, 21s., warranted; cane roach rods, trolling rods, winches, lines, floats, cans, hooks, nets, and every article in the above line at the lowest prices, and best quality. Live and all other kinds of baits always fresh.  
Gentlemen supplied with every information of any fishing water within 20 miles of London.—Observe, 67, Wood-street, Cheapside.

**OKEY'S ST. LEGER SWEEPS ARE NOW OPEN.**  
Three classes of Leger Sweeps divided as follows:—  
First. Second. Third.  
97 at £2 2.... £112 0.... £34 0.... 10 0  
97 at 1 1.... 56 0.... 12 0.... 5 0  
97 at 10 6.... 30 0.... 6 0.... 0 0  
Each starter, £2 2s., £1 1s., and 10s. 6d.  
N.B. The prizes go with the Stakes. Disqualified horses not drawn. Post Office Orders to Mr. N. F. Okey, Hero of Waterloo Inn, Waterloo Road, London, will be duly attended to.

**BATHE'S ST. LEGER SWEEPS, Green Dragon, Fleet-Street.**  
Subs. 1st Prize. 2d. 3d. Starters  
97 at 40s.... £120 0.... £50 0.... £15 0.... £9 0  
97 at 20s.... 60 0.... 20 0.... 10 0.... 7 0  
97 at 5s.... 12 0.... 8 0.... 4 0.... 1 0 0  
Great Yorkshire Handicap.  
1st horse. 2nd. 3rd.  
26 at 20s.... £16 0.... £7 0.... £3 0  
26 at 10s.... 8 0.... 3 0.... 1 10  
26 at 5s.... 3 10.... 2 0.... 1 0  
5s. St Leger drawn on Monday next.  
All money divided, less 5 per cent.—Post Office orders, payable to Mr. John Bathe, will be punctually attended to.—Drawing night, Monday and Thursday.—Money paid as judge places.

**TURPIN'S ST. LEGER SWEEPS, Old Essex Serpent, No. 6, King-street, Covent Garden.**  
1st horse. 2nd. 3rd. Starters.  
98 at 45s. 0d.... £110 0.... £40 0.... £25 0.... £30 0  
98 at 25s. 0d.... 70 0.... 25 0.... 12 0.... 10 0  
98 at 12s. 6d.... 35 0.... 12 10.... 6 0.... 5 0  
98 at 5s. 6d.... 15 0.... 5 0.... 3 0.... 2 10  
98 at 3s. 0d.... 7 10.... 3 0.... 2 0.... 1 10  
The above sums paid less five per cent.  
WM. WRIGHT, Secretary.  
All horses disqualified previous to the draw will be omitted, and the number of chances less than the above will be deducted from the Starting Money.  
21s., 12s. 6d., 5s. 6d., and 3s. sweeps for the Great Yorkshire Handicap.  
Post-office Orders (payable at Charing Cross) punctually attended to.

**TO SPORTSMEN.**  
**SHOOTING, FISHING, and DEER STALKING KNIVES.**—**J. B. DURHAM**, manufacturing outler, respectfully invites the attention of sportsmen to his immense stock, which includes all the newest patterns and latest improvements, and all warranted of the best quality. Knives of every description made to order on the shortest notice. Old knives, &c., polished and repaired. 261, Regent-street, near the Polytechnic Institution.

**T. PARISH**, of the White Horse, Fan-street, Aldersgate-street, has the following Sweeps open:—  
**GREAT ST. LEGER.**  
1st prize. 2nd. 3rd. Starters.  
97 at 2s. 6d.... £7 10.... £2 0.... £1 0.... £1 10  
**LEAMINGTON STAKES.**  
1st prize. 2nd.  
14 at 2s. 6d.... £1 5.... 10s.  
**YORKSHIRE HANDICAP.**  
1st prize. 2nd. 3rd.  
26 at 2s. 6d.... £3 0.... £1 0.... 10s.  
To be drawn on Thursday next. Prizes paid as the judge places, 5 per cent less.  
Post-office orders attended to.

No. 1, Price One Penny.  
**EVERY MAN HIS OWN LAWYER!**  
—Just Published, Barth's edition of the  
**NEW ACT FOR THE RECOVERY OF SMALL DEBTS,**  
Containing the Clauses, Schedules, &c., &c., without the slightest abridgment.  
London: W. Barth, Brydges-street, Strand; Vickers, Holywell-street; E. Dipple, Holywell-street; Cleave, Shoe-lane; Purkiss, Compton-street, Soho; Strange, Paternoster-row, and all Booksellers.

Now publishing, the Fifth Number of  
**THE ADVERTISER and TRADER'S GAZETTE**, a weekly, commercial, literary, and family paper, price 1d.  
The Trader's Gazette is established to advocate the cause of Early Closing.  
Published by E. Dipple, 42, Holywell-street, Strand, and sold by all vendors of periodicals in the kingdom.

Just Published, the **SIXTEENTH EDITION**, illustrated with cases and Full-length Engravings, price 3s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 3s. 6d.

**THE SECRET COMPANION. A MEDICAL WORK ON NERVOUS DEBILITY and the concealed cause of the decline of PHYSICAL STRENGTH and the loss of MENTAL CAPACITY**, with remarks on the effects of SOLITARY INDULGENCE, neglected GONORRHEA, SYPHILIS, SECONDARY SYMPTOMS, &c., and Mode of Treatment: followed by observations on MARRIAGE, with proper Directions for the removal of all Disqualifications. Illustrated with Engravings, shewing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell-square, London.  
Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges-street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

**THE CORDIAL BALM OF ZEYLANICA; OR, NATURE'S GRAND RESTORATIVE**, is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c. Even where Sterility seems to have fastened on the female constitution, this Medicine will warm and purify the blood and fluid, invigorate the body, and remove every impediment.  
This Medicine should be taken previous to persons entering into the Matrimonial State, to prevent the offspring suffering from the former imprudence of its parents, or inheriting any seeds of disease, which is too frequently the case. Sold in Bottles, price 4s. 6d. and 11s. each, or the quantity of 4 in one Family Bottle for 33s., by which one 11s. Bottle is saved.

The 5s. Cases may be had as usual.  
**BRODIE'S PURIFYING VEGETABLE PILLS** are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.  
Price 1s. 1½d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.  
Messrs. BRODIE and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of £1, and in all cases the most inviolable Secrecy may be relied on. Only one Personal Visit is required to effect a Permanent Cure.  
Observe—27, Montague-street, Russell-square, London.

**THE EARL OF ALDBOROUGH CURED BY HOLLOWAY'S PILLS.**  
The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb., 1845.  
To Professor HOLLOWAY.—  
SIR—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either.  
Your most obliged and obedient servant,  
(Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing. Copy of a Letter from Mr. Thomas Taylor, Chemist, Stock-ton, Durham, 17th April, 1845.

To Professor HOLLOWAY.  
SIR—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Aukham, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.  
I am, Sir, yours, &c., &c.,  
(Signed) THOMAS TAYLOR.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines throughout the CIVILIZED WORLD, at the following prices:—1s. 1½d. 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.  
N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope,) 3s. 6d., a new and important edition of

**THE SILENT FRIEND; a Medical Work** on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The beneficial effects of solitary indulgence, neglected Gonorrhoea, Gleet, Stricture, Secondary Symptoms, &c., are fully pointed out. Illustrated by Engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and L. PERRY, & Co., Consulting Surgeons, London. Published by the Authors, and may be had at their Residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay & Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

"The Authors of the SILENT FRIEND seem to be thoroughly conversant with the treatment of a class of complaints, which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—*Bra.*

"This work should be read by all who value health and wish to enjoy life, for the truisms contained therein defy all doubt."—*Farmers' Journal.*

**THE CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility, obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

**THE CONCENTRATED DETERGENT ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcers, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

**PERRY'S PURIFYING SPECIFIC PILLS**, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammation, Irritation of the Bladder, &c., without hindrance to business.

Consultation-fee, if by letter, £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 till 11, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

LONDON.—Printed by JOHN WORTHAM, of No. 313, Strand, in the Parish of St. Mary-le-Strand; and published at the OFFICE, 42, Holywell-street, Strand, by E. DIPPLE.—Saturday, September 13, 1845.

## THE GAMECOCK

SECTION I.—(Continued from page 312.)

### BREEDING.

**T**HE eggs you intend to set from must not be saved too early, nor from hens that have not been with your brood cocks from the beginning, or you may fall into errors which it will take a long time to correct; and although a few eggs may partake of the stamp of another cock, those few may be of incalculable mischief, and engraft a blood every way so different from that of the cock you desire that in the course of fighting you will find cocks so very good and so very bad that, supposing them bred alike when they are not, you are utterly at a loss what steps to take to remedy the evil. This circumstance, and another equally if not more dangerous (the unwarrantable practice of changing the eggs), every Fancier who has been in the habit of long breeding, has experienced. To obviate such errors, so as not to admit of a doubt (at least as far as human foresight can insure us) have them so early together as may in

that respect totally exclude the idea:—even with this precaution, I would not save the few first eggs, nor the last.

It is not in the compass of practice to avoid every particular inconvenience that arises in breeding, or I could wish that every hen could lay distinctly—that the eggs might be marked differently, and of course hatched under separate hens: for every sister may not enjoy an equal share of good health. In this particular, how requisite it is, that the person employed or engaged in the pursuit should have a knowledge of those deviations of health to which these birds are subject in order that they may be detected as early as possible. It does not always fall to the lot of those whose province it is to superintend them, to discriminate to that extent; but the many inconveniences and errors attendant on this pursuit, should point out the necessity of their being possessed of such qualifications. A single day should not pass without seeing the general brood, and the utmost attention paid to every minutiae to prevent the errors committed by neglect; and more particularly so, when experience some default, notwithstanding our utmost care, it behoves us to exert our best endeavours to bring them to the feeder, in whom we confide, as unexceptionable as possible.

'Tis doubtless an absurd opinion to think any breed incestuous that springs from the brute creation, and of course we have bred from father and daughter, mother and son, or from brother and sister, which is termed full-blood. I have also known the brood excellent where the brood-cock and hens are got by the same cock, but out of a different hen. Though I most approve of the former, the hen's strain being generally allowed to be superior and more certain than the cock's. If your brood places are at a distance from your house or place where you mean your old game hens to sit, great care should be taken that your eggs in being conveyed away, are not cracked or shaken, but compact and firm for carriage. As eggs are best marked when gathered, always on these occasions provide yourself with pen and red ink, and mark each egg with some character known to yourself, with the day of the month: for, as you may not always have broody hens ready, this method will point out to you to set or destroy them according to the time they may have been on hand. I have generally kept mine in sweet bran: their own weight imbeds them and prevents their contact: cause them to be turned every two days—for by lying too long in one position, the yolks will frequently decay, and destroy the prolific power. It frequently happens that some eggs are smaller than others, and ill-formed—they therefore should be rejected; for all misshaped eggs will produce defective birds. From intense observation I have generally found that the round egg produced the female, and those of the oblong the male bird. If too many eggs are set under the hen so as to be exposed to the chilling cold or too intense heat, either extreme impairs the vital power, and the embryo will prove deficient. Nature prompts these creatures to turn their eggs during incubation; equally necessary is its being done previous to their being set.

When provided with a sufficient number of old game hens to sit, on no account be prevailed on to use any other. Old hens are always more steady in sitting than pullets, are more industrious and attached to their brood, and not half so prone to quit their brood at too early a period. Their places for sitting should be private, free from annoyance, and ought to be as little ruffled as possible, save more immediately to see that they are not laid to, as well as to observe that she has not deserted them:—to give them every chance of secure retirement, they should be little liable to intrusion. It has been recommended to supply them with food, &c. near them. Whatever is most natural I should think most conducive to their health, and therefore have suffered them to come off to enjoy good water with feed at a certain place, that they may not be too long absent from their eggs, with any other enjoyment they are in search after.

It is a good and regular method to chalk over the place where they sit the day they should hatch, and of course draw your attention to see that the eggs are perfectly right as to number, mark, &c.—and to remove the chipped envelope, as well as the chickens which are hatched, until the whole are at hand. You will then return them to the hen in such place as you may have for the purpose (boarded floors are best) where they remain as to time according to the clemency of the season, and the strength of the chickens. Let their feed be:—

Macerated eggs that have been boiled hard;  
Crumbs of white bread;  
Lettuce leaves, well mixed with an addition of meadow ants;  
The maggots from grains, kept for the purpose;  
Shelled steeped oats;  
Small wheat;  
Curds, with new milk;  
Bread toasted, steeped in chamber-lye;

as they are fond of variety. Let their food be given frequently, in small quantities, and accommodate them with small heaps of dry earth or fine sand in the room.

You will observe never to carry them abroad until the dew is entirely off the grass, every kind of humidity being hurtful; and you will return them before sun-set.

As more hatches than one may be in the same place, [never delay marking them when brought into the room with some one of the marks usually put upon them (perhaps those upon the nostril and eye are the most injurious) in order to discriminate their sorts as well as to enter them in the manner set forth in the book for the purpose, previous to your leaving the room. If you have plenty of range in your department, a great many chickens may be kept until such time as the hens may leave them. A distribution of your cockerils claims your serious attention, so much so that one half of your early birds may be preserved until such time as they are to occupy their allotted walks. The mode I have pursued to accomplish this desired end is, to select as many early cockerils, as nearly of an age as they present themselves, and turn them down in some secure retreat, under the guidance and authority of a two-year-old cock, with one hen. Here they may remain without a probability of their becoming rebellious or self-contentious until November, when it may be right to do away the old cock and his mate, and suffer them to enjoy an uncontrolled retirement until a proper disposal offers. No other mode that I could possibly devise has offered me so much security as this, and what I should strongly recommend. Others you may dispose of in such far n-yards, where interest is most predominant, and there remain a proper season until their removal. Frequent visits are in this department necessary to watch their growth and well-doing—and at a proper time to make choice of those whose shape and perfection promise

to reward your future care. Those that are not the objects of your choice, see them properly disposed of, in order to prevent an improper use.

Previous to their going to master-walks have them up for twelve or fourteen days, that you may cut their comb and wattles; and handle them with gentleness and every encouraging demeanour. Let them go proudly out of hand, and touch them lightly behind to bring them to the front of the pen: this will feed their pride, inure them to the crow of others, and they come to with more alacrity and pleasantness to be fed and with more facility than cocks unaccustomed thereto; and from this necessary attention few or any are liable to shy.

Let your pens be well aired, the fastenings properly secured, the perches arranged, the straw sweet and not damp, and every morning shook from their filth. Before you send them out number your pens from number one to the number you have up, with the person's name they are to go to; and having your book ready enter them as directed, being particular as to their marks and colours, with any other natural mark they may have, and ticket your bags according to the pens, when sent. A regularity of this kind will save much trouble.

Your utmost care and attention must be exerted to procure good walks, for half-bred fowls in a well-furnished walk will beat the best game when starved or pined; and hand-strewed walks generally bring on an inactive sloth. To send fine stags that have enjoyed every indulgence to bad walks, is one of the most flagrant errors a breeder can commit, and it is undoing all you have done before. Cocks, from so sudden a deviation, experience a change in their system, and it checks their growth—frequently a gradual decline ensues. Therefore the procuring good walks is absolutely necessary and conducive to the well-doing and constitution of your cocks. All town-walks, except here and there a few, are not worth having, and there are few in villages where towns are near to each other, but may be ranked in the same class. The best are those whose situations are distant, and where plenty of corn and water abound. Grass walks with corn are to be preferred to clay-bound fields, the latter defacing their glossy plumes. Where a great number of walks are wanted, the practice of running stags with cocks is unavoidable, and with some to a late period; even if he fights a long main early in the spring he may fall short of the whole of his stags being got off, and of course many are sacrificed. If you have much yard-room, or two yards belonging the same dwelling, let the younger brood be accustomed to occupy the one, with a proper roost distinct from the other, seldom interfering with the older branch. Gentlemen who command any number of walks, have infinitely the advantage of those whose walks are few and limited; the advantages over the latter are pre-eminently great, for many are so beautifully situated that even the crow or the sight of a cock seldom come across them; they are neither fretted nor teased, which even causes them to lose much of their flesh, and destroys that martial fire and spirit, when so habituated, added to the annoyance of stags—that when exhibited upon the pit, his raging pride is so far abated it frequently makes him tardy and slow to action.

Those who fight for considerable sums cannot be too scrutinizing in the choice of their stags, when they are to be sent out to clear walks, to see that they are in all respects free from ocular imperfections; for the occupying walks with any deficit is not only an increase of expense, but a great disappointment, as it frequently happens for want of such observation, that they are reckoning upon more fine cocks than they are possessed of.

To mention a few of these imperfections may be necessary, although they are generally well known; such as are

Flat sided, and then generally deep keel-d,  
Short legged,  
Thin thighs,  
Crooked or indented breast,  
Short thin neck,  
Imperfect eye,  
Duck and short footed, and  
Unhealthy.

may be easily seen when up for the purpose of cutting and handling.

Cocks that are well formed and lofty have an amazing advantage over the disproportioned; the latter carrying with them much useless weight. High bearing fowls will always have the odds in their favour over low setting cocks. Cocks when they are justly formed, rise in their fight with more agility and force, are better heelers than those that carry their make equal to the extreme: and your dry heeled cocks are generally of the latter description, the weight being too far from the centre of action, and once overpowered they are always under a cock, that is not alike defective;—their legs are thrown out of the line of the body, and of course are never close hitters.

Cocks that do not bear cone-like shapes, are for the most part wide and straddling in their walk, and as they walk they fly—whereas in the cone-like shape, the legs are more inverted and narrow, and are more terrible in their spur.

(To be continued.)

A Yankee, whose face had been mauled in a pot-house brawl, assured General Jackson, that he had received his scars in battle. "Then," said Old Hickory, "be careful the next time you run away, and don't look back."

## NOTICE I.

\* \* THE SPORTSMAN'S MAGAZINE, Part IV., for SEPTEMBER, price Sevenpence, in an embellished wrapper, is now ready. The Parts for June and July are also procurable. ALL the back numbers are now in print, and may be had through all booksellers. The Stamped Edition (free by post) price 2½d., must be ordered a week in advance; or per quarter, 3s., (in advance) will secure its transmission to the subscriber's address. In the number of this paper for this week (the Stamped Edition only), will be given a full and faithful report of the GREAT PUGILISTIC CONTEST for the CHAMPIONSHIP OF ENGLAND, exclusively by express. To prevent disappointment in the country, all orders must be given before September 10, as the number of Stamps printed will be regulated by the orders.

Office, 42, Holywell-street, Strand, where all communications for the Editor must be addressed.

## CORRESPONDENTS.

ANTONIO PUGNO.—Apply to Alec Reed, at Owen Swift's, or Mr. May, of the Lamb, in Houghton-street, Clare Market, will enlighten you as to getting lessons. Young Sambo (Welsh) is a teacher, or Jenny Shaw, whom you may meet with at Caunt's, in St. Martin's-lane.

PROMICUS.—Much obliged for good intentions: but the paper was made up when your note arrived. Like *Punch*, *Joe Miller*, and *Chambers's Journal*, we supply the wholesale dealers with the unstamped edition of our paper on *Thursday morning*, as many want them to pack for very distant parts, where they are conveyed in heavy parcels with other publications, that do not go post-free. Hence it is necessary to get the type to machine on Wednesday evening, so as to print off a quantity, and in good time, say four o'clock, on that day, as the latest time for any communication to be inserted in the current number. Some of the larger publications, which print immense long numbers, in these respects rule the trade, as it is called, and all others must follow their plan, or "miss parcels," and abide the loss of their late keeping open. The stamped edition is independent of all these embarrassments.

G. W. N.—A HANDICAP is a prize given by an individual, or raised by subscription, for which horses are declared on a certain day on a certain hour, by written information delivered to the Clerk of the course, whose province it is to make out the list and hand it to the Stewards; the weight each horse is to carry in the race is irrevocably fixed by some one appointed by the Steward, and appears in the printed list; horses thus entered and declining the weight appointed them to carry, are of course permitted to be withdrawn without loss. *Sweepstakes* is what its name implies; a race where the winner sweeps all the stakes. *Give and take plates* are for horses fourteen hands high, to carry a stated weight, above or below which seven pounds are to be given or altered for every inch.

A GROOM.—Pond water, from a clayey bottom, is better for the health of horses than running water. Nevertheless, in summer, stagnant water sometimes becomes putrid and nauseous, and consequently injurious. A pond with a moderate running scour is better than a river for grass-eating animals. We will give you an article on *GLANDERS* soon.

A SCOT, Edinburgh.—It is the Gannet, or Solan Goose, of which the fact is related. Sailors sometimes catch them by fixing a fresh herring on a floating plank. The gannet, catching sight of the glittering fish, stoops at it so furiously as to break its own neck.

"ROBERTUS."—"Salt-cat" is a queerly named article used by pigeon-keepers. It is placed on a dish in the middle of the loft, and it is thus compounded:—Lean, sand, old mortar, fresh lime, bay salt, coriander seed, caraway seed, and allspice, mixed into a consistent mass with uric acid. The pigeons peck at this, and are constantly in a good state of health. They are very fond of it, and it also prevents them from pecking the mortar on the roof of the houses, which otherwise they are very much given to.

"FUSILLION."—Lined oil must be used to repel sea water; sweet oil (Florence or olive oil) has not body enough to do it. Yellow soap and warm water, says Hawker, are the best things to clean and restore the colour of gun barrels, stained by the brine.

W. F.—Four mortal times have we explained to correspondents in the *SPORTSMAN'S MAGAZINE*, that although its Editor is the same as that of the *SPORTING WORLD*, yet its proprietorship is different. The *SPORTING WORLD* was the property, as a business speculation, of its then publishers, Messrs. Dunn and Sweet. On their failure other parties (anxious that the only popular and cheap sporting periodical should not "die and make no sign," clubbed brains and peace to carry it on; with thanks to all subscribers who have supported and recommended us, we are sorry to say that the sporting public has but coldly responded, and labour and money are yet unpaid for to a very large amount. This is not a very bright perspective for those who may try a similar venture. In the last number of the *SPORTING WORLD*, a promise was vicariously made, at the suggestion of the publishers then (though the Editor knew it not, and that to his cost) in *extremis*, to give all purchasers "a sporting plate worthy of a frame." This he, the Editor, supposed they, the publishers, intended: but, "Oh, *World*, thy slippery turns!" next week the proprietors stopped payment, and more than that, when the Editor, with another gentleman, proposed to carry on the paper, they were warned by due legal notice, that the title of the paper being "the property of the said, &c. &c.," they would be called upon to account for all moneys received on account of the said *SPORTING WORLD* for the benefit of the estate. Now, as there were some proceeds, but little or no profits, the Editor at once changed the name. Louis the Fourteenth, when a minister spoke about the "State," replied "L'état c'est moi!" so, when they squabbled about the copyright of the *SPORTING WORLD*, the Editor replied "I am myself the paper," and proved it by declining to edit it for the estate, and on his withdrawal the publication ceased to exist. Does W. F. consider the present proprietors bound to give him sixpence for his three-halfpence under these circumstances?

A HORSEKEEPER.—It is a good time to buy them. With regard to fomentations, you will find elderflowers a very cheap and profitable ingredient; gathered in the height of bloom and properly dried they will keep well throughout the season. They are excellent in strains, bruises, blows, and other injuries; the efficacy of hot and persevering fomentation is only known to those who have experienced its salutary effects.

A. B. C.—Mr. Gully's horses are Weatherbit and Old England; Old England is entered as John Day's. Forth's lot comprises Clear-the-Way, Merry Monarch, Connaught Rasper, and Ould Ireland of the probable starters. C. Peck trains for Major Yarbrough, the major's colours are dark blue, with a red cap.

E. W. S.—The Doncaster course is a round one, of one mile, seven furlongs, and seventy yards. The St. Leger course is much more than a mile and a half; it is one mile, six furlongs, and 182 yards, which is over a mile and three quarters. The New Derby Course at Epsom is exactly a mile and a half.

J. W. Dumfries.—The sire of Voltaire was BLACKLOCK.

C. S., Handsworth.—The list was sent by us to the printer, and by him mislaid. Accidents will happen in the best regulated families.

W. P., Manchester.—We should say J. K. Farlow, of 5, Crooked-lane, is the best to go to; he is not only a first-rate maker, but being a crack angler, is enabled to judge of what you want. Give him a call.

A. FORSTER.—Pressure of matter (as four pages of type are cancelled for the REPORT) must be our apology to yourself and several correspondents.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, September 14.—SEVENTEENTH SUNDAY AFTER TRINITY.—Moscow burnt by the Russians, 1812.

MONDAY, 15th.—CRICKET.—The Gentlemen v. the Players, at Brighton.—Redditch Races. Stockport Races.—Southampton Races.—Northern and Eastern Railway opened, 1840.—Mr. Huskisson killed at the opening of the Manchester and Liverpool Railway, 1820.

TUESDAY, 16th.—THE COURSEING Season commences with Abington Meeting.—Doncaster Races.—The materials of the Speaker's house sold in lots, 1843, prior to the improvements near the new houses of parliament; the auctioneer, as the Speaker's deputy, "put the question;" the bidders were the "ayes," and so the "House came to a division."

WEDNESDAY, 17th.—THE GREAT DONCASTER ST. LEGER DAY.—Redditch Fair.—Brecon Races.—London and Birmingham Railway opened throughout, 1820. Siege of Gibraltar ended, 1782.

THURSDAY, 18th.—Canterbury Races.—Hastings Races.—Whitby Regatta.—A quantity of half-farthings issued, 1844. Tom Duncombe congratulates Joe Hume and the Dean of Westminster that charity is at length made easy to the meanest capacity.

FRIDAY, 19th.—Worcester Fair.—Abingdon Fair.—Madame Laffarge found guilty of poisoning her husband; "with extenuating circumstances," says the French jury, and a "jolly young barrister," as *Punch* would call him, declares in open court that if they'll let her out he'll marry her! That was the way to make a *grande sensation*, and perhaps to get brief.

SATURDAY, 20th.—Dolgelly Fair.—The Fortifications round Paris begun, 1840.

## The Sportsman's Magazine.

FOR THE WEEK ENDING SEPTEMBER 20, 1845.

## THE "BULLS" AND "BEARS" OF THE SPORTING WORLD.

EVER since there was an interest to be served and a profit to be made of sporting matters, have these two classes of speculators, rumour-dispersers, and "Sir Oracles," been existent, lively, and flourishing. Like their namesakes of the Stock Exchange, the Sporting "Bulls" and "Bears" are active, loose-tongued knaves, whose business it is to decry or to praise-up, to debase or to exalt, the subject matter of their hopes, desires, fears, or wishes. Their vocation, however, generally lies in "alarming."

No race is run, no fight comes off, but these gentry have a "finger in the pie:" at one time they puff off a particular man or horse, and by dint of strong assertion and the assumption of exclusive knowledge, they raise him or it in the market, and within some narrow sphere of their own influence if they do not command the betting. Their vocation is a combination of the hypocrite and the false swearer, and they are necessarily shunned by the better informed section of the sporting world, except those who seek to profit by them. At the race, the regatta, the coursing meeting, the cockpit and the prize fight, are these "bulls" and "bears" to be found, and dearly must that man pay who puts his confidence in these knaves. They are of all ranks too; from the "bull" dressed in broadcloth and fine linen and faring sumptuously every day, down to the ragged oracle of the taproom. Some "bulls" and "bears" of the turf possess a honeyed tongue and a gentlemanly demeanour; others are the antitheses of these, being bullies and ignoramuses, yet each labours in his vocation. In the times of the Second and Third George, a gentleman could be known by his coat, there is now no such distinction in dress, and the stranger or the uninitiated would do well, when he finds any man in a mixed company more than usually knowing upon subjects on which the public at large are not only uninformed, but which an individual can only know by surreptitious, underhand, dishonest, or confidential means—to distrust, avoid and despise him. These are the professional "bulls" and "bears," or what is as bad, mere *touters*: there is another class, however, extremely rife in these days of Derby, Leger, and all other sorts of "Sweeps." We mean the "amateur" "bulls" and "bears." These generally are a set of conceited, uneducated, overweening fellows, swell tradesmen, natty bagmen, clerks in warehouses and the like, whose narrow education enabling them to commit to memory the names of the leading turfmen, the nominations for the great races, and a few trifling turf-minutiae, become a sort of tavern oracles, and sporting "bores" (in this case the e may well be changed). This animal is a dreadful infiction, and unfortunately the breed is sadly increasing. Crammed with a catalogue of names of horses, he looks down with pity on every man or mixed company who knoweth not, and pleads guilty to his ignorance of the "market prices" of all the favourites, and every, even the most recent fluctuation in the betting at "Tatt's" as he terms it, or Manchester.

Speak upon any subject under the sun, any topic of general interest, and he exhibits his "book" learning on the forthcoming great race. These "singlestring" talkers are really becoming a public nuisance. The other night we dropped in to a place where we were wont to hear social converse; but lo, the Sporting Oracle was on his legs and we were fain to depart. These gentry can always "put their finger on the horse," but somehow they seldom do. They lose their money and disappear from the society they have infested only to make room for another bore. A word to these gentry—they are mighty in their own opinion; let one or two of them look out, for

"A chiel's among ye takin' notes,  
And faith he'll print it."

### THE NATURAL HISTORY OF SPORTING.

THE STOAT.

This animal, which is as agile and mischievous as the weasel in pursuit and destruction of the hare, and all other sorts of game, poultry, and eggs, has, from its habits and the small difference in shape from the weasel, been often described under the same denomination. Its height is about two inches; the tail five and a half, very hairy, and at the points tipped with black; the edges of the ears and ends of the toes are of a yellowish white; in other respects, it perfectly resembles the weasel in colour and form. In the most northern parts of Europe, the stoat regularly changes its colour in winter, and becomes perfectly white, except the end of the tail, which remains invariably black. It is then called the ermine: the fur is valuable, and sold in the country where caught, from two to three pounds sterling per hundred. The animal is either taken in traps, made of two flat stones, or shot with blunt arrows.

The stoat is sometimes found white during the winter season in Great Britain, and is then commonly called the white weasel. Its fur, however, having neither the thickness, the closeness, nor the whiteness, of those which come from Siberia, is, with us, of little value.

To destroy these worst of all four-footed vermin to game in its infant state, the following mode is recommended:—Provide small square-made steel traps, with a small chain and iron peg to fix them down; get two drachms of musk, shoot some small birds, and dip the tail of these birds in the musk; tie one on the plate of each trap, and net in the hedges, or where it is suspected they frequent: this will soon reduce the number, should it be ever so considerable: if it so happen, that no musk is immediately to be got, the trap must be baited with a bit of rabbit; and it should be remembered that this bait cannot be too stale.

Some time since, as Mr. Clarke, of Horndean, was going a few miles on foot, in the forest of Bere, to visit a friend, he observed a hare come into the green road before him, which seemed to be listening, and looking back for something which pursued her. He stood still, and hearing no dog, was curious to discover the cause of her alarm, when, to his great surprise, he discovered the object of it to be a small yellow red and white stoat, which hunted her footsteps with the utmost precision. He, wishing to know if so diminutive an animal could have a chance of coping with the great speed of the hare, retreated to a holm-bush hard by, where he was an attentive observer of this silent hunt for near two hours, during which he is certain to have seen both hare and stoat at least forty times. They were frequently gone for five or ten minutes; but the hare, still unwilling to leave the place where she was found, came round again, and her little pursuer sometimes close at her heels. Towards the end of this remarkable chase, which became uncommonly interesting, the hare took advantage of the thickest covert the place afforded, and made use of all her cunning and strength to escape, but without effect; till at length, wearied out by the perseverance of the stoat, Mr. C. heard her cry for some time.

At last, the cries coming from one point, he concluded she was become the victim of the chase; on which he went to the spot, where he found the hare quite dead, and the stoat so intently fastened on her neck, as not to perceive his approach. The stoat, in its turn, now fell a victim to Mr. Clarke's stick, after which, he proceeded with both hare and stoat, to the house of his friend.

### THE FISHER'S CREEL.

THE SALMON TROUT.

**P**RESSURE of matter having this week disarranged our columns we shall be brief upon this beautiful variety of the speckled trout as the "posy of a ring."

As may be gathered from the print he is handsome in his form, and is thicker and rounder than the salmon. Add to this that he is splendidly adorned, his scales are small and beautifully spotted on both sides the lateral line and on the gill covers, the fins are strong, the tail shorter and less forked than that of the salmon. The flesh of the salmon-trout is exceedingly rich, and in some counties esteemed superior to any fish of the salmon kind. From two to six pounds weight is their general run, though they are occasionally taken larger. They are often hooked while fishing for salmon or larger trout, their haunts being similar. Early in spring they enter the rivers, are in prime season from the end of April to July, and spawn chiefly in September. The period varies, however, in different waters. The rod for the salmon trout should be similar to that for the salmon, the reel line strong, three yards of fine-twisted silk worm gut for a foot-length or the strongest single with the knots well whipped.—In this brief notice of the salmon trout, we beg to append a letter of an epicurean correspondent, who has chosen the signature of *ICHTHOPHAGUS*.

(The letter next week.)

**SAM SLICK HOOKING LUCY'S GOWN.** "Well, just as I was ready to start away, down comes Lucy to the keepin' room, with both arms behind her head a fixin' of the hooks and eyes. 'Man alive,' says she, 'are you here yet, I through you was off gunnin' an hour ago; who'd a thought you was here?' 'Gunnin'?' says I, 'Lucy, my gunnin' is over, I shan't go no more now, I shall go home; I agree with you; shiverin' alone under a wet bush for hours is no fun; but if Lucy was there—' 'Get out,' says she, 'don't talk nonsense, Sam, and just fasten the other hook and eye of my frock, will you?' She turned round her back to me. Well, I took the hook in one hand and the eye in the other; but arth and seas! my eyes fairly snapped again; I never see such a neck since I was raised. It sprung right out o' the breast and shoulder, full round, and then tapered up to the head like a swan's, and the complexion would beat the most delicate white and red rose that ever was seen. Lick, it made me all eyes! I jist stood stock still, I couldn't move a finger if I was to die for it. 'What ails you, Sam,' says she, 'that you don't hook it?' 'Why,' says I, 'Lucy dear, my fingers is all thumbs, that's a fact, I can't handle such little things as fast as you can.' 'Well, come,' says she, 'make haste; that's a dear, mother well be a comin' directly;' and at last I shut too both my eyes, and fastened it: and when I had done, says I, 'There is one thing must I say, Lucy.' 'What's that?' says she. 'That you may stump all Connecticut to show such an angeliforous neck as you have—I never saw the beat of it in all my born days—it's the most—' 'And you may stump the State, too,' says she, 'to produce such another bold, forrad, impudent, onmannerly tongue as you have—so there now—so get along with you.'

# THE GRAND TOURNEY FOR THE CHAMPIONSHIP OF ENGLAND, THE BELT, AND £200 ASIDE,

AT

LUFFIELD GREEN, NORTHAMPTONSHIRE, ON TUESDAY, SEPT. 9, 1845.

[Specially Reported for the SPORTSMAN'S MAGAZINE.]

HE combat, the haps and mishaps, chances and contingencies, merri-ments and misfortunes, frolic, fun, and fighting of which it is now our province to record, stands, as penny-a-liners would say, "unmatched in modern times" for the interests involved and the general excitement it has created in circles beyond those usually and exclusively termed "Sporting." This may be referrible to several distinguishing features which occasioned this mill to stand alone, and lent it an attraction beyond the everyday combats of ordinary pugilists. Although we must say, ere we enter on the details, that we have seen better fights by second-rate millers, yet the disparity of the men, their known rivalry, the distinctive character of their styles of fighting, the honour as well as profit at stake, and their numerous partisans in London, Birmingham, Leeds, Nottingham, Derby, Manchester, &c., made this one of the most interesting combats since the days of Tom Johnson and Petrus, and Big Ben, to whom the men in nature and personal qualifications presented several points of similarity.

In the thirteenth number of this periodical we gave the several fights of the antagonists, and as space is valuable we shall not here repeat the details; suffice it to say, that this was the third meeting of the belligerents, and if we may judge from several conferences with the parties themselves, their former meetings had by no means enhanced their good opinion of each other. Caunt appeared more than confident, he booked winning as a dead certainty, and prided himself hugely on the improvement he had made. He insisted on it that he was a mere novice, a yokel, in his former conflicts with the "renowned Bendy," and declared that he could not lose, and would not be trifled with as he had hitherto been. That the burly champion is a "good plucked one," and that his giant strength is seconded by invincible courage, no man who has seen him fight can deny; but that his skill, temper, and judgment are on a par with his physical gifts, no one can contend without damaging their reputation for judgment in matters pugilistic. But we quit this discussion and hasten to the mill.

The word was given, (and pretty well published too) that Newport Pagnell, Bucks, situate some four miles from the Wolverton station of the London and Birmingham Railway, was to be the rendezvous; and thither on Monday evening did some hundreds of the cognoscenti repair by the six o'clock train: that at half past eight brought its share of reinforcements; and about eleven, we were sipping our cocoa 'neath the lustrous light of a pair of splendid black eyes reflected from that staple commodity of a railway station, a large white-metal urn—for to look at the eyes themselves without this medium would be utterly beyond our philosophy. Refreshed, we started on a superannuated stage-coach, whose creaking wheels, rattling axles, and unmusical shrieks, as each successive passenger climbed to its dusty roof, gave ominous warning of a dissolution of its crazy members. "Fortune favours the brave," and by the separate efforts of two blind uns and a bolter, driven unicorn fashion, who displayed an agreeable diversity of opinion by never leaning against collar at the same time, we, by about half past twelve, achieved the up and down hill distance, and found ourselves snugly ensconced in the coffee-room of the Swan Inn, Newport Pagnell, blowing a choice Havannah, and sipping our cold without, amid a set of choice spirits, whose phisigs recalled the "days of auld lang syne." Jem Ward, the once clever Black Diamond, was there, active, pleasant, and amusing; he had left Liverpool and the York Hotel to take care of each other, and had come among the beauties of Bucks—and some beauties of Bucks there were—to look on and keep order at the approaching "passage of arms." There too, was my rattling, roasting, roaring, host of the Queen's Head and of Fulham Fields, the chaffing Jem Burn, lively as a young elephant, frisky as a kitten, and as full of fur. The Rising Sun too, had lost its light, for the conqueror of Hannan and of Bumparee, the youthful-looking Johnny Broome was there, choke-full of oratory, and certainly making out a strong case against the "Prophet" of the Era, until the good feeling of the company properly repressed his specification, as the much-canvassed Vates was absent. But when the liquor is in the wit's not at home, and although no man present would suspect Broome of being guilty of the offence so slanderously imputed to him by some obscure scribbler (for we are sure the Editor is not the man to prostitute his talent to such purposes) from "the abundance of the heart the mouth speaketh," and we drop this unpleasant subject. Swift, the Wonder, Alec Reed, and that's no wonder, showed a head; "our fat friend" of twenty-stone, and a pen ditto of eight; swells of the first water, coves at low water in the cly, patricians, playmen, pubes, and patrons of the good old art of self-defence of every class, made up the noisy assemblage. Beds were at a premium, farm-chairs advanced to the dignity of four posters, and sofas carried double; two thousand were to make shift with accommodation for two hundred, and the state of the town, with scores of peripatetics who preferred promenading the street

in a splendid starlight night, to stifting in a steam of cookery, bad tobacco, and reeking, liquors, kept the place alive till

The morn in russet mantle clad  
Walked o'er the dew of the high eastern hill,

safron-robed Aurora oped the gates of day,

And from the sloping hill descending,  
Strewed the earth with orient pearl.

But who ever got poetical going to a fight? For ourselves we, as old campaigners, felt no inclination to pay gold to be fleabitten, and furnish a feast to Buckinghamshire bugs; so, finding a comfortable carpeted apartment at the Swan, the best inn of the town, wherein mine host proposed and effected the lighting of a roaring fire, we, with a half-score of choice spirits from various quarters of England—not forgetting a most garrulous and rest-disturbing Taffy, who had come down from the Welsh mountains to see the sport,—bivouached with an ample supply of mull and cogniac, and got through the small hours till the assembling multitude in the village street awoke us from a brief dose, and we walked forth to view—not the nakedness, but the fruitfulness of the land. Rumour was rife, but in the sanctum it was announced that retracing the steps of the previous night, and crossing the line of rail, Stoney Stratford would be the fixture, and could Tom Oliver, the commissary, was sent off in that direction. By the first morning train arrived numerous members of the London division—mine host of the Castle, &c. To them the change of venue was announced, by which eight miles were saved, them, and looking to the after proceedings, that was by no means disagreeable. All were now en route; £2 per seat in omnibuses, £1 in chaise-cart with a likely prad, and anything that could be got from a crown to a half sovereign for a coster-monger's timbel, or the inside seat in a cheap funeral company's hearse (we saw one of them on the road with the Tipton Slasher on the box thereof!) may be quoted, as the City Correspondents say, as "the ruling prices." "Kim sup," as the deceased Charles Mathews used to say and sing: "d'ye think I stole yer?" "Git down, yer inhuman wretch, arn't nine enuf for vun donkey?" was about the size of much of the cavalcade, which comprised everything, from the swell barouche with its four posters, down to the hay cart of "Giles Jolter, of Bacon cum-cabbage, in Bookenhamshire." Stratford the Stoney is reached, and from the big stones on the road, which must have given striking and painful proofs of their frequency to the riders on untaxed vehicles minus springs, of which there were not a few, it must have been feelingly manifest that the place was not misnamed.

Leaving the Cock at Stratford, away we rattled along dusty roads, through a splendid country beneath a blazing sun, the fields dotted with stocks of cut corn brown and full, or bowing their waving heads to the sickle of the sweating labourer, by hedgerows ripening their crimson hips and berries beneath an autumnal sun, which might have made the dog days of the present year of our Lord utterly ashamed of themselves. On reaching Whaddon, a parish some seven miles from Stoney Stratford, at a little before ten, the ring was already forming in a beautiful rural spot, most admirably adapted for the assembled multitude. An excellent inner and outer circle were formed, but there was a deficiency of management. Half-past ten came, Old Tom walked about, scratched his grey head, and surveyed his work; where are the inner-ring tickets? No one had the authentic pasteboard, and a congress of rough uns from the hardware village, &c., with some half dozen fellows who never were or will be pugilists, began selling a lot of spurious cards with which they had previously supplied themselves. Two mortal hours beneath a broiling sun did this game go on, still no authentic tickets—this was, to say the best of it, unjust to the more respectable portion of the flaccid body, who anxious for the cause of fair play and good order, were thus deprived of their legitimate profit; and some in self-defence began disposing of pieces of card displaying their own name written thereon: to this strat was old Tom himself reduced. Twelve o'clock came; the sun rode high in heaven, and the half-baked multitude were grumbling loudly, when up rode Broome on a Windsor cob, and announced that "the magistrates had decided that there should be no mill within the hundreds of Newport, Stratford, and Whaddon," and, therefore, "so much for Buckingham!"

Again on the road, and the now familiar Stoney Stratford is once more gorged with pedestrians and horsemen. At the Cock hostelry, where Bendy and Maley were located, the cry was "still they come," and the question of many of the owners was, "how shall we go." Eating and drinking seemed to be taken to naturally, and the Cock was in "high feather," while all the drinkables in the town, from swipes up to sherry, dried up with amazing celerity. For Oxfordshire—or perhaps Northamptonshire—seemed to be now the cry; the ropes and stakes were sent forward to Luffield-green, a locality in the latter county, among the sylvan beauties of a portion of the Forest of Whittlebury, and thither, soon after three, all were on route.

(In, on, through meadows tended like a garden, sylvan slopes, stony and dusty roads, which powdered all oostumes to an undistinguishable white, and made the motley group look all, what many of them were, a company of "millers." The ground is reached, through gates and field roads for the last mile or two. See! there is the ring, and every

moment the surrounding mass of humanity augments by hundreds till the dense crowd contains not less than ten thousand persons. Indeed the "sons of the soil" who swelled the procession, and who stuck to pedestrianizing like good un's, were awfully and unpleasantly numerous. Intermixed with these were all sorts of outsiders—a set of semi-pugilistic roughs, whose presence is at no time so pleasant as their absence. At a little after three, Caunt shied his cap into the roped square, and Bendigo was not slow in answering the defiance with his castor. Caunt was waited on by Jem Wharton (Young Molyneux) and Jem Turner, the trainer, while Nick Ward, the brother of "our Jem," and Johnny Hannan did the attentive to Bendigo. The colours were tied to the centre stake—they [were] dark blue, with white spot, for Bendigo; for Caunt a blue with an orange border and star, with the motto—"Beff Caunt, Champion of England, and Bendigo, 9th Sept., 1845. May the best man win!" Above them was placed the proud insignia of Championship, a black leather belt covered with massive silver plates, emblematically chased and inscribed with Caunt's victories. All seemed now ready; expectation was on tiptoe, the inner ring beaten out, the men's toilet completed, when, behold, all sorts of difficulties arose. One gentleman after another declined the office of referee; a thankless, an onerous, and a trying task. We would here suggest the propriety of the "big wigs" who are the leading and influential men on such occasions, endeavouring to arrange these matters beforehand, so that when the many-headed multitude have taken their places, the men are stripped and ready, and all is anxious expectation—these delays may not occur to exasperate any partisan feeling, prejudice, or desire to avail themselves of any excuse for disturbance which may be rife among the roughs, who always attend such great and interesting mills. From three till a few minutes to four were some ten thousand persons kept on tenter-hooks. No referee could be had, and all sorts of people who had no business to be there, traversed the inner ring, while the hundreds who had paid for the privilege, or assumed it, crept closer and closer, justified, as they insisted, by the bad example of others. The consequence was, that those whose official duties brought them to the ring side, the respectable Editor of *Bell's Life*, and several others, were seriously incommoded by the continual "pressure from without," to which the "House of Lords" was on this occasion subjected by its "most unfaithful Commons." At length, the venerable "Squire" accepted the ungrateful task; a referee was thus obtained,—and at five minutes to four—the choice of corners having been won for Caunt, who, of course, fixed himself with his back to the sun—the men shook hands, and placed themselves in attitude.

## THE FIGHT.

1.—As the men placed themselves in position, we had a better opportunity of judging of their condition. Caunt looked big as a house, strong as a bull, muscular as the Farnese Hercules, and hard as nails. He seemed fit to fight for a man's life. Bendigo, though well proportioned and confident, appeared rather softer and fleshier than we liked for so tough a job and so hot a day. The weight of the men was—Caunt, who had no superfluous meat, 14 stone 5 lbs.; of Bendigo, 13 stone and a bare pound. The height—of Caunt, six feet two inches and a half; of Bendigo, five feet nine and a trifle over. Bendy, however, looked a big man in a small compass, compact and well knit. The round was begun by Caunt displaying too much eagerness for the fray, while his antagonist seemed as quick as a harlequin and as shifty as a shadow; substantial proofs were not long wanting, however, of their both being there in flesh as well as spirit, for they soon got to hard knocks; Caunt letting go his left which Bendigo parried, following it by his right which Bendigo avoided, and then going in like a bull at a gate. Bendy broke ground, evaded his rush, capered a little, feinted once or twice, and at last got home in a merry sort of rally, with a most undeniable smack over the left eye of the big un, which raised a mouse in no time; in some rather wild-tumble-about-maneuvring, the effect of which was not very visible, Bendy again planted on Caunt, from whose face the purple fluid was instantly visible. Bendy was nearly down but up and at it again; both down. The first event decided. "First blood for Bendigo!" and the provincials made the welkin ring with shouts and exclamations.

2.—Some shifting, parrying and manœuvring on the part of Bendigo; "Caunt nothing daunted, forced the fighting: he rushed at his man, delivering with one hand after the other, but out of distance, Bendy propped him once in the nose as he came in: Bendigo slipped down, but started up again, and renewed the round. Caunt's left eye swelled and much discoloured, but he grinned confidently, stepped in, when Bendigo got down craftily. Caunt pointed derisively at Bendigo as he lay on the ground, who laughed in return.

3.—Caunt seemed determined to annihilate his adversary; he rattled in at him as if he meant to make this round the last, but though his steam was up, it blew off without much work done; Bendy ducked his head and caught Caunt a bodier, who repaid with a round crack with the left on Bendy's jaw; the men closed, Bendy went down as easy as he could with Caunt's heavy carcase on him. Caunt laughing.

4.—Caunt's tactics still "forward" he seemed fresh, in good wind, and out and out sprits. He let fly three or four times, but was foiled by his crafty antagonist, rushed in; Bendy went with his bandungas through between the upper and lower ropes, and looked up laughing.

5.—Caunt at him again, determined to make it no laughing matter; Bendigo hit short once or twice, and the Champion's immense arms seemed to cut the air in vain, at last he caught Bendy a rap in the mouth which drew the claret; the latter at once ended the round by getting down upon this receipt, so as to take the sting out of the blow. "Who'll bet even on Bendigo?"

6.—The big un bent on mischief; he grinned like a Cheviot cat, and in he slapped. "D—the repairs!" seemed to be his motto. Bendy broke ground and retreated before his charge, lashing out his right, and once touching him on the body just to check him a little: it was no use, Caunt did not mean to be denied, and Bendigo got down much more cleverly than courageously.

7.—Considering how fast the men had been fighting (or at least jumping about, hugging, and hitting away), as well as the heat of the weather, they seemed both very fresh. Bendy pumpled profusely, but Caunt seemed as hard as a flint. Bendy made several very pretty offers, and Caunt for the first time retreated a little; both got at it, ding dong, Bendigo gave Caunt a regular smother, in the exchanges; Bendy, who seemed already bent upon a long fight, saluted mother earth.

8.—Caunt in a hurry, wouldn't have any delays, at it as soon as at the scratch. Bendy retreated and got on the ropes near the corner; Caunt hesitated a moment, when Bendy, who seemed to be about to go down, sprung up again, and hit Caunt on the neck or shoulder; the big un embraced him, bore him to the ropes, gave him an ugly squeeze against them, and after some vain attempts to fob his man, they both rolled outside them, Bendy undermost.

9.—After a sort of dance round the ring, in which the men changed hands and set corners at all points of the compass, in went Caunt at Bendigo's headrails; the little un bobbed to right and left, nailed the big un once on the mouth, and slipped down from his own blow.

10.—Bendy tried to draw the champion, but it was no go; anxious for an opening he played round him; at last Caunt stepped in, drove him to the ropes, got him in a bruin's hug, and gave him an ugly fall.

11.—A smart little rally, but Caunt wild and ineffective. His intention was mischievous, but he could not carry it out. Bendigo hit open handed. Both rather awkward. Bendy dropped in a round right-hander, received a round left-hander in return, which, to prevent mischief, as usual, he compromised with by going down as soon, or perhaps a little sooner, than it reached him. Caunt's friends crying out at Bendy's style of falling.

12.—Caunt tried his left, missed, then his right, got slightly home; Bendy half down against the ropes and then up again; but finding the big un ready and eager for the fray in an exchange, he closed the round by another downer.

13.—A clumsy weaving sort of affair on the part of Caunt, Bendy shifty, popping at him now and then; a close, Bendy under.

14.—The best round in the fight. Bendy met Caunt, who hit out well and powerfully, but was generally stopped, some ugly raps were given and taken, at length Caunt's left was shot rather round, over Bendigo's head, who ducked to avoid, and as the giant made what the captains of steam-boats call "half a turn a-head," Bendigo dealt Caunt such a tremendous right-hander on his right cheek-bone, that down went the mighty house of the champion in a twinkling. (Half the ten thousand spectators roaring like five times their numbers of bellowing bulls of Bashan; a rush and pressure on the inner ring, which rendered the duties of reporters, umpires, and referees, anything but agreeable. First knockdown for Bendigo, making the second event. Half of his partisans seemed frantic with joy.)

15.—After a storm comes a lull, but Caunt came up as rough and ready as ever; Bendy closed with him, Caunt bore him to the ropes, where he got him in an awkward position, hanging on him and hugging him amid the shouts and yells of the multitude.

16.—Caunt at Bendy right and left, Bendy turned and got away, Caunt could not get near enough to him, and Bendy was under in a sort of roley-poley fall.

17.—Bendy backed to the ropes, an injudicious position which he often took during the fight, a close, a hug, Bendy hit up with some little effect. Both down.

18.—"All round the ring Ben danced after brisk Bendy, All round the ring, but Bendy he said nay,

And if any body axes you the reason why he did it, 'T was because the small un would do nought but hit and get away."

This was about the time o' day, Caunt had a score of raps and taps to settle, but Bendy did not seem to be inclined to an exchange in which he was to receive the difference in hard knocks. Bendy got down somehow in Caunt's corner. No harm done.

19.—Caunt fresh as a young bull, and just as ferocious; Bendy performed hanky-panky, and was down in the hitting.

20.—Caunt hit Bendigo down, and acted with a forbearance which produced some applause, as Bendy hung on the lower rope.

21.—Two or three little rounds rolled into one. Bendigo up and down like a Jack in a box, slipping and skipping; Caunt got close and nailed him on the body with his left, and somewhere at the side of the head, with the right, not, however, without getting a smashing hit on the mouth which cut his lip open. Bendigo down in the corner.

22.—Bendy run down; retreated, hitting out once or twice. Caunt bored him completely through the ropes, Bendigo laughing.

23.—Bendy down in some sort of a fashion. The scene of confusion here became awful; whips, sticks, and flais were in vain flourished. "The Squire" and the writer of this, despite the energetic and praiseworthy efforts of Jem Ward and his namesake Burn, occasionally aided by Spring and Broome—to the last and first named of whom his best thanks are due—were carried by the encroaching tide of people, impelled by those behind, on to the ropes of the ring itself. The scene was terrific; some of the hindmost ruffians, who, it seems, supposed or feared that Bendigo was beaten, rushed recklessly in, and it was only by the most strenuous exertions of the pugilists already named, that they were prevented getting to the ropes and breaking in. This confusion and disorder lasted through the remainder of the fight, with but few and short intermissions.

24.—An appeal to the referee by Spring, as to Bendigo's method of getting down. Bendigo planted on Caunt, and slipped. The referee saw nothing unfair. "Go on!"

25.—Exchanges right and left, Bendigo bent on procrastination as the only chance of reducing his mountainous antagonist to his own weight, got down during the hitting.

26.—Hugging and hanging on the ropes. Caunt hung on him cruelly, and Bendy twisted like an eel till he touched ground undermost.

27.—On coming up it was perfectly clear that, so far as hitting went, Caunt had the lion's share of punishment. His right eye was in mourning, his cheek bone more than naturally protuberant, his lip was split, and his nose somewhat damaged; yet he was as cheerful as a cricket, and as strong as a horse. Bendy still as alert as ever, showed but trifling marks; a little boss over the left eye, and some marks on the neck, and near the angle of the right jaw, from Caunt's left handed visitations, were all that was perceptible. A rally and a roll, wherein Bendigo cleverly turned Caunt over the ropes; and both down ended the round.

28.—A pause. Both had been quite active enough; Caunt at last got tired of shifting, went at his man, received a pop from Bendy's left and in return rattled Bendy, who went down, nothing loth.

29.—A close a struggle on the ropes, and Bendy down with Caunt's stern on his body.

30.—Caunt, in the middle of the ring, a rally took place near the ropes, wild deliveries on both sides, Caunt got half over the ropes, and so down; Bendy stood over him, but did not hit "bravo" from all quarters.

31.—Caunt did not know what fear was; he pushed in, hitting away, and would take no denial. Bendy let go his left, and caught the big un a smack on the face; Caunt bored him down furiously.

32.—Bendigo gave Caunt a job on the nose, and got down cunningly.

33.—Bendigo, sweating awfully, as Caunt strove to embrace him, Bendy got down; a claim of "foul!" on the part of Caunt.

34.—Both down.

35.—Caunt seemed to lose his balance when hitting; he reeled for an instant upon missing a blow; Bendy was at him like lightning, and rolled him over the ropes cleverly, both men falling outside the ring.

36.—Bendigo dropped as if from his own blow. Another appeal: An awful noise, and confusion reigned confounded.

37 to 41.—The same tactics throughout; Bendy grinning at Caunt when he was down, and Caunt nodding his head in acknowledgment of the compliment.

42 to 45.—Caunt still first to fight. The old game again in each round till the last named, when, as Bendigo slipped down, Caunt struck him with his foot, evidently unintentionally, and perhaps carelessly. A loud claim of "foul!" from the Nottingham hero's partisans, but the referee said "Go on!"

46.—Caunt let fly with both hands—a close, and both down. In several rounds Bendigo succeeded in the closes and falls, so as to shift his position; hence Caunt did not seem to gain much by them: indeed, once or twice he decidedly struck earth hard, when his competitor got down softly.

47.—Caunt again forcing the fighting, Bendy seemed almost astonished at his obstinate hurry; the big un went at him like a bull at a gate, a close, and Bendy made himself as small as he possibly could. Bendigo's shoes and his foot were damaged by Caunt's cricket spikes in his soles, which were certainly of improper length.

48.—Some very pretty exchanges. Caunt in first with right, and followed it up with the left, catching Bendy on the head; Bendy retorted by a plunging blow, and was down the head he could.

49.—Caunt, still fresh and eager, hastily stepped in upon Bendy; a close, both down.

50.—Caunt at his man; Bendy jumped in and got down.

51.—A few exchanges, out of distance. The men broke away and looked at each other, neither seemed to form a more favourable opinion from the inspection. Caunt's figurehead was painted and embellished, and Bendy had not escaped quite scot-free; indeed, he had received several awkward visitations to his ribs in the rolls at the ropes—to say nothing of having fourteen stone weight every now and then to assist his going down hill, and as coverlet when he laid on the ground. Caunt wiped his hands, Bendy seemed to have something the matter with his left, in which he held a piece of paper. Having stood a breathing, while they mutually missed hits, closed, and rolled down; Bendy too fond of fighting with his back close to the ropes.

52.—A rally, Bendigo rolled over on the ropes, recovered himself, jumped up and renewed the round; ran after Caunt, who in turn retreated across the ring; Bendigo nailed him somewhere on the upperworks, and both were down, Caunt undermost.

53.—Some posturing and shifting about, not over graceful or scientific on either side; then they got at it, ding dong, hammering away, Caunt his wild and for the first time got down upon Bendigo, hustling him into his corner, jumping at him and hitting. Caunt laughed grimly at Bendy as he sat on the ground, the latter drew back his hand and returned his grimace.

54.—No harm done, both missed and closed, Bendy down on the lower rope touching

the ground, Caunt on him. The ropes of the ring were much loosened, by the pressure upon them, and various persons, the reporters, referee and others, being compelled to stay and support themselves thereby to prevent their being thrust bodily into the ring. As it was, in various falls, Bendigo was bodily borne on to the hat and into the arms of the writer, and the venerable and respected referee, neither of whom could retreat a yard to save themselves.

55.—Time but badly kept. The minute given on this, and one or two other occasions was "as good as bread" to both the men. They had been fighting at a pace though doing but little work, and the good condition of Caunt was proved by the fact, that he seemed but little winded by his exertions; Bendy perspired profusely. Exchanges, a close, a scuffling wrestle, Bendy tried for the crook, got it, and turning Caunt half round, got him undermost. The fall was of no moment, but the Bendy-ites cheered vociferously, and the volume of voice gave pretty good proof they were in a glorious majority.

56.—Bendy caught Caunt a slight slap, then retreated to the ropes, Caunt after him, the big 'un went at him one, two, but Bendy was down cunningly. Caunt pointed contemptuously at him.

57.—Caunt surprisingly fresh and seemingly as strong as ever, several capital exchanges; loud cheers for both men; Bendy down, but no best in the round.

58.—Time! time! all callers, but no markers. Caunt first at the scratch, but Bendy up in a moment after. Of no account, both down.

59.—Bendy retreated to the ropes, and let go his right at the body, Caunt returned on Bendy's ribs, who rolled on the ropes, and as the giant withheld his hand, over anxious not to throw away a chance by hitting his man when down, the latter sprung up, making use of the elasticity of the rope for an impetus, gave Caunt a clever hit with the left, and was down again not very creditably.

60.—Nothing to nobody.

61.—A rattling round, Caunt got up his steam, and Bendigo seemed to mean fighting; went at his man like a trump, serviced him with both hands, and despite his weight and strength got him over the ropes among the spectators; whereas not a few were a little astonished.

62.—Caunt didn't seem to care a rap for anything; he was as fresh as a four-year old, and though his features were by no means improved by his antagonist's handy work, he seemed all right in the right place. He went on, despite a stopper, or two from his opponent, caught Bendigo in his arms, gave him a Bruin-like hug, and went down on him. Caunt acting perfectly fair, yet the prejudice in favour of the lesser man was unpleasantly manifested by the shouts of many bystanders.

63.—Time! time! but who would have dared to pull out a watch at that instant! Caunt bored Bendy through the ropes, again. Whips, sticks, and fists at work; the referee thrust through the ropes, and for a few seconds inside the ring, under shelter of the corner-post till Ward, Burn, Alec, Reid, and others made a few yards of standing room. The conduct of the referee, who thus broke the inner ring, of whom we observed and received several outsiders of the provincial schools, must be utterly destructive of fair fighting and order, on which depend the existence of the ring itself.

64.—Bendy got away once or twice actively; Caunt followed him up, getting now and then "a little 'un in." Bendy was two thirds down at ropes. Caunt held back his hand and stepped back, as if undecided, when Bendigo sprang up as before; Caunt retreated, slipped down, and laughed at Bendigo, as much as to say "that's tit-for-tat."

65.—Time, a minute or thereabouts. Bendigo, still with his back against the ropes; Caunt fell on his knees by accident, and Bendy was in a praying position near him.

66.—The row outside the ring much more vigorous than the mill within it. Caunt bored in, Bendy did not carry metal enough to stop him, both blowing, and Bendy wet with perspiration, the weather piping hot, and the men piping too. One hour and thirty-five minutes had now elapsed, and there was certainly no remarkable advantage on either side. Caunt still much the stronger; had the worst of the punishment, and Bendy, except seeming rather tired, looked much the same as when he began.

67.—Wild and indecent deliveries on both sides. Bendigo down under Caunt's hands in the hitting, the big 'un slipped down on him, and a vast deal of fuss was made by his party, who declared Caunt knelt on him. We, who could see best, perceived there was no occasion for pestering the referee, who was almost wholly occupied with his own personal safety, which seemed really though unintentionally menaced.

68.—Caunt on to his man once more, but with no better luck than hitherto; Bendy leaped out his right and stopped it against Caunt's ribs, who returned ineffectively on his shoulders; there was not a fair counter hit throughout the fight, a fact perhaps attributable to the disparity in the men's size, as much as to their different styles of fighting. Bendy fell, and Caunt was again charged with dropping his knees on his chest; indeed Bendigo as he lay on the ground pointed to that part of his person and then at Caunt, but it was a smothering at straws, and the umpires disagreeing, the referee said "so end" A most infernal wrangle.

69.—Caunt succeeded in nailing Bendy on the ropes, a close, and both down.

70.—Bendy retreated before Caunt until he was dangerously close to the corner stake; Caunt rushed at him, and Bendy stopped in, hit, fell into the big 'uns arms to avoid mischief, and then scrambled down.

71.—"Beware of the bull!" Bendy missed his blow, but the Champion was too slow to snatch the advantage; Caunt let drive full of mischief, Bendigo ducked and shifted, firmed and stopped, and at last, after plinking Caunt in the body, got down just in time to avoid a swinging left hander, that if it had reached his canvaser would have told tales.

72.—Wild random hitting. "Is this your improved big 'un?" Caunt wanting to get on closer terms, and Bendy keeping out. At last they closed. Both down, Bendy under, but no harm done.

73.—Caunt's visage becoming quite a study for a painter; Bendy looking much as usual except a ruby tinge in the mouth, and the puffed eyebrow aforesaid. A pitiless, relentless man, roasting the spectators and melting the combatants. Caunt hustled Bendigo on to his knees. Another claim of "foul," and a loss of time between this round and the next. "All fair; go on!" One hour and forty-five minutes gone.

74.—Time! time! Both considerably slower, and well they might be. Caunt determinedly followed Bendy into the corner, and he got down more prudently than creditably. At this point a rumour with a whip, under pretence of clearing a space, came and laid a cartwhip once or twice on the referee, lashing away furiously and indiscriminately until stopped in his career. The confusion and violence were shameful, and several who ought to have known better instead of quelling, aggravated the disturbance.

75.—Bendy on the ropes, Caunt hugging him, and at last, both were down, the little 'un undermost.

76.—Of no account. Bendigo almost laid down. A vociferous appeal, during which the men were up at the scratch for round.

77.—Bendy in with right, but his strength seemed so much impaired that the blows did not tell, neither did Caunt's exhibit the same impetus, both in a scrambling close, neither undermost.

78.—Bendigo jumped in, hit, and slipped through Caunt's hands, fell forward under the big 'uns arms, who looked down at him, pretty considerably annoyed that he had not stayed for the present he intended for him.

79.—As before, Caunt followed up his man, and he got down somehow.

80.—Ditto, ditto, ditto; the old pattern repeated.

81.—Bendigo seemed to think he had reduced his man's strength a little, but he had certainly lost most of his own in the trial; he let go, but Caunt stopped him rather cleverly; he tried both hands but was foiled, and Caunt resuming the offensive, down went Bendy.

82.—Generalship and manoeuvring; the champions missed twice in succession; Bendy put in a straight right-hander with astonishing celerity, and followed suit with the left, which, however, did not get so well home; in trying to profit by his advantage, he slipped down.

83.—Some sharp work considering the tired state of two heavy men. A close, a roll over, and Caunt kicked up his heels in the air.

84.—Time! time! all sorts of discussions and altercations till the men were at the scratch. Bendy kept clear out and worked round his man, dodging and watching for an opening. Caunt went at him as usual; both down awkwardly.

85.—A silly, wild hitting. Caunt got the best of it, although the little 'un put in a sharp crack over the eye; Bendy down in a roll.

86.—The Nottingham hero showed a bump on his forehead, and seemed much worried, yet he answered the call of "time" with alacrity: he dropped in on Caunt's neck with his left, but received a sharp bodier in return, and was quickly on the grass.

87, 87, 88.—The confusion of Babel was nothing to it—there they had only a confusion of tongues, but here, yells, roars, thrustings, sticks, whips, and fists were all in full play. To the individuals already named, added by a noble lord and a gallant captain, the worthy old Squire was indebted for the preservation of the confined space he stood on, and even that was momentarily changing. Every one of these rounds ended with a squabble and a noisy appeal—the appellants knew they could say what they liked for the referee declared he could not see the men, and must resign his office, in the midst of the uproar the men stood for the

89th round.—After some bustling exchanges, Bendigo caught Caunt an ugly thump on the cheek. he turned round, and amidst the roar of the multitude Bendigo forced him over the ropes.

90.—A close, Bendy under, when Caunt rose Bendigo intimidated by gesture that he had knelt upon him. It was not true, at least Caunt could not help dropping as he did, from the shiftiness of his antagonist. Johnny Hannan (as Bendigo's second) was very pressing for a decision, and on the other hand so was Wharton; the umpires disagreed, a minute was consumed, but the referee properly decided "Fair!"

91.—More hugging, and another appeal. Both men slow, as well they might be.

92.—Bendigo caught the big 'un a bodier, but got a nasty left-hander in return; he plunged in with a stoop, very low; and struck Caunt in the mark, the effect of this blow on the wind was instantly and visibly manifest; he gasped for breath, Bendy got close, but they laid hold of each other and rolled down. An indescribable turmoil now ensued. The referee was assailed on all sides for his decision amid cries of "foul," and "fair," one party asserted that Bendigo had struck Caunt in his tenderest parts; another that it was below the waistband, while an equally or more noisy lot strenuously denied that the blow was at all unfair. For ourselves we could not see its exact position, inasmuch as Bendy's back at that moment eclipsed our view, and per consequence, that of the referee. That gentleman declared "he did not see any foul blow!" and the men stood up for

Round 93 and last.—There was some rallying. Bendigo got down, or so nearly down, on the ropes, that Caunt, afraid of giving away a chance, retreated a stop or two, when Bendigo, as if thinking all stratagems fair in war, jumped up from the ropes and plunged in at Caunt, who was half turned from him; the big 'un, though surprised at this renewal of the round, let go his right, and sent Bendy a little backward; Bendy made an offer to repeat his blow at Caunt's stomach, and the latter, as if suddenly struck comical, went back three or four steps, and came leisurely on his broadest end. It was certainly going down without a blow, and that with some of the wily cunning of Bendigo, who always played some slip or trick off, to mask his manoeuvre; the Nottingham hero at the moment of Caunt's taking his seat, was in the act of pointing his finger at him. "The Squire" was once more appealed to, and he deliberately replied "Caunt has gone down without a blow, or the shadow of one." It was urged by several that Bendy lost the fight the round before, but this was utterly irrelevant. The referee was, in our opinion, right; he declared just before, that the first foul he himself observed he would stop the fight, or throw up his office, and he did so. Bendy was borne from the ring amid the vociferous shouts of his partisans, while Caunt stood for some seconds unable to believe in the fact of the adverse decision. It was now three minutes after six, and the battle had lasted ~~two~~ <sup>three</sup> hours and eight minutes.

## REMARKS.

The length of the details of this momentous contest preclude the necessity of any diffuse remarks. The style of both the men may be best judged from the particulars of the rounds; Caunt seemed over eager, and occasionally lost his temper, by which he threw away a chance which moderation, steadiness, and coolness might have given to him. His physical advantages—height, weight, length, and strength—were too great to allow of that deviation on his side which was accorded on the other; for it was impossible to repress a feeling for the boldness, dexterity, and quickness of the lesser man, whose escape from utter annihilation seemed little short of a miracle. Hence much of the imputed unfairness. Yet we must here record our deliberate conviction that, although Bendigo was often sailing too near the verge of unfairness to be altogether pleasant or proper, yet this only occurred in the earlier rounds, and that it must be viewed as a set-off for natural qualifications which the lesser man supplied by activity and skill. To have stood up and exchanged blow for blow in half-arm rallies with an overwhelming giant like his opponent must have quickly terminated the contest, without a hope on the part of the lesser man. Indeed, it would have been the very hammering game at which a thorough staunch man like Caunt, with unmatched strength, must annihilate an adversary: he was therefore expected to shift and get down, and it argues little for Caunt's skill or gift of hitting, that twelve stone should fight for two hours and eight minutes, and leave off with a few slight contusions. Bendigo however, declared previous to entering the ring, that win or lose, he would not fight again, a resolution we sincerely commend. His thirty-three years of age, a time at which professed pugilists, especially of the heavier weights, should retire. He may well repose beneath the shadow of the laurels he has won, although we doubt not that there are many who would fain pluck the leaves from his brow. Both sides cannot be satisfied: the London division, and the most experienced members of the corps pugilistique, have large odds in favour of Caunt, whose science it was declared was so much improved, that Bendigo would be served *à la* Nick Ward; the result proved their error. Bendigo is a bolder man than Ward, ready, cool, and courageous; the first fight with Ward, which Nick won, was but eleven or twelve minutes; the second, which he lost, forty-seven minutes of manoeuvring, while Bendigo on the first occasion, fought Caunt twenty-two rounds and forty-five minutes; and on the second, after seventy-five rounds, occupying one hour and twenty minutes, he lost by getting down too quickly; this third time he contended for one hundred and twenty-eight minutes, a pretty convincing proof of the difference between Caunt's two competitors. Caunt will, of course, challenge the championship, and in the present dearth of big men we do not know of any one who could contest the claim. Independent of ill-health, we cannot think the Tipton Slasher, slow and navigational, could have the ghost of a chance with so resolute and two-handed a fighter as the mighty Ben—mighty, although for the present, fallen. That the losers will grumble and seek to revise the decision we doubt not, but it is a duty which the press owes without fear, favour,

partiality or affection, to support rigorously the decision of the appointed judge, when acting, as Mr. O——n unquestionably did, with perfect *bona fides*. If this is not done, a most dangerous and destructive precedent is introduced, which can involve no lesser consequence than the utter ruin of the ring. No one can impeach the uprightness of the judge, and the absurd rumours about the intention to retain the stakes, divide them, or to adjourn the affair to another day and another trial, are as foolish as they are mischievous. If those who have always supported this authority are the first to renounce, deny, and invalidate it, what can be said? That they are the worst enemies of the system they profess to uphold. In conclusion, we may observe that the result of the battle was known in London before eight, by means of pigeons and the telegraph. Many clever people, however, *knew* it for certain long before it took place; and previous to the publication of this detail, the sole authentic report, by the only reporter who succeeded in reaching town in time for the daily papers, was the condensed account in the *Morning Advertiser* of Wednesday.

The lateness of the hour, half-past six—it was dark a little after seven—precluded the possibility of the second contest, that between Maley and Merriman, from being proceeded with. Indeed, as those worthies have proved rather long-winded in their former battles—it would be as well to give them a "long day."

CRICKET.—KINGSTON CLUB v. WALWORTH UNION.—This match was played on Tuesday last, and was decided in favour of the Kingston by twelve runs; the return match will be played at Blishous Ground, Kingston, on Wednesday next.

MONDAY.—If not a very busy, was an important day at the corner, inasmuch as the hopes and fears of the backers of Merry Monarch were effectually set at rest by a declaration that he would not start, owing, it was reported, to his having fallen lame, while, to increase the excitement, Mentor, who, but the day before, owing to a similar rumour, had receded to 40 to 1, sprung to 12 to 1, at which price nearly all the money for which he was backed (some three or four hundred pounds at a guess) was laid out. Miss Sarah was quoted at 3 to 1 layers, Weatherbit at 7 to 1, laid once to a small sum and afterwards offered, but not currently. The Pacha at 11 and 12 to 1, both taken in several quarters, and Red Robin at 16 to 1, to which figure he rose from 1000 to 45, laid twice at the commencement of the betting. Forth's lot, now confined to Mr. Irwin's two and John Davis, was backed by Mr. Irwin himself at 20 to 1, but did not appear to have any admirers out of the stable. The other changes were of little moment. Closing prices.—

BUTT ER AND CHEESE.—House-feeding of cows is admirably suited for promoting a great increase of butter, if the animals are properly fed; grass-feeding, or out-of-door feeding, is essentially necessary for the manufacture of cheese. And this reason is assigned for the difference in treatment—that a generous diet, and warmth and quiet are promotive of the oily substance of the milk, from which butter is made; but that exercise, and less rich nourishment, produce that peculiar substance in milk called *casein*, from which cheese is procured. In fact, it appears that, without exercise, very little *casein* is obtained from the cow, and that the waste of the tissues which exercise promotes, increases indirectly the amount of *casein* in the milk.—*Professor Playfair*.

#### A SONG FOR THE SEASON.

"Tis the first of September"—the sports of the field  
The metropolis thin, from St. James's to Wapping;  
And each blood, that an Egg or a Manton can wield,  
Is off for the fields to commence partridge-popping:  
Not a soul, bless'd with tin, cares in London to stay,  
Where all is blank, profitless, *blasé*, and tame,  
Where, of course, as the people of *mark* are away,  
There remains nothing really deserving of *aim*!

What a strange medley grouse is this second *crusade*,  
Where certificate-christians make war on the *moors*:  
Here distinctions anomalous, startling are made,  
For the hunters, not game, class as very great *bore*!  
Raw from college, the "young idea," learning "to shoot,"  
Aspiring to laurels of sporting renown,  
Of his *bringing up* shows, with *empressment*, the fruit,  
By the science with which he contrives to *bring down*!

And the quondam disciples of famed Billy Pitt  
Follow anxiously now in the footsteps of Fox,  
While the *Tally-ho*—*nigh*, which a fine ear would split,  
Reminds of the *ballet* and *opera-box*!  
Over hill, over stream, the equestrians bold,  
Whom no perils can daunt or delay, onward tear,  
Fully bent, like a beauty of three seasons old,  
To succeed, at all hazards, in *catching a heir*!

Still philanthropy squares not with every one's views,  
When restricting the palate, or slighting its claim,  
And we candidly own, that we should not refuse  
From our friends in the country, a *basket of game*!  
So fail not, ye Nimrods robust of the chase,  
Whom exercise sylvan embrowns like anchovies,  
Of partridges early to send us a brace,  
Or else we shall think you are very *queer coveys*!

SHOOTING.—Did you ever shoot with a funnel bore? It spreads the shots so that you can bring down hundreds at one pull. But I'll tell you of a peculiar cheap shot as I had with a single bullet. In at Farmer Spovin's I see a coop ready to go to Brooklyn, with seven and forty ducks in it. So I says to Spovin, "How much will you charge me for a single shot among that brood with a single bullet, whole, and not split?" "Two dollars," said Spovin. "Done!" says I, slick enough. So I took a little bruised corn and strewed it along the trough, and out pops the seven and forty heads of the ducks. Then I lay down on the ground right away, and taking a perspective horizontal view of the whole regiment sideways, I wish I may be tee-totally substaquillated if I didn't carry off the entire whole of the seven and forty heads.—*Yankee Paper*.

PURCHASING A POINTER.—If you are forced to this alternative, be very cautious; first, learn as much as you can with regard to the breed, and have indubitable proofs that the account rendered is correct. Let powder be burnt over the dog, for it has not unfrequently happened, when one has been purchased without a trial, that the first shot has sent the frightened animal no one knows where, perhaps to his original home, where he had been foolishly shot at to cow him, and consequently he will never be worth the powder that ruined him. Mark the signals which the master of the dog you are buying makes, and carefully note the words of command, reproof, &c., he uses; dog language, unfortunately varies in different localities, and almost every breaker has his own calls which it behoves the buyer of a new dog to store up in his mind.

"I smoke as well as you," as the chimney-pot said to the counter-jumper.

AN AMERICAN SHOT.—A hoozier walked into a country store on the banks of the Ohio River, and asking the owner if he had any good powder, he was answered in the affirmative. "Is it first-rate?" "First-rate, sir," was the reply. "I will take a quarter of it to try." He got his powder, stepped out of the store, loaded his rifle, looked around to find an object to shoot at, when the storekeeper pointed to the opposite side of the river (which was about 300 yards wide), where there was a goose picking grass. "There," says he, "shoot that goose!" The hoozier levelled his rifle, fired, and over tumbled the goose. A boy jumped into a boat, and soon brought the goose across the river. The ball had passed through its head. The hoozier shook his head, walked into the store, threw his powder down, and demanded his money back, grumbling—"You sold me this powder for first-rate, and it ain't worth a curse!" "How so?" inquired the storekeeper, "You have certainly made an excellent shot"—pointing to the goose's head. "That a shot! why, if the powder had been good I should have shot it through the eye! Don't you see that the ball is full a quarter of an inch below it?" The storekeeper at once returned him his money.

"Those notes enliven me," as the man said on receiving a remittance.

JEM BURN'S CRIBB.

We this week present a portrait of JEM BURN's celebrated dog CRIBB, out of LADY SANDWICH, presented to JEM BURN by CAPTAIN VERNON, aged 10 years; he is on the sire's side of the celebrated TUMBLER breed. The owner still preserves the breed, at his rural crib in the Fulham Fields.

### WRINKLES FOR THE GROOM.—NO. III.

#### **DIRECTIONS FOR MANAGING A HORSE DURING A JOURNEY.**

Previously to setting off on a journey the horse should be brought into good condition, by being worked out for two hours every morning, and fed as I have directed in the chapters on feeding and exercise. The feet should be carefully attended to, and, if they are dry and brittle, the soles should be stopped a few days with cow dung, then pared rather thin; and, for about a week before he begins his journey, the feet should be kept stopped with tar-ointment, which is then much better than clay or cow-dung, and, in the course of a week, will considerably improve the quality of the horn, and tend, in a considerable degree, to cool the feet. This ointment is of great use, also, about the heels of the frog and coronet, especially when they are dry and cracky. A horse had better be new shod about the same time; for, when it is done just before he sets off, the shoe may not fit exactly, or a nail may be driven too close, and the horse be found lame in consequence during the first or second stage. The saddle, or harness, should be carefully examined, as much inconvenience sometimes arises, during a journey, from saddle or harness galls. The most important thing to be attended to, during a journey, is the method of feeding, as, by improper management in this respect, not only great inconvenience and delay often arise, but sometimes the most serious diseases are the consequence. The hay should be examined, and the best that can be obtained should be given. It is usual not to limit the horse in hay; but leave that part of his diet entirely to the discretion of the ostler who takes care to keep the rack full. If a horse travels every day from ten to twenty miles, one peck and a half of corn will not be too much for him, provided he has only about eight pounds of hay; and the less hay he has the better; for, by distending the stomach, a morbid appetite is produced, which leads a horse to eat and drink much more than is proper for him, and this often proceeds to a depraved or voracious

appetite, which leads him to eat even his litter. While I was in practice at Exeter, and attended the horses of commercial travellers, I met with numerous cases of cough, broken wind, gripes, and other diseases produced by this cause. So common, indeed, is the practice of giving too much hay, that most horses have a greater appetite than in the natural healthy state; the capacity of the stomach having been increased by frequent distension, and the capacity of the lungs, or wind, not unfrequently proportionably diminished. When a horse comes in from a stage, the feet should be picked and examined the first thing; and the common practice of tying up a horse at a stable-door, and washing his legs, is not injurious, if the horse is cool, and has been walked quietly in; but he should never be taken to a river to be washed. The horse should never be put in a hot close stable, however comfortable it may appear, nor in a dark stable desirable, unless a horse is very tired, and then, perhaps, he lies down more readily. When there is no work for a horse, he should always be taken out, and have one hour's exercise, at least, early in the morning; he may then have his full feed without injury, and be perfectly fit for the work he is wanted for; but when this cannot be done, especially for two or three days, he should have less corn, and some cold mashes.—WHITE'S FARRIER, by Spooner, 17th edition.

#### THE SIZE OF HORSES.

Most persons have heard the remark that the smallest cows in the pasture yield most milk. It is, with a qualification, true, and the result of observation and experience for many years; and most owners of stock are ready to assent to its correctness. This is the case also in breeds of horses. Those above what are called middle-sized are not so good travellers, they are more liable to stumble, and they are less capable of enduring hardships than those of middle and under size. It is also observed that large horses require richer food than small ones to keep them in good working condition.

If we were required to give a reason why middle-sized animals of all

kinds are better than the largest, we should answer that nature must not be wholly disregarded. Nature never intended that the horse should be made to weigh as much as the elephant, nor the cow should have as large bones as the ox. By crossing and selecting the very largest animals for breeders—not permitting them to have progeny until they are fully grown, and by high feeding, we can produce monsters in size and weight. But monsters are not agreeable to nature's rule. Monsters are exceptions to nature's law.

In directing our efforts, therefore, to the increase and size of animals, by extraordinary means we build up an artificial frame; and this requires extraordinary care—artificial support. We find that the largest horses will never be in so good condition as small ones, with the same kind of keeping, either in pastures or on hay. We have raised them above their natural level, and we must use extra means to keep them there, or they fall away.

This is the reason that we offer to account for the known fact, that all the animals of the middle or ordinary size are more useful, more active, and more easily kept in good condition, than the largest are.

Heavy, large-boned horses are clumsy, and are more apt to stumble than small ones; and when they do fall their burthen is precipitated with more violence in proportion to their height. Small-boned animals require less food in proportion to the service they perform, and they are not half so likely to become lame as the largest samples are.

It is a remarkable fact that short-legged horses, as well as oxen, travel better and endure hardship longer, on a journey, than horses with long legs. This is also the case with the human species. Experienced officers know that the longest-legged soldiers cannot march so far as those that are not distinguished for length of shank.

#### SELECTION OF HORSES.]

There are many points to be observed in the selection of a horse for use, and it is not easy to lay down rules on paper that alone will serve for a guide. We sometimes purchase compact, snug-built horses that are hardy and tough; but they cannot go ahead. These may answer on a farm, but not on the road. If we go to the opposite extreme, we run the risk of buying those that have not sufficient bottom or endurance.

Well-built, compact frames are always to be preferred for service; and it is a good sign in a horse if he weighs more than you would judge from his appearance; because well-built horses, houses, monuments, &c., having good proportions—no ugly prominences—always appear less than they really are. A well-formed, well-proportioned man or woman will always weigh more than you would suppose. For the same reason dress has much effect on the eye in judging of size. A lady with wide stripes in her gown looks larger than in one of a uniform colour. A man in striped trousers and coat looks larger than in plain clothes. Speckled oxen and horses look larger than they really are. Irregularity of colour, as well as of form, makes the eye wander and distracts the judgment.

It is important to a purchaser to know how a colt has been bred; whether to stand on a plank or stone floor; or on loam or litter that would not injure his feet. It is believed that corns and ringbones are produced by standing on hard and dry floors. Dealers are sometimes so cunning that they will put off ringboned horses in seasons when their lameness is not observable. Press your hand on the upper edge of the hoofs of the fore feet, and see if the horse flinches—at the same time look the dealer in the eye and see if he does.

#### COLOUR OF HORSES.

This point may be thought a mere matter of taste, but it is not so. Who ever knew a black and white horse to earn his living? The iron grey is a very good colour for a horse. It is a strong indication of health as well as activity. Bay, or chesnut, is a handsome and promising colour; the mane and tail being black. A deep sorrel is not a bad colour, but a light sorrel is indication of a want of strength and endurance. White horses often prove good; and black ones are not to be rejected on account of colour.

The quality of the hair is quite important, as indicating the stamina of the horse. Fine glossy hair denotes a good skin and a good constitution. Fine haired horses and oxen will endure heat and fatigue much longer than others. A coarse yellow haired ox makes the tenderest beef; but such haired animals are not good for labour, nor will their hides make so tough leather as hides covered with the finest hair.

In regard to white spots and marks, as indicative of valuable qualities, we can say but little, though we have seen dealers who value them. One white foot and three white feet are said to be good signs, while an even number of white feet are said to be bad signs—these may be as uncertain as the signs in the almanac. A white star in the forehead, or a narrow streak of white in the face is not considered a bad sign, but a white faced horse is never sought for, if regard is had to beauty, speed or endurance.

HARES AND RABBITS.—Rags, dipped in melted sulphur, are the best means of preventing the destruction to trees, caused by these animals. Let the rags, cut into slips nine inches by six, be put into cleft sticks, two feet long, which should be stuck in the ground, about six inches deep, and about three yards apart, all round the trees intended to be protected.

#### A PURSUIT BY WOLVES.

One among the many instances that can be adduced, of the tenacity with which a pursuit is kept up by these animals, the following may be found worthy of the perusal of our readers.

During a severe winter, several years ago, two boys were driving a sleigh through the woods in the northern part of Vermont. The season was uncommonly cold, and the snow lay at the average depth of five feet. But the boys were hardy fellows, accustomed to the climate, and, moreover, were well wrapped up in furs. They had occasion to pass from one town to another, where a portion of the road led through a dense forest, for four miles, without a single house. Soon after they had entered upon the solitary portion of their journey, they were startled at hearing the gruff, husky bark of a wolf in the adjacent thickets. In a few moments, the animal sprang out from his cover, and came rushing to the side of the sleigh, making a desperate plunge at the elder body, who was driving. The youth gave the furious brute a rough salute with his whip, and for a moment the animal slunk back—the boy taking advantage of this to put the horse to the utmost speed. The animal was, however, too jaded for anything better than a smart trot to be extorted from him. The wolf soon rallied, and now renewed his attack, accompanied by one of his companions. He again assailed the driver, while the other came up to the back and threatened to leap into the sleigh. At last, the horse noticed the savage growling wolves; and now, being seriously frightened, he broke into a round gallop. The wolves still pursuing, kept by the side of the sleigh, occasionally making a fierce leap for the purpose of springing into the vehicle. The two boys had no weapon of defence but the whip, yet they carried a brave front. In one or two instances, the pursuers had partially succeeded in mounting the sleigh but they were knocked off by the butt-end of the whip. It was, however, a serious race, and the little fellows saw their danger was extreme. By the time they had passed one half the forest, and while they were yet two miles from any house where they could hope for assistance, the wearied horse began to relax his speed, and the wolves, as if rendered desperate by strife, became even more furious than before. Laying down, and sheltering themselves as well as they could, or starting from side to side, as occasion required, in order to escape the fangs of the foe, the boys continued their course. It seemed, however, that they must at last be overcome, and fall victims to their fierce assailants. Nothing indeed could have saved them but a most unexpected accident, and one which might have seemed to expose them to certain death.

While the horse was advancing with considerable speed, he came to a short turn in the road; cramped by the ridges of snow on either side, the sleigh was thrown out of the track, and, rising with a sudden bound, was completely overturned, and thrown to a considerable distance—the two boys caught beneath as in a trap. The edges of the board sank deep in the snow, and the impulse of the horse, snapped the traces in an instant. He was liberated and pursued his career rapidly towards the village.

The wolves were at first disconcerted by the adventure, and hesitated whether to pursue the horse, or to investigate the wonderful disappearance of their intended victims. After smelling about for some time, they comprehended the real state of the case; and now began a regular siege upon the intrenchment which had been so luckily provided for the two boys. The latter were a little stunned at first, but they soon appreciated their condition, and saw the advantage which their present stronghold afforded for defence.

Turning round and bedding themselves in the snow, so as to obtain a comfortable position, they determined to continue where they were, until relief should come, which they hoped might speedily take place. They had not long space for deliberation; the growling of the wolves was soon audible, and a few minutes after they heard them pawing furiously in the snow, at the sides of the capsized sleigh. The elder boy had a jack-knife, which he now got ready, and, placing himself on his knees, prepared to give the enemy a sharp reception.

In a few minutes the paws of one of the wolves were seen below the edge of the sleigh. Clinching one of them, the resolute youth pulled it in with all his might; but as he was about to ply his knife, the limb was wrenched from him.

The two animals wrought at their task with incredible energy. Although a thick sharp crust lay upon the top of the snow, this was immediately torn away by their feet, and in a short space they were already below the edge of the sleigh, and on the point of grappling their prey, when their attention was called to their own safety. The horse had reached the village and an alarm had been excited. The people hurried along the road, and soon came to the scene of action.

So intent were the wolves upon their object—so reluctant to surrender the prey which seemed within their grasp, that they faced two men for a considerable time, and did not finally retreat till they had received several severe blows. With a reluctant growl they took to the wood, and the two boys were safely delivered from their imprisonment.—*Magazine of Natural History.*

FISH AND FLOWERS.—When is a nosegay a fish?—When it's smelt!  
AGAIN.—When is a nosegay literary?—When its a Book—eh?

**RELIGION, RAILWAY SPECULATION, AND HORSE-RACING.**—The editor of the *Liverpool Chronicle*, writing of the present mania for railway speculation, observes—"It is a riddle which we cannot comprehend, when we see men, who would decry a bet on a horse-race as an abomination never to be got over, and even the transfer of a sixpence by the means of threepenny points at whist as an unpardonable sin, rushing, under the most insatiable influence of Mammon, into speculations which, they know, can only turn to their profit by effecting the ruin of hundreds of their fellow-creatures. We cannot understand the mental construction of such "pick and choose" saintship. Surely if it be wrong, to back Tom Tinker against Alice Hawthorn for a five pound note, it cannot be right to back the Grand Goose Line via Cape Horn to China, against the Big Cheat'em plan which is to go by Greenland and the North Pole, for a couple of hundred thousands. It may be that these gentry only consider gambling to be a sin when administered in infinitesimal doses, but regard it as a virtue when it grows into magnificence and comprehensiveness, and contemplates the total ruin of its victims as its result. At all events, the subscription list we are speaking of [the parliamentary return of railway shareholders to the amount of more than 20000.] bears ample testimony to the fact, that when *pious* and *religious* men do take to gambling, they do not enter upon the thing by halves, but throw Ascot, Epsom, Doncaster, and Newmarket—Crockford's is but a drop of water in the ocean compared with them—into the shade at once and for ever.

**ORIGIN OF THE JOCKEY CLUB.**—By A FORMER MEMBER.—There appears very little on record of the origin of this society of noblemen and gentlemen, beyond the fact of its first establishment in 1768; the following whimsical remarks upon this interesting subject, are from the pen of "An Old Member," who says:—"The original founders were a set of dignified mathematicians and natural philosophers, who, to wipe off the aspersions usually thrown on persons of their quality, that they are altogether ignorant of everything like science, or mere smatterers at best, agreed to hold periodical meetings, the result of which should prove to the world that they were not only well read, but *practically* conversant in these things. For this purpose they commenced their studies in 'natural history' upon that noblest and most beautiful animal of the brute creation, the 'horse,' and, as a proof that they are something more than superficial observers of nature, their physical investigations have not, since the year of their institution, 1768, extended beyond this creature, convinced, as they seem to be, that true philosophy cannot dwell too long upon one subject; and possessed of this idea, it appears to be their unanimous determination to devote their whole study, as naturalists, to no other. Their mathematical pursuits have been entirely occupied in the doctrine of 'chances'; but in this, as in their natural history, they have rested more upon practical experience than vague theory. Their first knowledge on this subject was obtained from the Jesuitical sect of 'Blacklegs,' who, for a series of years confined it to themselves, till by a masterly manoeuvre of 'the right honourables,' in pretending to become 'novices' of the society, they obtained their secrets, and instituted this establishment upon their principles. The principal object of their first meeting, was, as before stated, in 1768, after electing officers and arranging the standing articles of their league, to establish an annual subscription of five guineas each, for the purpose of raising a sufficient sum to be laid out in the purchase of a Gold Cup, to be run for by horses the property of members, at their immediately succeeding meeting, by which means they might be enabled to contemplate the mechanical powers and muscular beauty of their favourite quadruped to greater advantage. However, it does but ill-become me, as a former member, to be too much in the line of burlesque on the occasion; but your readers will naturally conceive from what has been said, that a man must be possessed of qualifications superior to birth and fortune to fit him for a society of such respectability as the jockeys. They have read, perhaps, in the public prints probably, of the philanthropy of one, the learning of another, and the taste of a third for the sister arts and polite literature, and they will naturally conclude, that in even their cups they enjoy 'the feast of reason and the flow of soul;' but they are so absorbed in the vastitude of their 'peculiar studies,' that like all other mathematicians, they have little time, or, indeed, disposition, to dabble in less abstruse sciences, particularly at their meetings."

**THE CAPE BUFFALO.**—This animal is nowhere to be found but in the southern parts of Africa, and is now rare even there, civilisation driving it into more distant, and for a time, secure retreats. It is characterised by its great dark rough horns spreading horizontally over the summits of the head, with the points turned upwards. These horns are extremely heavy, and measure from five to eight or nine feet, following their curve from tip to tip. The countenance of the animal exhibits a savage and malevolent expression. Its bulk is great, and this is equalled by its activity and strength: its withers are high; its tail resembles that of the common ox, but is shorter; its hide is unusually strong, and is on this account much valued. It is of so fierce and treacherous a disposition, that to attack it without extreme caution and a ready means of escape is highly dangerous. This is well illustrated by the following anecdote:—A party of boors went out to hunt a herd of buffaloes which were grazing on a piece of marshy ground. As they could not conveniently get within shot without crossing a marsh, which did not afford a safe footing for

their horses, they agreed to leave them in charge of the Hottentots, and to advance on foot, thinking, that if the buffaloes should turn upon them, it would be easy to retreat by escaping across the quagmire, which, though passable for man, would not support the weight of heavy quadrupeds. They advanced accordingly, and under covert of the bushes approached with such advantage, that the first volley brought down three of the fattest of the herd, and so severely wounded the great bull leader, that he dropt on his knees, bellowing furiously. Thinking him mortally wounded, the foremost of the huntsmen issued from the covert, and began reloading his musket, as he advanced to give a finishing shot; but no sooner did the infuriated animal see his foe in front of him, than he sprang up, and ran furiously upon him. The man, throwing down his gun, fled towards the quagmire; but the beast was so close upon him, that, despairing of escaping in that direction, and turning suddenly round a clump of copse-wood, he began to ascend a tree. The raging animal, however, was too quick for him, and, bounding forward with a frightful roar, he caught the unfortunate man with his terrible horns just as he had nearly escaped his reach, and tossed him into the air with such force, that the body fell dreadfully mangled into a cleft of the tree. The buffalo ran round the tree once or twice, apparently looking for the man, until, weakened with loss of blood, he again sank on his knees. The rest of the party, recovering from their confusion, then came up and despatched him, though too late to save their comrade, whose body was hanging in the tree quite dead.—*Pringle's South African Sketches.*

**THE POWER OF TRUE LOVE.**—A girl in one of the Midland Counties, who has a *swivel* or *screw eye*, looked so long and affectionately on a gin bottle, that she actually drew the cork!

### A SEXAGENARIAN'S VIEW OF THINGS IN GENERAL.

"There's not a joy this world can give, like that it takes away!"—BYRON.

I've ta'en the nest!—Then—how enrich'd!  
(Look! five blue eggs are gleaming there!)  
I've fought a wasp's nest, newly breech'd,—  
And gone, excited, through the air!  
I've kept a jackass—kept a fag,—  
I've fought a lad with all my might;  
I've bath'd,—and lost each grass-bank rag,—  
But now I take a calmer sight!

I've baited badgers,—baited bulls,—  
Tried quoits,—thrown up in slanting rings!  
Play'd hazard,—never minding *pulls*,—  
Ecarté,—never minding kings;  
I've seen Dick Fleming handle cocks  
Gracefully,—neath a mere dip's light;—  
But all these luring things are—rocks!  
I now can take a calmer sight!

I've touch'd the cider cellar late,—  
Supp'd with a Jackson, and an Earl;—  
Slang'd a dawn pike-man at his gate,—  
And made it up with early purl.—  
I've tried the things of fins and wings,  
Hook'd,—and brought down them, left and right;  
I've sprung a glorious night at *Spring's*—  
But now I take a calmer sight.

I've watch'd dark eyes by lobby-glare,  
And (all rose-soften'd) *thought* them eyes!  
I've deem'd a chambermaid all fair,  
And watch'd her warming-pan with sighs;  
I've shudder'd at the covert's side,  
Yet thought the chill, in scarlet, right:  
I've panted for the bullfinch ride,—  
But now I take a calmer sight!

I've seen the blood-thing start and win—  
Rush at the word, and keep the van!—  
Seen the stripp'd man, with glowing skin,  
Stand, in the sun-light, 'gainst his man!  
Seen the day die on Epsom Down —  
(O'er faded spirits faded light!)  
Oh! then I thought life all my own:  
But now I take a calmer sight.

No more a boy,—no more a boy;  
The turf,—the sod, the follies fly;  
The green baize cannot bring a joy;  
Dark knowledge glooms the heart and eye.  
Passion so mads the early games,—  
It spreads o'er reason all its blight!  
But seventy-eight the spirit tames!  
And I can take a calmer sight!

SERENISSIMUS.

# ADVERTISEMENTS.

**THE NAUTILUS LIFE-PRESERVER**  
and SWIMMING BELT.—No Lady or Gentleman should cross the water or go to the seaside without obtaining this small, simple, and valuable apparatus, unsurpassed for buoyancy, portability, and efficiency, and approved by the Admiralty, and all nautical and scientific men. The Nautilus may be procured, of any size or quality, at the Office of the Company, 12, Wellington-street, Strand.

**THE NEW RACE GLASS.** To be had only of the inventors, **THOMAS HARRIS and SON**, Opticians, No. 52, opposite the entrance to the British Museum, London. The extraordinary magnifying power of this glass, with its approved adjustment, made to suit all sights, enables the possessor to keep the horses distinctly in view, the entire course, from the start to the coming in. Caution: No. 52, opposite the British Museum, London, is T. Harris and Son's only establishment. To prevent mistake, the name, *Thomas Harris and Son*, and the number (52) is laid in mosaic pavement in the footway contiguous to their shop.

**TO THE LOVERS OF ANGLING.—J. K. FARLOW**, 5, Crooked-lane, London-bridge, being the actual manufacturer of Rods, Flies, Tackle, &c., is enabled to offer to his brother Anglers, the following low list of prices: four joint hickory trolling rods, 10s.; four joint best hickory trawling and bottom rods, two tops, partition bag, double braided socket, spear, &c., &c., 21s.; three joint walking stick rods, 2s. 6d.; best hickory or cane punt rods, two tops; 15s.; the best town made taper fly line, twenty yards, 3s.; thirty yards, 4s. 6d.; thirty yards patent eight plat, 3s. 6d.; the best trout flies on Limerick hooks, dressed on the premises, 2s. per dozen; winches from 1s. 6d.; fly hooks from 9d.; best gut hocky 1s. per dozen; best gut lines 3d. and 3d. a yard. Lists of prices forwarded on application; country and export orders executed on the shortest notice; old-netting for preserving fruit trees from frost, blight, and birds, or as a fence for fowls and pigeons, and can be had in any quantity at 3d. the yard, two yards wide, or 1 1/2d. the square yard; the above netting being tanned, will stand exposure to the weather.—Observe the address, 5, Crooked-lane, London Bridge.

**BROTHER ANGLERS.—HUTCHINSON and SMITH**, 67, Wood Street, Chappaiside, beg leave to offer to their Brethren of the Angle their unique Basket Seats, being light, commodious, useful, and a sure prevention against damp. Also their novel Glass Beach Flots, each, hermetically sealed; balance handle fly rods, 21s.; warranted; cane roach rods, trolling rods, winches, lines, floats, cans, hooks, &c., and every article in the above line at the lowest prices, and best quality. Live and all other kinds of baits always fresh. Gentlemen supplied with every information of any fishing water within 20 miles of London.—Observe, 67, Wood-street, Chappaiside.

LONDON:—Printed by JOHN WORTHAM, of No. 378, Strand, in the Parish of St. Mary-le-Strand; and published at the Office, 42, Holywell-street, Strand, by W. DUFFLE.—Thursday, September 11, 1845.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 19. FOR THE WEEK ENDING SEPT. 27, 1845. **THREE HALFPENCE.**

[Stamped to send Free by Post, Twopence-halfpenny.]

GEORGIANA CHARLOTTE THEOBALD, *Obit*, Sept. 13, 1845, AGED 29.

Beauty is nature's pride, and must be shown  
In courts, at feasts, and merry meetings,  
Where most may wonder at the workman's hip.  
It is for lovely features to keep home,  
They had their name thence; coarse complexions,  
And cheeks of sorry grain will serve to ply  
The sampler, and to tease the housewife's wool.  
What need a vermell-tinctured lip for that,  
Love darting eyes, or tresses like the moro?

COMUS.

**A**Ll that's bright must fade; the brightest still the fleetest,"  
is, indeed, too true. The finest field flower has been cut  
down in its prime; and the gay, the beautiful, the high-spi-  
rited, the charming, the charitable, the true-hearted Geor-  
giana Theobald, the Diana of the hunting field, the star of  
the assembly-room, the ornament of the race-course, the

admiration of all circles, and the idol of her own, has been snatched from  
among us in the full glow of youth and generosity by one of those fatal  
and inglorious chances which make us feel that—

The spider's most attenuated thread  
Is cord, is cable to man's held of life!

Georgiana Charlotte Theobald, was the daughter of Major General  
Sir Amos Norcott, of the Rites, and formerly Governor of Jamaica.  
Married at an early age to the well-known Mr. Theobald, of Stockwell,  
the proprietor of some of the best horses on the turf, she shone as a  
bright and cheering light, in the circle which she as a wife adorned.  
To the world she was best known as a fearless horsewoman, and it was  
to a predilection for this fearful accomplishment that her melancholy  
death is to be traced.

Her attire and appointments were always of the choicest description,

and her steed one beautifully adapted both by nature and art, both in size and training, to receive the gentle burden it had to carry. This lady's style of riding was masculine in its undaunted bravery, but truly feminine in its grace and elegance. Her person—but why describe that with our pen, which our artist has so happily depicted with his pencil?—was perfection; that one word has economized a hundred. Her charms were—oh, that we should write *were*—admired wherever known, and known wherever civilization has advanced, and the value of female loveliness is recognized. Mrs. Theobald was of the *Diana Vernon* cast of beauty. The ideal of Scott found a brilliant realization in the form of this fair personage; and, on horseback, we know of no woman—Miss Woolford not excepted—who so fully entered into the spirit of the course. At that period of life when female charms have reached their full development, and when the judgment and the figure are alike matured, this lady had an advantage over the *belle* contemporaries of the day, which must be universally admitted. It is to this pre-eminence of attraction that Mrs. Theobald was indebted for her high reputation amongst the coteries of town and country, and ever foremost in the rank of benevolence. Mercy, indeed, is here twice blessed, both in the giver and the receiver. At Ascot and Epsom, crushing the heath-flower on the course of the one, and trampling the gorse on the Downs of the other, Mrs. Theobald and her charger were invariably found, lending fresh spirit, and imparting renewed attractions, to the beauties of both those favoured spots. Royalty itself has even deigned to acknowledge the presence of charms which might well keep the world in awe; and the highest male personage in these realms testified, by his attentions, the estimation in which he held a being so wondrously and beautifully framed.

The melancholy particulars of her fatal accident will be found in our stamped edition.

## CORRESPONDENCE.

### THE SLANDERERS OF THE TURF.

Sir,—At the last past Derby races, some excitement was caused by the issue of hand-bills, purporting to be extracts from a speech of the Reverend E. H. Abney, vicar of St. Alkmund's, at the Lancasterian school-room, on February the 18th, 1845, against the re-establishment of races at Derby. Now on a careful perusal of these extracts they exhibit, as the generality of such speeches do, the most conscious denunciations against this peculiar feature of our national sports.

In one place the reverend rector says, "He could speak from his own experience of the bad effects resulting from races. He lived in York, when races were held there, and such were the evils that followed them, that the inhabitants of that place had not recovered from their effects before the period of their recurrence."

Oh! most sagacious Solon, you must indeed have a narrow mind; or, what seems almost as bad, a narrow education, thus to libel the inhabitants of York. We would ask the reverend gentleman one question upon this point; Pray of whom did you get that opinion? Was it from some sour hypocritical puritan? or, from some pious shop-keeper, who, during the races, shut up the front of his shop and sold goods out of the back door, so as not to incur the charge of inconsistency? It is a notorious fact, that more trade is done in a town during the racing season, than during the whole round of the year, and that the tradesmen of many towns would be glad to establish a per-centage for a race to be established near their location. As to their not recovering from its effects before the period of its recurrence; bah! you may tell that to the marines, but it won't do for the sailors.

In the next place the reverend anti-cursor says:—"From circumstances which had recently taken place connected with races, it had been made fully manifest, that they were most degrading and demoralising in their character. He would ask who were the persons that were so zealous for races? *Not respectable people.* It was always found that they were persons whose characters were defective or immoral. He had no hesitation in saying, that, taken as a whole, the frequenters of races were a mass of unredeemed, unmitigated blackguards! He said this respecting those persons who generally attended races. They choose not only to debase themselves, but they were instrumental in assembling large masses of the worst characters together, and thus they demoralised the whole community." No doubt the reverend gentleman felt a glow of pious excitement when he delivered this passage; he says, "The frequenters of races are a mass of unredeemed, unmitigated blackguards." Extremely loyal, Mr. Abney, to call his Queen and her Royal Consort, the Royal Family, and the Royal Families of Foreign Nations, and, the most noble families of England, "A mass of unredeemed, unmitigated blackguards." It is a good thing that Mr. Abney did not live in the days when the Godolphin Arabian ran: at that time he would have had his ears cut off and nailed to the pillory for *Scandalum magnatum*. But this is not all, the reverend denouncer says that, "they demoralise the whole community." It is very evident that Mr. Abney is a man who has not paid much attention to the subject matter of his address, or else he would use more moderate language, for nothing can justify such coarse and virulent language from the lips of a clergyman,

who should be no "brawler," but whose speech should be "seasoned with salt, and be an example to all hasty and unlicensed tongues." Trusting these few lines will be thought to the purpose.

I am, Mr. Editor, yours,  
PHILOCURSUS.

## IRISH FISHERIES.

Sir,—As a correspondent of yours has made an inquiry on this subject, permit me to reply to him through your medium. The river fisheries of Ireland though conducted with very bad management, (with a few pleasing exceptions, which are generally confined to large landed proprietors, who find it to their interest to preserve their waters,) nevertheless, form, in several parts of Ulster, a very lucrative source of property. The want of proper management of the rivers is the more to be regretted, as they for the most part abound in an extraordinary degree with trout, pike, perch, eels, and char; and the Bann, the Foyle, and the Ballyshannon, in Donegal are well stocked with salmon.

The salmon fisheries of the Bann and the Foyle were very early celebrated. In Phillips's MS. they are stated to have been let from 1609 to 1612 at 666l. 13s. 4d. a year! The right of fishing in the river Foyle, as far as Lifford, is vested in the Irish Society, and tickets can be obtained from the members. The season for salmon fishing throughout Ireland, by the present law, begins on the 1st of February, and ends on the 1st of September. Seven months being open, and five close. On the Bann river the facilities for angling have been greatly improved under the able and judicious management of Charles Atkinson, Esq.

I am, yours obediently,  
F. B. THOMPSON.

## LICE IN DOGS.

London, September 9th, 1845.

Sir,—In reference to a query from your correspondent, G. M., on the best means for destroying lice in dogs, I beg to reply to him. Lice in dogs is invariably caused by proper care not being taken to keep the dog in a proper state of cleanliness. And besides producing lice, this neglect, if long continued, will cause the ruin of the dog. The best remedy is the following:—

Take a sufficient quantity of lard, and rub it well into the dog's body, especially the hind and fore-quarters; then chain him up for half-a-day, so that he cannot lick himself. Then loose him, and bathe him in hot water; but not hotter than you can bear your hand in; wash the lard well out, leaving no more grease on the body than you can possibly help. Repeat this treatment every day for a week; giving the dog after every washing, three grains of blue pill.

I am, Sir, yours obediently,  
F. B. THOMPSON.

**BAY CHILDERS.**—Amongst the various honours connected with the turf to which Doncaster can lay claim, is that of having sent forth into the sporting world the most celebrated race-horse of the period, Bay Childers. He was bred towards the middle of the last century, by Leonard Childers, Esq., who occupied at that time the residence of the family, Carhouse, in the immediate vicinity of this town. An anecdote, which is nowhere related in the accounts hitherto given of this horse, may here perhaps be read with some little local interest. The late John Woodyear, Esq., of Crookhill, when a young man, happening one day to be riding through the lanes adjoining some part of the Carhouse estate, attended by his groom, perceived in one of the fields at a little distance from the spot, a brood mare pacing to and fro upon the bank of a dike or deep ditch, apparently in much agitation and distress. Stopping to ascertain the cause, he observed a young foal splashing about in a vain endeavour to extricate itself from the unnatural element into which it had accidentally fallen. Mr. Woodyear immediately hastened to its succour, and, with the assistance of his servant, soon succeeded in rescuing from an untimely end what was then regarded no farther than a lackless foal, but turned out, in after-life, to be the fleetest racer of his day, and acquired for himself the well known appellation of the "Flying Childers." He became the property of the Duke of Devonshire, and is said to have been first trained as a hunter; but, at five years old, the superior speed and courage which he discovered caused him to be transferred to the turf—where, common report affirms he could run a mile in a minute.

**NEW NEWSPAPERS.**—The spirited proprietors of the "Iron Times" are about to publish a "Wood Herald," a "Cotton Chronicle," a "Steel Advertiser," and a "Zinc Post."

**THE CAUSE OF THE LATE BAD WEATHER.**—M. Arago has discovered that the inclemency of the weather in Paris is occasioned by certain blocks of ice floating about in the Atlantic. From this we may infer that the cold weather which we have lately experienced has arisen from the large quantities of Wenham Lake Ice which are daily carried about the streets of London.

## THE NATURAL HISTORY OF SPORTING.

THE HARE.

**H**IS little animal is found throughout Europe, and indeed in most of the northern parts of the world.—Being destitute of weapons of defence, it is endowed by Providence with the passion of fear. Its timidity is known to every one: it is attentive to every alarm, and is, therefore, furnished with ears very long and tubular, which catch the most remote sounds.—The eyes are so prominent, as to enable the animal to see both before and behind.

The hare feeds in the evenings, and sleeps in his form during the day; and as he generally lies on the ground, he has the feet protected both above and below, with a thick covering of hair. In a moonlight evening, many of them may frequently be seen sporting together, leaping about and pursuing each other: but the least noise alarms them, and they then scamper off, each in a different direction. Their pace is a kind of a gallop, or quick succession of leaps; and they are extremely swift, particularly in ascending higher grounds, to which, when pursued, they generally have recourse: here their large and strong hind legs are of singular use to them. In northern regions, where, on descent of the winter's snow, they would, were their summer fur to remain, be rendered particularly conspicuous to animals of prey, they change in the autumn their yellow grey dress, for one perfectly white; and are thus enabled, in a great measure, to elude their enemies.

In more temperate regions, they choose in winter a form exposed to the south, to obtain all the possible warmth of that season: and in summer, when they are desirous of shunning the hot rays of the sun, they change this for one with a northerly aspect: but in both cases they have the instinct of generally fixing upon a place where the immediately surrounding objects are nearly the colour of their own bodies.

In one hare that a gentleman watched, when the dogs were heard at the distance of nearly a mile, she rose from her form, swam across a rivulet, then lay down among the bushes on the other side and thus evaded the scent of the hounds. When a hare has been chased for a considerable length of time, she will sometimes push another from its seat, and lie down there herself. When hard pressed, she will mingle with a flock of sheep, run up an old wall, and conceal herself among the grass on the top of it, or cross a river several times at small distances. She never runs in a line directly forward, but constantly doubles about, which frequently throws the dogs out of the scent; and she generally goes against the wind. It is extremely remarkable that hares, however frequently pursued by the dogs, seldom leave the place where they were brought forth, or that in which they usually sit; and it is a very common thing to find them, after a long and severe chase in the same place the following day.

The females have not so much strength and agility as the males: they are, consequently, more timid, and never suffer the dogs to approach them so near, before they rise as the males. They are likewise said to practice more arts, and double more frequently.

This animal is gentle, and susceptible even of education. He does not often, however, though he exhibits some degree of attachment to his master, become altogether domestic; for although taken very young, brought up in the house, and accustomed to kindness and attention, no sooner is he arrived at a certain age, than he generally seizes the first opportunity of recovering his liberty, and flying to the fields.

Whilst Dr. Townson was at Gottingen, he had a young hare brought to him, which he took so much pains with as to render it more familiar than these animals commonly are. In the evenings it soon became so frolicsome as to run and jump about his sofa and bed; sometimes in its play it would leap upon and pat him with his forefeet, or whilst he was reading, even knock the book out of his hand. But whenever a stranger entered the room, the little animal always exhibited considerable alarm.

Mr. Borlase saw a hare that was so familiar as to feed from the hand, lie under a chair in a common sitting-room, and appear, in every other respect, as easy and comfortable in its situation as a lap-dog. It now and then went out into the garden, but after regaling itself always returned to the house as its proper habitation. Its usual companions were a greyhound and a spaniel, both so fond of hare-hunting, that they often went out together, without any person accompanying them. With these two dogs this tame hare spent its evenings: they always slept on the same hearth, and very frequently would rest itself upon them.

Hares are very subject to fleas. Linnaeus tells us, that cloth made of their fur will attract these insects, and preserve the wearer from their troublesome attacks. In India the hare is hunted for sport, not only with dogs, but with hawks, and some species of the cat genus. The flesh, though in esteem among the Romans, was forbidden by the Druids, and by the Britains of the early centuries. It is now, though very black and dry, and devoid of fat, much esteemed by the Europeans, on account of its peculiar flavour. The female goes with young about a month; she generally produces three or four at a litter, and this about four times in a year. The eyes of the young ones are open at birth: the dam suckles them about twenty days, after which they leave her, and procure their own food. They make forms at a little distance from each other, and never go far from the place where they were brought forth. The hare lives about eight years.

Some believe that hares propagate but once a year, but in the author's opinion they breed from February to the end of harvest. The doe chooses some thick dry brake, high grass, clover, or standing corn, to kindle in; her paps come forward under her belly than those of almost any quadruped; she does not long suckle her young; if she did, and had many, the udder would be drawn too big, and be inconvenient whilst the hare was running; she brings forth differently from the rabbit, her offspring being completely formed and quick-sighted the instant they are dropped. Among naturalists it is a received notion that the hare, especially the buck, seldom lives beyond seven years, and that when either is killed, another succeeds to occupy its place; whence derived the proverb—"The more hares you kill, the more you will have to hunt;" for when the buck and doe live undisturbed together a little time, they suffer no stranger to reside within their limits. It is also a well experienced truth, that some places are remarkable for being seldom without hares, and others, (although as likely, in all appearance to harbour them) rarely with any. Whether it is any particular excellence in the feed, in the situation for forming advantageously, for warmth, hearing, seeing, that induces them to prefer certain spots to others, or that on the death of a buck or doe, another succeeds, and they possess their usual circle, cannot be ascertained, but the fact is perfectly established.

(To be concluded in our next.)

## THE 'FISHER'S CREEL.

## HOW TO EAT A TROUT.

Mr. Editor—You have said much in your entertaining columns about eating fish. Allow me, with all due deference, to suggest a word or two, on what you should do with him when you've got him. True, in the first place, you should "catch your trout," before you even talk of eating him, yet, in this light communication allow me to consider him as already caught; thanks to your hints and instructions.

The rank of the trout, as a delicacy for the table, seems to have been placed very low by the ancients. It is, nevertheless, not a little singular, when the madness of the table was at its height, and the universe was ransacked for dainties, this beautiful fish, which is found in many lakes in the neighbourhood of Rome, should have been overlooked by the world's masters. The milts of "murena" were brought from one place, the livers of "scari" from another, and oysters even from our own remote Sandwich, to furnish forth the dishes of their feasts. Yet who would not resign the "brains of nightingales," the "rich paps of a pregnant sow," the "heels of camels," and the tongues of flamingoes, for a crimson-spotted trout, dressed after the recipe of honest old Isaac?

But *de gustibus non est*, &c., and so much influence have early habits and associations in fixing our tastes, that we cannot forbear giving an anecdote of our first monarch of the name of George, connected with taste in the matter of fish. "Vat ish ven man's fish is anodor man's poisson," said the Frenchman; and he was right. When George I. ascended the throne of England, his long residence in Hanover had given him some peculiarities in *gourmandise*. Among other gastronomic attachments, his Majesty was very fond of oysters, and had patronised the consumption of them very freely during his residence in Hanover. The distance from

their native beds, however (the method of keeping them in salt and water being not then introduced), prevented them from being so fresh as with us; but their *haut goût* had become familiar to the Hanoverians, and was by them identified with them as part of their excellence. On his Majesty's arrival, his pet luxury was not forgotten, and native oysters graced his board, of the choicest and latest arrivals. Day after day did the monarch bolt these grateful *bivalves*, and day by day did he swear, in choice German, that they were good for nothing. They were changed and re-changed, but to no purpose: at length some one suggested the true cause, and such a "dainty dish was set before the king" as would have caused an oyster-room waiter to be ejected at the window. But his Majesty, recognising the old flavour, pronounced them "good, very good," and thenceforward the monarch had them served with the requisite staleness. We take this pithy and "over true" anecdote to be worth a column of lucubration; and shall, without apology, return to our trout.

The moment a trout is landed it should be immediately killed; and so soon as you have arrived at home lay your fish on a cold stone.

Cold and crimping are the grand agents in preserving the firmness and flavour of all fish. It is, therefore, to these united causes, that we must attribute the firmness, almost amounting to crispness, of salmon and trout, when judiciously cooled; while, *vice versa*, softness, wateriness, and insipidity, are produced by injudicious treatment. Proceed we next to the process of cooking. We shall not here plagiarise the recipes of Walton, Heliaeus, and Kitchener; they are to be found in their respective works: we would merely suggest, as the powers above are said to send the vizard, while the ruler of the "nether realm" supplies the cooks, that no fisherman should be above knowing how to boil his fish, at any rate. Let the fish be well pumped upon for a few minutes, then, having ready the kettle of water with a handful of salt in it, when the water is *boiling properly*, and not before, place your fish in it; an average sized trout (one pound) will be "enough" in ten minutes. "A trout," as Colonel Hawker judiciously observes, "if possible, should always be dressed the day it is caught; and remember, that if this delicate fish is put to soak or soften over the fire in cold water, as is the general custom, it is spoiled. Care should moreover be taken that it is not suffered to remain in the water a moment after it is done."

We are pathetic and earnest in impressing this point, as our favourite fish hath lost much reputation through the evil treatment of the ignorant. Remember too, for we are not to give you the why without the wherefore, that our process is truly scientific and *secundum artem*; for, as Sir Humphrey Davy observes, boiling salt water attains a much higher temperature than fresh, hence the curd or interstitial matter of the flakes becomes more hardened by increase of heat. Let the reader store up this hint and I will give him a few more shortly, for which, if he have any taste, he will thank his gastronomic suggester,

ICHTHYOPHAGUS.

**REQUISITES FOR A GROUSE SHOOTER.**—A catalogue for some of the articles necessary to a Grouse Shooter's equipment may not be unserviceable. Dogs; fowling-piece, in case or bag; two extra pivots; a pivot-pricker; pivot-wrench; gun-rod, or cleaner; a small bottle of olive oil; some linen cloth and leather; powder-flask; dram-flask; shot-belt; bird-bag; a canister of powder; a quantity of shot, various sizes; a few pairs of woollen stockings; strong laced boots; or strong shoes and gaiters; dark shooting dress; copper-cups, and box; wadding; screw-turner; spring-crimp; a punch for cutting waddings; shoe-oil; straps, collars, couples, and cords for leading and tying up dogs; dog-whistle; dog-whip; a pocket-knife, with an instrument attached for unlacing boots; a pen-knife; a pocket-comb; some cord or string for tying up game; hampers, in which grouse may be packed between layers of heath; sealing-wax, and seal to mark birds when sent by coach or carrier; game certificate; card of permission, or other authority to produce to the gamekeepers; sandwiches; cigars; soda-powders; congreves; brandy. This bill of fare may not suit every one, there being few but would omit some of the articles, and fewer that would be content without adding to the list, since we have all our tastes and foibles; for example, one would leave out the cigars and substitute a canister of snuff; a small telescope, if no incumbrance, would afford amusement to another. However, the shooter should "run the items o'er" himself; trust nobody, and if he happen to possess a treacherous memory, or is otherwise too busily engaged in weightier matters to make a formal preparation for the autumnal campaign, the best advice we can afford him is, that before he travel northward, to compare the invoice of his outfit with the paraphernalia here enumerated, when he will probably be reminded of something that has not found its way into his travelling equipage; in which case he has only to ask himself the question, "Do I need this?" or, "Can I procure this over the Border?"

**RECIPE FOR BREAKING STONES.**—Select the thickest and strongest box you can find, and be sure to see that it is free from all defects. Then take the stones, which pack, as carefully as possible, in hay or straw. Write "Glas—with care," and sundry other such admonitions, on several parts of the box, in large letters. Then give it to one of the appointed men at a railway station, and desire him to take particular care of it. If you do this, and send your box fifty miles on the railroad, you may be certain that the stones will be Macadamized.

## CORRESPONDENTS.

**ETHELBERT.**—You are quite right; an editor is a sort of target for all sorts of wittlings to try the sharp shafts of their wits upon. One advises him upon the price of his publication; just as if those engaged in a trade did not understand it best. A second informs him of some minute defect or oversight in an artist's drawing. A third lectures him for his ignorance, seeing that the printer hath perpetrated a typographical error; perchance one minute piece of metal, the size of a pin, (our form of type for each number contains, on the average, upwards of one hundred and forty thousand moveable letters), has jumped from its place, or been substituted for the right one; and straightway, the unfortunate compositor, known as the editor, is offered up as a vicarious sacrifice for the sins of all people, and the ingenious discoverer of an accident or a blunder huggeth himself mightily of his superiority over the dunderhead he has so sagely set right. We can imagine old Sir Thomas Overbury, had he lived till this day, writing thus of the unfortunate wight called an editor:—"From the bottom of my soul do I pity the editor; for once he is too grave, for another too lively; for the serious he treateth not amply enough, or soundly of matters instructive and edifying; for the laughter-loving he draweth not enough from the sparkling fountain of jest and merriment; for the parsimonious he sellecth his wares too dear, albeit the said wight thinketh he is all too modest in asking the fair due of his commodity; and urgeth that things of small price are ever little thought of; hence do they all address him, as whilom the frogs did pester Olympus with their croakings. Thus have I seen a covey chewing the cud of rumination, in the midst of a pond, on a sunny day of midsummer, surrounded by the tormenting brize; first she shaketh her ear, then her tail; lastly banteth her side, anon swayeth like the pendulum of a clock from her angular rump; straightway one buzzing gad, more daring than the rest, inserts its sharp pricking latter-end into the patient one's hide, and deposits an egg; then a skin-shiver cometh ever, patient dapple, who, though she shakes her hide, has not got rid of the troublesome grub one day to become a gilded fly. This, gentle reader, is the symbolic likeness of an editor, with his advising, remonstrating, buzzing, and egg-laying correspondents." Questions he is happy to answer, when in his or any mortal's power with whom he is acquainted; but as to advice to alter, enlarge, change the price, matter, form of publication, quality of paper, engravings, &c., &c., &c., on all which points it hath been his misfortune to be fully advised with and demonstrated with; he begs to say that he hath fully studied and digested an ancient fable, lyricised in modern times, by George Colman, and which opens with these lines:—

Gaffer Grist, Gaffer's son, and their little jackass,  
Trotting along the road,

and keeping both that and the song ever present to his mind, he must insist on  
Riding his jackass just as he likes,  
While trotting along the road.

**STPHAX.**—Read our last number, or No. 13. You will there find the information you seek. **ENQUIRER, Bolton.**—Johnny Broome fought Bungaree for 300*l*. It was Bungaree's first fight in this country, and Broome was but recently married when the match was made.

**LONGLEGS.**—We never heard of a man running six miles in 30 minutes, and regard such a feat as an impossibility.

**WERRY NERVOUS.**—You are right. There has been a vast deal of humbug upon the subject of the "roughs" at the late fight. The referee was incompetent, and certainly people were thrust against him, by the involuntary swaying to and fro, produced by the pressure from behind; but that the "Squire was threatened" or "intimidated" we utterly deny. The rumours are the spiteful, interested, and complaining misrepresentations of the losing party.

**EMERITUS, Worcester.**—Your newsman is a—, and the truth is not in him. The same to our Chesterfield correspondent.

**A. E., Aberdeen.**—We will give the exploits of Childers in No. 20. Thanks for the report; but the races are not of sufficient general interest.

**M. R. S.**—The whole and exact process of gudgeon fishing is described as follows, in a book on angling, printed in the year 1815:—

"Lo! in a little boat where one doth stand,  
That to a willow branch the while is tied,  
And with a pole doth gently raise the sand,  
Whereas the gentle stream doth gently glide.  
And then with slender line and rod in hand,  
The eager bait not long he doth abide.  
Well loaded in his line, his hook but small,  
A good big cork to bear the stream with all.

"His bait, the least red-worm that may be found,  
And at the bottom it doth always lie.  
Whereat the greedy Gudgeon bites so sound,  
That hook and all he swalloweth bye and bye.  
See how he strikes, and pulls them up as round  
As if new store the place did still supply;  
And when the bait did die, or badly prove,  
Then to another place he did remove."

**AN ANSWER.**—You win. The fight between Cant and Bendigo did not take place half-way between London and Nottingham, although so stipulated in the articles. The place of meeting was changed by mutual consent of the men's backers.

**SAM SWORDSMAN.**—Fugilists are often short-lived from their peculiar exposure to excess in liquor, &c. Yet the most eminent pugilists may well compete with any other class, as witness the following old uns:—Mr. Jackson is in his 78th year; Mr. Gully is about 80; Tom Belcher is in his 69th year; Cribb in his 65th; Oliver is about 66. Spring is in his 51st year. Jackson's first fight was in 1798, his last in 1798. Gully's first fight in 1806, his last in 1801. Belcher made his debut in 1804, his final bow in 1813. Cribb came out in 1805, and fought Molyneux for the last time in 1811. Oliver fought from 1811 until 1821, came out again and fought in 1824. Spring fought first in 1814, and lastly in 1829. Broughton lived to be 85, and Mendoza to be 73.

**G. W. H., Brighton.**—Half-an-ounce of corrosive sublimate, powdered to an impalpable powder; to this, by very small quantities, add two ounces (half a gill) of spirits of wine, and one pint of rain or river water. Wash the dog on every affected part, with a sponge dipped in the solution, once in every three days; give him also three mercurial purging balls (proportioned to his size, age, and strength), this for red mange. If it is the common mange (which I suspect), three plentiful washings of the following cheap composition, will effect a cure. Sulphur, four ounces; white hellebore, in powder, two ounces; black pepper, one ounce; sal ammoniac, half an ounce; olive oil, about a pint. You may reduce the quantities proportionally, if you please. Let this be well and thoroughly rubbed in with the hand three different times; and give, at the same time, a mercurial ball. The flea will be got rid of by the process, as well as the mange.

**Q. R. P., Hampton.**—We do not know any good work on "Training Greyhounds for Running," except "Thacker's Courser's Manual," a rather expensive and bulky book, and we believe scarce. We will give you a series of short papers on the subject shortly, from the pen of a cunning friend.

**WM. Y., Kingland.**—The Editor don't know why you write; and what's more, he has no recollection of your letter.

**COOGER.**—Cant stands close and square. We don't know what you mean by legs expanded. When you say it is not like Bendigo, (with the exception of a mistake in putting his left leg foremost, which was right on the wood block, but comes wrong on the paper), permit us to say, though we may admit your sincerity, we would not give a rotten penny for your judgment; it is on a par with your English, and that is as bad as can be. Purchase a "Mavor's Spelling," and a "Murray's Grammar," read more and write less. We suspect your wretched barolical English reaches under two or three different signatures.

**YORKSHIRE FISCHER.**—"Derry." You should have addressed your letter to the Editor, at the Office, 42, Holywell-street; in consequence of addressing it to a former publisher by name, it was only by chance that it came to hand. Mr. J. K. Farlow, of 3, Crooked-lane, Cannon-street, who is a wholesale dealer, will execute your order with punctuality, and on reasonable terms.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

**SUNDAY, September 21st.—EIGHTEENTH SUNDAY AFTER TRINITY.**  
**MONDAY, 22nd.—Brewed Races.**—The French capture the Emperor of Morocco's parasol at Ialy, 1844; being as large as an umbrella, they leave the Emperor to the misery of a long reign, as the season is just setting in.  
**TUESDAY, 23rd.—Richmond Races.**—Oswestry Races.—Great Fire at Liverpool, 1842.  
**WEDNESDAY, 24th.—Bedford Races.**—Walsall Races.—Lincoln Races.—Monmouth Races.—List of claimants to vote, and persons objected to, to be fixed by Town Clerk in some public place in boroughs, from this day until October 1.  
**THURSDAY, 25th.—Gorton Races.**—A Warning to Parents.—A father having imprudently left his eldest son in a room along with a bill stamp, he converted it into a kite, and went into the city to fly it.  
**FRIDAY, 26th.—Lampeter Fair.**—Grassington Fair.—Marquis Wellesley died, 1842.  
**SATURDAY, 27th.—Derby Fair.**—Great complaints of detention of luggage at the Custom House, 1844: one gentleman, who was very drunk, complains to the *Times* that he could not get his intellects "cleared" in time for the next train (of thought). He must have been slow-brained.

## The Sportsman's Magazine.

FOR THE WEEK ENDING SEPTEMBER 27, 1845.

## CAUNT VERSUS BENDIGO.

Fiat justitia, ruat cælum.

HENEVER an event comes off contrary to the prognostications, wishes, and interests of those who conceive themselves the knowing ones, conjecture, argument, and even the distortion of fact is liberally resorted to by those on the wrong side, to cover their miscalculations and save their vanity; or with the less creditable object of saving their pockets; which, in such cases, have been generally called in to back their judgment.

Thus has it proved in many a case within our recollection, and thus we suppose it will continue to be. There will always be two ends to a stick, and two sides to a question, and those who have the wrong end of one and the indefensible side of the other, will generally be found the loudest in assertion, the most varying in their arguments, and the readiest to impute all sorts of improper motives and actions to their adversaries.

This has been strikingly exemplified in the past week, wherein many who have been for years looked up to as the arbiters of fair play and the advocates of justice, even though it should strike their brothers, have been so touched in pride, purse, pocket, or prejudice, that they would shake the very structure they have themselves built, and pronounced faultless.

We allude to the "London Division," who have certainly been "hit" to some tune, in the affair of the fight for the Championship. Rumour with her thousand tongues, has been busy misrepresenting and slandering, and the whole details of the fight viewed through the distorting medium of prejudice and anger, have assumed a totally different aspect from that which they presented to the cool and dispassionate observer, and such the writer of this asserts himself to be. Having been close to the experienced referee from the instant of his appointment, until the time he stepped into his carriage, into which we, together with Jem Ward assisted him, surely a better witness, as to the subject of the much-talked-of "intimidation," can be nowhere had. We have not, nor even had a shilling on the fight, neither have we a predilection or prejudice to gratify; and we solemnly declare, that the question was twice or thrice put to the Squire by friends by whom he was surrounded, (one of them a noble lord), and he declared he was "perfectly at ease, if some one would keep those fellows from pushing us against the ropes." The referee then had his watch in his hand, which he consulted, as also did the writer of this, up to the ultimate decision, an act which he would have thought highly imprudent, even in the vicinity of the A division, during her Majesty's progress to the House of Lords, or a state visit to Drury Lane. The letter which Spring inserted in *Bell's Life* is clearly of that character that it answers itself. He says, that the "referee decided over and over again that a man going down without a blow after treacherously delivering one himself, was fair." This will not require an answer from the Squire. As to the gentleman who told him, that the referee said that "he dared not decide

in favour of Caunt lest his life should be sacrificed," the referee's observations and his character show that this unfortunately proves too much. The referee said to Jem Ward, that he had "decided to the best of his judgment, and was not, nor would he be, influenced by any man." This we heard; we will not say a harsh word on interested motives and mortified pride, but quote "the Oracle of the Ring," on the duties of a referee, his functions and powers, with the just commentary of the *Sunday Times*—

"The decision of the referee, is, and must be, final; neither should it be commented on or impugned. Why was he chosen if absolute power was not implied by his election to office. A sporting writer, and the editor of a popular work on the ring, has well said:—'He (the referee) should withhold all opinion till appeal to by the umpires, and, in giving his opinion, it should be done without hesitation, and, once given, it should not be retracted. Whatever may be his decision, it ought to be submitted to without cavil or dispute. The referee saw Caunt go down without a blow, and gave it against him. The friends of the loser aver that Bendigo having got down, Caunt considered that the round was over. If so it was the duty of Caunt's seconds to take him from the place where he was when Bendigo fell, and carry him to his own corner. It is clear Caunt's seconds did not consider the round over. Several times in the course of the fight Bendigo fell, jumped up again, and renewed the battle. This, though it should have been, was never once objected to. After Bendigo fell, Caunt's seconds permitted their man to remain in the ring in a defensive posture, and when the former made play to renew the combat, Caunt fell to avoid punishment, he being at the time weak and sick from the blow received in the previous round.'

Of the justice and sound sense of these observations, there can be but one opinion among the impartial and disinterested. While on the subject of letter-writing, we may observe as an instance of the bad logic generally advanced when men's interests call on them to argue against their better knowledge, the comical *non-sequitur* involved in a letter to the editor of *Bell's Life*, by one Joseph Saunders, who concludes that because Mr. O. told him (at the Wolverton-station,) that "if he had been there he would have done as he (Mr. O.) did," "left an impression on his mind that what he said was through fear and intimidation." Here is an astute deduction, which we don't see follows from the premises: we should think the answer the cut direct unless Mr. Saunders interprets the squire's speech to mean, "I have give an unjust decision, which is just what you (Mr. S.) would have done had you been in my situation." A sarcastic cut this, if meant, my worthy squire; but we rather think Mr. S.'s confusion of ideas must have the credit of the query and the answer.

To conclude, as we begun, in every instance where the knowing ones have been bit, and the odds floored, similar declarations of foul play, or of a cross, have been rife. When Noworthy beat the previously invincible Dutch Sam, in the fight which we give in part in this week's number, a writer of the day says:—"Boxiana, p. 84, vol. ii.")

"Every exertion has been made, by the author, to place the dispute in question in a fair, clear, and concise point of view, and the result of his conviction is simply this: that it was more owing to the immense odds laid than to any demonstrable proof of a cross having existed, that many of the bets were not paid!" Whatever strong prejudices may have been entertained against Sam since the termination of the fight, it is certain, that he was backed when fighting till near the end of the battle, by the best considered judges in the pugilistic circles, that he must ultimately win.

"The Jew, while living, challenged inquiry, and defied any proof being brought of his having lent himself to the views of any party to bring about an improper termination of the contest. Like many others, he had to lament, that having filled the pockets of his own people and numerous persons in the sporting world, while victory crowned his efforts, and their praises flattered him to the very echo, Dutch Sam was then invulnerable; but no sooner had the chance turned against him—the once great CONQUEROR being conquered—and not only suffering under a severe beating, and distressed from the total desertion of his friends, but he was denied even the small consolation to a defeated man, 'of having done his duty,' and a cross was insisted upon by his backers to avoid paying bets.

"It appears, that in a case once referred, a few years ago, to Sir Charles Bunbury for his decision, respecting a difference of opinion about the issue of a prize pugilistic contest, he delivered himself to the following effect—'If persons will bet on prize-fights, they must be decided by the event.'

Thus we see the present position of affairs is no novelty in the sporting world; yet we cannot but regret that those who, "come weal come woe," should support fair play, are now losing sight of it. We declare, and that without fear of contradiction, that the referee was not intimidated, nor is he the man to be so; that the inner ring was throughout preserved inviolate and unbroken; that no one molested either man (with the exception of a blow on Bendigo's shoulder); and that the referee gave his decision without fear, favour, or affection, on the merits of the case.

"You have been the making of me," as the mustard said to the cook.

"I shall be undone by you," as the pepper-corn said to the mill.

THE DONCASTER CUP.

We here present the reader with a faithful pencilling of this magnificent equestrian prize. It is a *currus quadrigus*, or four-horse chariot, driven by a triumphant charioteer; supposed to be Diomed. The design is from the pencil of Mr. Frank Howard, the horses grouped by Macarthy; the whole modelled under the superintendence of E. H. Bailey, Esq., R. A. The driver holds the ribands scintillating with his left hand, while with his right he waves aloft the curling whip, ready to apply it deftly whenever he perceives the symptoms of flagging. Apparently, however, there is no need of either lash or spur to urge the noble animals to the goal, for they are thorough-bred—perchance from Argos or Epidauros—and spurn the sands from their hoofs with full blooded indignation. The whole group is of pure silver, and both the *quadrigarius* and his team are beautifully moulded. The horses are very spirited, and the composition is chaste, and finely wrought, the subject being treated in a style at once simple and purely classical. This piece of argentine sculpture may stand comparison, in its finish, with the works of Benvenuto Cellini. The lines of Homer (thus translated by Pope) were evidently in the artist's mind:—

"High o'er his head the circling lash he wields,  
His bounding horses scarcely touch the fields;  
His car amidst the dusty whirlwind roll'd  
Refulgent through the cloud;  
And the fierce coursers urged their rapid pace  
So swift, it seemed a flight, and not a race."

## BRITISH BIRDS.—NO. XII.

## THE GREY PLOVER.

**A**LTHOUGH the Plover has generally been classed with those birds whose business is wholly among water, we cannot help considering the greater part of them as partaking entirely of the nature of land birds. Many of them breed upon our loftiest mountains, and though they are frequently seen upon the sea coast, feeding with birds of the water kind, yet it must be observed that they are no more water birds than any of our small birds which repair thither for the same purpose. The long legged plover and the sanderling are waders, and belong more immediately to the water birds, to which we refer them; the great plover and the lapwing we consider as entirely connected with birds of the plover kind; the former has usually been classed with the bustard, and the latter with the sandpiper; but they differ very materially from both, and seem to agree in more essential points with this kind. We have therefore given them a place in this part of our work, where, with the rest of the plovers, they may be considered as connecting the two great divisions of land and water birds, to both of which they are in some degree allied.

Our next engraving will represent the Golden or Yellow Plover, the best known of the family. This bird is the size of the turtle-dove, which we shall figure when we come to the family of Pigeons; its bill is dusky, its eyes dark; all the upper parts of the plumage are marked with bright yellow spots upon a dark brown ground; the fore part of the neck and breast

are the same, but much paler; the belly is almost white; the quills are dusky; the tail is marked with dusky and yellow bars; the legs are black. Birds of this species vary very much from each other; in some which we have had, the breast was marked with black and white; in others it was almost black; but whether this difference arose from age or sex we are at a loss to determine.

The golden plover is common in this country, and all the northern parts of Europe; it is very numerous in various parts of America, from Hudson's Bay as far as Carolina, migrating from one place to another, according to the seasons. It breeds on high and healthy mountains; the female lays four eggs, of a pale olive colour, variegated with blackish spots. They fly in small flocks, and make a shrill whistling noise, by an imitation of which they are sometimes enticed within gun shot.

The male and female do not differ from each other. In young birds the yellow spots are not very distinguishable, as the plumage inclines more to grey.

The other variety we shall notice is, the subject of our engraving, the Grey Plover, called by some the Great Plover, or Stone Curlew, and commonly known as the Norfolk Plover. The length of this bird is sixteen inches. Its bill is long, yellowish at the base, and black at the tip; its irides and eyelids are pale yellow; above each eye there is a pale streak, and beneath one of the same colour extends to the bill; the throat is white, the head, neck, and all the upper parts of the body are of a pale tawny brown; down the middle of each feather there is a dark streak; the forepart of the neck and breast are nearly of the same colour, but much paler; the belly, thighs, and vent, are of a pale yellowish white, the quills are black; the tail is short and rounded, and a dark band crosses the middle of each feather; the tips are black, the rest white: the legs are yellow, and naked above the knees, which are very thick as if swollen, hence its name, the claws are black.

This bird is found in great plenty in Norfolk and several of the southern counties, but is nowhere to be met with in the northern parts of our island; it prefers dry and stony places on the sides of sloping banks. It makes no nest: the female lays two or three eggs on the bare ground, sheltered by a stone, or in a small hole formed in the sand; they are of a dirty white marked with spots of a deep reddish colour, mixed with slight streaks. Although this bird has great power of wing, and flies with great strength, it is seldom seen during the day, except it is surprised, when it springs to some distance, and generally escapes before the sportsman comes within gun-shot; it likewise runs on the ground almost as swiftly as a dog; after running some time it stops short, holding its head and body still, and on the least noise it squats close on the ground. In the evening it comes out in quest of food, and may then be heard at a great distance; its cry is singular, resembling a hoarse kind of whistle, three or four times repeated, and has been compared to the turning of a rusty handle.

Buffon endeavours to express it by the words *turlui, turlui*, and says it resembles the sound of a third flute, dwelling on three or four tones from a flat to a sharp. Its food consists chiefly of worms. It is said to be good eating when young; the flesh of the old ones is hard, black, and dry. Mr. White mentions them as frequenting the district of Selborne in Hampshire. He says, that the young run immediately from the nest almost as soon as they are excluded, like partridges; that the dam leads them to some stony field, where they bask, skulking among the stones, which they resemble so closely in colour, as not easily to be discovered.

Birds of this kind are migratory; they arrived in April, live with us all the spring and summer, and at the beginning of autumn prepare to take leave, by getting together in flocks; it is supposed that they retire to Spain, and frequent the sheep-walks with which that country abounds.

## SPORTS FOR QUEENS!

(From Punch.)

As *Punch* is very frequently smuggled beyond the Pyrenees, we have been solicited by Donna Mendoza—wife of a Spanish refugee, residing in Seymour-street, Somers-town—to print the subjoined letter, that it may meet the eye of the writer's sister, a lady of high rank, residing at San Sebastian.

"My dear Jacinta,—You know how much I hate this dull and foggy prison, England—how much I yearn for the sweet freedom, the blue heaven of our adored Spain. However, in the next revolution but ten—and that cannot be longer than three months—Baldomero Espartero will be paramount in Madrid, and we shall again embrace.

"Beloved Jacinta,—you can have no idea of the sluggish blood of these Britons—of their utter ignorance of romance—of their insensibility to true heroism. Will you believe it;—they absolutely sneer at our glorious bull fights! Yes, they condemn that gallant sport which thrills the heart-strings of Spain's daughters—they denounce the pleasure derived from disembowelled horses, with now and then a crushed and wounded *matador*! It is only a few days since that some of the audacious newspapers wrote in the most treasonous terms about the bull-fights at San Sebastian (witnessed by our beloved Queen—whom Heaven preserve! and her apostolic professor,)—and moreover cast the venom of their ink upon that truly national game, so dear to the hearts of Spaniards, of jumping at the head of a live goose, and pulling it from its quivering body. Imagine the effrontery of this!

"I had given up these English as a dastard race—a nation of cowards—incapable of nothing but killing men in equal fight—when my hopes of what they may do yet were raised by accounts from Germany. You must know that Queen Victoria (whom Heaven preserve!) has been to Saxe-Gotha, and there, with other royal ladies, has witnessed the butchery of I know not how many stags, in a way almost worthy of our own delicious bull-fights. All the deer were driven into a corner, when the Queen and the royal ladies, while the band played the Polka, were seated in easy chairs at a table, to see the fun. Well, the slaughter began—the princes fired away, the band playing the luster; and, after two hours, nearly all the brutes were killed. Then, says the *Times* account:—

"The dead or dying were either dragged, or carried suspended from poles, across towards the pavilion, where the huntsman plunged his enormous *couteau de chasse* into their throats."

The royal ladies, be it remembered by those who sneered at our bull-fights and our game of goose, looking on. When the delightful sport was over, why then, says the *Chronicle*:—

"The ladies passed along the line of dead on the way to their carriages. It was a wretched sight. The poor creatures arranged side by side—their dull, dim, dead eyes looking as ghastly as the wounds from which the clotted blood came oozing in black drops down the yet warm carcass. I had as lief see a knacker's yard."

"After this, dear Jacinta, I must confess I have some hopes in the spirit of English ladies, I do hope, that, influenced by the highest example, there may yet be bull-fights, and games of pull-goose in Hyde Park; and that at least until that glorious time arrive, young ladies of the very best families will gradually accustom themselves to bear the sight by attending the westernmost slaughter-houses on killing-days. To be sure, to see an ox felled with a pole-axe, or a sheep's throat cut, is hardly so exciting as to behold a herd of stags butchered as above described; nevertheless, the slaughter-house will do to begin with.

"However, after this, let us have no sneering at our beloved Queen of Spain, the *toros* and the goose,—let Englishmen think of Germany, and be quiet.

"Your affectionate Sister,  
"MARIA MENDOZA."

A FRENCHMAN'S IDEA OF THE YACHT CLUBS.—A French writer of some celebrity amongst his own countrymen, but who will obtain little faith here for his veracity (M. Lal), gives the following ludicrous description and edifying anecdotes of the lords and ladies of the Royal Yacht Club:—"Yachts," observes M. Lal, "constitute a luxury of which no idea can be formed in France—the luxury of wealthy islanders, loving to roam the world at their ease and pleasure. Every Englishman of fortune who is fond of the sea, keeps one or several yachts, just as he keeps his carriage and horses. The elegance and distribution of each vessel are characteristic of the whims of the lady who presides over its deck; or the sybaritism of the gentleman to whom it belongs. A yacht is considered as much a racer as any horse at Newmarket; and the sailor by whom it is navigated is, in fact, the mere jockey of a regatta. Just as gentlemen of the turf have portraits taken of their favourite horses, the M. R. Y. C. orders sketches of his yachts—of their feats, their perils, and their triumphs. Amongst others, a London brewer, of the name of Perkins, is the owner of several yachts, which are used by Mrs. Perkins, as so many barouches or landaus, for her morning visits. A short time ago she arrived at Cherbourg, in one of her yachts, to call upon a lady of her acquaintance. They gossiped over new novels and new Irish melodies, and in the sequel, Mrs. Perkins kindly offered to return to England and fetch some new songs which were just then

much the fashion amongst the fair melo-maniacs of London. One morning, shortly afterwards, Mrs. Perkins again made her appearance, with a roll of music in her hand. 'You positively must stay and dine with me,' said the fair friend, whom she had exerted herself to oblige. 'Can't indeed, my dear,' replied the yachting lady; 'I must be off immediately—I have promised the wife of the British Consul at Cadiz to drop in upon her, and I know she is expecting me!' And away went Mrs. Perkins to Cadiz, and then back to London, just as if she had been taking an airing to Richmond. It was probably this same lady whom the officers of the *Luxor* met at Alexandria."

NATURAL.—If a village beggar were to hoard money, in what funds would he invest it? In anything but the *stocks*!

ANGLING FOR A PUN.—A gentleman, much struck by the beauty of a barmaid, asked his friend if he knew anything about her. "Why, yes," said he, "I believe she is an odd fish." "I suppose, then," rejoined the lover, "you mean that she is a bar-belle (barbel) and difficult to be caught!"

Why is a Camel more fit to be present at a cricket match, than a horse? Because he is a *hump higher* (umpire.)

Why does a publican resemble his beer-engine?—Because the *pull* is on his side.

Why is a man knocked down in a row, like a pickled donkey?—Because he's Ass-salted (assaulted.)

THE DOG BILL.—Thanks to the Bishop of Bond street, the fellow now who steals a dog will find he doesn't exactly steal trash—not even in the eye of his old patron the law of the land. Eighteen months' hard labour, instead of a small fine or a few days in quod, is in future to be the reward for any clever canine seductions; while the "receiver-general" will have to tender his resignation forthwith, or continue to hold office on very different and far less agreeable terms. The Bishop and his backers held out strongly for seven years' transportation, but were in the end compelled to draw it mild in accordance with the wishes of some humanity members. Sufficient, however, has been done to put the trade upon the fret, and the victims upon the quiet; the threats and howlings of the former making a not unpleasant variation to the more lively airs now performing in Bond-street.

TICKS IN CATTLE.—A veterinary surgeon, in the *Agricultural Gazette* who admits the value of mercurial ointment and of tobacco-water in skilful hands, condemns the use of them by ignorant and careless farm-servants. He recommends the following as effectual, without fear of dangerous results:—Take of goose-grease, 4 oz.; train oil, 4 oz.; sulphur vivum, 2 oz. Mix well. The affected animal must be taken into the house; if out, be well cleaned with a strong brush, and a little of the ointment applied, and well rubbed in wherever the lice can be found on the skin. Cleanliness must be rigorously attended to, along with good keep and pure water. Tobacco-water is thus made:—Take of fine-cut tobacco, 8 ounces; boiling water, 8 quarts. Let the infusion stand until cold; then strain for use.

APPROPRIATE PRESENT.—It is not generally known that Prince Albert—"his brows bound with victorious garlands,"—on his return to the Isle of Wight from deer-killing, was waited upon by a deputation of ladies, who presented him with a blue apron, very curiously worked, in honour of his recent conquest of the stags. The ladies represented the body of butchers' wives of London, and the blue apron was worked with a *couteau de chasse*, and various gouts of blood, in scarlet silk. We understand that the master-butchers themselves intend to offer for the royal acceptance a magnificent knife, and a beautiful steel, manufactured from the very best German metal. It is further stated that Sir H. Bishop proposes to compose a new Royal catch, the burden of which will be—"What will ye buy?" The articles in question will, no doubt, be preserved as part of the Regalia, and consigned to the curatorship of Mr. Swift, of the Tower, to whom by-the-by we alluded erroneously the other day as the showman of the Crown, whereas he is entrusted with the honourable office of Viceroy of it.—*Punch*.

LONGER THAN ETERNITY.—At Waterloo, a Highland regiment and the Scots Greys met in the thickest of the fight, and raised the cry of "Scotland for ever!" "And could Ireland for longer!" exclaimed an Irish dragoon.

## SPORTING CONUNDRUMS.

When is an 'oss like a man dressing for dinner?—When he's changing his coat.

When is an 'oss like a man who hasn't settled his accounts of late?—When he's in a rear (arrear).

When is an 'oss like a man regularly done up?—When he runs away.

When is an 'untsman like a wessel in a storm?—When he's tossed on the mane.

When is an 'oss at a riding school like a young lawyer?—When he's brought up to the bar.

When is an 'oss fit to be on a dining table?—When he's a tumbler.

What answer would a Frenchman give to the last one?—When he's in de-canter.—*Jorrock*s.

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIER.

## CHAPTER VII.

WILLIAM NOSWORTHY. (THE BAKER.)

**S** the historic renown of "Richmond" rests principally on his defeat of "Richard," so (to compare great things with small) does the fame of NOSWORTHY in the history of gladiators rest mainly on his triumph over the previously invincible hero of Israel. Hence the next place to that extraordinary boxer seemed a fit portion for a sketch of his career.

In his boyish days, Nosworthy, it appears, was not altogether unknown in Devonshire, both as a wrestler and pugilist. He was born at a place called Kenn, a parish within the hundred of Exminster, of respectable parents, on the 1st of May, 1786. He was of an athletic yet prepossessing appearance, in height five feet six inches, and weighing about eleven stone. In disposition, cheerful, good natured, and inoffensive; but in the ring, he displayed courage of the first water; in sporting circles he bore the soubriquet of "The Young Chicken," from some resemblance he bore to Hen. Pearce, of milling memory.

The milling qualities of Nosworthy first developed themselves in a contest with the mate of a vessel, at Exeter, when he had scarcely attained his sixteenth year. Some difference of opinion occurring between them, a regular set-to was the consequence. The mate flattered himself that he would soon be able to chastise the lad for his presumption in thus daring to contend with a man, and immediately poured in a broadside, to induce the enemy to cry for quarter. The action was kept up with great spirit on both sides for a considerable time, and notwithstanding the brisk and heavy firing of the man-of-war, the superior skill and tactics of the frigate prevailed, and ultimately compelled the mate to strike.

After several provincial battles, the particulars of which are very doubtful, he removed from Exeter to Wellington in Somersetshire, and thence to London, where from his Devonshire pretension as a wrestler he was matched with Pentikin, a Scotch baker; but the latter having been defeated in this trial of gymnastic skill, challenged his conqueror to a bout at fisticuffs for a guinea aside. The contest took place on the 3rd of May, 1808, in Pancras Fields. Nosworthy was waited on by Tom Jones and Bill Ryan. The superiority was evidently on the part of Nosworthy for the first twenty minutes. Pentikin being milled in all directions. It was presumed, that, had the fight continued without any interruption, victory was by no means doubtful on the side of Nosworthy, who had, at this period of the battle, considerably reduced the strength of his opponent. But Nosworthy, was a stranger to his fraternity, the bakers, and the odds had been laid rather too thick upon Pentikin. The ring was in consequence broken; general confusion ensued, and some delay occurred before the combatants could appear in a new ring. The contest was then renewed, Pentikin appearing more fresh from the delay he had experienced. Reciprocal fighting continued for one hour and twenty-five minutes, when Nosworthy was hit out of time, and carried off the ground by his brother. The game he displayed was highly praised. Pentikin, although the conqueror could not be induced again to face his fallen adversary, and forfeited three times to Nosworthy. This battle is erroneously given to Nosworthy by FISTIANA.

A navigator, belonging to the canal at Paddington, well known for possessing great strength, and other requisites for boxing, challenged Nosworthy to fight for a guinea a-side, in the fields of the above neighbourhood. It proved a good battle, and plenty of work was done on both sides; but, at the end of an hour the *man of clay* was convinced that the *man of dough* was the best man.

The dead men of this metropolis now viewing Nosworthy as a leader in their sporting circles, a match for ten guineas a-side was made between him and Barnard Levy, a Jew, which took place at Golder's Green, near Hendon. Levy was known to be a good man, and proved himself deserving of that character throughout the fight. Nosworthy was not in condition, and the Jew maintained an evident superiority for the long space of two hours. The game displayed by the baker astonished every one present; he fought undiminished up to his ankles in mud and slush, and showed himself a taker of no common mould. Notwithstanding the unceasing punishment the Jew administered to his opponent, he could not take the fight out of him, and at length became quite exhausted. Nosworthy, contrary to all expectation, got second wind, and finished the Jew in high style in the last twenty-five minutes. From this conquest, the Baker gained ground in the milling circles. The fight lasted two hours and twenty-five minutes.

Martin, an active lively bower, and much fancied by his own people, the Jews, was now pitted against Nosworthy, for a purse of twenty-five guineas, at Moulsey-Hurst, on the 29th of March, 1814. High expectations were formed of the pugilistic talents of Martin, but the baker soon put his skill and manoeuvres at defiance. Martin was one of the easiest

customers Nosworthy ever had to deal with. Joe Ward and Paddington Jones seconded the latter, and Little Puss and Jacobs attended upon Martin. It was two to one in favour of the Jew, previous to the battle, and betting brisk.

1.—On setting to considerable reliance was placed upon the talents of the Jew, who commenced with much gaiety; but Nosworthy, on the alert, planted a tremendous hit on Martin's mouth, which not only tapped his claret, but sent him down. [Loud shouting from the dead men!]

2.—The Jew, more cautious than heretofore, sparred for advantage, but ultimately was again flogged. [The two to one had now all vanished, and even betting was the truth of the matter.]

3.—Nosworthy began to serve the Jew in style; his hits told tremendously. Martin made a good round of it, but fell rather distressed. [The dead men now opened their mouths wide, and loudly offered six to four on the Master of the Rolls.]

4.—Martin, with much activity, planted a good fencer, but Nosworthy again finished the round in high style.

5.—The Israelite's nob was peppered, and his body much punished; Nosworthy, with great severity, hit him right through the ropes. [Seven to four on Nosworthy.]

6.—It would be superfluous to detail the remaining rounds. Nosworthy had it all his own way; notwithstanding Martin resorted to his old method of falling, to tire out his opponent. In thirty-six minutes the Jew was completely milled, and Nosworthy's fame as a boxer, considerably extended.

One Bill Reynard, a good bit of stuff, and not altogether destitute of pugilistic acquirements, flattered himself he could beat Nosworthy, but could not muster enough bluntness to make the stakes of any importance to the baker. Nosworthy, above taking advantage of this circumstance, agreed to accommodate Reynard, and a gallon of ale was to be spent by the losing man. The battle took place in Hare-street-fields, Whitechapel. Reynard fought heroically, put in many severe blows, and felt as much interested to win the battle as if he had been contending for thousands. He was altogether a good man, and not to be disposed of as a matter of course. Nosworthy, at length, proved the conqueror. It is necessary to observe, that neither of the combatants was in a state to enjoy the gallon of ale at the end of the battle.

But we hasten from the minor feats to come to the important contest which has given to Bill Nosworthy a niche in the temple of pancrastic fame. This was his great contest with the celebrated Dutch Sam, at Moulsey-Hurst, on Tuesday, December 8, 1814.

The pugilistic world experienced an almost electric sensation at the defeat of the hitherto invincible hero, Dutch Sam. So confident were the knowing ones—so satisfied were the swells—and so positive were the whole of the fancy, upon this mill, that "Sam must win and nothing else!" that four to one was to be had from Duke's Place to Hyde-park-corner. Nor was this confidence in the least diminished upon Sam's entering the ring, but rather increased, with loud and repeated offers to any amount upon this once distinguished phenomenon of the fighting world. And Sam, says the "historian," *felt himself so much at ease respecting this conquest, that he had deemed it unnecessary to adhere to the rigid rules of training.* The following admirable account, which there is every reason to attribute to the pen of the once celebrated George Kent, is a masterpiece of milling reporting.

Five years had nearly elapsed since Sam had exhibited in the prize-ring. The curiosity to see him once more display his great pugilistic acquirements drew together an unusual number of spectators. Neither bad roads nor torrents of rain could check the interest excited by this battle. Vehicles of all descriptions for weeks before were put in requisition to reach the destined spot; and pedestrians out of number were not dismayed in tramping through thick and thin, for sixteen miles, to get a peep at these boxing heroes. The vast collection of carriages on the Hares excited the astonishment of every one present, and some hundreds were on the spot who did not even see the battle. Several marquees were erected for accommodation. The sum to be contended for, in a twenty-foot ring, was 50*l.* a-side, and a purse given by the Pugilistic Club of 25 guineas. At a few minutes before one, Nosworthy, entered the ring, attended by his seconds, Bill Cropley and Silverthorne, and was loudly cheered for his confidence, in daring to face so acknowledged a boxer as the Jew. Sam soon followed, and received every mark of gratifying attention from the surrounding multitude. Medley and Puss were his attendants. A heavy shower of rain could not delay their thirst for fame, and the signal for milling commenced.

## THE FIGHT.

1.—On the combatants approaching each other, and shaking hands in the usual way, the difference of condition and form was so manifest, that an unbiased spectator must have given the preference to the Baker, from the roundness of his frame, the firmness of his step, and the cheerfulness of his countenance. He must have been a novice indeed, not to have discovered the wretched condition of Sam upon his throwing off his clothes. His ribs were bare in the extreme; his face, which hitherto had assumed such a formidable aspect, and his fierce eyes, that seemed upon similar occasions to have

penetrated into the very souls of his opponents, darting looks of terror and confusion, now appeared clouded with doubt and anxiety. As for his legs, (the general criterion of strength,) as if Sam had anticipated that they might be viewed against him, he, for the first time in his life, preferred fighting in gaiters and breeches. But all these objections were as a feather in the scale against the Jew. Weather could not affect him. No one could punish him. He hit as hard as Cribb. He was no mannerist. He set to a hundred different ways. He altered his mode of fighting as circumstances required. Many seemed really to think, and plenty were forward enough to urge, that Sam was as well, if not better, without training than undergoing that systematic precaution of invigorating the stamina. In short, he was the phenomenon of the fighting world; every thing but a losing man. The numerous and brave conquests which he had achieved flashed strong across their memory. The recollection that he had beaten all the best men for a series of years that had been pitted against him, gave a double confidence to their sanguine opinions. And what was Sam now called upon to perform at the top of his glory? Why, merely to enter the lists with a boxer, who, to speak the best of him, was but of considerable obscurity. Who, for a moment, would listen to a comparison made between Nosworthy and the hardy and brave Champion of Westminster, that had fallen beneath the conquering arm of Sam? Or with that truly elegant scientific pugilist, Tom Beitcher, who had twice surrendered up his laurels to this distinguished Jew. Cropley, too, who ought never to be mentioned without praise, ranking as a superior scientific boxer, was tremendously beaten by him. And his last antagonist, Ben Madley, possessing those sound fighting pretensions of true game and science, was reluctantly compelled to acknowledge the vast superiority of the hero in question. The renowned Dutch Sam was once more before his friends. His mighty prowess was again to be exerted, in quickly removing any obstacle from his presence. And his fanciers were so confident of his adding another laurel to his brow, that bets to a most extravagant amount were loudly offered. To have named the Baker as having anything like a chance, was out of the question; but, at this period, to have proposed an even bet, that Nosworthy won, would have operated like a touch of the ridiculous, and been laughed at, as betraying a total ignorance in matters of sport. Such was the true state of things, upon the combatants facing each other, and the great superiority of the Jew was now most anxiously expected to have been witnessed every instant. The decision was near at hand, and the Baker, eager to commence the attack, displayed more of a valorous spirit, than scientific precision. In making play, his distances proved incorrect, and two blows fell short. Sam gained nothing by this opening. Nosworthy, full of resolution followed up the Jew, appearing rather too rapid in his manner to take any particular aim, and seemed to prefer milling away, than trusting to those advantages that are sometimes obtained in sparring to put in a favourite blow. Sam made a slight hit upon the Baker's nob—but, ultimately, he went down.

2.—The eagerness of the Baker to go in, appeared to supersede every other consideration. He again hit short. But Sam did not miss this opportunity, and returned right and left, drawing the cock of the Master of the Rolls. Nosworthy, it seemed, had made up his mind to smash the Jew, and in his haste to get at Sam, slipped and fell.

3.—The Baker, determined in his mode of warfare, resolutely made up to Sam, but the Jew warded off the force of the blows with much adroitness. Nosworthy received a hit from Sam, and went down, but his fall was attributed more to the slippery state of the turf than to the severity of the blow.

4.—This round commenced with severe fighting, and much activity was displayed on both sides. Some good hits were exchanged. The Baker, *sans cérémonie*, milled the Jew before him to the ropes, and here it was that Nosworthy showed his superiority by putting in three three tremendous blows. Sam fell, evidently distressed, and his breath was nearly hit out of his body, by a terrible blow he received upon his breast. But his friends thought his conduct was a mere *ruse de guerre*. In fact, nothing could shake their opinion that the Jew was playing a sure game, by letting the Baker make the most of his strength, in order that, at a more advanced stage of the battle, he would become exhausted, when he might easily be kneaded in any direction to answer the purpose of the Israelite.

5.—It was in this round that Sam found out what sort of a customer he had to deal with. He saw also on that day what had never appeared to him before in the prize-ring, namely, his master! He was also convinced, too late, that the chance was against him. He could not resist the hardy blows of the Baker. Nor had he room enough to get away from him. Sam's hits produced no effect upon the courage of Nosworthy, who went in to mill in such an unusual manner to whatever the Jew had before experienced with any of his other competitors, that he was confounded. All his science had no avail. His wonted fortitude seemed to have deserted his once towering spirit, and dismay had taken possession of his mind, that he went down quite exhausted, from the severe punishment he had received. But however Sam might feel that he was sent down against his will, it did not appear in that light to his backers, who generally looked upon this disengagement as nothing more than mere trick and artifice of the Jew to weaken and tire out his adversary. A few persons, who were not quite so infatuated with the appearance of things, hedged off a little of their 4 to 1. Some others ventured upon even betting; but this latter circumstance was by no means general.

6.—Sam was scarcely upon his legs and set-to, when Nosworthy put in a blow that sent him down.

7.—The Baker, always ready, proved himself a first-rate article. He did not wish to lose time by any useless display of scientific attitudes. The proud fame of Sam proved no terror or drawback to his exertions. He went in with as much gaiety and sang frolic to mill, as if he had been only contending with a novice, instead of fighting with a boxer who had performed such wonders in the pugilistic arena. Nosworthy planted some good blows, and the Jew was again down on the turf.

8.—The science of Sam was conspicuous in this round, but the strength of his opponent was not to be reduced. The Jew put in some good hits in a smart rally, but he could not divert the Baker from his purpose, and Sam went down again much exhausted.

9.—Nosworthy commenced this round with his usual spirit, by milling the Jew again to the ropes, where he punished him severely. Sam, notwithstanding, planted some hard blows, but the impetuosity of the Baker carried all before him. The best efforts of the Jew, however well directed, seemed as useless if he had been trying to stem a torrent!

[At this period, it is presumed, the deeply-interested ones perceived something in the Baker they had not expected. He was not to be disposed of *sans cérémonie*. In fact, that he was about to accomplish the great task he had undertaken to perform—that a chance must not be thrown away, when four to one had been betted. A bustle now commenced, and the outer ring was instantly broken. The populace pressed heavily against the roped ring, bearing down all opposition to keep them off, and many persons crossed the ropes, to the confusion of the combatants exhibiting. However we might be disposed to attribute this disorder of the ring as the effect of accident, owing to the great concourse of spectators anxious to witness this mill; to what account can we place the conduct of a strong man, endeavouring to force out of the ground one of the stakes which supported the ring, and which attempt was only prevented by the manly interference of the Champion of England (Tom Cribb)? Nosworthy appeared at the mark, and called out to Sam to observe he "was ready," but the Jew declined setting-to till the ring was cleared out. It may not be improper here to remark, that, if Sam had decidedly felt in his own person he was, or must be eventually beaten if he continued the contest, it is natural to infer, that he would have saved the money of his friends by taking the advantage of this interruption in making, at least, a drawn battle. But the Jew wished to fight it out. In clearing out the ring, the confusion beggared all description. The whips and sticks were laid on heavily, in all directions; and many a rude and uncultivated commoner, smarting under the unmerited lash, gave a hasty return, regardless of the fame and science of his opponent. In the course of about twelve minutes, the desired object was attained, when the combatants once more commenced offensive operations.]

(To be continued in our next.)

## THE GAMECOCK.

SECTION II.—(Continued from page 325.)

TRIALS.

TRIALS are absolutely necessary:—Cocks vary so much in constitution, from one period to another, that how far a fair trial can be had from such as are imperfect is too well known for me to comment upon. I shall therefore only here observe that a trial of stage is very indeterminate; for they may be excellent in stage and very indifferent in cocks.

The variety of cocks bred in this kingdom, and the opinions of men being as various, it is difficult to say what sort to recommend in preference to another; for in one part of the kingdom they are partial to Piles, in others to Black Reds, Silver black-breasted Ducks, Birchin Ducks, Dark Greys, Mossy Greys, Blacks, Spangles, Furnaces, Pole Cats, Cuckoos, Gingers, Red Duns, Duns, Smoky Duns, in all of which good birds may be found.

It has always been a matter of surprise to me, to see the wonderfully avidity, even in experienced breeders, in expressing a wish of obtaining a single cock from a day's fight, that has exhibited something out of the common routine of play, in order to breed from, when I have been sensible of the impropriety of the cross he was destined to make, in fact, with hens that were as dissimilar in feather and other necessary similarities, as possible. If uniformity in their general appearance is absolutely necessary in forming a regular breed, I cannot help expressing my wonder at well-informed men running into an error so fatal to the welfare of judicious breeding; and which must convince a reflecting mind, that from such unnatural or at least incompatible crosses we are indebted to the public for such a strange medley of colours as we see in every main, when a few years attention would exhibit cocks of a very different stamp. From such incongruous mixtures, we see

1. The Pheasant-breasted Red;—2. The large spot-breasted Red;—3. The blotched-breasted Red;—which are all produced by some inaccuracy of breeding.

4. The Turkey-breasted Grey;—5. The large marble-breasted Grey;—6. The large spot-breasted Grey;—have a cross that does not belong to the true Grey.

7. The shady-breasted Birchin Duck;—8. The streaky-breasted Birchin Duck;—9. The marbled-breasted Birchin Duck;—have also a cross different from the true feather of the Birchin Ducks.

When I assert that No. 1 is from some inaccuracy of breeding, it must be understood that they deviate from the character of

The true black-breasted Red,

by the introduction of a cross of the Pheasant-feathered Cock, or a variety of the Spangle, either of which must deteriorate the original; and that No. 2, under

The large spot-breasted Red,

has been introduced either from the cock or hen in some distant cross of

a black, and of course attaches some remains of that colour either in spots, streaks, shades, or blotches, which strain operates as an injury to

*The true black-breasted Red.*

The remarks upon No. 2 hold good for No. 3.

The Turkey-breasted Greys under No. 4, 5, and 6, are under the same injudicious distant cross of No. 2, and wherever the distribution takes its seat (except a regular tip of the wing) they are inconsistent with that of

*The true Mealy Grey.*

The shades, streaks, spots, blotches, and marbled, whenever they differ in colour, their varieties arise from a cross possessing those colours at some distant period.

A regular and well chosen system to breed uniformly not only in feather but in each character respectively, is the best mark or criterion of an experienced breeder. When a main exhibits a regular set of brothers that require minute discrimination to distinguish one from the other, it meets with the general plaudit of the surrounding pit.

The feather of the True Black-Breasted Reds should be a clear vivid dark red, without any shade of the black whatever, extending from the hack to the extremities—the red upon the hack above, and black beneath, the upper convex side of the wing equally red and black, even those surrounding the posterior—the whole of the tall feathers black, the tip of the wing also—with black beak and black legs.

The brood-hen for such a cock should be the Dark Partridge-coloured Hen, bright red heckled above, black beneath, clean brick breasted, and such to the posterior; black beak and legs.

*The Mealy Grey,*

which may be ranked next in value to

*The true Dark Grey,*

is originated from the Black and Mealy White, has been the selected from those whose feathers were nearest to the Mealy White, slightly tinged and shaded with black; they have been kept in and in, and established the Mealy Grey, and from those of darker varieties have nearly all our Greys originated: the hen's colour will wonderfully prevail, in general more so than the cock's.

Number 7, 8, and 9, as remarked, differing from

*The true Birchlin black-breasted Duck-Wing,*

are from an introduction of some broken feathers either in the cock or hen, and will gradually infuse those different traits.

*The true Birchlin black-breasted Duck*

has been originally bred from the Black-breasted Red, the Yellow Birchlin, and the Grey Duck-Wing Hens.

The feather of No. 3. (Birchlin Duck) is a grey heckle tinged with black above, and black beneath, yellow ground with a general shade of dark Birchlin, thorough and clean black breasted, yellow legs and beak.

No cocks exhibit a longer period of unfaded health than the True black-breasted Birchlin Ducks; and their reputation stands as high in the opinion of sporting men as any general established feather going. When we come to appreciate the cross, you have in them as many excellencies in regard to feather, heel, courage, constitution, and shape, as will warrant an eulogium from the most experienced amateur.

The Piles have originated from a variety of crosses, and which have constituted the many shades you find in this numerous class. There is a strain in these cocks that eminently distinguishes them in that most wished-for gift and excellence—the deadly heel—that generally stamps their prowess in fighting; and it may be here remarked that the lighter colours wield their well-tempered weapons in a more dangerous direction than any other class of cocks.

Their admired excellence is that of close hitters. The true Pile was probably from the Ginger and light Custard Hen, and then crossed with Reds and Red Duns.

We have justly to regret that we cannot enjoy all the requisites in the Piles, Gingers, —Meals, —Yellow Greys,—Blacks,—Pole cats,—Cuckoos,—Furnaces,—Spangles,—Custards and Cuckoos.

They are so liable to intermediate changes of the constitution, become degenerated, soft, and long feathered, delicate in habit, and you find it an arduous undertaking to keep them for any length of time, to any fixed or established excellence.

Breeders of the present day are avoiding those injudicious crosses, and by adopting more uniformity are doing away the many party-coloured birds, which marked a certain want of refinement in breeding, so every way necessary to establish a choice few, which might be restricted to the undermentioned, and would in the course of a little time totally obliterate all others:—say

- No. 1. Dark Reds,
2. Dark black-breasted Red,
3. Dark black-breasted Birchlin Ducks,
4. Dark black-breasted Berry Birchlin,
5. Silver black-breasted Duckwing Grey,
6. Clean Mealy Grey,
7. Dark black-breasted Grey, and
8. Red Duns.

The whole of these if bred with care may be produced to a standard of uniform regularity, taken in their progressive numbers:—thus

- No. 1. Crosses well with the Partridge Hen, with No: 2 and 3 Hens.
2. Crosses well with No. 2 and 3 Hens.
3. } Cross { As a Cross already they are best kept to their respective
4. } feathers, always in youth.
5. }
6. } Will cross with each other with his own feather, invariably.
7. }
8. Will cross with No. 1 and 2.

Many of my readers no doubt will say, that a good cock of any colour is acceptable, and individually may be esteemed so; but a regular pen of cocks uniform in feather, blood, and constitution, must have the advantage of an opposite adversary who claims his support from the many.

"Piles" says Mr Sketchley, "are not in the number of my selects, although many that I have seen fight have had a share of my admiration, from a peculiar mode of fighting, singularly their own, their appearance being attractive and prepossessing. But all my endeavours to breed them have ever been unsuccessful; and as what I have to offer as a guide to others is from the sober light of experience, rather than from the delusive glare of plausible theories, I have omitted them in my favourite select."

SOME ACCOUNT OF THE TRANSFORMATIONS OF THE  
genus HOMO—species COUNTERJUMPER.

BY PHINEAS HAWKSEYE, MEMBER OF THE ENTOMOLOGICAL  
SOCIETY, &c., &c.

[This paper was intended to be read by MILES'S BOY, at the last gathering of the British Association for the advancement of Science; but some of the learned humbugs of that important body fancying that there was a lurking satire in the essay, it was maliciously suppressed.—ED.]

It is admitted on all hands that entomology is one of the most delightful of the practical sciences. Its inquiries are so varied, and the subjects for investigation so numerous, that students may pursue their inquiries to an almost unlimited extent, without being able to combat the opinions of each other on individual members of the genus. Each day new species of insect are discovered—new characteristics of others are developed, and an earnest inquiry respecting the insect tribe, every now and then disturbs the equanimity of our philosophical circles. Such being the interest excited by this remarkable science, we join the crowd of minute investigators, and proceed to describe a remarkable species of grub-worm which we have frequently encountered in our urban experiences.

In its caterpillar state it may be recognised by wearing a jacket of diminutive dimensions, upon rather a slender carcass, the sleeves exceedingly dubious at the elbows, and shrinking with dismay from the wrist. Beneath the waistcoat may be seen the suspenders from which hang trousers of venerably brown corduroy, and through which the knees peep in delicate transparency, while its ancles rebel against their covering, and show a soiled stocking equi-distant between them and the kneejoint. Its shoes are cleaned regularly every Sunday; its neck, arms, and feet at indefinite periods, and its hands when occasion may imperatively require. The remains of a cotton handkerchief, in imitation of a rope, encircle its neck, on one side of which a huge extent of cotton, vulgarly called linen, dangles to the shoulder, while on the other may be seen the co-partner of the collar negligently lying beneath the cravat. Its hair is short and hard, and a cap, somewhat too evidently bearing witness of having been in the mud, surmounts the cranium of this interesting specimen of life and activity. Its habits may be briefly stated—a great propensity to eat all that comes within its reach, to sing, whistle, or roar in the street, to keep its hand rubbing on walls as it passes along, and to trip up little girls who stand gaping as it pursues the noisy tenor of its way.

This is the real grub-worm of masculine humanity. Its probation in this state being completed, the *chrysalis* may be seen sweeping out a draper's door in the morning, carrying a parcel during the day, and assisting the porter with the shutters in the evening. Its face is emblazoned and incrustated with soap; the cravat is stiffened, and a small collar peeps modestly beneath its jaws. The sleeves of the jacket are not only entire at the elbows, but measured to a nicety to reach the second joint on its fingers. Its ancles have consented to hide themselves from the public gaze, and its shoes bear evident tokens of having been brushed at least yesterday. Sometimes, but certainly not always, a nasal handkerchief may be seen in its breast pocket. Its hair is still short, but not quite so hard; by looking closely into the jacket it will be seen that it has been polishing its head with the clothes' brush. Instances have been known where the creature has stolen its sister's hair-oil, and feloniously applied it to its own selfish purposes; but these cases are exceedingly rare in the *chrysalis* state. Its habits are now greatly modified. It sometimes may be heard gossiping to itself, and seen looking at the theatre bills, or admiring a well-dressed footman. It is at all times anxious to get possession of the hand-bills that are distributed about the street, no matter on what subject, and when it is refused this gratification, it scowls as fiercely as a kitten at a piece of hot-toasted cheese. It seldom continues long at one employment, and is generally lost to public view for a whole season at this time. Its *chrysalis* state continues from three to five years,

when it merges from its obscurity, and dazzles all the milliner apprentices and servant girls in the neighbourhood. It is now a full-grown butterfly.

Few but those well versed in natural history would be able to recognise this joyous specimen of pride and beauty as the grub worm of former days. Sometimes, however, it encounters an unwelcome acquaintance of its youth, and displays a power and genius on these occasions truly wonderful. The eye, which a moment before was wandering in greedy search of admiration, now becomes suddenly fixed—the lounging walk is converted into a hurried pace, and the fourpenny cane which it carries strikes ominously on the pavement at every step. Numerous instances are on record where it has been observed that the phenomenon has lifted a glass to its eye, and fixed it with a wonderful mechanism between its eyebrow and cheekbone; and all naturalists agree in declaring that this is the most complete invention yet discovered, by which one person may pass another without recognition.

Its habits are now so varied that it is not possible to follow it regularly through all its sportive enjoyments, nor are we capable of describing its appearance as a species. Individual members of the genera present many differences from each other, but a few prevailing characteristics in dress and conduct will sufficiently enable all the admirers of this splendid natural wonder to discover and appreciate it when this concentration of elegance and wit honours their vision with its presence.

In its expanding state it is busily employed in imitating all the elegancies of the older members of its species. The penny given it in the morning to purchase a biscuit for lunch is carefully hoarded till evening, when it may be seen gliding like a guilty thief into a tobacconist's, and buying a cigar. The small wretch then puffs a little in the shop-girl's face, and struts out in full blouse, blowing like a porpoise, its arms swinging at a rate only less furious than its legs: its neck is in continual motion, looking to the right hand and to the left, and saying with its eyes to all admiring beholders, "Aint I clever?" As the creature gets older, it walks more sedately; its hand is generally in the left pocket of its coat, the tail beautifully draped down the side instead of its back, exposing that its chair or stool is not always dusted when it seeks a sitting posture. Its hair is delightfully long; and every now and then its fingers are delicately passed through it, and a rebellious curl on the left cheek bent and twisted into the desired position. It rarely carries a watch, that being expensively ungenteel, but a silk cord or ribbon may be seen passing across its shirt, but for what purpose the closest inquirers have been unable to ascertain.

It is very rarely seen in the company of educated young ladies, although by its inquisitive glances, a superficial observer might suppose that its acquaintances were legion. Its conversation, however, is generally respecting the fair sex, that is to say, when not talking about itself. Were it to be believed, it has more admirers in the female world than all others put together;—it can boast of private assignations, secret interviews, and invitations to tea innumerable, but it doesn't care for any of them—indeed, it wishes that the girls would not take such a fancy to it;—that it is absolutely employed in continually casting them off, but all will not do, it is surrounded, flattered, and caressed, until it is sickened with excess of sweet attentions. It is greatly given to boastful lying, and entertain its wondering hearers with the secret amours of all the favourite actresses:

"It speaks of beauties whom it never saw,  
And fancies raptures which it never knew."

Indeed, its female acquaintances are principally lighthearted old maids, who, rather than be without a male companion, condescend to patronise this sorry specimen of manhood. They invite it to tea on Tuesdays and Fridays, and to dinner on Sundays. They pay its expenses to the "Eagle" or to "Vauxhall," and it promises to obtain an order to the theatre for them from its "friend Macready." It is very sorry that "Vandenhoff" and "Fanny Ellsler" are not in town, as they were very intimate together, and would do anything to render it a service.

As the summer of its life wears away, it begins to look about for winter quarters. It has always been "too proud to marry," but now considers it quite as well to make itself comfortable. It therefore pays assiduous court to a widow with a well-furnished house, who keeps lodgers, or has a settled income—or to an aged milliner, whose business is respectable, and who requires some one versed in book-keeping to note her accounts. To marry a young woman, and to support her, would be an act of madness;—any one that will support it, that is the object, as young, beautiful, and accomplished as possible; if not these, then one well to do in the world; but old or young, she must support it, or some other will. Should this concentration of selfishness not succeed in such a matrimonial speculation, it makes an attempt upon a butcher's or publican's widow, and strange to state, sometimes succeeds. In cases where total failure ensues; it drops down into a lounge at the stage door of the theatre, and contrives now and then to get admittance per favour of his friend, the scene shifter, or it loiters to the last at free-and-easies, in the hope of picking up a green but profitable friend. In a few years it is altogether lost sight of; or, if recognised in any future state of existence, it is as light porter in a draper's shop, or overseer of a stay-maker's establishment. It amuses the young men or women, as the case may be, with reminiscences of its former glorious life, knows the

world is sadly changed for the worse, and regrets that it did not marry one of the many rich young ladies who languished for it in vain. Like postboys, donkeys, and unmarried ladies, the ultimate destiny of this very uncommon specimen is exceedingly obscure.

"I am in an emaciated state," as the apple said to the cider press.

Why is a hackney coachman like a religious man?—Because he has an inward check upon his outward actions.

NOT A MINOR.—At the Totness Guildhall, a young man named Morgan was brought before the magistrates; his legal adviser, in extenuation, was pleading his youth, and said he hoped they would consider that he was a *minor*, when the youth, touching him by the elbow, said, "No, sir, I beg your pardon, I am a *woolcomber*."

A CABBAGED CON.—Why are Vauxhall and Cremorne House like kitchen gardens?—Because they are continually raising GREENS from them.

NEW LINE OF BUSINESS.—We understand that medical students, instead of walking the hospitals, intend to apply for permission to walk the different railways, as, from the number of accidents that occur on each line, they expect to finish their surgical education in one-half of the usual period.

### THE GOTHA HUNTSMAN'S CHORUS.

AIR.—"Der Freischütz."

What sportsman can vie with the sportsman of Gotha?

For whom foams more brightly life's glass of champagne?

Who butcher can boast him a handsomer quota

Of meat in the course of his life to have slain?

With rifle his hand in

He takes his proud stand in

His shooting-box raised on a hillock's ascent;

And from that pavilion,

Deals "Death to the Million"

Of deer down below him in fold snugly pent.

CHORUS.

Bang, pop-a-pop, pop-a-pop, pop-a-pop, pop pop

Bang, bang, bang;

Go it, go it, go it, go it,—pop;

Go it—bang,

Go it—pop,

Go it, bang away, pop!

The arbour around him with flow'rets is trick'd out,

And foliage and heather so pretty and fine;

Beneath run the bucks and the does to be pick'd out,

Before him are tables with cake and with wine,

The deer whilst he's slaying,

Musicians are playing,

And Polkas and Waltzes resound through the grove;

And mellow his popping,

The animal's "dropping"

As he lounges at ease in his shady alcove.

CHORUS.

Bang, pop-a-pop, &c.

Gay hunters—their master's protection their duty—

Attend him in liveries of green and of gold,

Whilst a little way off sit the Daughters of Beauty,

Surveying the feats of the sportsman so bold;

With ogling and smiling,

His labours beguiling,

As whizz! from its barrel his rifle-ball flies.

Oh! scarcely less killing,

I'll wager a shilling,

Are the glances as often that flash from their eyes.

CHORUS.

Bang, pop-a-pop, &c.

Declare, now; ye yägers of Epping, who follow

The hounds at the risk of your limbs and your lives,

If this kind of sport doesn't beat your own hollow,

And wouldn't suit better your sweethearts and wives?

Take, then, to deer shooting,

Both Epping and Tooting,

And you, all ye suburbs of famed London Town;

Let sportsmanship fire you,

And courage inspire you,

With Coburg and Gotha to strive for renown.

CHORUS.

Bang, pop-a-pop, &c.

—Punch.

## ADVERTISEMENTS.

### WORTHY OF NOTICE.

**A SUPERFINE BLACK DRESS COAT** for TWO GUINEAS, at KISCH'S WEST END ECONOMICAL, CONTRACT, CLERICAL, and GENERAL OUTFITTING ESTABLISHMENT, 40, Cranbourn Street, Leicester Square.

Inventor of the Improved Style of PALETOT. A Book, containing list of prices and mode of self-measurement will be forwarded (on application) post free. Observe the address, 40, Cranbourn Street, Leicester Square.

### THE NAUTILUS LIFE-PRESERVER

and SWIMMING BELT.—No Lady or Gentleman should cross the water or go to the seaside without obtaining this small, simple, and valuable apparatus, unsurpassed for buoyancy, portability, and efficiency, and approved by the Admiralty, and all nautical and scientific men. The Nautilus may be procured, of any size or quality, at the Office of the Company, 12, Wellington-street, Strand.

On Saturday, October 4th, will be Published, a New Weekly Publication, entitled

### THE PARLOUR ORACLE, and TRAVELLERS' COMFORT, 16. pages Demy Quarto, 48 Columns.

In this great Age of Literature, Art, and Steam, it may be fairly asked why another Candidate for Fame seeks the already crowded field;—the answer is, that there are at all times thousands of Trades and Professions thirsting after information combined with cheerful amusement, and that even the gigantic power that is daily and hourly wielded, fail to satisfy the craving appetite of the million.

Like a Dwarf when ushered into the presence of Giants, we for the moment shrink back appalled at the fearful array of rivalry before us and wonder at our temerity; but it is respect and esteem for our fellow Labourers that infuses awe into our hearts, not without a lurking feeling that the right hand of fellowship will be extended to us with bounty, good-will and fervour, seeking not the jostling of any fellow labourer out of the broad path he has chosen for himself, we incline to work shoulder to shoulder, and heart to heart, in securing the happiness of all mankind.

To one great and important body we would address ourselves, conscious that an appeal to their judgment and support will not be made in vain; we mean "The Licensed Victuallers of the United Kingdom." It is the intention of the Proprietor of the Work, to devote a portion of its columns to their interest; and while strenuously advocating the many and well-founded claims they have upon the public body at large, it will be found that generally its pages will be a never-failing source of Amusement, not only to the Worthy Host, but likewise, the Welcome Guest. Politics will be entirely excluded, and Party Spirit in its pages have no existence; but the Spirit of Good Humour, Good Fellowship, and Good Feeling, sparkle in its pages, eye, with as ruddy a glow and joyous a chirrup as any Bottle in "Mine Host's" Cellar.

All Orders for the Work to be addressed to the Publisher. Published by E. DIPPLE, 42, Holywell-street, Strand, London.

Letters and Communications to the Editor, and Advertisements, to be addressed to Smith and Son, Printers, 4, and 5, Union Street, Southwark. Price:—Weekly Nos. 1d.—Monthly Parts, in an Elegant Wrapper, 6d.

The following SPORTING HANDBOOKS, all uniformly bound in cloth, price 5d., or post free, 1s. each, are published by W. M. CLARK, 17, Warwick-lane, Paternoster-row, and sold by every bookseller in the United Kingdom.

**CLARK'S CRICKETERS' HANDBOOK.** Embellished with an outline Engraving of a Ground and Players, containing the History and Origin of that manly Game,—an account of celebrated Players and remarkable Matches; instructions to Young Cricketers, and the NEW LAWS OF CRICKET.

**WRESTLING AND PEDESTRIANISM.** With full instructions in Training for Athletic Sports and Exercises; with Engravings.

**MODERN BOXING.** Containing the History and Practice of Pugilism, illustrated with numerous Engravings.

**SPORTING SONGS.** Containing upwards of 100 of the most approved Sporting Songs extant.

Also, in One Volume, 8vo., handsomely bound, price 5s. with nearly Seventy Engravings, an entirely New Edition (the fourth) revised, and nearly re-written, of the popular Romance of

**DICK TURPIN, THE HIGHWAYMAN.** By HENRY D. MILES. W. M. CLARK, 17, Warwick-lane.

**THE PRINCE OR PEOPLE'S CRAVAT. THE ALBERT PATENT ELASTIC SPRING CRAVAT** is the best, most durable, and elegant wear.

Extract of a letter from G. E. Anson, Esq., Treasurer to his Royal Highness:—

"The Prince thinks the Cravat most comfortable to wear—the contrivance very ingenious, and will give his permission for them to come under his Royal Highness's patronage." Agencies granted in provincial cities on most favourable terms by the patentees, F. Hughes and Co., anatomical mechanician. Manufactory, 267, High Holborn, 433, Strand, 29, Lombard street, London.

### TO SPORTSMEN.

**SHOOTING, FISHING, and DEER STALKING KNIVES.**—J. B. DURHAM, manufacturing cutler, respectfully invites the attention of sportsmen to his immense stock, which includes all the newest patterns and latest improvements, and all warranted of the best quality. Knives of every description made to order on the shortest notice. Old knives, &c., polished and repaired. 261, Regent-street, near the Polytechnic Institution.

Now Publishing, in Weekly Numbers, price 1d., and in Parts, price 6d.

### THE HISTORY OF THE CONSULATE

AND EMPIRE OF FRANCE, under Napoleon, by M. THIERS, Author of the "History of the French Revolution, late President of the Council, and Member of the Chamber of Deputies.

CONDITIONS.—The work will be neatly printed in two columns, royal octavo, from a new and beautiful type, and on fine paper.

It will be uniform with "The People's Edition of Thiers' History of the French Revolution," forming, together, four handsome volumes.

On the completion of the Work, a general Preface, introductory to the History of Napoleon, with Titles, Index, &c., will be given, thus forming a complete standard classical book of general reference, and interesting perusal.

London: G. VICKERS, Holywell-street, Strand.

**RUPTURE.**—All persons afflicted with Hernia should at once supply themselves with Elam's Patent Truss, which supersedes all others now in use; it is light, imperceptible, and keeps its position in every motion of the body. Can be sent post-free to any part. See testimonials.

Gentlemen's Belts for hunting, horse exercise, &c., &c., made upon anatomical principles, and warranted to keep their position in every motion of the body. Suspensory Bandages, Spinal Instruments, Spring Crutches, Artificial Hands and Arms. Elam's Patent Uterus-supporter, which has never failed in one instance, immediately gives relief, and Performs a cure where it is possible. It has been tried in the most secure cases of the falling of the womb, with every success that could be desired. Can be sent post-free. See testimonials.

To be had at A. Elam's, Human Mechanician. All letters by post, with a remittance, punctually attended to. 403, Oxford-street, London.

Laced Stockings, Ankle Socks, Knee Caps, for varicose veins, swollen ankles, and support of the knee cap. In ordering send the measures, as drawing, post-free.

### THE EARL OF ALDBOROUGH CURED BY

### HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Masina, Leghorn, 21st Feb., 1845.

To Professor HOLLOWAY.—

SIR—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either. Your most obliged and obedient servant,

(Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing. Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.

SIR—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c., &c.

(Signed) THOMAS TAYLOR.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicines THROUGHOUT THE CIVILISED WORLD, at the following prices:—1s. 1½d. 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, the SIXTEENTH EDITION, illustrated with cases and Full-length Engravings, price 2s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 2s. 6d.

**THE SECRET COMPANION. A MEDICAL WORK ON NERVOUS DEBILITY and the concealed cause of the decline of PHYSICAL STRENGTH and the loss of MENTAL CAPACITY,** with remarks on the effects of SOLITARY INDULGENCE, neglected GONORRHOEA, SYPHILIS, SECONDARY SYMPTOMS, &c., and Mode of Treatment: followed by observations on MARRIAGE, with proper Directions for the removal of all Disqualifications. Illustrated with Engravings, showing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell square, London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Parkins, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges street, Covent-garden; Gordon, 146, Leadenhall-street, London: and by all Booksellers in town and country.

### THE CORDIAL BALM OF SYRIACUM; OR, NATURE'S GRAND RESTORATIVE.

is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c.

This Medicine should be taken previous to persons entering into the Matrimonial State.

Sold in Bottles, price 4s. 6d. and 11s. each, or the quantity of 4 in one Family Bottle for 33s., by which one 11s. Bottle is saved.

The 55 Cases may be had as usual.

### BRODIE'S PURIFYING VEGETABLE PILLS

are universally acknowledged to be the best and surest remedy for the cure of the Venereal Diseases in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 1½d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. BRODIE and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of £1, and in all cases the most inviolable Secrecy may be relied on. Only one Personal Visit is required to effect a Permanent Cure. Observe—27, Montague-street, Russell-square, London.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and important edition of

**THE SILENT FRIEND; a Medical Work** on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Stricture, Secondary Symptoms, &c., are fully pointed out. Illustrated by Engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and L. PERRY, & Co., Consulting Surgeons, London. Published by the Authors, and may be had at their Residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay & Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Parkins, Compton-street, Soho, and all Booksellers.

The CORDIAL BALM OF SYRIACUM is exclusively directed to the cure of nervous and sexual debility, obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

The CONCENTRATED DETERGENT ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms, &c. PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d. and 11s. per Box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammation, Irritation of the Bladder, &c., without hindrance to business.

Consultation-fee, if by letter, £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 till 11, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

LONDON:—Printed by JOHN WORTHAM, of No. 313, Strand, in the Parish of St. Mary-le-Strand; and published at the OFFICE, 42, Holywell-street, Strand, by E. DIPPLE.—Thursday, September 11, 1846.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 20. FOR THE WEEK ENDING OCT. 4, 1845. **THREE HALF-PENCE**

[Stamped to send free by Post, Twopence-half-penny.]

**THE BARON, WINNER OF THE DONCASTER ST. LEGER, 1845. VALUE OF THE STAKES, 2,150 SOVS.**

HE Baron is a very dark chesnut horse, with black legs, 1778 tail and mane, 15 hands 3 inches high. He has a strong 1779 bony head, with strongly marked projecting forehead. His 1780 neck rather short and straight, his shoulders oblique and 1781 beautiful. He is a tough, full gaskined, lasting-looking 1782 animal, and is engaged in the Cesarewitch Stakes. The 1783

Baron was bred by his present owner, Mr. Watt, and is by Birdcatcher, 1784 out of Echidna, by Economist, out of Miss Pratt. At the Curragh April 1785 Meeting, the Baron, carrying 8st, ran for the Madrid Stakes, and was 1786 beaten by Highwayman, the Hermit, and brother to Kerdiffatown, 7st; 1787 11lb each; he and Singaway were tailed off a long way (even betting 1788 on the Baron).—At the Curragh June Meeting, carrying 7st 10lb, he 1789 won the Kirwan Stakes in a canter, beating Wheel, 8st 2lb; and The 1790 Cook, 8st. Same meeting, carrying 8st 4lb, he won the Second Class 1791 Waterford Stakes easily by three lengths, beating Ould I. eland 9st; Will- 1792 o'-the Wisp, 7st 11lb; and Violet, 7st 13lb (even betting).—At Liverpool 1793 July Meeting, carrying 8st 3lb, he ran fifth for the Liverpool St. Leger, 1794 Mentor (the winner), Pantassa, Vaudeville. and Cinizelli being the first four. 1795

## CORRESPONDENCE.

## A FEW OBSERVATIONS ON THE DOINGS AT THE "CORNER."

[Our correspondent seems to us to be a "stricken" one; his letter is mysteriously complaining, he seems to know (or suspect) more than he cares to write.—ED. SPORTSMAN'S MAG.]

Sir—The doings at the "Corner" within the last four months, or from the last Derby to the just past Leger, have at the best partaken of a very unsatisfactory character; whether this has been caused by the chicanery of the "Bulls" and the "Bears" we leave others to determine, but we are inclined to think so. Let that be as it may we certainly have our doubts, if things go on as they have lately done, that the palmy days of horse-racing are at an end. We have little hopes of anything after it has been polluted with dishonest fingers, and when things go to their present length, we unhesitatingly declare that we have none at all. There is a very old proverb and one that our grandmothers and great grandmothers were very fond of, that "things often have a fair outside while the core is rotten." That proverb we think very applicable to our present subject, inasmuch as a few horses running over a course on a fine day, may be a very exciting amusement and a pleasurable sight, yet how few know the real facts of the case. The secret of that race how few are they that consider the hopes and fears, that are agitating the minds of thousands who anxiously await the termination of that race; how many thousands of pounds are at that moment made "safe," although the race is not yet run. Yet there is a secret in this, but it is a secret that men wear about them, and unblushingly expose to the sight in open day. In the opinion of every honest man, a debt of honour is a debt that ought to be paid without evasion or shuffling; and if such an opinion prevails as to the loser, we ask what ought our opinion to be of that man, who would employ dishonourable and dastardly means to obtain the amount of that bet from the really honest man? There is a practice existent in the army, to send the wrong-doers or any that commit faults which the law cannot reach, to Coventry: could this not be acted upon in sporting matters, and a "Court of Honour" be instituted, and by a verdict of *Guilty*, to sentence the offender to a total incapacity to make another bet; and if he is a subscriber at Tattersall's to expel him there, and from every Stand and betting Ring; perhaps, however, this would speedily thin and reduce the present crowd, even of race horse proprietors, and hit men in high places too hard? I say nought personal, but the

fluctuations in the late Leger, the sort of things that were made favourites in the public betting, and the scratchings at the eleventh hour, are exceedingly suspicious, to say the least of them.—L. J. S.

## FIELD SPORTS IN IRELAND.

Sir,—It is a strange anomaly and one very difficult to explain, why Ireland so abounding in game, is so little "shot over." Possessing the most useful hilly tracts in the world, and infinitely superior to the Highlands of Scotland. For it is obvious to every one possessing any idea of its geography, that the "warm" birds in their migrations from abroad, must touch in Ireland before they reach Scotland. From Skeabreen to the point of Tory Island, it is completely stocked with every description of migratory game; and from the want of proper sporting, will soon (as it is reported as Uncle Ben's goose did), roast and serve themselves up at table.

Yours, &c.,  
VIRIDUS.

## THE POTATO DISEASE.

The following letter is copied from the *British Mercury* of Sept. 6:—

Sir.—"My attention has been given to the disease which has shown itself so extensively amongst the growing potatoes. I find, in almost every instance, that the epidemics of the stalk below the surface of the ground, is more or less in a state of decay, often disintegrated, and completely rotten: the leaves and branches accord with the state of that part of the stalk below the ground. The tuber, beneath the outer skin, is first spotted brown (like a bruised apple): these spots extend and penetrate toward the centre, quite changing the nature of the potato. Those near the surface are most injured; in some cases the lowest on the root are not at all affected, while the upper ones are useless. I should therefore expect that the longer the crop remains in the land, the greater the injury will be. I judge, from the microscopic appearances, that the starch escapes injury for a long time after the skin and cellular parts are gone; and as the whole of the nutritive powers of the potato reside in the starch, I should recommend that wherever the disease has shown itself to any extent the crop should be dug whether ripe or not, and the starch extracted by the following simple process:—

"After washing the roots, let them be rasped fine and thrown into a large tub or other vessel; pour a considerable quantity of water, and well agitate and rub the pulp with the hands; all the starch or fecula will, from its great weight, fall to the bottom, while the skin and fibrous matter will be carried away by the water. Wash the starch with one or two more waters, allowing it to fall after each washing; spread it upon cloths in a warm room to dry—in this way about 20lb. or 21lbs. will be obtained from every 100lbs. of potatoes, and it contains as much nourishment as the original roots; it will keep any length of time, and might be used with flour to make bread, pies, puddings, &c., as well as farinaceous spoon-meat.

"This is much better than throwing away the diseased roots, and will furnish food for tens of thousands who might otherwise want it.  
"WILLIAM HERAPATH."

Sir—The free use of potatoes being inadvisable, disease having destroyed so much of the crop, I have adopted rice as a substitute, and I find it most palatable and nutritious. It should be simply dressed by throwing it into boiling water, boiled for half an hour, and then strained; serve it up instead of potatoes, and add gravy, pepper, and salt, according to taste.

These few remarks may draw attention to an article which, though generally used only for puddings in England, is the most important article of daily food to a great portion of the world:

I am, Sir, your obedient Servant,  
September 19, 1845. R. H. S.

## FIRST OF SEPTEMBER OPERATIONS; WITH A FEW WORDS ON POACHING.

To the Editor of the Sportsman's Magazine.

Sir.—I take the liberty of handing you a brief sketch of my operations on the first of September. Shooting has, of late years, sunk considerably in my estimation. Three years ago, I made a journey to the Highlands of Scotland, where fowling may be enjoyed in the greatest possible perfection; and, since that period, I have been more indifferent than I formerly was, respecting this diversion, at least, as far as regards shooting in this country.

Poaching in England, has increased to such a degree, that in all parts of the country, where the game is not strictly guarded by numerous keepers, is taken on the near approach of the season, and the nocturnal depredators find a ready sale, and good prices, for their nefarious commodity. Nor do these plunderers confine their operations to the gloomy shade of night, but, as far as relates, at all events, to partridges, busily employ themselves

in the broad glare of the noon-day sun. Poachers (those, at least, which reside in my neighbourhood, where, by the by, they literally swarm) effect their object in the day-time by the following method:—they discover the basking places of the birds, and contrive to cover them with a net; or they will place their large net at the bottom of a narrow field of potatoes or turnips; that is, they spread the snare over the tops of the potatoes or turnips, leaving one end of it upon the ground, and, with the assistance of a dog, drive the birds under it: thus they are enabled to capture them with little or no noise; and at a time, too, when those appointed to guard them are the least suspicious of an attack. As I am writing for the perusal of sportsmen, such will perceive, from what I have stated, how easily the object may be accomplished. Poaching, like all other arts, has experienced the improvement of modern times; and, in all its ramifications, may justly be said to have arrived at a degree of perfection unknown to former periods. Where the all-destructive net cannot be conveniently used, many of these birds are taken (particularly in the north of England) by small snares made of horse-hair: so that, on the whole, the poacher comes in for his full share of the game, in defiance of all the legal enactments for its preservation.

Moreover, there are poachers of two grades, and which, for the sake of distinction, I will call the semi-licensed and the non-licensed. The former are men who purchase a certificate, and under the colour, or rather, perhaps, under the cover, of this document, carry on an extensive business with the latter. The licensed poacher, prior to the month of September, ascertains from his own observation, and through the instrumentality of his agents, the situation of every covey in the district; and all that are within the reach of the net are captured a night or two before the first of September, and are thus prepared for the earliest market. The licensed poacher then prepares to kill as many of the remainder as possible; for this purpose, he turns out at the earliest dawn of the first of September, attended by one of his myrmidons, who conducts him to those coveys, which they had not been able to capture by the net: and, as the spot is known where these birds are to be found, as well as the direction of their flight and their general haunts, so he usually succeeds in the destruction of a more than ordinary quantity; in fact, he labours hard all day, and returns at dusk heavily laden with the plunder of the surrounding neighbourhood. In three days, the district is pretty well thinned from partridges; since, as long as they are to be found, it is pursued incessantly, and as fiercely as a wolf would pursue an antelope.

Hence it may easily be perceived, that a fair sportsman, who happens to reside in the same neighbourhood, has scarcely a chance. Still, with a perfect knowledge of what I have stated, I yet turned out on Monday, the first of September, conscious that, unless I succeeded in killing a brace at the first onset, the chances would be very much against me for the remainder of the day. Further, I had contrived to preserve one single covey in my ground, by running it up with my dogs every evening for several previous weeks; and though I had repeatedly observed "Anubis," and his tribe of greedy assistants, manœuvring for the capture of this my "horse in stable," as it were, yet, on the evening of Sunday, the 31st of August, I had the pleasure of counting all the members of it, excepting two:—eighteen was the original family; sixteen still remained.

The fine purple-red hue of the glowing setting sun left no fears of foul weather for the following morning. A goodly day did, indeed, burst upon us on the first of September. I took the field rejoicing in hope, and active with expectation; I knew I could trust to my dogs, and I felt that I could rely upon my covey, and I deemed

"——— he must be a dotard such pleasures to shun,  
At the point of his dog, and the flash of his gun."

The covey, however, owing to its having been much disturbed, had become wild; and, therefore, though I found it immediately, the birds sprung much out of distance, mad as March hares, indeed, nor was it till some time had elapsed that I could come anything like near them. I was too old a campaigner to waste powder, and throw away shot, upon a wild discharge, merely because it was possible to kill. At length, I succeeded in killing a brace; when "Anubis" made his appearance, with his train of followers. The report of my fowling piece had attracted their attention, and induced them to make towards a spot where they had reason to believe game was to be found; I therefore, moved off in a contrary direction, not wishing to mingle in such suspicious company. And that "Anubis" and his companions are viewed in this light, may be gathered from the following circumstances:—six different landholders, prior to the month of September, caused legal notices to be served upon the fraternity,—it is like "legion," many,—in consequence of the depredations which, for several previous years, had been committed upon their geese and domestic poultry, and, which, though it had caused the usual bruit, had never been laid to the charge of the leading unfair sportsman and his gang, as the circumstances of the former (he has some £150 per annum), raised him above this kind of suspicion.

But to proceed with my day's excursion. As my walks with my young pointers, both in the spring, and in the months of July and August, had been frequent, I, of course, possessed a tolerable knowledge of the haunts of the coveys in the neighbourhood, of which there were many, and these for the most part, large and well grown; I, consequently, directed my course towards those points where I had been in the habit of observing the

birds. However, out of fifteen coveys, I have strong reason to believe, five only remained; and, of course, my doubt is as little that several of them had been captured only on the previous evening. Yet I was glad, out of the extensive wreck, to pick up a few brace; this I did, and returned home at an early period; not, indeed, with a determination to abandon the sport generally, but disgusted with the odious system of depredation which has been carried on for years with comparative impunity.

All persons are agreed as to the evil tendency of the game laws; the letter and spirit of these statutes are arbitrary in the highest degree, and their operation productive of the most disastrous results, though incontrovertibly proving, at the same time, that these very enactments increase the evil which they are intended to check. In fact, nothing can be more absurd than portions of these laws, particularly the enactments which regard what is termed *qualification*. As this matter stands at present, it is completely ridiculous; and I am most decidedly of opinion that if what is called qualification were expunged from the statute book, and the price of the certificate raised to ten or twenty pounds, little more (if any thing) would be wanting to remedy the defects so palpable, disgusting, and cruel, and which have been productive of incalculable, and, alas! irremediable, mischief, though framed, I have not the least doubt, with the best possible intentions.

Generally speaking, there is no lack of partridges; but scarcely to be found in such numbers, I think, as they appeared to be in last year. It generally happens that hares present themselves to the shooter on the first of September; I, however, met with only one, and that not more than half-grown, though I have reason to believe that these animals have bred abundantly, and will be found very numerous, when an advanced period of the season, by causing vegetation to fade, exposes them more to human observation, and to the operations of the "mean, murdering, cursing" crew, as Somerville has it. In the course of my day's ramble, I found (what I certainly did not expect to meet with) a brood of unfledged partridges. Nay, these very pretty little birds did not appear to have been hatched many days. I picked up two of them before the nose of my favourite dog, "Bob," and, of course, turned them down again: of how many individuals the covey consisted I know not, nor is it of much consequence, as I have little doubt that, before the evening of the third of September, they would all be destroyed. From true sportsmen they would be safe; but, unfortunately, on the first of September many illegitimates make their appearance in my neighbourhood, who could scarcely hit an elephant, yet I suspect that the produce of their prowess, dangle in bunches from the shop fronts of the neighbouring poulterers.

Yours,

PERCUSSION.

### THE PRIVILEGE OF POVERTY.

[The following letter evinces considerable talent and observation; we should be glad to hear again from Peter.—ED. SPORT. MAG.]

Mr. Editor.—I have just been thinking what a privilege it is to be poor and unknown, and what a blessing it is to be without a character and a dignity to support. Nine-tenths of my enjoyments are such as are not attained by the wealthy or great. They are such as are not permitted to those who have character and reputation and station to sustain. The great pass through life on a high horse. They sit erect. Their heads are elevated, and they move proudly on to their graves, without knowing or feeling a thousandth-part of the beauties of the world in which they have lived. I, on the other hand, with my characterless, poverty-stricken brethren, make the journey of life on foot. We hasten not on our way; we take it easy; we cull the flowers which grow along our paths; we avoid the briars and thorns which obstruct it; and when we come to a sunny or a pleasant spot, we sit down and enjoy its beauties, and take the refreshment and rest that our necessities may require.

Oftentimes when I have taken my station in front of one of our first-rate print-sellers' windows, with my elbows resting on the bar that projects before it, for the purpose of examining at my leisure the various specimens of the arts which he daily displays for the gratification of the public—oftentimes, I say, when I have been so stationed, I have seen the man of consequence, as he wended his way slowly along the street, turn his eyes wistfully towards the splendid display with which I was gratifying my senses, look cautiously around to see if any of his acquaintances were near, stop for a moment, and before he had half gratified his curiosity, start suddenly and guiltily aver, and pass on. "Pass on," I have said to myself, "slave of custom—victim of pride—pass on, and leave the pearls that are scattered in thy path to those who have the good sense to appreciate them." And then, after such a mental address, I have crowded into my place among the motley and ragged group of amateurs, and with them I have admired the taper form of the sylph-like Tagioni, and the graceful ringlets of Mrs.

\* Our esteemed correspondent has said well in adding "as Somerville has it;" he, we are quite sure, would not have to be charged against him an expression half so contemptibly ungenerous. *Quando dormit bonus Hemerus*. Blackwood would say the author of the Chase was half seas over, when he penned this hiccupping libel.—EDRR.

Wood, have expressed my astonishment at the sublime conceptions of Martin, pointed out to my less informed neighbours the faults in his "Belshazzar's Feast," and have laughed, without fear of giving offence, at the comic power of Cruikshanks.

I am always at hand when a man is run over, or when a sweep falls from a building, help to carry him to the nearest apothecary's shop, and am always one of those who are inside when the door is closed. By these means, I have an opportunity of seeing where the man is hurt, and what are his prospects of recovery, what remedies are applied, how he bears his misfortunes, and thus gain a great deal of useful information.

I attend the parade of the "Life Guards," and see them go through their manoeuvres and drills, and thus pick up a little knowledge of the art of war, to place at the service of my country in time of need.

When the "Band" comes out with either of the above-mentioned, I am not too proud to walk along with the boys on the side-walk, and keep step with the music. It does me good. It excites my martial spirit, and calls to mind "the times that tried men's souls;" in short, it makes me a more patriotic man and a greater lover of my country.

I attend all the fires—am a great admirer of engine No. 14, and Mr. Braidwood. I am an honorary member of the company No. 14, when short handed, however. I only work at the engine where there is a lack of hands my general occupation at fires being of a superintending or looking on character. I help females and small children to escape from the flames: take care of valuable packages that are thrown into the street, pick up pieces of china and looking glasses that are cast down for preservation from the upper stories, and see how a stop is finally put to the flames.

I take great interest in the improvement and increase of the city. No citizen, public or private, has been more solicitous than I about the paths, posts, and railings in the parks, the dumb lighters and floating piers, at the various bridges and landings, or more anxious concerning the introduction of "pure and wholesome water." For the last two years I have been a superintending superintendent of the erection of Hungerford Bridge, the Nelson Pillar, and the Conservative Club-house. Every morning I would go and contemplate the work of the preceding day. I made the acquaintance of the master builder, and obtained a great deal of information from him relative to the details of the latter edifice. These, also, have now failed me, and I have now only the new houses of parliament to fall back upon; when these are finished I must betake me to some new line of street, say that from Blackfriars-bridge to Islington, which may come off about that time.

These are a few of my occupations and amusements, and they are such as the man of wealth, of worldly pride of business character, knows not. They are engrossed with themselves, and see not and care not what the world is doing, further than it affects their immediate interests. Their natural tastes are curbed, their impulses are restrained, and their real feelings are concealed. Their whole life is a mask. They are "star" actors on the world's stage, while we poor, unwashed, unvaccinated gentlemen are the "supernumeraries." They have an arduous and difficult character to sustain, while we have only to hear their ranting, and sing choros to their songs. They are obliged continually to look and act their parts, while we can crack a joke with the pit, ogle the side-boxes, and have the fun among ourselves.

Yours, everlastingly,

PETER POROCURANTE.

## THE NATURAL HISTORY OF SPORTING.

THE HARE.

(Concluded from page 337).

Resume the subject of our last paper by a few observations on the peculiarities of "Pass," when seeking to evade the pursuit of her natural enemy, the dog. The first thing a hare takes is generally the foundation of the ensuing pastime, all the doubts she afterwards makes are in a great measure like the first; a hare will go over a great part of trailed land, and visit her works of the preceding night and morning; sometimes a buck will take endways over fresh ground, without offering to return; the doe usually runs in a circle, unless with young, or having recently kindled; at such times she often runs forward, and ceaselessly ever escapes with life, being naturally unfit for fatigue; however, both sexes greatly regulate their conduct according to the season and weather. After a rainy night, in a weedy country, neither buck nor doe will keep the cover, owing to the drops of wet hanging on the spray; they therefore run the highways or strong lanes, for as the scent naturally lies strong, they hold the roads which take the least; not that a hare judges upon what soil the scent lies weakest; it is her ears that chiefly direct her, for the hounds being oftener at fault on the hard paths than the turf she finds herself not so closely pressed, and is not so much alarmed with the continual cry of the dogs at her heels. The louder the cry, the more she is terrified, and flies swifter; the certain effect of which is, a heart broken sooner than with a pack equal in number and goodness, but who spend their tongues less free. The same principle directs the hare to run to the covers in autumn; when the ground is dry, and the wind cold at north or east; she then keeps the

paths that are covered with leaves, which are so continually falling and blowing about, that the best hounds can carry no scent; her alarms are consequently short, and she rests contented where she is least disturbed.

When a hare rises out of form, if she erects her ears, and at first runs slowly, with her scat cast over her back, it is surely old and crafty. When a hare is hunted to her form, along the hard highways, and feeds far away from cover, and that her doublings and crossings are wide and large, it is a buck; for the doe generally keeps close to the side of some cover, and, when going to feed in the corn fields, seldom cross over the furrows, but follow the track of them: when hunted they turn frequently, use many stratagems, and rarely leave the country round their seat, whilst the buck, after two or three turns about his form, runs straight forward four or five miles, and then probably squats in some place where he has before preserved himself. A buck or jack hare may also be known by his head being shorter, his ears more grey, his shoulders redder, and his body being smaller than the doe, and, at his first starting, by the whiteness of his hinder parts.

They who make a business of hare-finding (and a very advantageous one it is, in some counties), are enabled to find them in any weather, by observing the direction of the wind. People frequently do not find hares, from not knowing them in their forms. A gentleman courting with his friends, was shown a hare that was found sitting. "Is that a hare?" he cried, "then, by Jove, I found two this morning as I rode along."

According to the season of the year, the hare is to be looked for: if it be spring, upon fallows or green corn: during the autumn, in stubbles or turnips; in winter they will seat themselves near houses, in brambles and tufts of thorn.

Hares will certainly, when hard pressed, go to vault; that is, take the ground like a rabbit.

*Fecundity of Hares.*—A male and female hare put together by Lord Ribblesdale, for a year, when the offspring amounted to sixty-eight. A couple of rabbits, enclosed for the same period, produced about three hundred.

*Feet of Hares.*—Tender feet in dogs are owing to the softness of that fleshy substance called the ball of the foot: but nature has to the hare been singularly liberal in this part by supplying her with such feet as are not subject to, and indeed scarcely susceptible of hurt, so as to incommode her in running. The balls of her feet, instead of hard flesh, are covered with strong coarse fur, suited so well for the purpose, that she never treads easier or to more advantage than on the hardest beaten track, or rugged, stony road; the very surface which cripples a dog she glides over with pleasure. In a frost she has an evident superiority to most creatures; the horse does not at that season take his gallops for fear of foundering; the greyhound or bound would in running start all their claws, and tear their souls to pieces, whilst the hare treads as soft as if she went on wool.

*Hare Warren.*—The warren should be paled, and the meuses made of brick; but to any person making a warren, Mr. Beckford recommends examining the traps, boxes, and stoppers, all of which have peculiarities not easy to be described. His town warren is in a wood of near thirty acres, and is cut into many walks: a smaller warren, which would perhaps answer as well, should have only one walk, and that round the outside of it. No dog must ever be allowed to enter it, and traps for stoats and polecats should be constantly set. Parsley sown in it will induce the hares to keep at home. When hares at the end of a season become shy of the traps from having been often caught, it will be necessary to drive them in with spaniels. The warren hare will be found very thick round the warren, for they will be unwilling to leave it, and when disturbed by dogs will immediately go in. The number of hares which a warren will supply is hardly to be conceived; but Mr. B. prefers a warren in the midst of an open country (which might be stopped close on hunting days), to the catching hares in traps, and then turning them down. A warren so situated would supply the whole country with hares, which, after one turn round it, would most probably run straight on end.

Hounds for hunting box hares should not be too fleet, and they are to be hunted like a pack of fox hounds, as a trap hare runs very much in the same manner, and will even top the edges; Mr. B. concludes his remarks upon the running of trap hares, with the method recommended by a gentleman to insure them to run straight, which was tying a piece of riband to their ears.

The hounds mostly used for hare hunting are the deep tongued, thick-lipped, broad and long hung southern hounds.

The fleet, sharp-nosed dog, ears narrow, deep-chested, with thin shoulders, showing a quarter cross of the fox hound.

The rough wire-hair hound, thick quartered, well hung, and not too much flesh on his shoulder.

The rough or smooth beagle.

*HUMBLED.*—It means hitting the public in reality. Anybody who can do so is sure to be called a humbug by somebody who can't.

## BRITISH BIRDS. NO. XHI.

THE GOLDEN PLOVER.

**LAST** number we gave, along with a few general remarks on the delicate bird, a figure of the Grey Plover, which we this week companion with a faithful representation of its golden namesake. The season for the visit of this beautiful bird is fast approaching, its coming generally taking place about the beginning of November and its departure early in February. The Golden Plover frequents salt-marshes in flocks. It breeds in Ireland, and is very common in some parts of the Highlands of Scotland, especially Caithness and Sutherlandshire.

There is also a small and elegant variety termed the Green Plover, which is often found on moors and heaths, during the winter, in small flocks. The legs are black and the feet coloured.

## TEACHING YOUNG SONG BIRDS.

It is impossible to give better instruction for teaching young birds to sing various tunes, than those of the celebrated Lawis de Berg, which he gives in the following remarks:—

"There is neither lark, linnet, bullfinch, nor goldfinch, but that may be brought to as great perfection as the canaryfinch; but the English do not take the pains a German does, they love to sleep while the German is tuning his pipe, and instructing his feathered songster. There is more to be done with the lark from two to three o'clock in the morning than can be done in many months in the day time, or when the least noise or sound is to be heard but from the instructor; and this rule holds good with all finches. Every thing should be quiet but the master; as it is with the human kind so it is with the feathered; a good tutor seldom fails of making a good bird. I say begin with your birds when all is quiet, they will then take much more notice of what you endeavour to teach them. The age for beginning to instruct should not exceed three months; I sometimes begin sooner, and seldom stay less than an hour with each bird; I sometimes use my pipe, sometimes sing, but whichever method I adopt, I seldom fail of bringing up birds to please, inasmuch that I have often sold a lark for two guineas, a linnet for one guinea, a bullfinch, when it could pipe finely, from five to ten guineas, and a goldfinch from one to two guineas; in short, the whole art of bringing up a bird to sing well, depends entirely on visiting him early, and furnishing him, the best thing before you leave him, with what he is to eat during the day. He should be supplied daily with fresh water in his fountain, and small gravel at the bottom of his cage; but short allowance in eating is absolutely necessary to make him a good songster."

## THE OFFER.

(For the Sportsman's Magazine.)

Oh! do you think that I'd deceive  
A lovely maid like thee;  
Oh! no, by all my promise'd vows,  
Decent ne'er dwells in me.  
Accept them, Jane, my passion'd love,  
She answered "Ax my eye."  
I'll cherish, love thee, as I ought,  
No one shall kinder be;  
Happy, loving, we will live,  
If you will marry me.  
And is it true, the maiden said,  
To do all these you'll try;  
If that you'll promise, quick I'll wed:  
I answered, "Ax my eye."

J. KIMBROUGH.

## CORRESPONDENTS.

**WORMS IN HORSES.**—Since we replied to a Correspondent a week or two back upon this subject, the following passage in the Veterinary Record met our eye. It is from the pen of Mr. Haggren, who states that no other remedy than the betel nut is used in India for horses affected with worms. From one to two drachms of the powdered nut are added to half the usual dose of aloes, with a little more ginger, and to use his words, "it turns out the worms like a broom in a gutter." He thinks it has only to be known in England to come into general use. The betel is a climbing plant, the leaf in shape and appearance resembling ivy, but more tender and full of juice. It belongs to the same class of plants as the pepper. This remedy is certainly well worth a trial. Will any Correspondent who may make the experiment, forward us the result of his experience?

**"ERNEST."**—Without a pun, are you in FUN? A word in your ear, and that of all our Subscribers; patronise us by increasing our circulation, which you can easily do, and we will spend more money, but we must get it first. We feel proud of your opinion of our report of the fight for the Championship, as you were an eye witness. The "Sun," "Globe" and "Advertiser" severally quoted our "Remarks" and spoke laudatorily of our labours. The last named paper did us the honour to transfer our "leading" article of last week to its columns on Friday last, and it was doubly gratifying to us when we saw how completely every statement we had made was borne out by "THE OLD SQUIRE'S" letter published three days after by "Bell's Life" and "The Era."

'Tis not in mortals to command success,  
But we'll do more, good public, we'll deserve it.

**SIMON SLOW.**—You're FAST enough, a little too fast to our thinking. It is a bubble bet, and Simon is "simple Simon," cute as he thinks himself. His case stands thus for the warning of others: Simon bets a "friend" that "he cannot jump over a stick placed at a certain height STANDING THERE," i.e., in the place where the challenger indicates. His friend jumps over it without a run, and Simon evidently waits our decision in his own favour, because his friend did not keep standing there when he made the jump that won him the wager; 'tis a poor quibble, and Simon must pay according to his own shewing. The spirit of the bet was for a STANDING jump, in contradistinction from a RUNNING one; which is equally impossible, if Simon be right, for the man is no longer running when he takes to his jump.

**REMEMBRANCE, LEEDS.**—It is said that Bendigo can jump his own height—we speak only from hearsay. Ireland could do it, without a spring board. He leaped over a horse 15 hands high with only a step to aid his spring.

**SESSABLE.**—HACKNEY.—Cribb fought ten times, and was beaten once. Spring twelve times, and was also beaten once. Cribb was defeated by George Nicholls.—Spring by Ned Painter. Cribb, Spring, and Painter are all living. Broome has never been defeated.

**S. BURTON, CHICHESTER.**—To buy off a private, serving in India, if in the Queen's service,—infantry, £40, cavalry, £50; if in the Company's, from £50 to £60.

**J. BOWLAND, MANCHESTER.**—Caunt's second fight with Bendigo took place April 3rd, 1893. His fight with Bendigo was on the 12th Feb. 1893; if the Printer has made it 13th, it is a mistake. It would take us too much time to refer to a file of papers more than a twelve-month back.

**A. COCKNEY SPECULATOR.**—We have answered your question before:—Doncaster is a round Course of about 1 mile, 7 furlongs, and 70 yards. The other Courses are portions of this circle, viz.—Red House in, 3 furlongs 152 yards; T. Y. C., 7 furlongs 214 yards; Fitzwilliam Course, 1 mile, 4 furlongs, 10 yards; St. Leger Course, 1 mile 6 furlongs, 132 yards; Two-mile Course, 2 miles, 15 yards; Four-mile Course (twice round) 3 miles, 7 furlongs, 219 yards; Cup Course, from the Red House and once round, 2 miles, 5 furlongs, 14 yards.

**J. CULL.**—You are right. The position of the mid wicket in the frontispiece to the Cricketer's Handbook is wrong, through a mistake of the artist. You cannot get these people to draw a thing correctly which they do not understand. It is the TEXT we praised, not the picture. The fiddlers' positions are much varied according to circumstances.

**G. M., Coventry.**—The "Gamecock" series of articles begun in No. 17; which has for its frontispiece a lifelike figure of that "valorous bird."

**"ENDLESS TROUBLE."**—We wish no one gave us more than you do. Tom Oliver was born in 1789, he is a Buckinghamshire man, and his fighting weight was 12st. or thereabouts. His first fight was in 1811, so you can guess he was more than at "years of discretion" when he entered the ring. His best mill (after a long rest) was in 1834, with "Uncle Ben," whom he licked in 24 minutes, "two could uns," but a right good and a merry mill.

**SNOR.**—We will just "skim over" your facetious MS., and give it a place with pleasure. CRICKET. PETO.—It is not sufficient that the bat touches the crease; it must go over it, or a short run may be called.

**ALPHA.**—When the catch is made the ball is dead, and you could not put down the other wicket.

**J. W. B.**—We must say that the conduct of the H—h—te Club was anything but liberal or fair; but certainly the conduct of Mr. A—, in using his influence with them to the injury of an individual who exercised an arduous and onerous duty, was not that which might be expected from a gentleman or a player.

**CYCLOPS.**—Not out. Make better use of thy solitary optic in future.

**T. G., Hampstead.**—A batsman may, after playing a ball, defend his wicket with any part of his person, but must handle the ball in so doing; therefore it was quite fair in B. to kick it away from his stumps after playing it with his bat.

**P. Q.—**Yes, Bill Hillier, for a hundred.

**J. H.—**A day with the South London" by NED RIV., in an early number.

**HARRY.**—The rumour with regard to the Corner Pin is an absurd one. Bendigo was met at Tom Oliver's house on Thursday last, and there he could not be presented with the belt. Jam Ward presented Bendigo with a belt in 1834, after his fight with the Doctor. "Life in London" is thrust "out of town" by pressure of sporting matter at present.

**HARRY BLAIR, Paddington.**—Send us the newspaper vendor's name, we will point it—he is a shammer, and the truth is not in him. We make a LARGE proportionate allowance than the 3d. or 6d. newspapers to the retail trade, as ANY honest vendor will tell you.

**"COCOA."**—The book is exceedingly scarce: and if we wanted to procure one, we do not know where to look. We once gave an order, and could not get it for several months.

## BYRON CORRECTED.

"I stood in Venice, on the bridge of Sighs,  
A palace and a prison on each hand."  
Thus read a loving husband, "law, such lies,  
Tho' written by a lord, I'll not bow stand."  
Exclaimed his wife—masterfulite of spouses,  
"Or else, indeed, his hands were once of size,  
And dreadful small, the palaces and houses."

**FOUR CHOICE THINGS.**—Alphonso, King of Aragon, once said that there were only four things worth living for,—old wine to drink; old wood to burn; old books to read; and old friends to converse with.

**A CON.**—What finite map Noah he supposed to have chiefly laid up, in the ark? Pain (pears).

**A EULOGY ON A PIPE.**—The fact is, the moment a man takes to his pipe he becomes a philosopher. It is the poor man's friend, it calms the mind, soothes the temper, and makes a man patient under trouble; it has made more good husbands, kind masters, indulgent fathers, and honest fellows, than any other thing in this world.

FLIRT AND WEST WIND.

### THE GREYHOUND.

**F**ULLY intending to give the readers of the SPORTSMAN'S MAGAZINE, a series of articles on Coursing and the Greyhound, which shall contain all that experience has gathered, on the mode of choosing puppies, breeding, rearing, and training them; we shall here confine ourselves to a few paragraphs of generalities.

A well bred greyhound is characterised by a symmetry of form superior to any other known dog. His general appearance bespeaks great swiftness in running, which is rendered more evident by a minute examination of those different points by which sportsmen form a judgment previously to trial. If we take the hare for a model, a greyhound will be found to assimilate with her in some peculiarities of shape, as, in the nearness of the shoulder-blades upwards; the depth of the chest; the length, muscle, and sweep of the thighs, and the formation of the hind legs and feet: and these are allowed to be the points of speed. The greyhound, also, has a long neck and fine sharpened head and nose, with small ears; is rather low and thin at the shoulder, and short between the knee and the fore foot, the latter being round and close like a cat's. The lowness in front affords a facility in picking up or killing at speed, while the short joints and round feet give strength, which enables the animal to stop and turn with the hare in a small compass. The best winded dogs are observed to be well hooped in the ribs; by which they are more capable of sustaining a long or severe course, as the action of the lungs is less confined or restricted than in animals which are flat-sided. Broad and muscular loins are, also, essential to support and give effect to the strong impelling power of the hinder legs and thighs. The thigh bones, upwards, are wide apart and prominent; and the tail is fine and long, and shows itself low from its insertion, so as to allow a greater degree of freedom in the action of the haunches in running. These points in a greyhound should be always preferred, because they are not only proofs of good breeding, but it is notorious that dogs so formed have obtained the highest celebrity from their performances in the field. With respect to colour, it is quite a matter of fancy, and, consequently, not worth attention.—Good dogs have been produced of all complexions, and every gentleman may indulge his taste in this particular without prejudice to his kennel.

**BREEDING.**—To breed greyhounds with success requires considerable judgment. A kennel may be easily filled, but it is extremely difficult

to procure a convenient number of good dogs. A considerable knowledge of the subject of breeding, and great attention, aided by peculiar facilities, are scarcely sufficient to insure the possession of a superior dog; as, notwithstanding the numbers that are bred from the best blood, few prove beyond mediocrity in qualifications. To reduce this risk as much as possible, a dog and bitch should be selected with a good pedigree, both of which can or have run well, of a fine and perfect symmetry, with good constitutions, and free from disease; if the bitch be aged, take a dog of three years old; but if the dog be aged, select a bitch of two or three years old.

In the choice of puppies, when very young, there is not any criterion by which we can judge, as the points cannot be discovered at so early a period; a bitch should not be allowed to bring up more than four, or she will be inclined to wean them too soon. Puppies whelped between the middle of February and the middle of April, thrive better than at any other time of the year; as they obtain strength before the heat of summer can affect them; and, from being bred early, they are more capable of bearing, and, consequently, less liable to be injured by the cold in winter.

A greyhound dog may be considered equal to his most powerful performances at three years old: some published opinions state "the best age to be four years;" but, at three, he is unquestionably in the greatest perfection as to speed, strength, courage, and activity; and therefore, can never be able to support a course with more effect than at that age, provided his owner has previously done him full justice in training, &c. Bitches are generally more forward, and may be considered as reaching their meridian at two years and a half old: some examples may be selected not exactly favourable to these opinions; but they are confined to particular cases, and relate to extraordinary dogs who ran their most celebrated courses after that age. These instances, however, may have been entirely accidental, and are by no means to be regarded as proofs of superiority in the animal at a more advanced period. A practical observation of general or frequent results will produce the most advantageous conclusions for the formation of a correct judgment.

**PROPER AGE TO ENTER GREYHOUNDS.**—Puppies should not be entered before they are fifteen months old, either dog or bitch; and special care should be taken (if they prove worth preserving) to treat them with great lenity during the first season; otherwise, they are liable to contract injuries, from which legimentary enlargements may arise that destroy all future expectation of excellence.

**CUNNING FALSE, OR CUNNING.**—It is well known that all greyhounds, after having been much used, acquire a habit of *waiting to kill*, without using their best exertions in speed; this lurching is termed "running cunning," and, according to the regulations of coursing is always discountenanced. Cunning rarely occurs in young dogs, but is usually the result of experience, and is often brought on earlier by injudicious working: a greyhound may, occasionally, run two courses in one day; but such practices should not be frequent when the courses are severe. Great attention must be paid to valuable dogs, as they may be often preserved for an additional season with proper caution in this particular: frequent change of field is also desirable; by constantly running over the same ground, dogs obtain a knowledge of the direction in which hares will go, and frequently make for the covert instead of pursuing the animal in a direct line, which is another trick of "cunning" practised by them. Whenever such propensities are observed in a greyhound (let his former excellence have been ever so great), he is never to be depended upon afterwards in running matches.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN FERT AND FARMEST.

**SUNDAY, September 26th.**—NINETEENTH SUNDAY AFTER TRINITY.—Your grapes will now be ripe. If you do not bag them yourself, and your vine happens to be in an exposed situation, you may expect that some one will come and bag them for you.  
**MONDAY, 29th.**—MICHAELMAS DAY.—Nottingham Races.—Lord Nelson born.—The Sheriff's sworn in.—STRANGE IF TRUE.—A lady had a goose which hearing it was to be killed for dinner, walked into the garden, and considerably stuffed itself with sage and onions.—Country Paper.—WONDERFUL PERCOCITY.—A celebrated dramatic translator has in his possession a magpie of this season, who, whenever he sits down to write an original piece, calls out "O you thief!"—Country Paper.  
**TUESDAY, 30th.**—Newmarket 1st October Meeting.—Mr. Bunin issues an order that all visitors to Drury Lane are required to come in "full dress."—"S'help ma cot," says Lippy Isaac of Duke's Place, "that's 'ot I calls a prime move to clobber up the clothe (clothes) of the season."—Destruction of the plaster figure of George the Fourth at King's Cross, 1848. Tippy Cooke said he was not surprised as the "Statty" had been in a state of mortification ever since he knew it.  
**WEDNESDAY, October 1st.**—PHEASANT SHOOTING BEGINS.—Royal Caledonian Hunt and Kelso Races.  
**THURSDAY, 2nd.**—NOTTINGHAM GOSSE FAIR.—London University opened, 1838.  
**FRIDAY, 3rd.**—King's College opened, 1831.  
**SATURDAY, 4th.**—Lord Brougham sends a letter to the papers, stating that he will instruct any poor debtor gratis how to fill his petition under the "Small Debts Act." I.e. "the Schoolmaster" undertakes to teach poor devils to decline quod, gratis. The attorneys declare he is "all abroad," though he gives his address in Grafton Street.

## The Sportsman's Magazine.

## OURSELVES AND THE STAMPED PRESS.

**WHEN** "the Thunderer" of Printing House Square, "the Stranded Grunticle" our venerable "grandmother" of Shoe Lane, (the original 'old woman who lived in a Shoe') the "swift coursers of the fiery Sun," or the exquisite Jenkinsonian "Morning Po," do or say anything out of the common! Straightway do they delectate their readers, and astonish the public with a leaded leader, anent and concerning their superhuman exertions as caterers of public intelligence: the *Times* doth then condescend to explain how, through the energy of "their own reporter," or "correspondent," seconded by certain Deal or Folkstone boatmen, or some "superintendent of locomotives," on the "Smash-and-crash Line of Railway," they received, printed, and dispersed, innumerable copies of a certain result of an Election at Sunderland, a Revolution at Madrid, a present of bottled stout and Cheshire cheese from Louis Philippe to Queen Victoria, or whether it rained in the forenoon of a certain day during a musical fete and deer battue, held at Schlipschloppkrankerslaughterhausen, whereat seventeen Princes of Mecklenburg, Leiningen, and Coburg, "assisted," together with our gracious Queen. "My Grandmother" points with pride to her "eleventeen column report of the speech of his grace the Duke of Broadacre," at the grand *Reventicultural* dinner, held in his own borough town, to which "300 substantial freemen sat down," including in that number, half-a-dozen M.P's, four noble lords, six "honourable misters, whose honor is more before their names than after," a like number of colonels, twelve half-pay captains, two-score of country squires, twenty

five persons, a like number of country attorneys, land-bailiffs, stewards, &c.; fifty of his grace's dependents, and a hundred of their hangers on, relatives and tradesmen. Then does "my Grandmother," echoed by the *Standard*, cock her cap and look big at the thought of this "great demonstration of the sound spirit of the agricultural districts, and say all sorts of ill-natured things about demagogues and leaguers, incendiaries, and the like.

So doth the *Post* plume itself in a *Record* of illuminations, ladies' dresses, cracked pannels, or a criticism in *lingua franca* on the last *soprano* who has strained his emasculated windpipe at the Opera House; the *Sun* "boasts the deeds it has done" in reporting and printing the speech of a minister, "ere its echo has died in the house." Shall we not then, seeing all this, say that we

"Have done the ring some service"

in the matter of Caunt and Bendigo?—By this time the public will have the whole case before them. Our report, the first, the fullest, and the fairest, has been confirmed in every particular. The remarks we appended to it were transferred into the *Sun*, the *Globe*, and the *Advertiser*; while in the ensuing week, the last named paper, as well as the *Sun* (on Friday, Sep. 19th) quoted the *whole* of our last week's leader with a commendatory notice. Let the reader peruse that leader, in conjunction with our reports, published on the morning of Thursday, Sep. 13th, ere a single Sunday paper had issued from the press, and then read the following letter from the referee, which contains his decision, and the confirmation, we are proud to say, of every syllable we have written.

TO THE EDITOR OF BELL'S LIFE IN LONDON, STAKEHOLDER, &c. &c.

SIR: An appeal having been made to me as referee, through the medium of your paper, by Mr. Spring, to reverse my decision in the late fight between Bendigo and Caunt, on grounds unworthy of my consideration, I request you will confirm that decision by paying over the stakes to Bendigo, who, in my opinion, is justly entitled to them. It was with the greatest reluctance, and at the particular request of my friends and the unanimous solicitation of the backers of the men, that I accepted the office; but I shall always consider it one of the greatest acts of folly I ever was guilty of in my life. In discharging my duty, I endeavoured to do justice to the contending parties, to the best of my abilities and judgment; and, arriving at the conclusion I did, and now confirm, I was actuated only by a complete conviction of the justness of my decision, and not from the intimidation of the "roughs," as Mr. Spring states in his letter. It would redound more to the credit of the ex-Champion, if he termed my decision an error in judgment, rather than a direct robbery. Such insinuations against a gentleman who undertakes the office of referee merely to oblige both parties, and unanimously chosen by them, are not calculated to induce any gentleman, in future, to accept it; and, in taking leave of the ring, I should advise all my young friends to avoid so thankless and unsatisfactory an office. Had I been under the intimidation of the "roughs," I had several opportunities of putting an end to the fight before the conclusion, by acts on the part of Caunt.

A noble lord and several gentlemen who stood close to me during the whole fight can corroborate this statement. I most positively deny that I stated to any one that a man going down without a blow, after he himself had treacherously delivered blows, was fair. In no one instance, in my judgment, did Bendigo break the laws of fair fighting. I must also contradict, in the most positive manner, that I ever stated to any person that I did not see the last round, which Mr. Saunders, of St. Martin's Lane, has advanced. I saw every round distinctly and clearly, and when Caunt came up the last round he had evidently not recovered the 92nd. After the men were in position Bendigo very soon commenced operations, and Caunt turned round directly and skulked away with his back to Bendigo, and sat down on his nether end. He never knocked Bendigo down once in the fight, nor ever got him against the ropes in the last round. In my opinion Caunt got away as soon as he could from Bendigo, fell without a blow to avoid being hit out of time, and fairly lost the fight.

I am your obedient servant,

Doncaster, 18th, Sep. 1845.

THE OLD SQUIRE.

Without a purpose to serve, except that of enlightening and amusing the public, we here pledge ourselves that our future reports of sporting events, shall be written (exclusively for ourselves) on the same principles of uprightness, honesty, and impartiality; all we ask our subscribers in return is, to recommend our little venture. In taking leave of the subject of the championship we may observe, that it is our intention, on the occasion of every regular pugilistic contest, to give a detailed and special report in our stamped edition, which will also contain the latest betting on every forthcoming race.—The Number containing the report of the contest will be kept for some time in print.

## THE FISHER'S CREEL.

THE PAR, OR "SKEGGER TROUT" OF ISAAC WALTON.

**T**he much-vexed question of the par and samlet or skegger, and whether it or they be different fish, is not our intention here to treat. Of late years the researches of Mr. Shaw and others have tended to affirm the opinion that the par samlet, or skegger, is not a diminutive trout, but neither more nor less than the fry of the salmon, under peculiar circumstances. To the subject of this remarkable and much disputed fish we will return in an early number, and present the reader with a carefully compiled paper on the par, wherein the various conflicting authorities and experiments on the obscure point of Natural History shall be assiduously weighed and compared, and their various experiments on salmon fry duly noticed.

## THE GAMECOCK.

SECTION III.—(Continued from page 344.)

ON THE NECESSITY OF MAKING TRIALS.

**T**HE mode of trial varies as much as any circumstance in the routine of cocking. Those who breed but few, implicitly rely upon them from one period to another: others content themselves with a trial of stage, or from some imperfect brother, taken from his walk and immediately devoted to proof—perhaps pitted against a cock considerably heavier than himself, contesting a struggle under disadvantage, and this only to know if he is good game. These trials are too incompetent, and too trivial for any number, much more so for a set of cocks, where a main of any consequence is depending. It is now found highly expedient with those who have various sorts, not to hazard a match without a regular private trial, under the management of those who feed it—and from such fair cocks from whose actions they may form a proper judgment of the whole. In this trial they ought to be fed with the same caution as those for a main, abating no one circumstance whatever; and where a great many are bred, they may be so selected, as to match them sufficiently accurate, which will put them in the same situation as those who are meant to be depended upon; and if any suspicion arises from such trial, if those are brothers, let the survivors be out up, giving them every equalizing chance through the whole contest. If this is not complied with, it cannot be esteemed a fair trial.

It may be necessary to explain, to some of my readers, what is to be expected from a fair trial. Cocks proving good game denote only a part of their excellence, for they may be deep game, and yet be deficient in what constitutes the best and first quality of a cock—that of being a good healer; and if these wanting they must be deemed imperfect. They should be

Close hitters,  
Bloody healers.  
Steady fighters,

Good mouths, and come to every point.

A hasty fighter indicates a desire to get shut of his cock—and if his antagonist gives him too much trouble, he will frequently give him ground for agreement. It is also a bad sign to see him crouch, and give his head away: nor is a shifty cock to be admired, notwithstanding he sometimes wins—There are cocks, even in the extremity of death, that will show you the goodness of their intentions, as much as to render themselves dangerous.

To judge with nice discrimination the various effects the piercing head has upon the frame, more immediately to catch the momentary gash upon the vital parts, to watch with cautious eye how he bears the ebb and flow of departing existence—as in this gasping stage (if I may refine upon the sentence) their heroic fortitude is frequently conspicuous, and their last moments are a train

of the greatest magnanimity. On the other hand some cocks would display an early propensity to shrink from the sod of danger; for as these are degrees of cowardice, so are those degrees variously exhibited—and many a coward, if they had the power, in their fleeting passage would quit the field of battle. He, whose interest it is to mark and to commit to paper this scene of combat, gives due merit and applause to such meritorious warriors, who have stood foremost in all their various exploits, that the surviving brothers and sisters may hereafter do justice to these departed heroes, and hold up their fame and glory to their allotted extent. When I am speaking of various degrees of cowardice, so are they variously urged by pride and jealousy, the least alarm of either hurries them on into that impetuosity (more remarkable in some than in others), which with them is not to be appeased but by death.

A trial holds to view, probably all that is valuable as well as defective; for they exhibit as many modes of defence and attack, as the pugilistic tribe—and their blows have more or less of the destructive, according to their better art:—a wide striking cock seldom carries death with his heels; if his legs are out of the direction of his body, so of course they are further extended, and they are generally esteemed dry spurred cocks—and it generally happens that they are a low flying fluttering cock,—but on the contrary, if his legs are in a due direction to his body, he is more erect, rises higher, and is a close hitter,—his battles are generally short.

Brothers will not always prove equally good; yet if close bred, from a regular set of sisters, any little apparent want of constitution should not suffer them to run away.

"A few years ago, says Mr. Sketohley, some friends thought it necessary to make a cross with a set of favourite hens, then well known by the appellation of the Old cross-marked sort. They were given to understand that cocks, similar in feather, &c. and long in favourite reputa, would fight at Nottingham. These consisted of six full brothers, fine, lofty, boney cocks; four out of the six fought, and in such a style of excellence, that, exclusive of their previous recommendation, it was thought prudent to purchase the two unmatched.

"Merely saying that they fought in a style of excellence is not doing that justice to my worthy friend, who pointed out their superiority, and whose judgment and recommendation gave a decided preference in their favour: I need only to say that they followed closely to the heels of our favourites. Shropshires, and to them we refer our readers; and like them they never produced their equals. Every thing which could contribute to the welfare of breeding, was bestowed upon the brood, and their progeny gave us such flattering hopes, that we were undetermined if we should give them a trial when stage, but the produce being very numerous, and in the midst of our annual great main, it would have been placing that confidence, experience urges me to say we ought not to have—therefore on mature deliberation a selected number were committed to the management of our old feeder Roastal—fed at the house of one of the gentlemen concerned, and enjoyed all the advantages of cocks devoted for a regular main, and from this cautious selection were matched with great equality—every thing was conducted with that degree of regularity which would have done credit to the first mains;—the setters had equal merit—due attention was paid to them in their intervals of fighting—and all the laws of cocking were rigidly adhered to. I have seen many mains, and a great many trials of stage, but I never yet saw any that exhibited such proofs of every excellence, as these stage manifested throughout every stage of trial. If a trial of stage, could be a certain criterion of their goodness in a future stage, as cocks, how pre-eminently high we should have ranked, in our endeavours to meet our numerous antagonists, with such rare ones,—the consummate superiority must have carried every thing before them. Highly gratified as we were in their juvenile state, we were also intent upon another proof ere the main came on: the same attention was paid to them in cocks, as to the stage, but what a falling off was there; such as would induce a man to decline any attempt at future breeding—their constitutions were so gloriously changed, that all our hopes were baffled—our arrangements disconnected—and we were thrown upon the public for a supply which in the end was the loss of the only main out of six fought. Such a carnage ensued as seldom takes place, for the whole were made away with—and the surviving old cocks, in their trial, but, too plainly pointed out to us the failure we experienced in their sons. My own died rotten on his walk, the others, though struggling under a bad constitution, evinced evident proofs of their innate excellence. A brother to the brood cocks, after being struck blind in the first fly, and won his battle, was bought at a high price by the late Mr. Brooke, in London, whose knowledge in these birds ranked high with the gentlemen of the sed;—he put him to some of his Spitzers hens, that enjoyed all the flow of health, still the progress was equally unfortunate. These cocks had been known and fed many years by Roastal—and his annual remarks upon the superiority of these were not lost upon his employers. Such failures as these are unpleasant drawbacks, in pursuit of cocking, and have their serious attendants. Our references relative to this unfortunate change was easy and satisfactory—that the breeder of these cocks had kept them in and in for as many years, without that requisite caution of putting youth to youth, was the rock he split upon—and hurled destruction on his favourite brood."

These details have for their object—To point out the liability of change in the constitution, from removal of cocks from a country they were bred in; to a distant one. The uncertainty of coming to advantage. To show that a trial of stage is not to be depended upon, and the necessity of trial when cocks that cocks may hold their constitution until they are two years old. A failure in the constitution at three. The impropriety of keeping in and in without putting youth to youth.

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

### CHAPTER VII.—continued.

WILLIAM NOSWORTHY. (THE BAKER).

It would be superfluous to detail the remainder of the rounds in number 38. A complete sameness pervaded the whole of them; and Sam, who had hitherto portrayed the hero, now scarcely exhibited the traits of a second-rate pugilist. The ferocity which had so terrified his opponents was now visible; and he exhibited great weakness and distress early in the fight. It is curious to remark, that he never once knocked down Nosworthy, but, on the contrary, was either flogged or went down every round, with the exception of about three. Yet still the friends of Sam, and particularly those denominated the Flash Side, relying on his experience and judgment, flattered themselves "it was all right," that he was aiming to bring down Nosworthy to his own pitch, in order to obtain any conquest, and give a good opportunity of betting. But, alas! they woefully deceived themselves! the wished-for change never arrived, and they ultimately found out their error in calculation.

Nosworthy proved himself a confident boxer. If his movements were not equal to the scientific precision of Tom Belcher, his undaunted resolution and courage, from the commencement to the termination of the fight, reminded many of the spectators of that peculiar forte of Bill Hooper. The Baker was a two-handed hitter, and seemed perfectly awake to the business before him. From this mode of attack the debilitated Jew stood no chance whatever. The strength of Sam, once so much the theme of his backers, was missing, and he appeared a mere shadow of his former self, of his former tremendous character. He could not knock down Nosworthy, or even hit him away. This defeat of a great favourite may operate as a useful lesson in future to the Knowing Ones, if properly applied by teaching them discretion. It would seem, that an opinion had been entertained that Sam never could be conquered. Youth and strength must be served; and never was the position more clearly and decisively shown, than in this instance. Sam was turned of 41 years of age, and his irregularities of life must have dilapidated as fine a constitution as was ever possessed by man. His opponent, a young man of 28, was in good health, of great strength, and weighed a stone and a half more than the Jew; besides, we are to take into the scale, that Nosworthy was not destitute of skill, and possessed unimpeachable bottom which had shown itself in all the battles he had fought. But calculation was out of the question. The game of chance, even, was completely lost sight of. "To a certainty—to a certainty," was the cry of nearly the whole of the fancy; and any opinion expressed in favour of the Baker was instantly silenced by 4 to 1, treated as a want of judgment, and laughed at with derision and contempt.

Upon Sam's resigning the contest, a general consternation took place among the backers of the hero. If the Jews were weighed down with grief—the Christians were equally miserable and disappointed at this unexpected defeat! So complete a cleaning out, it is supposed, had not taken place in the boxing world, since the conquest obtained by Slack. It is computed that, in different parts of the kingdom, one hundred thousand pounds, at least, were lost upon this battle. In the dismay of the moment, the exclamations of the losers were loud and vehement. "Tis impossible!" said many. "It must be a cross!"

The combatants did not appear to be so much punished as might have been expected, when that mode of painting is recollected, in which Sam had hitherto so peculiarly excelled, ornamenting the mugs of his adversaries. But the case was altered; instead of giving, as heretofore, he now received severe punishment. Sam must have suffered terribly from the repeated knock-down blows he experienced. But his fame was of so close a texture, that he did not exhibit marks of punishment like most other men. This was an important point towards victory on his side, by disheartening his antagonist, who however they might mill him, could not see the result of their efforts, from Sam's appearing fresh and unharmed.

Had Sam properly attended to his training; had he viewed the consequences of the battle in the light of an experienced veteran, bearing in mind, that he had every thing to lose, and but little to gain; the sequel might have proved different. His experience and judgment should also have pointed to him, that youth, strength, science, and determined resolution, were not to be disposed of as matters of course; that it was not a mere sporting article he had to

pink for his amusement: one who had presumptuously dared to enter the lists against so mighty and renowned a chief. Some caution, it might be presumed, was necessary, when it was also known to him his antagonist was above a novice; that Nosworthy was an energetic boxer, aspiring to reach the top of the tree, and, if possible, to wrest those hard-earned laurels from Sam, which had so often and deservedly decked his victorious brow. But the conquests of the latter had made him forget himself. Fame and flattery had cheated him. His name was a terror. His ferocity was not to be resisted. The pugilistic world thought, if not pronounced, him invulnerable. The whole race of pugilists viewed him as a phenomenon amongst them. Impressed with this character, it should seem, latterly, that poor Sam, in the enthusiasm of the moment, "had crept so much into favour with himself," from what he had hitherto done, that he vainly imagined, he had now only to appear in the ring, and his towering fame alone was sufficient to vanquish any pugilist who might have the temerity to oppose him. Four to one was laid thick upon him in all directions. This elevated him beyond his equilibrium. He staggered under his weight; and he at length fell a victim to "self-conceit" and ill-timed flattery.

The fame which Nosworthy earned on this occasion, led to several challenges, among others to one from the renowned and hardy Scroggins, which he accepted, and they met on June 16, 1815, at Moulsey Hurst. The details of this battle will be found in *the Life of Scroggins*, who was on this as on many other hard fought fields, the conqueror. His friends attributed this defect to bad condition; but the truth seems to be in Scroggins, Nosworthy met a miller of his own stamp.

Bill was afterwards matched to fight Geo. Curtis, but the latter paid forfeit from ill-health.

Nosworthy felt his defeat by the hardy little tar, and never recovered his usual spirits. Dissipation and excessive drinking hurried him into a consumption, and in the last stage of this frightful disease, he, with the assistance of a few friends left London for Lymington, in Devonshire; but in Oct. 26, 1816, while resting at Exeter, he received his final knockdown, scarcely surviving the Jew three months. His connections in Devon were very respectable, his manners, until depraved by excessive drink, pleasing, and his appearance prepossessing.

Our next chapter will contain the pugilistic career of Mr. JOHN GULLEY, with a portrait.

(To be continued in our next.)

**FIRING AN ARROW.**—A certain learned Theban who, in writing figures in the *Asiatic Journal*, on the subjects of the sports of India, writes as follows:—"After awhile he fired his arrow in the jungle, &c." We never before heard of an arrow being fired. As iron mile-stones and zinc-coppers are now in vogue, perhaps we must not grumble.

**TO MAKE BLACK JAPAN FOR LEATHER.**—Take four pints of boiled linseed oil, four ounces of burnt umber in powder, three ounces of asphaltum, and oil of turpentine enough to give the whole a proper consistence. The asphaltum must be melted, and the hot linseed oil gradually added to it; then the burnt umber, and lastly the oil of turpentine.—*Pharmaceutical Journal*.

**HIGHLAND MODE OF PAYING DEBTS.**—In former times, when the Highland chieftains were not prompt in their payments, a tradesman from the low country, impatient for his money, found, with some difficulty the way to one of their castles. Arriving at night, he had his supper and was put to bed. On looking out in the morning, he observed opposite to his window, a man hanging on a tree. Asking a servant the reason of it, he was told, "It was about a pair Glen-co' body, tat cam to insult ta laird." The tradesman, immediately calling for his boots, went off without unfolding his errand. The laird had caused the effigy of a man to be hung up during the night, and instructed his servants what to say, which had the desired effect.

**AN AMAZING LIGHT DRAUGHT OF WATER.**—An American paper says they have a trick of constructing steam-boats of such an amazing light draught of water, in the enterprising State of Arkansas, that the Lucy Long, a boat recently built at that place, will run anywhere that the ground is a little damp. We believe she generally comes to anchor if there is anything like a heavy dew.

**THEY WANT A RAILWAY.**—The ordinary rate of a camels' walk, when in full progress, says a recent traveller is, on an average, two and a half English miles an hour.

## BEAR HUNTING IN SWEDEN.

(From Lloyd's Field Sports of the North of Europe.)

On the succeeding morning, after breakfast, our party, which was pretty large, set off in our sledges to the place of rendezvous, which was at six or seven miles distance. Here we found between six and seven hundred men assembled, whom Mr. Falk, with his under-keepers and other assistants, arranged in the usual manner. On this occasion there was a considerable number of soldiers present, many of whom had been expressly ordered from a distance, subsequent to the last skall, for the purpose of assisting in the one which was about to take place. These ensured the better organization of the people; for the military, as I have already remarked, from their habits of discipline, commonly make the most efficient Skall-fogdar, or under officers.

As we had so considerable a number of people, and the ring was not of any great size, Mr. Falk was enabled, at the first setting out of the skall, to place them at only a few paces apart from each other. This was very desirable, as from the bear having succeeded in breaking through the cordon when the previous battue took place, we could not but anticipate he would make a similar attempt on the present occasion. We were well prepared, however, to receive him, as in this instance unusual attention had been paid in the examination of the fire-arms with which the people were provided; and these, besides, were only placed in the hands of persons who were supposed to be capable of using them with effect. The guns were also equally distributed throughout the line, so that let the bear make his appearance at what point he might, he was pretty certain to meet with a warm reception.

On this, as on similar occasions, Mr. Falk led the driving division, whilst his right hand man, Jan Finne, took the command of the stationary wing of the skall: I attached myself to the latter, and placed myself in a favourable position a little in advance of the people. In this instance I was only armed with my rifle, having had no time before leaving home to send for my double gun, which, with dogs, &c. I had left at a distant point in the forest. This, as I shall presently show, was a rather unfortunate circumstance.

All being now in readiness, the driving division, as we knew by hearing their cries, moved forward; but they had not continued their march for very many minutes, before a volley of shots in the distance announced that the bear was on foot. For a long while subsequent to this, however, all remained perfectly quiet, and not another discharge was audible, nor did we, at the point I was stationed, see or obtain intelligence of the beast. Tired therefore of waiting, and being joined by Jan Finne, who, like myself, was without information, we proceeded together to the spot whence the firing had taken place, to ascertain how matters stood. Here we found that the animal had met with so hot a reception on his approaching the line, very many shots being fired at him almost at the same moment of time, that being intimidated from breaking through the people, he had headed about and retreated back into the ring; but he had not escaped with impunity, as was evinced from his track being very deeply marked with blood.

Jan Finne and myself now lost no time in hastening to Mr. Falk, who was in the centre of the driving division, to inform him of the wounded state of the bear. On hearing which, that gentleman shortly afterwards ordered a general halt, when he permitted me to take Jan Finne, and to advance into the ring, for the purpose of giving the beast the *coup de grace*.

Jan Finne and myself now hastened back to the point where the bear had received his wounds, and from thence we pursued his tracks within the ring. For a while we were followed by three or four individuals, but on our pointing out to them that we were much more likely to attain our object if left to ourselves, as in that case our movements would be conducted with the greater silence, they all rejoined the ranks, and we were left entirely alone.

Though it was evident from the manner in which the beast had dragged himself along, and from the quantity of blood he had lost, that he was desperately wounded, it was ten minutes or a quarter of an hour before we saw any thing of him. At last, however, we got a glimpse of him as he was making his way among the trees at some little distance in advance of us. I now lost no time in firing, but owing either to the trees intercepting my ball, or to an incorrect aim, he went off unhurt: Jan Finne did not discharge his piece, which was probably attributable to his not getting a sufficiently distinct view of the animal to have enabled him to have done so with any prospect of success.

When I had reloaded we again continued the pursuit, and shortly afterwards we once more viewed the bear, who kept halting occasionally as he was retreating from us, at about thirty-five paces distance. On seeing him we both fired, and the beast as instantly fell; but it was only for a few seconds he lay prostrate; for rearing himself and uttering a terrible groan, he dashed at no contemptible pace towards us. Jan Finne now made the best use of his legs, and ran for it; and I should perhaps have acted wisely had I followed his example; but thinking that with a little management I might avoid the onset, I simply stepped a pace or two on one side, and sheltered myself behind the stump of a pine which had been felled, (probably when the snow was deep) at about four feet from the ground. In this while, however, I kept my eye steadily fixed upon the enraged brute, and I was thus enabled to direct my movements in unison with his, that he was incapable of seeing me. By adopting this manoeuvre, I anticipated that he would have passed my place of concealment, and I should have thus readily escaped. But the beast was not to be so foiled; for when he had advanced to within

about three paces of the stump, he halted, and growling desperately, he cast his eyes about him in every direction, as if at a loss to understand in what manner I had eluded his clutches. Jan Finne, who by this time had sheltered himself behind a tree at some thirty or forty paces distance, now cried loudly for me to run; but thinking their was as much danger in adopting that course, the snow being knee-deep, as in standing still, I determined on remaining in my position. I kept my eye, nevertheless, constantly fixed upon that of the bear, so that I was in readiness to bolt the instant I should observe him making serious demonstrations of attacking me.

Had the stump which befriended me been more elevated than it was, I might possibly, with good management, have been able to reload my piece without attracting the attention of the beast; but it was so low, that it was only by holding my body in a stooping position that I could keep myself concealed from his sight. Had I at this time been possessed of a pocket-pistol, I could with every facility have shot the brute through the head, but unfortunately I was not provided with any other weapon except the rifle which I had just discharged.

If I had been alone on this occasion, I might have been in some little jeopardy; but, as I could fully depend upon my companion, and as I was morally certain that the instant he had reloaded his gun, I should quickly be relieved from the rather awkward situation in which I had perhaps foolishly placed myself, I cannot say that I felt much apprehension for my personal safety. But Jan Finne was rather slow in his movements, so that I think near three minutes must have elapsed before his piece was again charged. In all this while the bear still remained in much the same spot where he had first stationed himself; and, instigated by fury, or the pain of his wounds, or probably by both causes combined, he with distended jaws kept growling or rather roaring, in the most furious manner.

Though, in consequence of directing my movements by those of the bear, the animal did not at first discover my place of concealment, yet he at last either viewed me as I was peeping from behind my friendly covert, or he got so strong a scent of me as to be assured that I was there; for fixing his eyes directly upon the stump, which he had not previously done, he, with a terrific growl, was in the very act of coming at me. But in this he was baffled, for at the moment he was making his spring, and as I drew backwards to avoid the coming storm, Jan Finne fired with so deadly an aim, that his ball entered the head of the beast, he instantly sunk lifeless upon the snow.

## THE DESERTED CITY.

(An Ossianic Fragment.)

How empty is Westminster; empty as thy purse, oh Bard! The Hall no longer echoes to the bounce of the barrister; silenced in its courts is the hum of law. Hushed in St. Stephen's is the voice of braying; whither are ye gone? oh, M.P.'s! Whereunto have ye betaken yourselves, ye wise men? From the moors afar, resounds a noise of popping, as of multitudes of corks of the water of soda; by honourable members many grouse are slain. Thither have they departed; the sons of St. Stephen roam on the distant heath. When wilt thou return, oh Brougham; and thou, Campbell, of the North? When will ye renew your battles, oh ye heroes? when will ye shake our sides again? And thou, Field Marshal Duke of Wellington, unto whom art thou presenting thy compliments? and where art thou specifying, Peel of the sliding scale?

Closed is the theatre of Her Majesty in the Haymarket. Around it are the shops of various tradespeople; within it is—solitude. Perfumeless is thy pit, oh Opera House! white-kid-gloveless are thy stalls! Cooked are thy capers, mute is the voice of song. They have flitted like swallows, the artists of a foreign land. How have they flown, laden with the golden spoil? They have flown upon the wings of steam: with the spring they shall return: and the coxcomb shall be joyful in the Alley of Fops.

At Almack's all is over. Nought is there but room in the Rooms of Willis. Beneath the bright chandelier, to the band of Jullien, the Nobility and Gentry polk no more. Where is the leader, of the white waistcoat, and when shall he revisit town? Tenantless are the mansions of the Square of Grosvenor; nobody dwells in the abodes of Belgrave. Drearily from second stories frown the closed shutters of the aristocracy; dark is the eclipse of drawing-rooms. The life of fashion, also, hath departed from the houses of Bloomsbury, and Fiddlefaddle hath shut the windows thereof. Where are they of the family? They have retreated to the two-pair back.

Weep, Gunter, ice king of celebrity; mourn Verrey, glory of Regent Street. With the season have ceased the parties of evening, and the demand of beauty for lemonade and cream: in the morning the calls for mock-turtle are few; so of an afternoon are the orders of coffee. Pipe your eyes, drapers of Regent Street; lament, tailors of the Street of Bond. Cry amain, ye foremen; raise the wail, walkers of shops. Vanished are your customers, flat is business. The thoroughfares no longer are lined with carriages; empty is Rotten Row. The *élite* of Ton have gone to Tom-bridge; the superior classes to the sea-side; the circles of exclusiveness to the Continent. The nobility and gentry have made themselves scarce. Noiseless are the pavements; save with the tramp of the policeman, and the tread of the occasional and peripatetic passenger. Desertion hath darkened the Clubs of Pall Mall: desolation is paramount in the Places of Pimlico.

## POWER OF MEMORY IN THE HORSE.

Horses have exceedingly good memories. In the darkest nights they will find their way homeward, if they have but once passed over the road; they will recognise their old masters after a lapse of many years; and those who have been in the army, though now degraded to carters' drudges, will wondrously become inspired at the sight of military array, and rush to join the ranks, remembering not only their old uniform, but their own places in the troop, and the order of the various manoeuvres. Many interesting anecdotes might be related under this head, which place the retentive powers of the horse in a highly pleasing and accessible light.

A gentleman rode a young horse, which he had bred, thirty miles from home, and ten part of the country where he had never been before. The road was a cross one, and extremely difficult to find; however, by dint of perseverance and inquiry, he at length reached his destination. Two years afterwards, he had occasion to go the same way, and was bewildered four or five miles from the end of his journey. The night was so dark that he could scarcely see the horse's head. He had a literary man and companion to pass, and had lost all traces of the proper direction he had to take. The rain began to fall heavily. He now contemplated the uncertainty of his situation. "Here am I," said he to himself, "far from any house, and in the midst of a dreary waste, where I know not which way to direct the course of my steed. I have lost all trace of the memory of the horse, and in that now is my only hope." He threw the reins on the horse's neck, and encouraging him to proceed, found himself safe at the gate of his friend in less than an hour. It must be remarked, that the animal could not possibly have been that road but on the occasion two years before, as no person ever rode him but his master.

Sometimes the recollection of the horse serves him so well, that he will perform actions with as much precision when left to himself, as though he had been under the guidance of his master. A Wiltshire gentleman, in 1831, lent a well-bred and fiery mare to a friend from town, who had come down to try the Essex dogs against the Wilts breed of greyhounds. At the close of a very fine day's sport, the huntsman had to beat a small furze-brake, and for the purpose of better threading it, the London gentlemen dismounted, and gave the bridle of his mare to the next horseman. Puss was soon started; the "halloo" was given. The person who held the mare, in the eagerness of the sport, forgot his charge, loosed his hold, and, regardless of any other than his own steed, left the mare to run, like Mazeppa's, "wild and untutored." But, to the astonishment of all, instead of so doing, or even attempting to bend her course homewards, (and she was in the immediate neighbourhood of her stable,) she ran the whole course at the tail of the dogs, turned as well as she could when they brought the prey about; and afterwards, by outstripping all competitors, (for the run was long and sharp,) she stopped only at the death of the hare, and then suffered herself to be quietly regained and remounted. What renders it still more remarkable is, that the animal had only twice followed the hounds previous to this event. It is true that her conduct may have been influenced by the circumstance, that the brace of dogs which were slipped were the property of her owner, and the groom had been in the habit of exercising them with her.

To prove that the notes of hounds have an overpowering influence upon horses which have once joined the chase, another incident, which occurred in 1807, has often been related:—As the Liverpool mail-coach was changing horses at the Inn at Monk's Heath, between Congleton in Cheshire and Newcastle-under-Lyne, the horses that had performed the stage from Congleton having just been taken off and separated, hearing Sir Peter Warburton's fox-hounds in full cry, immediately started after them with their harness on, and followed the chase till the last. One of them, a blood mare, kept the track with the whipper-in, and gallantly followed him for about two hours over every leap he took, till Reynard ran to earth in Mr. Hibbert's plantation. These spirited horses were led back to the inn at Monk's Heath, and performed the stage back again to Congleton the same evening.

Horses, being highly susceptible in their dispositions, are also peculiarly mindful of kind treatment. "This," says Colonel Smith, "was very manifest in a charger that had been two years our own, and which was left with the army, but had subsequently been brought back and sold in London. About three years afterwards, we chanced to travel up to town, and at a relay, getting out of the mail, the off-wheel horse attracted our attention, and upon going near to examine it, we found the animal recognising its former master, and testifying satisfaction by rubbing its head against our clothes, and making every moment a little stamp with the forefeet, till the coachman asked if the horse was not an old acquaintance. "We remember," continues the colonel, "a beautiful and most powerful charger belonging to a friend, then a captain in the 11th dragoons, bought by him in Ireland at a low price, on account of the impetuous viciousness, which had cost the life of one or two grooms. The captain was a kind of centaur rider, not to be flung by the most violent efforts, and of a temper for gentleness that would effect a cure, if vice were curable. After some very dangerous combats with his horse, the animal was subdued, and became so attached, that his master could walk anywhere with him following like a dog, and even ladies could mount in perfect safety. He rode him during several campaigns in Spain; and on one occasion, when in action, horse and rider came headlong to the ground, the animal, making an effort to spring up, placed his forefoot on the captain's breast, but immediately withdrawing it, rose without hurting him, or moving till he was remounted."

The most remarkable instances of minute recollection, however, occur in horses that have been accustomed to the army. It is told, that in one of their insurrections in the early part of the present century, the Tyrolese captured fifteen horses belonging to the Bavarian troops sent against them, and mounted them with fifteen of their own men, in order to go out to a fresh rencontre with the same troops; but no sooner did these horses hear the well-known sound of their own trumpet, and recognise the uniform of their own squadron, than they dashed forward at full speed; and, in spite of all the efforts of their riders, bore them into the ranks, and delivered them up as prisoners to the Bavarians. "If an old military horse," we quote the *Cyclopædia of Natural History*, "even when almost reduced to skin and bone, hears the roll of a drum or the clangor of a trumpet, the freshness of his youth appears to come upon him, and if he at the same time gets a sight of men clad in uniform, and down upon him in a line, it is no easy matter to prevent him from joining them. Nor does it signify what sort of military they are, as is shown by the following case.—Towards the close of last century, about the time when volunteers were first embodied in the different towns, an extensive line of turnpike road was in progress of construction in a part of the north. The clerk to the trustees upon this line used to send one of his assistants to ride along occasionally, to see that the contractors, who were at work in a great many places, were doing their work properly. Their assistant, on these journeys, rode a horse which had for a long time carried a field-officer, and though aged, still possessed a great deal of spirit. One day, as he was passing a town of considerable size, which lay on the line of the road, the volunteers were at drill on the common; and the instant that Bolus (for that was the name of the horse) heard the drum, he leaped the fence, and was speedily at that post in front of the volunteers which would have been occupied by the commanding officer of a regiment on parade or at drill; nor could the rider by any means get him off the ground until the volunteers retired to the town. As long as they kept the field, the horse took the proper place of a commanding officer in all their manoeuvres; and he marched at the head of the corps into the town, prancing in military style as cleverly as his stiffened legs would allow him, to the great amusement of the spectators, and to the no small annoyance of the clerk, who did not feel very highly honoured by Solus making a colonel of him against his will."

**OLIVER CROMWELL'S STUD OF RACE-HORSES.**—Oliver Cromwell, with his accustomed sagacity, perceiving the vast benefit derived to this nation by the improvement of its breed of horses, the natural consequence of racing, patronized this already peculiarly national amusement; and we find accordingly, that he kept a racing stud. Mr. Place, whose name, coupled with that of his horse, the famous white Turk, will live for ever in the memory of all British sportsmen, was Cromwell's master of the stud.—*History of the Turf.*

## SONNETS FOR THE SEA-SIDE.

*Written on Margaret Jetty.*

'Tis sweet at eve to see the red sun sinking,  
Behind the margin of the western wave,  
And view the thirsty billows slowly drinking  
The crimson rays that mark his gory grave;  
Whilst the low plash of some melodious scull  
Creeps o'er the drowsy stillness of the pier,  
Mingling a mournful cadence with the gull,  
Whose harsh discordant scream steals on the ear,  
And startles vagrant craw-fish as they wind  
Amidst the groves of tangled sea-wood near;  
Leaving their oozy bed—the sand—behind  
To sport on land amidst the moonlight clear—  
How sweet—"the tide is coming in. Good luck!  
Mama! Papa! I never shall get back!"

**THE POWER OF FUDGE.**—Fudge is to a man what the lever is in mechanics; it enables him to do that for which his own powers would be insufficient. Archimedes said—or is reported to have said, which will answer our purpose just as well—that, had he a place whereon to rest his lever, he could move the world. Fudge does this effectually. "Soft sawdust, and a knowledge of human nature," ay, that is it, Jonathan Slick: here are lever and fulcrum combined, by which the world is daily, hourly moved.—*Illuminated Magazine.*

**WISE MEN LIKE GOOD THINGS.**—A very ignorant nobleman, observing one day at dinner a person eminent for his talents intent on choosing the delicacies of the table, said to him, "What? do philosophers choose delicacies?" "Why not," returned the other. "Do you think, my lord, that the good things of this world were made only for blockheads?"

**CAUSELESS CENSURE.**—An American paper argues that a brief less barrister ought never to be blamed, because it is most decidedly wrong to abuse a man without a cause!

**VERY IMPROPER.**—A witness having sworn that a prosecutor was staggering drunk, the counsel, anxious to ascertain exactly what he meant, desired the witness just to put himself in the same position!

**ADVANTAGE OF TIME.**—A poor man being laughed at for wearing a short cloak, said, "It will be long enough before I have done with it."

## ADVERTISEMENTS.

### WORTHY OF NOTICE.

**A SUPERFINE BLACK DRESS COAT** for TWO GUINEAS, at KISCH'S WEST END ECONOMICAL, CONTRACT, CLERICAL, and GENERAL OUTFITTING ESTABLISHMENT, 40, Cranbourn Street, Leicester Square.

Inventor of the Improved Style of PALETOT. A Book, containing list of prices and mode of self-measurement will be forwarded (on application) post free. Observe the address, 40, Cranbourn Street, Leicester Square.

On Saturday, October 4th, will be Published, a New Weekly Publication, entitled

**THE PARLOUR ORACLE, and TRAVELLERS' COMFORT**, 16 pages Demy Quarto 48 Columns.

In the great Age of Literature, Art and Steam, it may be fairly asked why another Candidate for Fame seeks the already crowded field;—the answer is, that there are at all times thousands of Trades and Professions thirsting after information combined with cheerful amusement, and that even the gigantic power that is daily and hourly wielded, fails to satisfy the craving appetite of the million.

Like a Dwarf when ushered into the presence of Giants, we for the moment shrink back appalled at the fearful array of rivalry before us and wonder at our temerity; but it is respect and esteem for our fellow Labourers that infuses awe into our hearts, not without a lurking feeling that the right hand of fellowship will be extended to us with bounty, good-will and fervour, seeking not the jostling of any fellow labourer out of the broad path he has chosen for himself, we incline to work shoulder to shoulder, and heart to heart, in securing the happiness of all mankind.

To one great and important body we would address ourselves, conscious that an appeal to their judgment and support will not be made in vain; we mean "The Licensed Victuallers of the United Kingdom." It is the intention of the Proprietors of the Work, to devote a portion of its columns to their interest; and while strenuously advocating the many and well-founded claims they have upon the public body at large, it will be found that generally its pages will be a never-failing source of Amusement, not only to the Worthy Host, but likewise, the Welcome Guests. Politics will be entirely excluded, and Party Spirit in its pages have no existence; but the Spirit of Good Humour, Good Fellowship, and Good Feeling, sparkle in its pages, eye, with as ready a glow and joyous a chirrup as any Bottle in "Mine Host's" Cellar.

All Orders for the Work to be addressed to the Publisher Published by E. DIPPLE, 42, Holywell Street, Strand, London.

\*. All Communications to be addressed to the Editor, 42, Holywell Street, Strand.  
Price:—Weekly Nos. 1d.—Monthly Parts, in an Elegant Wrapper, 6d.

### TO SPORTSMEN.

**SHOOTING, HUNTING, FISHING, and DEER STALKING KNIVES.** J. B. DURHAM, Manufacturing Cutler, respectfully invites the attention of Sportsmen to his Immense Stock, which includes all the Newest Patterns and latest improvements, and all warranted of the best quality. Knives of every description made to Order on the shortest notice. Old knives, &c. polished and repaired. 261, Regent-street, near the Polytechnic Institution.

**RUPTURE.**—All persons afflicted with Hernia, should at once supply themselves with Elam's Patent Truss, which supercedes all others now in use; it is light, imperceptible, and keeps its position in every motion of the body. Can be sent post-free to any part. See testimonials.

Gentlemen's Belts for hunting, horse exercise, &c. &c., made upon anatomical principles, and warranted to keep their position in every of the body. Suspensory Bandages, Spinal Instruments, Spring Crutches, Artificial Hands and Arms. Elam's Patent Uterus-supporter, which has never failed in one instance, immediately gives relief, and performs a cure where it is possible. It has been tried in the most secure cases of the falling of the womb, with every success that could be desired. Can be sent post-free. See testimonials.

To be had at A. Elam's, Human Mechanician. All letters by post, with a remittance, punctually attended to. 403, Oxford-street, London.  
Laced Stockings, Ankle Socks, Knee Caps, for varicose veins, swollen ankles, and support of the knee-cap. In ordering send the measures, as drawing, post-free.

To be drawn next Tuesday, Wednesday, Thursday, and Friday. The above prizes will be paid, 6 per cent. less, the day after the races. Post-office Orders attended to. Tickets sent to any part of the country.

## THE EARL OF ALDBOROUGH CURED BY HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Mesina, Leghorn, 21st. Feb., 1845.

To Professor HOLLOWAY.—

SIR,—Various circumstances prevented the possibility of my thanking you before this time for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either.

Your most obliged and obedient servant,  
(Signed) ALDBOROUGH.

A Wonderful Cure of Droopy of Five Years' standing. Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.

SIR,—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Droopy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c. &c.,

(Signed) THOMAS TAYLOR.

These truly invaluable Pills can be obtained at the Establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicines throughout the CIVILISED WORLD, at the following prices:—1s. 1d., 2s. 9d., 4s. 6d., 11s., 22s., and 32s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, the SIXTEENTH EDITION, illustrated with cases and Full-length Engravings, price 2s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 2s. 6d.

## THE SECRET COMPANION. A MEDICAL WORK on NERVOUS DEBILITY and the concealed cause of the decline of PHYSICAL STRENGTH and the loss of MENTAL CAPACITY, with remarks on the effects of SOLITARY INDULGENCE, neglected GONORRHOEA, SYPHILIS, SECONDARY SYMPTOMS, &c. and Mode of Treatment; followed by observations on MARRIAGE, with proper Directions for the removal of all Disqualifications. Illustrated with Engravings, showing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeon, 27, Montague-street, Russell-square, near the British Museum London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 68, Oxford-street; Barth, 4, Bridges-street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

**THE 'CORDIAL BALM OF ZEYLANICA; OR NATURE'S GRAND RESTORATIVE,** is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c.

This Medicine should be taken previous to persons entering into the Matrimonial State.  
Sold in Bottles, price 4s. 6d., and 11s. each, or the quantity of 4 in one Family Bottle for 32s., by which one 11s. Bottle is saved.

The 25 Cases may be had as usual.

**BRODIE'S PURIFYING VEGETABLE PILLS.** are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 1d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., Consulting Surgeon, 27, Montague-street, Russell-square, near the British Museum, London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. Brodie and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of 21s., and for all cases the most inviolable Secrecy may be relied on. Only one Personal Visit required to effect a Permanent Cure.

Observe—27, Montague-street, Russell-square. Fourteenth Edition of the "SILENT FRIEND" on Human Faculty, with coloured engravings.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope,) 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and J. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BRANNS STREET, OXFORD STREET.**

Sold by Strange, Paternoster-row; Hannay and Co., 68, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

The **CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 32s., by which 11s. are saved. The Five-poned cases may be had as usual.

The **CONCENTRATED DETERGENT ESSENCE** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin. Secondary Symptoms. &c.

**PERRY'S PURIFYING SPECIFIC PILLS**, price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c., without hindrance to business.

Consultation fee, (if by letter,) 21s. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 21. FOR THE WEEK ENDING OCT. 11, 1845. **THREE HALF-PENCE**

[Stamped to send free by Post, Twopence-half-penny.]

THE FIRST OF OCTOBER.--THE PHEASANT.

**R**IGHT and glorious in plumage, the most gorgeous of the birds of game here stands pictured. Next to the peacock it is the most splendid of birds.

The pheasant is rather less than the common cock. The bill is of a pale horn colour; the nostrils are hid under an arched covering; the eyes are yellow, and surrounded by a space, in appearance like beautiful scarlet cloth, finely spotted with black; immediately under each eye there is a small patch of short feathers of a dark glossy purple; the upper part of the head and neck are of a deep purple, varying to glossy green and blue; the lower parts of the neck and breast are of a reddish chestnut, with black indented edges; the sides and lower parts of the breast are of the same colour, with pretty large tips of black to each feather, which in different lights vary to a glossy purple; the belly and vent are dusky; the back and scapulars are beautifully variegated with black, and white, or cream colour speckled with black, and mixed with deep orange, all the feathers edged with black; on the lower part of the back there is a mixture of green; the quills are dusky, freckled with white, wing coverts brown, glossed with green and edged with white; rump plain reddish brown; the two middle feathers of the tail are about twenty inches long, the shortest on each side less than five, of a reddish brown colour, marked with transverse bars of black; the legs are dusky, with a short blunt spur on each, but in some old birds the spurs are as sharp as needles; between the toes there is a strong membrane.

The female is less, and does not exhibit that variety and brilliancy of colours which distinguish the male; the general colours are light and dark

brown, mixed with black, the breast and belly finely freckled with small black spots on a light ground; the tail is short, and barred somewhat like that of the male; the space round the eye is covered with feathers.

The ring pheasant is a fine variety of this species: its principal difference consists in a white ring, which encircles the lower part of the neck; the colours of the plumage in general are likewise more distinct and vivid. A fine specimen of this bird, was sent us by the Rev. William Turner, of Newcastle, from which the figure was engraven. They are sometimes met with in the neighbourhood of Alnwick, whither they were brought by his grace the Duke of Northumberland. That they intermix with the common breed is very obvious, as in some we have seen, the ring was hardly visible, and in others a few feathers only, marked with white, appeared on each side of the neck, forming a white spot. It is much to be regretted that this beautiful breed is likely soon to be destroyed, by those who pursue every species of game with an avaricious and indiscriminating rapacity.

There are many varieties of pheasants of extraordinary beauty and brilliancy of colours; in many gentlemen's woods there is a kind as white as snow, which will intermix with the common ones. Many of the gold and silver kinds, brought from China, are also kept in aviaries in this kingdom; the common pheasant is likewise a native of the East, and is the only one of the kind that has multiplied in our island. Pheasants are generally found in low woody places, on the borders of plains, where they delight to sport; during the night they perch on the branches of trees. They are very shy birds, and do not associate together, except during the months of March and April, when the male seeks the female; they are then easily discoverable by the noise which they make in crowing and clapping their

wings, which may be heard at some distance. The hen breeds on the ground like the partridge, and lays from twelve to fifteen eggs, which are smaller than those of the common hen; the young follow the mother as soon as they are freed from the shell. During the breeding season the cocks will sometimes intermix with the common hen, and produce a hybrid breed, of which we have known several instances.

For shooting pheasants it often becomes necessary to start very early in the morning, as they are apt to lie during the day in high covert, where it is almost impossible to shoot them till the leaf has fallen from the trees. We can never be at a loss in knowing where to go for pheasants, as we have only to send some one the previous evening, for the last hour before sun-set, to watch the different barley or oat stubbles of a woodland country, and on these will be regularly displayed the whole contents of the neighbouring coverts. It then remains to be chosen, which woods are the best calculated to shoot in; and, when we begin beating them, it must be remembered to draw the springs, so as to intercept the birds from the old wood. If the coverts are wet, the hedge-rows will be an excellent beginning, provided we here also attend well to getting between the birds and their places of security. If pheasants, when feeding, are approached by a man, they generally run into covert; but if they see a dog, they are apt to fly up.

There are very few old sportsmen but what are aware that this is by far the most sure method of killing pheasants, or any other game, where they are tolerably plentiful in covert; and although to explore and beat several hundred acres of coppice, it becomes necessary to have a party with spaniels, yet, on such expeditions, we rarely hear of any one getting much game to his own share, except some sly old fellow, who has shirked from his companions to the end of the wood, where the pheasants, and particularly the cock birds, on hearing the approach of a rabble, are all running like a retreating army, and perhaps flying in his face faster than he can load and fire.

For one alone to get shots in a thick underwood, a brace or two of very well broke spaniels, would, of course, be the best. But were I obliged to stake a considerable bet, (taking one bet with another, where game was plentiful), I should back against the sportsman using them, one who took out a very high couraged old pointer, that would keep near him, and would, on being told, break his point to dash in, and put the pheasants to flight before they could run out of shot. This office may also be performed by a Newfoundland dog; but, as first getting a point would direct the shooter where to place himself for a fair shot, the Newfoundland dog would always be best kept close to his heels, and only made use of to assist in this; and particularly for bringing the game; as we rarely see a pointer, however expert in fetching his birds, that can follow and find the wounded ones half so well as the real St. John's Newfoundland dog.

Lord Stawell sent me from the great lodge in the Holt a curious bird for my inspection. It was found by the spaniels of one of his keepers in a coppice, and shot on the wing. The shape, air, and habit of the bird, and the scarlet ring round his eyes, agreed well with the appearance of a cock pheasant, but then the head and neck, and breast and belly, were of a glossy black; and though it weighed three pounds three ounces and a half, the weight of a large full grown cock pheasant, yet there were no signs of any spurs on the legs, as is usual with all grown cock pheasants, who have long ones. The legs and feet were naked of feathers, and therefore it could be nothing of the grouse kind. In the tail were no long bending feathers, such as cock pheasants usually have, and are characteristic of the sex. The tail was much shorter than the tail of a hen pheasant, and blunt and square at the end. The back, wing-feathers and tail, were all of a pale russet, curiously streaked, somewhat like the upper parts of a hen partridge. I returned it with my verdict, that it was probably a spurious or hybrid hen bird, bred between a cock pheasant and some domestic fowl. When I came to talk with the keeper who brought it, he told me that some pea-hens had been known last summer to haunt the coppices and coverts where this mule was found.

The pheasant is not a long-lived bird; but, it is probable the period of existence assigned to it by some writers, namely, six or seven years, is too short. The wholesomeness of its flesh was proverbial among the old physicians; it is of a high flavour and alkaline quality, and in perfection during autumn. A young pheasant very fat is reckoned an exquisite dainty. In a wild state, the hen lays from eighteen to twenty eggs in a season, but seldom more than ten in a state of confinement. Pheasants are not to be tamed by domestication, like other fowls; nor is the flesh of those brought up in the house, in any degree comparable to that of the wild pheasant: thence they are bred at home, either merely for show, or for the purpose of replenishing the proprietor's grounds, both with regard to number or particular varieties. However good nursing mothers in a wild state, pheasant hens are far otherwise in the house, whence their eggs are always hatched at home by the common hen,—generally, at present, by the smooth legged bantam.

The natural nest of the pheasant is composed of dry grass and leaves, which being provided for her in confinement she will sometimes properly dispose. The cock is bold, voracious, and cruel: and one which I had many years ago, caught a canary bird which had accidentally escaped, and was observed with it beneath his talons, in the proper attitude of the hawk, tearing it to pieces and devouring it. Pheasants have been seen preying upon a dead carcass, in company with carrion crows; and it has been said that they will fall upon a diseased and weak companion of their own species and devour it. They feed upon all kinds of insects and vermin, like the peacock, and are said to be particularly greedy of toads, provided they be not too large to swallow; whereas, according to report, they will not touch the frog, of which ducks are so fond. A pheasant was shot by T. Day, Esq., of Herts, the crop of which contained more than half a pint of that destructive insect the wire-worm. And the number of 1606 grains of barley were taken from the crop of a pheasant, at Bury, in Suffolk, in 1727.

The best known varieties of the pheasant, are the golden, the silver, the peacock or spotted, and the common European or English, generally brown, with a less brilliancy of colour. Mr. Castang, however, enumerates six distinct varieties, exclusive of the common, as follow: the gold and silver, natives of China, and very hardy in this country, and good breeders. The ring-necks, natives of Tartary, bred in China, very scarce: their plumage very beautiful. The white and pied; both sorts will intermix readily with our common breed, as will the Bohemian, one of the most beautiful of its kind, and equally scarce. The golden variety is generally of the highest price, the common most hardy and of the largest size.

**Breeding Pheasants.**—Eggs being provided, put them under a hen that has kept the nest three or four days; and if you set two or three nests on the same day, you will have the advantage of shifting the good eggs. At the end of ten or twelve days throw away them that are bad, and set the same hen or hens again if sitting hens should not be plenty.

The hens having sat their full time, such of the young pheasants as are already hatched, put into a basket with a piece of flannel, till the hen has done hatching.

The brood, now come, put under a frame with a net over it, and a place for the hen, that she cannot get to the young pheasants, but that they may go to her: and feed them with boiled egg cut small, boiled milk and bread, alum curd, ants' eggs, a little of each sort, and often.

After two or three days, they will be acquainted with the call of the hen that hatched them, and may have the liberty of running on the grass-plot, or elsewhere, observing to shift them with the sun, and out of cold winds. They should not have their liberty in the morning till the sun is up; and they must be shut in with the hen in good time in the evening.

Every thing now going on properly, you must be very careful (in order to guard against the distemper to which they are liable) in your choice of a situation for breeding the birds up; and be less afraid of foxes, dogs, pole-cats, and all sorts of vermin, than the distemper. I had rather encounter all the former than the latter; for those, with care, may be prevented, but the distemper, once got in, is like the plague, and destroys all your hopes. What I mean by a good situation, is nothing more than a place where no poultry, pheasants, or turkeys, &c. have ever been kept; such as the warm side of a field, orchard, pleasure ground, or garden, or even on a common, or a good green lane, under circumstances of this kind; or by a wood-side, but then it is proper for a man to keep with them under a temporary hovel, and to have two or three dogs chained at a proper distance, with a lamp or two at night. I have known a great number of pheasants bred up in this manner, in the most exposed situations. It is proper for the man always to have a gun, that he may keep off the hawks, owls, jays, magpies, &c. The dogs and lamps intimidate the foxes beyond any other means; and the dogs will give tongue for the man to be on his guard if smaller vermin are near, or when strollers make their appearance.

The birds going on as before mentioned, should so continue till December, or, if very early bred the middle of August. Before they begin to shift the long feathers in the tail, they are to be shut up in the basket with the hen regularly every night; and when they begin to shift their tail the birds are large, and begin to lie out, that is, they are not willing to come to be shut up in the basket. Those that are intended to be turned out wild should be taught to perch (a situation they have never been used to); this is done by tying a string to the hen's leg, and obliging her to sit in a tree all night: be sure you put her in the tree before sun-set; and if she falls down, you must persevere in putting her up again, till she is contented with her situation; then the young birds will follow the hen, and perch with her. This being done, and the country now covered with corn, fruits, and shrubs, &c. &c. they will shift for themselves.

For such young pheasants as you make choice of for your breeding stock at home, and likewise to turn out the spring following, provide a new piece of ground, large and roomy, for two pens, where no pheasants, &c. have been kept, and there put your young birds in as they begin to shift their tails. Such of them as you intend to turn out at a future time, or in another place, put into one pen netted over; and leave their wings as they are; and those you wish to keep for breeding put into the other pen, cutting one wing of each bird. The gold and silver pheasants you must pen earlier, or they will be off. Cut the wing often; and, when first penned, feed all your young birds with barley-meal, dough, corn, and plenty of green turnips.

**A Receipt to make Alum Curd.**—Take new milk, as much as your young birds will require, and boil it with a lump of alum, so as not to make the curd hard and tough, but custard like.

**N.B.**—A little of this curd twice a day, and ants' eggs after every time they have had a sufficient quantity of the other food. If they do not eat heartily, give them some ants' eggs to create an appetite, but by no means in such abundance as to be considered their food.

The distemper alluded to above, is not improbably of the same nature as the roup in chickens; contagious, and dependent on the state of the weather; and, for prevention, requiring similar precaution.

**General Directions.**—Not more than four hens to be allowed in the pen, to one cock; and in the out coverts, three hens to one cock may be sufficient, with the view of allowing for accidents, such as the loss of a cock or hen. Never put more eggs under a hen than she can well and closely cover, the eggs fresh and carefully preserved. Short broods to be joined and shifted to one hen. Common hen pheasants in close pens, and with plenty of cover, will sometimes make their nests and hatch their own eggs, but they seldom succeed in rearing their brood, being naturally so shy; whence, should this method be desired, they must be left entirely to themselves, as they feel alarmed even in being looked at. Eggs for setting are generally ready for April. Period of incubation the same in the pheasants as in the common hen. Pheasants, like the pea-owl, will clear grounds of insects and reptiles, but will spoil all wall-trees within their reach, by picking off every bud and leaf.

**Feeding.**—Strict cleanliness to be observed, the meat not to be tainted with dung, and the water to be pure and often renewed.—Ants' eggs being scarce, hog-lice, earwigs, or any insects may be given; or artificial ants' eggs substituted, composed of flour beaten up with an egg and shell together, the pellets rubbed between the fingers to the proper size. After the first three weeks, in a scarcity of ants' eggs. Castang gives a few gentles, procured from a good liver tied up, the gentles, when ready, dropping into a pan or box of bran; to be given sparingly, and not considered as common food.

Food for grown pheasants, barley or wheat; generally the same as for other poultry. In a cold spring, hemp seed, or other warming seeds, are comfortable, and will forward the breeding stock.

**A New Species of Pheasant.**—Amongst the numerous interesting natural productions recently brought from China by Mr. Reeves, it was with delight we observed a magnificent new species of pheasant, which will be a most interesting addition to the aviaries of Europe; and as it comes from the same part of the world as the gold and silver kind, there is scarcely a doubt but that, with a little care, it may be induced to breed in this country. It is about three times the size of the common pheasant, and has a tail from five to six feet long; it is of a pale bay colour, ornamented with black moons, and the head, wing, and under part of the body, black varied with white; the tail feathers are black and brown banded. Mr. Reeves brought with him from Canton two living specimens; but one of them unfortunately died in the Channel; the other is now in the gardens of the Zoological Society, where it will probably recover its fine tail. A beautiful specimen, in nearly perfect plumage, brought by Mr. Reeves for General Hardwick, has been presented by that gentleman to the collection of the British Museum. The tail feathers of this bird have been long known, two having been exhibited in the Museum for many years; but the bird which bore them was first described in General Harwick's Illustration of Indian Zoology, from a drawing sent by Mr. Reeves, where it is called Reeve's pheasant.

## RECREATIONS IN NATURAL HISTORY.

THE HEDGEHOG.

THE Hedgehog, or Urchin, is too well-known to need an elaborate description. It is a hibernating animal; and many marvellous anecdotes of its egg-destroying propensities have been told which we, for our own parts consider more than apocryphal. We, however, give a sample of one of those below, merely premising that the Hedgehog indicated, must have had a propensity, perhaps a morbid taste, which we who have kept them and observed, never yet discovered. White in his admirable "History of Selbourne," he says, "Hedgehogs abound in my gardens and fields. The manner in which they eat the roots of the plantain in my grass walk is very curious: with their upper mandible, which is much longer than their lower, they bore under the plant, and so eat the root off upwards, leaving the tuft of leaves untouched. In this respect they are serviceable, as they destroy a very troublesome weed, but they deface the walks in some measure by digging little round holes. It appears, by the dung that they drop upon the turf, that beetles are no inconsiderable part of their food. In June last I procured a litter of four or five young hedgehogs, which appeared to be about five or six days old; they, I find, like puppies, are born blind, and could not see when they came to my hands. No doubt their spines are soft and flexible at the time of their birth, or else the poor dam would have but a bad time of it in the critical moment of parturition; but it is plain that they soon harden; for these little pigs had such stiff prickles on their backs and sides as would easily have fetched blood, had they not been handled with caution. Their spines are quite white at this age; and they have little hanging ears, which I do not remember to be discernible in the old ones. They can, in part, at this age draw their skin down over their faces; but are not able to contract themselves into a ball, as they do, for the sake of defence, when full grown. The reason, I suppose, is, because the curious muscle that enables the creature to roll itself up into a ball has not then arrived at its full tone and firmness. Hedge-

hogs make a deep and warm hybernaculum with leaves and moss, in which they conceal themselves for the winter; but I never could find that they stored in any winter provision, as some quadrupeds certainly do.

Jesse says, "I also had a tame hedgehog, which nestled before the fire, on the stomach of an old lazy terrier dog, who was much attached to it, and the best understanding existed between them."

**Sagacity of the Hedgehog.**—During the summer of 1818, as Mr. Lane, gamekeeper to the Earl of Galloway, was passing by the wood of Glascaiden, near Garlieston, in Scotland, he fell in with a hedgehog, crossing the road at a small distance before him, carrying on its back six pheasant's eggs, which upon examination he found it had pilfered from a pheasant's nest hard by. The ingenuity of the creature was very conspicuous, as several of the remaining eggs were holed, which must have been done by it, when in the act of rolling itself over the nest, in order to make as many adhere to its prickles as possible. After watching the motions of the urchin for a short time longer, Mr. Lane saw it deliberately crawl into a furze bush, where its nest was, and where the shells of several eggs were strewed around which had at some former period been conveyed thither in the same manner.

## THE FISHER'S CREEL.

### HIGHLAND LAKES.—SALMO FEROX.

MR. EDITOR,—A few weeks since you asked for some further information respecting a fish of which you then gave an excellent engraving; namely, the SALMO FEROX, or Scottish Lake Trout. This fish, as you rightly observed, differs entirely from the salmon in many respects, and is entirely of the trout genus. It does not descend to the sea as the salmon does, but is a distinct description of trout, and grows to an immense size—having been killed of the enormous weight of 22lbs., and even more.

Being very fond of angling, I resolved to make a trip to Loch-Awe last summer in hopes of getting hold of one of these celebrated trout. I accordingly started from Edinburgh, one fine morning early in the month of August, and proceeded to Glasgow, from which I took a steamer to Dunoon, about twenty miles down the Clyde. From thence I walked to Loch-Ech, a very pretty little lake affording excellent trout fishing, and from thence pushed on to Dalmally, a romantic village at the west end of Loch Awe, near the mouth of the river Orchy, which runs into the lake. Another route to Loch-Awe, is by going from Glasgow to Inverary by the Steamer, and from thence to Dalmally, or whatever other fishing station may be selected (to which I shall immediately advert) and in this way, Loch-Awe may be reached from Edinburgh in one day. The distance from Glasgow to Loch-Awe, by either of the routes I have mentioned, is about the same.

I may here mention, for the information of such of your readers as have not visited that beautiful sheet of water, that Loch-Awe is about thirty-five miles in circumference, and of immense depth—in many places upwards of 150 fathoms. The scenery is of the most beautiful description, the hills, particularly Ben Cruachan, are magnificent, and the lake is studded with islands beautifully wooded, and adorned with the finest ruins. The lake runs nearly east and west. The Orchy, as I have already mentioned, runs into it at the west end, and about the centre, and to the north, the river Arne flows through a short and rapid channel, from Loch-Awe into another Loch, which last is an arm of the sea.

The best fishing stations are Dalmally, about sixteen miles from Inverary; Innistimich (an island) six miles from Dalmally, and Portscuanach, about four miles further east, on the road from Inverary to Oban. On the whole I prefer Dalmally, which is a most comfortable inn, kept by an Englishman, whose civility and attention are undeniable.

Having mentioned these particulars for the guidance of travellers, I shall now proceed to give a short description of the *Salmo-Ferox* and the mode of fishing for them.

The sportsman can be furnished by the landlord of the inn with a good boat, free of any charge, and one or two boatmen, at the very moderate charge of half-a-crown a day each. The mode of fishing for the large trout is entirely by trolling from a boat, rowed at the rate of three or four miles an hour, as the fish very seldom rise to the fly. A short powerful rod, with a strong line, of which you must have at least 100 yards, and very large hooks tied on gimp, back to back, are generally used, and the bait is a pretty large par. Not having any tackle of this description, I made use of what gives much better sport, viz. a small salmon rod eighteen feet long with a winnow top, the usual salmon line, and pike tackle, consisting of six hooks dressed on gimp, which I baited with a par about five inches long, and to which a pretty heavy sinker was attached. A friend accompanied me in the boat, who was similarly provided, and we had each a small trout rod with which we occasionally took a cast for the common trout of the Loch, which are of very fine quality, and commonly about a pound weight, but they are not often found in the deep water where the large trout lie, but in shallow water amongst the islands.

We saw nothing of the far-famed *Salmo-Ferox* till about two o'clock, when the reel of my large rod, which was lying at the stern of the boat with about eighty yards of line out, suddenly whirled round with great velocity. I immediately seized it, and handed my small rod to the boatman; my companion at the same time took in his trolling line to prevent it getting foul of mine. We at once perceived that I had hooked a very large fish, although he did not show himself for some time. Indeed he kept about twenty feet

under water for a considerable time, but at last he rose to the surface, and seemed so clear in the colour that the boatman and my friend all exclaimed at once it was a beautiful salmon. I endeavoured to get him into the boat by gaffing or clipping him, but he refused to approach it, and being fearful of losing him, I resolved, after working him for about a quarter of an hour from the boat, to land and finish the job from the shore. I succeeded in getting him on the bank in twenty-five minutes from the time I hooked him, but with the ordinary tackle used in the country, I should have done so in half the time. His extreme length was thirty inches, and his weight considerably over ten pounds, and he was admitted to be the finest specimen caught this season.

It must be admitted, however, that in beauty the salmo-ferox is greatly inferior either to the salmon, or the yellow trout. The head is in general, large in proportion to the body. The colours are deep purplish brown on the upper parts, changing into reddish grey, and thence into fine orange yellow on the breast and belly. The colours, however, although at first beautiful, change rapidly as the fish dies, and after death it becomes extremely dark in the colour. The fins and tail are very muscular, broad and powerful, and the fish is proportionally much stronger, though not so lively as the salmon. The mouth is armed with an immense number of teeth. The fish is of a very ravenous nature, as a proof of which I may mention that the one I killed had broken a hook in its mouth, which had evidently been there a very short time; and a gentleman whom I met at Innistimich mentioned having hooked a very large fish the day before near the place where I killed mine, which broke his tackle, and there can be no doubt it was the identical fish, as the broken hook in its mouth corresponded with the remainder of his tackle.

The landlord at Dalmally rents the salmon fishing in the river Orchy, and persons living at his house have permission to fish there. I had a very good day's sport and killed a fine salmon.

The river Awe is a very fine salmon river, but difficult to fish on account of the precipitous nature of its banks, and as two guineas were demanded for liberty to angle, I confined myself to the lake and the river Orchy.

The best season for the salmo-ferox is from March to the beginning of August. After the middle of that month they retire into the deep banks of the lake, for the purpose of spawning, in which they are engaged for about two months, and during that period little sport is to be expected.

Your sporting friends would be well repaid for their trouble by making a trip to Loch-Awe, and as it is within a day's journey of Edinburgh there is no difficulty in accomplishing it.

Should you think this letter worthy of a place in your magazine, it may perhaps be the means of leading some brother of the angle to the mode of obtaining a few days' sport, and if so I shall be amply repaid.

I am, your obedient servant,

Edinburgh, Sept. 28, 1845.

B.

P.S. I omitted to mention that in two days our party killed either five or six of the large trout, weighing 3, 4, 5, 6, and 10lbs. each.

#### NOTICE!

THE PROPRIETORS OF THE SPORTSMAN'S MAGAZINE have determined on presenting their readers with a SPORTING ALMANACK, equal in quality, contents, and arrangement, to either of those published at TWO SHILLINGS or HALF-A-CROWN, on the following conditions. With an early number (hereafter to be announced) will be presented to every subscriber a COPY of the ALMANACK, for one week, at the charge of three half-pence for the Almanack, and three half-pence for the current Number, should the subscriber wish them both. The price of the Almanack to non-purchasers of the Number, will be raised to SIXPENCE after the lapse of that period; the three half-pence being merely charged as the cost price of paper and print.

Part V., for October, of the SPORTSMAN'S MAGAZINE is now ready, in an embellished wrapper, price Sevenpence. All the back numbers are in print; the Stamped Edition of No. 18, containing the fullest, fairest, and best report of the GREAT FIGHT FOR THE CHAMPIONSHIP, will be kept for some time longer on sale. Office, 42, Holywell-street. Strand; where all communications for the Editor should be addressed.

#### CORRESPONDENTS.

**WHIST.**—J. N. W., Nottingham.—It depends upon the deal. If one party at eight has two tricks, and it is their deal, the other being six and holding four honours, the latter have the game; though it is not very probable that the holders of four honours should be unable to make a better show in counting.

**B.** Worcester.—If a player reminds his partner of the importance of calling after the trump is turned up, he forfeits a point. If you name the suit on claiming a revoke, you are entitled to examine all the tricks.

**CHESS.**—SCACIA.—You have a right to move your pawn. We have tried the position; there is certainly no "check by discovery," and cannot therefore understand why any objection should be taken.

**LIVERPOOLIAN.**—The larger ship, certainly. The Great Britain is 322 feet in length from figure-head to aft, and 50 feet 6 inches in breadth. She is registered 3,500 tons, builders' measurement; so that her bulk nearly equals that of any two steamers in the world. She has four decks; and the upper one, with the exception of a small fore-castle, is completely flush from stem to stern, and measures 308 feet. She has four engines of 250 horse power each, and she is fitted with the Archimedeal screw propeller, which has six arms, and is 15 feet 6 inches in diameter, with a 25 feet pitch.

**ENDERSBY.**—Both the paragraphs would be charged with advertisement duty at Somerset House; they must, therefore, be paid for as such.

**O.**—Thirty-three and thirty-six feet. It is asserted that Vanguard cleared thirty-four at Rugby steeple-chase (ridden by Mr. A. McDonough). We have seen a marked leap of thirty-three cleared by a cocktail hunter in Northamptonshire.

**HALE, Birmingham.**—You will find the Leger winners in the last number, printed while your letter was in transitu. We will put in the winners of the "Coop." Every number of the SPORTSMAN'S MAGAZINE is in print, and procurable of Mr. Guest, or of Mr. Watts, in your own town. Big Ben was contained in No. 7, of the SPORTING WORLD, of which only a few remain in print; it may yet be had by order.

**TYRO, Windsor.**—Brentford (not Blandford or Bradford) is the spot which tradition has pointed out, and "equestrian troops" have popularised, as the terminus of the ride of "Billy Button," the Cockney tailor. The distance points it as the place, and not Bradford, which would be an absurdity, being upwards of 200 miles. The error may have arisen from the popular pronunciation of the name of Brentford, which is called by the lower order of the "natives" *Branford*. There is a book above a century old, called the "Comical Diversions of Billy Button, the tailor, and his horse, showing forth the mishaps and adventures of his journey to Brentford." Widdicombe could be a great authority on this subject; for about the earliest of our theatrical reminiscences is coupled with a visit to London, and seeing the performance of himself, a trained pony, and an equestrian buffoon, in this legendary interlude.

**H. CLELAND, Liverpool.**—We have to apologise for apparent neglect; but a friend, an M.R.V.C., who undertook to procure us the circular, has remembered to forget to perform his promise. If he does not call on us in a day or two, we will see to it ourselves.

**J. A. Stepney.**—In cleansing barrels, cold water, with a little very fine sand may be used, and then hot, after thoroughly washing with cold. Gun-makers generally apply hot water to clean the barrels, if much leaded, and finish with cold; but cold water is, in our opinion, best; the tow being strewed over with steel filings, will better remove the lead, and that without doing injury to the inside polish of the barrel. If dry tow gets wedged in your gun with the cleaning rod, contradictory as it may seem, you will find if you pour boiling water on it, the rod will turn easily and draw it out.

**PELWIG.**—A horse is said in stable language to be well "planted" when he stands firm and equally on all his legs, and not with one advanced before the other. A Ptarmigan is a species of grouse (*Tetrao lagopus*), as you might have seen in our article on the Grouse a few numbers since, where it was engraved.

**A. GROOM, Hendon.**—Sulphate of copper has been found an excellent tonic for horses. When the urine has become stinking or high coloured, the diabetes may be considered as confirmed. Try the following, with rest or voluntary exercise only, and a light diet:—

Opium	Half a drachm.
Gentian root in powder	Three drachms.
Ginger	Two drachms.
Oil of catnawva	Twenty drops.

Mix, with syrup enough to make a ball.

Give this for two or three days morning and evening, and should the symptoms not abate, try this:—

Sulphate of copper	One drachm.
Ginger	One drachm.

Linseed powder and syrup to form a ball; and give every morning and evening till a cure is effected.

**W. Y. Islington.**—Five pence will purchase two copies of our stamped edition from any news-vender; but as you are within the limit of the "old twopenny post district," the law does not permit a newspaper published in London to be sent to you post free, therefore, we cannot send it you from the office without losing the postage. You must obtain it in the same regular way as you would another newspaper. Again, we repeat, that to ensure answers, Correspondents must address "THE EDITOR." If superscribed "Mr. E. Dipple," they are opened by the publisher, as being upon business, and very probably miss their way. We hope we shall not have fifty "CONSTANT READERS," and ditto "SUBSCRIBERS," ignorant of this in each future week. COGG, and others, next week.

#### OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

**SUNDAY, October 5th.**—TWENTIETH SUNDAY AFTER TRINITY.—Act to legalize the sale of Game passed, 1831.

**MONDAY, 6th.**—Lincoln Fair.—Amebury Fair.—Pain's Lane Races.—Great Chess Match proposed between England and France, 1844; England would have no objection to give some of her Bishops for a (K)night or so.—Louis Philippe born 1778.

**TUESDAY, 7th.**—STAFFORD RACES.—Louis Philippe arrived in England on a visit to Queen Victoria, 1844; the Mayor of Portsmouth, having no shore-grounds to go upon, finds himself at sea in delivering his address.—King of Holland abdicated, 1840.

**WEDNESDAY, 8th.**—YORKSHIRE UNION HUNT RACES.—KNOTSFORD RACES.—ASHBY-DE-LA-ZOUCH RACES.—Edystone Lighthouse finished, 1769.

**THURSDAY, 9th.**—SOUTHERN RACE MEETING.

**FRIDAY, 10th.**—Oxford and Cambridge Universities term begins.—The Chamberlain will not allow the managers of the Adelphi to perform "Satan in London" how should he? Is it proper for a Celestial body to play the devil? This we take to be a devilish bad pun.

**SATURDAY, 11th.**—Old Michaelmas day.—Queen Victoria and Louis Philippe visit Hampton Court. His Majesty, albeit, accustomed to intricacy and dodging, says "he wonders how such a maze can be exhibited."

## The Sportsman's Magazine.

FOR THE WEEK ENDING OCTOBER 11, 1845.

#### FIELD SPORTS FOR THE PEOPLE.

ITHIN the last few years much has been said and written upon the subject of amusements for the people, and "Young England" is supposed to be particularly favourable to the revival of what are usually denominated the old English sports; but the best sports are those which arise spontaneously from the feelings of the people and the circumstances of their condition.

Old sports, and we are prepared to uphold the assertion against all comers, are always the best. The nearer we approach the genuine sports of nature, the greater animation we experience in the pursuit of amusement. Hence the difficulty of devising new games, or even new nursery rhymes for our children. The affections naturally cling to the old for some apparently mysterious reasons, and neither better sense, nor better versification, nor more classical language, will recommend a new rhyme in preference to an old one. Does this arise from a Conservative spirit in our nature, or are these old rhymes really superior to anything that modern genius can devise? We remember hearing a very talented and popular writer assert—half in fun, no doubt, but in earnest also—that *The House that Jack Built*, was the most successful poem in the English language, and that the author, whosoever he was, deserved to have his life written by Johnson himself.

There are no amusements so delightful to the young and the vigorous as what are called field sports. The passion for such is universal. Even the ladies themselves, when education and circumstances permit, become enthusiastically fond of hunting, hawking, and angling. But with young men and boys the passion for such amusements is one of the strongest and most irresistible in our nature—a passion which defies hunger, and cold, and weariness of limb; and, by the vigour of its action, imparts an almost miraculous strength and patience to the body and the mind. It is the pursuit of these that gives tone to the nerve, quickness to the eye, hardihood to the frame, and we devoutly believe generosity to the heart, and candour to the soul. The cruelty of field sports has frequently been urged against them by the poet and the sentimentalist. But poets are creatures of feeling, and often neglect to take their reason along with them in their critical reflections on life and manners. Cowper goes so far as to say:—

I would not enter on my list of friends,  
Though graced with polish'd manners and fine sense,  
Yet wanting sensibility, the man  
Who needlessly sets foot upon a worm.  
An inadvertent step may crush the snail  
That glows at evening in the summer path;  
But he that has humanity, forewarn'd,  
Will turn aside, and let the reptile live."

And so far we agree with Cowper, that a social walk with a friend ought not to be profaned by any such unnecessary exhibition of the destructive faculties. There is a time for killing snails, and a time for not killing them. A young man of fine feelings, walking arm and arm with his sweetheart on a summer eve, and whispering into her ear the sweetest words that his fancy can divine and his lips pronounce, would never interrupt such a current of innocent and affectionate thought, even by the simple act of treading upon a worm, if by means of a longer or a shorter step he could possibly avoid it; and if inadvertently he did destroy it, he would even express regret for the deed, and pronounce a sympathetic oration on his victim. In so doing he would merely preserve the tone of feeling which the act of courtship requires; nor would he be likely to commend himself to his lady-love by the exhibition of such destructive propensities as he might even wantonly exercise, without reproach, in a formal crusade against the vermin of creation. Cowper, as a poet, walking with a friend on the summer path, is right, as poets always are when they speak from their feelings. But Cowper, as a farmer or a sportsman, is wrong, and nature has given man many varieties of character, in the representing of which he acts many apparently inconsistent parts.

Izaak Walton, who ranks anglers with honest men, and says that a pike well basted with claret, anchovies, and butter, is too good a dish for any but these two classes of humans, in giving directions for catching a pike, says you may catch him with a frog in this manner:—"I say, put your hook—I mean the arming wire—through the frog's mouth, and out at his gills; and then, with a fine needle and silk, sew the upper part of his leg with only one stitch to the arming wire of your hook, or tie the frog's leg above the upper joint to the armed wire, and, in so doing, use him as though you loved him—that is, harm him as little as you may possibly, that he may live the longer." Here is cruelty—what can be greater? Most deliberate cruelty we admit; and only to be matched by those inflicted by priests, Dominicans, inquisitors and Calvinists, on those who differed from them in belief. Yet few better men have ever lived than Izaak Walton; his *Complete Angler* is a universal favourite amongst learned and unlearned, and is chiefly remarkable for the purity, the innocence, and generous simplicity of its sentiments. But in fishing for the pike, Izaak pursued a natural and legitimate amusement; and nature, in making the frog the unfortunate victim of the pike-fisher's hook, has not forgotten to make compensation, as Izaak himself inform us, for the frog is known

to leap upon the head of the pike, and even to dig out his eyes, and at last devour it. Nature is just in her own way, but her laws of justice are different from those of man's, and she not unfrequently makes use of the irregular passions of men to effect such compensations as her law of retaliation requires. Moreover, cruel as this amusement of angling may seem to the inexperienced mind, we know no natural amusement which has a more chastening, sobering, and purifying effect, and our own angling reminiscences are by far the most delightful of any that now flicker in the mind, as we look with regret on the pleasures that are past. Appearances here are as deceitful as elsewhere; and the delicate, harmless, soft, and luxurious enjoyments of the ball-room—where not even a fly is injured in the wing, and where the death of a moth in the candle would be bewailed with pathos—conceal under their delusive show of happiness, the wrastlings of all the worst and the most dangerous passions which disorder society. There is peace and repose in the angler's mind, and a whirlwind of anxiety in that of the reveller.

What may be said of the tranquilising influence of angling may be also affirmed of almost all the other sports of the field. But then it is only when they are legitimately followed; and in proportion to the good which results from a legal pursuit of them, is the evil which follows from trespass and poaching. An act of the legislature, the interdict of a landlord, at once converts an innocent amusement to a crime. And we do not say that this act or this interdict is unnecessary; for as men become more numerous, and more intelligent, as they call it, they become, at the same time, more reckless and selfish, and instead of solacing themselves with such moderate enjoyments as angling with the rod, they resort at once to the voracious practice of poisoning the streams with lime, or raking them with the net—a practice which is so outrageously selfish and unjust, as to deserve any severity of discipline which the law has hitherto inflicted. Nor can the people with reason expect the law to give them countenance in such ways, inasmuch as by means of a few bushels of lime and a net, a few unjust and selfish persons might destroy the sport of a whole parish in the course of a few hours. All passions are useful, but all excesses are evil; and perhaps the protection laws for game have hitherto proved less unjust to the population as a whole, than would the irregular and licentious pursuit of wild animals by the most idle and lawless portion of the community. When men have a law of honour to guide them, a statute law may be dispensed with. But the statute laws are evidently indispensable in that preliminary and preparatory state of society in which man is learning justice, and gathering resolution to practise it.

The old English games are thrust out of large towns and cities, chiefly for want of room, and they are by no means suitable for a dense population. The substitutes for these are the young ladies's favourite amusements of dancing, music, and card-playing. The gentlemen find that of billiards for themselves. We have less to say in favour of the morale of such amusements than of those of the chase. They are the decoy ducks to snare the young and the inexperienced. Amid the respectable and reputable there are numerous disreputable houses, where dancing and music are nightly and riotously practised by the artful and the abandoned, and hand-bills are distributed even in the streets, amongst the youth of the metropolis, which inform them where they may enjoy a dance, and a song, and a bed for the night, and a breakfast in the morning, for two shillings and sixpence! Dancing, music, and games of chance, when immoderately indulged in, are most destructive to morals, inasmuch as they weaken the contemplative faculties, the modest and the prudential feelings.

Yet, it may be asked, what can young men do? where can they go for an evening's amusement? Are they to blame, or is not the legislature, is not the public in part to blame, which makes no provision in towns for innocent enjoyments, and thus leaves the young mind to the snare of the fowler, with scarcely even a hint of the danger it conceals? Old men and young must have amusement—the young bodily, the old mentally. It is amusement that makes life pleasant. It is therefore an important subject of consideration, whether it is not the duty of rulers, a duty they are only just beginning to understand, to encourage gymnastic and other athletic sports, merry-meetings, and open air gatherings. Foot, hurdle-races, and for speed, cricket, football, leaping, wrestling, and, under certain restrictions, boxing; to say nothing of feats of endurance and strength, horse-racing, single-stick, and the like, are recreations to which the right of the people will, we hope, shortly be acknowledged by the legislature.

INCENSE.—"Burnt offerings and sacrifices," as the auctioneer said, when he sold the goods damaged in the recent conflagration!

MR. JOHN GULLY.

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

## CHAPTER.—VIII.

MR. JOHN GULLY.

**W**HEN Hen. Pearce, the Game Chicken, seceded from the Ring, Gully, who, unlike most other pugilists, had positively achieved a high fame by his defeat at the hands of that fistic phenomenon, was hailed by common consent **CHAMPION OF ENGLAND**. Gully's ambition was of the highest order; second-rate pugilists, it should seem, were beneath his aim; and spurning the general mode of acquiring greatness step by step his daring spirit prompted him to the temerity of raising himself to the dignity of a hero at one stride, by attacking the justly renowned and mighty Chief of England. It is true that he fell; but it is equally true, that he rose a greater man by the attempt than ever. Gully convinced the amateurs that he was able to contend with honour, and even with a considerable chance of success, with the supposed invincibility of that eminent pugilist, whose generosity of disposition would not permit him to quit his vanquished adversary, without complimenting him upon his uncommon bravery and fortitude.

Gully, by the science and game he displayed in that celebrated contest, became a distinguished favourite with the Fancy in general. His knowledge of the art of boxing was considered complete, and his courage an able second to his judgment. His supporters were numerous, and his fame stood so high, that upwards of two years elapsed, from the time of his battle with the Chicken, before any one had the temerity to call on him to defend his title to the Championship. At length, he entered the lists with the formidable and burley **BOB GREGSON**, a boxer, who had been picked out by some of his friends in Lancashire, as likely to lower the crest of the champion. Gregson's size was considerably in his favour, he being nearly six feet two inches high, of prodigious strength, and having signalled himself in several pugilistic contests in that part of the country; but, notwithstanding such striking advantages, his pretensions were considered on the score of strength rather than of science. Gregson's game was unquestionable, and the amateurs wishing to see him enter the lists with so distinguished a boxer as Gully, a subscription-purse was immediately entered into for that purpose.

On the 14th of October, 1807, the contest took place in a valley, called Six-mile-bottom, on the Newmarket-road, on the spot where, in later days, Johnny Broome defeated the Australian; for miles round this part of the country the bustle commenced at an early hour, groups of people thronging from every directions, to witness the battle. Between nine and ten, Gully and Gregson entered the ring, both in excellent spirits and good condition. The former was seconded by Cribb, Cropley acting as bottle-holder. Richmond was Gregson's mentor, and Harry Lee was his bottle-holder. On setting-to the odds were in favour of Gully.

## THE FIGHT.

**ROUND 1.** The spectators were struck by the Herculean appearance of Gregson, who looked formidable in the extreme, and considerable anxiety was excited as to his probable mode of availing himself of his prodigious strength. A good deal of sparring took place, when, a favourable opportunity offering, Gully put in a desperate facer, which Gregson immediately returned, giving his adversary a teaser on the side of the head, that made it sound again—the men closed and fell.

2. Gregson's superiority was felt by his opponent, who endeavoured to adjust the balance by scientific caution. Gully, after much manoeuvring to draw his man, stepped in and delivered a dreadful facer, which made the claret fly—Gregson fell. [The odds rose rapidly.]

3, 4, 5, 6. In all these rounds a number of good blows were exchanged; but the advantage, at times, from Gregson's gigantic strength, appeared doubtful.

7. Gregson, with some dexterity, beat down his opponent's guard, and put in such a desperate blow on Gully's right eye, that he fell from its powerful effects, and lay stunned for four seconds. His eye swelled up so instantaneously, that he could scarcely see out of it. The friends of Gully were considerably alarmed at witnessing this sample of dexterity and strength. [The odds fell as rapidly as they had risen.]

8. Gregson came up with confidence from the success of the last round tried on all he knew, and went boldly into his man; Gully rallied, and put in several good blows, and both combatants stopped with great adroitness. Gregson, by sheer physical power, suddenly caught Gully up in his arms, and dashed him violently upon the ground; with the greatest forbearance, however, he declined falling upon him, as he might have done; for which noble conduct he was unanimously applauded from all parts of

the ring. [It was the opinion of the fancy in general that a better round had never been contested; and Gully's friends now rested their hopes upon his superior science, reducing Gregson by protracting the fight. The odds now changed upon Gregson.]

9. Gully stood up manfully, and gave his antagonist a severe facer, who slipped upon his hands and knees. This, for the instant, produced rather an unfavourable impression, being considered more by design than accident; but his manly conduct throughout every subsequent round soon chased away any suspicions that might have been entertained.

10 and 11. Gully put in some good hits; but Gregson closed, and Gully went down.

12. Gregson in the best condition; Gully manifesting weakness. Gully put in some blows, but they were too feeble to do execution: Gregson gave his adversary a dreadful blow upon the forehead that knocked him down. [Three to two upon Gregson.]

13. Gully, notwithstanding his weak state, was enabled, by his knowledge of the science, to gain the superiority in this round; but his blows lacked power.

14. Gregson punished the face of his opponent right and left; a severe rally ensued, and Gregson, apparently through weakness, fell on his knees.

15. A few blows were exchanged, when Gregson gave Gully a knock-down blow.

16. Gully's face exhibited desperate marks of his opponent's strength, and his right eye was completely closed; a rally took place, in which Gregson was knocked off his legs.

18. A good set-to; the advantage, so far as hitting went, completely on the side of Gully, who, notwithstanding, received a desperate fall.

20. Gregson, in endeavouring to plant his favourite straightforward blow, lost his distance, and, while in the act of falling, Gully caught him with the right; a small altercation took place, as to the fairness of the blow, but, as Gregson was not down, it was considered correct, according to the rules of the ring. [This was a strangely superfluous appeal, inasmuch as it is not pretended that Gregson was down.]

23. A desperate rally; Gully full of spirit, but his weakness was evident: the strength of Gregson was leaving him very fast. Gully's game was known to be of the first quality, and the odds changed considerably in his favour.

25. The spectators were full of anxiety respecting the decision of the combat; the best judges were puzzled to know which of the combatants was the most beaten and exhausted; both severely felt the want of time to recruit their wind and strength, and were scarcely able to quit their second knees.

36. For the last ten rounds it could scarcely be called fighting. Nature was completely exhausted in both, and it was the desperate efforts of the mind struggling for victory; their brave hearts endeavouring to protract the scene, reluctant to pronounce the word enough. It might now fairly be observed, that Victory hung in the scales of Chance: from the helpless state of the combatants, the betting became even. Knocking down seemed out of the question for the last seven or eight rounds, and they fell continually together, from feebleness. It has been remarked, that it is impossible to witness any battle, however perfect strangers the combatants may be, without feeling a sort of preference for one of the pugilists; and here, in this state of the contest, putting interest out of the question, it would have been impossible to have made choice from anything like superiority; but, if there was a favourite, Gully, perhaps, had the balance. At meeting, in this last round, both the combatants seemed incapable of steadying themselves so as to hit with anything like precision; at length, Gully rallied all his strength and spirits, and let go with both hands. Though the plunging blow was by no means powerful, it had of sufficient impetus to knock down Gregson, and prevent him rising to time. It was a proud moment for Gully; like a tired horse worn out from a long journey, who finding that he is near home, starts into vigorous action, so did Gully endeavour to make a jump over the ropes, to show how much he valued the victory. Gregson suffered terribly: he lay on the ground for some minutes, incapable of motion.

It has been the expressed opinion of all who witnessed this combat, to have been the most bravely contended and hardly won of any recorded battle. It was scarcely possible to decide which of the combatants was the most beaten. The game displayed on both sides excited universal astonishment. Johnson had been terrific in his time, Big Ben tremendous; George the Brewer had shown a hardihood and firmness almost superhuman; and Jackson had sported game of the richest quality; but this was such a complete demonstration of milling, that it was voted by the knowing ones as a *ne plus ultra*.

Gully exhibited considerable improvement in science since his fight with Pearce; nevertheless the strength of his opponent several times appeared impossible to be contended against, and he laboured under considerable disadvantage in being compelled to wait for Gregson's making a hit. Gregson's left arm was considerably stronger and longer than Gully's; and, in sparring, he always kept it completely extended. Gregson hits tremendously with his right hand, and so ponderous were its effects, that it seemed impossible to resist its powerful progress. It was owing to this circumstance that Gully displayed such heavy punishment, and got his left arm so materially injured at the commencement of the battle, that it was long ere he perfectly recovered.

Gregson, although so severely beaten in the above contest; flattered himself, that, in the event of another trial with Gully, he should prove victorious; and his friends coinciding with that opinion, he challenged Gully for 200l. a-side, which was immediately accepted by the latter.

Arrangements were made by Major Morgan and Mr. Shelton, who supported Gregson; and by Mr. Jackson on the part of Gully. The principal article of which arrangement was, "neither man was to fall without a knock-down blow—subject to the decision of the umpires." The important day being appointed, it was soon blazoned abroad that the scene of action would be contiguous to Bedfordshire and Buckinghamshire. But the Marquis of Buckingham, hearing of the circumstance, and having no great predilection for pugilism, issued the following formal notice, in the County Chronicle:

"Buckingham House, London, May 8, 1808.

"Information having been transmitted to me, his Majesty's Custos Rotulorum in and for the County of Bucks, of an intended riotous assembly, aiding and assisting in a breach of the peace, by a boxing-match within that part of the county of Bucks, which touches or joins on the counties of Bedford and Herts, near the town of Dunstable; and that the said illegal and riotous assembly will take place on Tuesday, the 10th instant, notice is hereby given, that proper steps have been taken for the detection and punishment of all persons acting as aforesaid, in breach of the peace, by the attendance of the magistrates, high-constables, petty-constables, and other peace-officers, entrusted with the execution of the law within the said county.

"NUGENT BUCKINGHAM,  
"Custos Rotulorum of Bucks."

Perhaps this document may serve to allay the apprehensions of some, who in the innocence of their hearts may suppose the notice just issued by the magistrates of Buck and Oxon, since the recent affair of Bendigo and Caunt, to be unusual or without precedent.

The anxiety manifested by the sporting men in general, was so great to witness this second combat, that numbers left London on the Monday, to prevent meeting with any disappointment, and to be in readiness to follow the cavalcade, should any interruption take place. The magistracy, from the above formal notice, were upon the alert, and the Dunstable volunteers being called out to secure the peace, were under arms by seven o'clock on Tuesday morning, May 10, 1808.

The impositions practised upon this occasion by the landlords of the various inns in the country towns near the scene of action, were of the most gross nature. Two guineas was the price demanded for a bed, not only the night previous to the fight, but the same sum extorted in the evening when the battle was over.

(To be continued.)

## CORRESPONDENCE.

### BLINDNESS IN TROUT.

SIR,—Your correspondent, George Austin, Junr., in a letter on the Blindness of Trout, which appeared in your valuable Magazine, of the 26th July, has queried the cause of the same. He says:—"The pool into which the trout were returned in the month of August, contained a great quantity of roach, some carp, tench, bleak and perch, all healthy and thriving fish; but the trout when taken out during the summer and the following season, seemed to have increased very little in weight, with the exception of one healthy fish of three pounds; nearly all the others were found to be entirely blind, or partially so." Now the question on this point is decided by a reference to the eye of a trout, and a careful anatomization of the same, and it appears as follows. The eye is of a moderate size, the pupil encircled with red, and the Iris (reflector) of a silvery colour. These colours overcome the difficulty of elucidation. The most important portion of the eye the Iris, or reflector is of a silvery hue, and it is well known that the most trivial accidents act upon that colour. We see that the photogenic, electric, and galvanic experiments, are for the most part tried upon bright silver plates, and therefore it becomes evident that the eye of the trout being silver coloured in an unusual degree, and he, to aggravate the weakness being in water, upon which electricity acts very forcibly, his eyes become very quickly damaged.

Now to the second part of the query—the trout changing colours; which is not so very wonderful occurrence as many persons might be led to imagine. Its ordinary colour is yellowish grey, which is darker or of a brown hue on the back, and marked on the side by several rather distant round bright red spots, each surrounded by a tinge of pale blue colour, and the belly of a silvery cast: and last, though not least, the scales are very small.

Now it is obvious to every person at all versed in the effects of the approximation of various colours, that the ones here specified are more liable to produce collectively a black hue than any others, and this may be accelerated by various causes, electricity among the number; for there are many things under the waters that "are not dream't of in our philosophy."

We will leave that cause to the guesser; as I have done my part in the matter, in suggesting the probable agent; the recent discoveries in light and colours, daily progressing, may soon furnish further guides upon the matter.

F. B. THOMSON.

Why is an exaggerated fact like the portrait of a young lady?—Because it is *miss* represented.

## WRINKLES FOR THE GROOMS—NO. IV.

## HUNTING STABLES.

 HE condition of the horse is an object of so much importance to every sportsman, that however well regulated his own stables may be, a peep into the management of his neighbour's will frequently afford a wrinkle, even if the general arrangements are not conducted upon the most approved principles; those customs which are observed to be objectionable may be rejected, and those which are good adopted. There is, however, so much mystery blended in the composition of grooms, and frequently sanctioned by their employers, that it is frequently somewhat difficult to discover many little circumstances which do not appear immediately to the eye.

## VENTILATION AND TIME OF FEEDING.

One of the most important foundations for the establishment and maintenance of condition is a perfect digestion; it is a function which is acted upon by a variety of circumstances. Ventilation, or the admission of fresh air, may be enumerated as one of the auxiliaries. It may possibly be exclaimed, "What has that to do with the power of digestion? the air does not enter the stomach for the purpose of assisting in the process." Most decidedly not, but it enters the lungs, and by its quality has a great influence over the vital powers and vigour of the animal: the more robust his constitution is, the more perfectly will his digestive faculties perform their offices. Water is also a most powerful agent to the process of digestion—but the time of giving it very materially conduces to its efficacy—an observation which is too frequently disregarded. Many horses are found to pass a great portion of their corn in an undigested state; and upon inquiry it will be discovered, that they are generally fed immediately after they have had their water. It is said by anatomists that water does not remain in the stomach, but that it passed through that member into the bowels. This I do not pretend to deny; at the same time there is no doubt that a portion of the fluid commingles with the food which it finds in the stomach, and renders it for a time more soft and pulpy; consequently, if those grains of corn which escape mastication, are received among the food already in the stomach in that state of fluidity, it is reasonable to conclude that they will be carried onwards to the intestines, without affording that degree of nourishment which they are capable of producing. Many grooms are in the habit of watering their horses after they have dressed them, and immediately placing the corn in the manger; where such is the practice a great portion of corn will be found in the evacuations. Let the cause proceed from what source it may, experience proves the fact, that horses which are watered three quarters of an hour or an hour before their corn is given to them, will not throw off their oats in the same ratio of undigested crudity as those which are differently treated. Grooms who know their business invariably give the water during the time they are dressing their horses; that is, having dressed their heads and necks, washed their legs and feet, and disengaged the rough dirt which adheres to their bodies, they present the water previously to using the brush and damp wisp. A trifling quantity of hay should always be given between watering and feeding, and if the animal has undergone considerable exertion, either in the field or on the road, gruel should be substituted for water.

The custom with outlets at inns of giving water to the horses immediately before they feed them is very commonly encouraged by the proprietors, for the purpose of being assured they are supplied with it; nevertheless that does not render the system less baneful, and as the horses of travellers are notoriously apt to pass their corn whole, that circumstance will go far to prove the veracity of my argument.

Returning to the subject of ventilation, it may be truly pronounced as one of the most important in stable management: if imperfectly ventilated it is always damp, especially in the winter season, and its inmates are constantly found in a cold sweat whenever the doors have been closed a few hours, from which they recover when the passing through the doors admits of a renewal of the vital principles of the atmosphere. If proof are wanting of the cause of those debilitating effusions, it is here adduced at once.

Let the inmates be warmly clothed, but let them enjoy a free circulation of air to the utmost extent, so that no actual draft is permitted to come in contact with their bodies.

## THE HARD MEAT SYSTEM.

The hard meat system during the summer months is so generally acknowledged as superior to that of turning horses out, that there can be but few who have not become converts to it; nevertheless, there are some, and the sooner they try the experiment, if experiment it can be denominated, the better. I am astonished that any men of observation should be found to pursue a course so totally at variance with theory, practice, and reason. I can quote some instances to show the absurdity, but as personal remarks would be offensive, it is unnecessary to introduce names. I shall merely observe that a neighbour of mine last spring turned out his horses which he had ridden hunting the preceding winter—a gelding and two mares. I had daily opportunities of seeing them, and invariably found them sheltering themselves from the rays of the sun beneath a tree, where they were constantly teased by the flies, stamping their feet, and appearing as unhappy as possible; their eyes were in a state bordering on inflammation; their legs, which had been blistered, stale and disfigured by windgalls; their feet had become soft and spongy; in fact, their natural shape was considerably altered. When taken into the stable in August, and put to stand on dry litter, the transition was so great as to establish diseased laminae with one of the mares, by which she is rendered nearly useless, and at this moment there is not one of them in condition fit to go to bounds. To sportsmen, and indeed to all others who are fond of horses, it is a great pleasure to enter a stable where the operations are properly performed; and an

equal degree of disgust arises where everything is found in confusion, and unskillfully managed. To see a horse tied up in his box or stall before his head and neck have been cleaned; to see a stableman picking the dirt out of the feet on the litter, or into the water in which he is about to wash them instead of into the rubber spread for the purpose; and then to see him on the off-side washing the legs and feet, proclaim at once a great want of attention to stable minutiae. The healthy condition of horses, as well as their appearance, is so greatly enhanced by a judicious method of dressing them, that it appears like neglect to pass the subject without some observations. A certain degree of friction is essential in order to increase the circulation and determine the blood to the skin, but it should be distinguished from irritation, which is decidedly injurious. On this account the use of harsh brushes should be avoided; one made of horse-hair in the form of a glove has lately been introduced, and is used by all first-rate grooms, which supercedes every other; and as it can be obtained at most saddlers at a moderate price, no stable ought to be without one; it thoroughly eradicates the dust—a most essential attribute—as the pores of the skin cannot perform their office unless they are free from obstruction. In using a brush, a foolish practice is frequently adopted of working it backwards and forwards—that is, with and against the horse's coat; by so doing it is rendered open, without any possible advantage to explain the motive for which it is done. The proper method is to work the brush transversely across the coat, and finish the way it lies, when it is in a proper state for the damp wisp—an auxiliary to good grooming which is generally too sparingly made use of.

(To be continued in our next.)

## FLYING CHILDERS.

[The following particulars of this celebrated stallion, are inserted at the request of a Cheltenham correspondent. Pressure of matter, and some mechanical hindrances, to which we have alluded under the head of "Correspondents," were the cause of its omission.—Ed. Sp. Mag.]

—FLYING CHILDERS, or Devonshire Childers. Generally allowed to be the swiftest horse ever produced in this kingdom, bred by Mr. Childers in 1715, who sold him, when young, to the Duke of Devonshire, was got by the Darley Arabian out of Betty Leedes (the daughter of a sister to Leedes), by Old Careless, a son of Spanker; grandam by the Leedes Arabian, great grandam by Spanker, great great grandam the Old Morocco mare, dam of Spanker. Flying Childers never started but at Newmarket, and there ran only two matches in public; he received, however, three forfeits, viz. from Speedwell, Stripling, Bobsey, and the Lonsdale mare. 1721, April 26, the Duke of Devonshire's b. h. Childers by Darley's Arabian out of Betty Leedes's by Careless, rising six years old, beat the Duke of Bolton's Speedwell, 8st. 5lb. each, four miles, 500 gs. h. ft. Oct. 3, received forfeit from Speedwell, 8st. 5lb. each, four miles, 1000 gs. h. ft. 1722, Oct. 22, beat Lord Drogheda's Chantier by the Akaster Turk, twelve years old, 10st. each, six miles, 1000 gs. 1723, April 3, received forfeit from the Duke of Bridgewater's Lonsdale mare and Stripling, 9st. each, four miles, 300 gs. h. ft. Nov. 1st., at 10st., received from Lord Godolphin's Bobsey (winner of two king's plates), 8st. four miles, 200 gs. h. ft. At six years old, he ran a trial at 8st. 2lbs. against Almanzor and Brown Betty, over the round course at Newmarket, in six minutes forty seconds, to perform which, he must have moved eighty-two feet and a half in one second, nearly at the rate of a mile in a minute. He likewise ran over the B. C. 4 m. 1 ft. 138 yds. in seven minutes thirty seconds, covering at each bound a space of twenty-five feet. He also leaped, it is said, ten yards on level ground with his rider. Tradition says, that the wonderful speed and lastingness of Flying Childers were first discovered at a fox-chase, in which all the horses but himself were knocked up.—We cannot decide, but such is the story. A Welsh gentleman offered the noble duke, for Childers, his weight (i. e. the weight of the horse) in crowns and half-crowns, which his grace refused.

Childers was sire of Badeworth, Hampton Court Childers, Black Legs, Fleecem, Plaistow, Second, Snip, Puff, Chuff; Hop-Step-and-Jump, Hip, Odsey, Spot, Steady, Polly, Young Duchess, Commoner, Spanking Roger, Firetail, Mouse, Poppet, Blaze, Roundhead, Comical, Leadon Heels, Lustre, Crazy, Philistine, Long-looked-for, Ebony, Chicken, Lady Caroline, &c. &c. Nestgull, first called Dwarf, foaled 1740, is said to be the last of his get that was trained. Nestgull was bred by Mr. Erratt of Newmarket, who sold him to Velters Cornwell, Esq.

Flying Childers died in 1741, aged twenty-six: he was a bay horse with black mane tail, and legs, with the exception of the fetlock joints, which were all white. The near fore-leg had more white than the others. He had a small star in his forehead, and a white nose.

CHILDERS (Bartlett's). Bred by Mr. Childers, was for many years distinguished as "Young Childers," it being generally understood that he was own brother to the Flying or Devonshire Childers, though some insisted that Betty Leedes never produced any other foal than Flying Childers, except one that was choked by eating chaff when young. Mr. Cherry, the original editor of the Racing Calendar, however, tells us, but we prefer transcribing his words: "I have heard the contrary from so many gentlemen of worth and honour, that I cannot but am of opinion that this stallion 'was full brother' to the aforesaid Devonshire Childers."—Be that as it may; and who can decide?

Bartlett's Childers got so many good horses, that he now justly ranks with the first-rate stallions: he was never trained; he was sire of Squirt, Epibus, and the Little Hartley mare; of the dam of Sir W. Middleton's Camilla, and the grandam of Snappdragon, Honeysuckle, Sourface, Red Rose, Aquila, Figg, Forfeit, Surly, Mousmus, Toy, Cripple, Polly, Country Wench, Smallhopes, Milkmaid, &c. &c.

## THE GAMECOCK.

SECTION IV.—(Continued from page 354.)

## INVESTIGATION OF CIRCUMSTANCES MOST LIKELY TO PRODUCE A BAD CONSTITUTION IN COCKS.

THE well-known axiom, "that prevention of disease is better than cure," cannot be more properly enforced, than after the following recital of the various transitions in the cock from health to disease.

I do not feel myself liable to contradiction when I assert that nothing is more common than to breed from a cock, after having fought not only one battle but several; the more battles he has been engaged in, the greater recommendation to make use of him as a brood cock. It would seem, upon reflection, unnecessary to dwell upon the impropriety of such a choice—but the mischief is of such magnitude, that it would have been unpardonable to be silent upon the subject. When we come to consider the position for combat, is it supposed possible that they should avoid giving and receiving a stab, more or less injurious; for they have no shield to ward off the deadly weapon from the vital parts; the interstices are numerous; bone, muscle, tendon, are all liable; vessels may be divided, or perforated: parts may be wounded, lacerated, or contused—and probably seldom restored to healthy actions:—the quantity of blood lost or effused, may of itself ruin his constitution. Under all these liabilities, who would build his hopes upon such a crazy fabric; admitting without a doubt that such cocks are made use of, are we to wonder at meeting with so many that have delicate constitutions.

The next, and not least of the causes, is that originating from the effects of molting. We know from experience that cocks, as well as hens, in particular years suffer such difficulties in that wonderful act of nature, inasmuch as to render their lives precarious for a length of time. It is well known that a fever, more or less, is ever attendant on this act of nature, and I have frequently observed that this operation is sometimes arrested, and remains for a shorter or longer period in a dormant state, without exciting any perceptible commotion in the economy—and when in this state death generally ensues—or it leaves them in a debilitated and faded state. At other times we see it rapid in its progress, and the ordinary course of nature enjoyed and perfected.

If hens and cocks have not completed this renovation, and fully arrived to their health and bloom, both the one and the other are unfit for the purposes of breeding.

I have remarked for several years, that if either my hens or pullets should be deprived of sitting when nature prompts, they do not molt kindly in the approaching season; how far and in what manner this resistance to nature operates on the constitution, I am unable to divine.

Cocks fed in the month of March, cut out of feather, and not matched, tendered by the mode of feeding and close covering, turned out in the middle or latter end of the same month, and perhaps the season as inclement as any part of the year,—what must the sufferings be of cocks so exposed?—it so far operates upon them, that instead of being lively and blooming, they are dull, heavy, and listless,—for as yet, notwithstanding they have been up and fed, nature had not then completed her work, for not one cock in ten is fine at that juncture—and the instance of turning out, would, with out a doubt, procrastinate the act of progressive nature, and leave him unfit for the purposes of breeding, or in fact for any other where much was depending. The practice of fighting males in March, as they have presented themselves for many years, seems to me to be unnatural, and premature; but this must be submitted to others, to judge for themselves—for in this chapter I am only intending to mark out the causes which have retarded, or accelerated the progressive work of breeding.

They say "of evils, we are to choose the least;" and I think it is a much smaller evil to feed and to fight, when cocks are in full feather, and in high health, than to take them in the state described. It is not only unnatural, but you are not giving this noble bird an equal chance with the other animals we select for our sport.

To the catalogue I have already commenced, I must not omit the following addition:—That of the severe injury stags meet with (particularly the forward ones) in the months of November and December—so much so as to arrest their growth, and frequently to leave a taint upon the constitution, that renders them unfit for breeding or fighting:—when stags of this description go out, it would be right to make a memorandum of the injury they sustained. A variety of circumstances are here adduced, in order to point out to my readers the necessity of being very guarded and circumspect in every department appertaining to cocking, and particularly those whose engagements are numerous, and who fight for large sums. We know that notwithstanding all our exertions and endeavours, they are not to be always crowned with success—but the discerning sportsman will not be at a loss how to account for the failure, and will give due credit to meritorious cocks.

## SECTION V.

## REMARKS ON SOME FAVORITE BREED OF COCKS.

THE following remarks of Mr. Sketchley, on some celebrated birds of the last century, may still possess interest to the cocker, from the practical hints they contain:—

"When Sir Charles Sedley and Hugo Meynell, Esq. fought their flog mains, I believe no contests in the annals of cocking were marked with such general eclat. Their characters as judicious sportsmen stood conspicuously and deservedly high. They fought for large sums, and backed their cocks with such unrivalled spirit, that before or since, no betting has been in equal competition. Great confidence was placed in their cocks, and their feeders were upon a par,—under such circumstances, [high betting is ever

the consequence. The mains were upon the decline previous to my becoming a breeder, but a considerable number of cocks and hens were left in the neighbourhood around my residence. As they were relinquished, and became the property of the possessors, I was in the habit of purchasing a number of both—particularly from one of the breeders of these fowls—those that were fought were equal to any that had gone before them, and as a young breeder, I thought myself singularly fortunate in having to commence my pursuit in cocking with such well-known valuable fowls. My selected few, as brood fowls, were put down to one of the sweetest retired spots my neighbourhood could boast of, and comprised every accommodation that could render them secure, quiet, and healthful—and no close breeding could be superior. Under these local advantages, early in the spring (and the springs then were congenial and delightful) I had three hatches produced so regular, and altogether so promising, that I could not help anticipating a future pleasure in the progressive growth of what I considered valuable birds—and no young cocker was so highly gratified in having at hand seventeen stags and twelve pullets, not a feather in the whole that did not challenge their originals. So pleasing was the recollection of these birds even at the distance of fifty years or more, that I omitted prefacing this recital with a description. They were a clear Mealy Grey, nearly white breasted, without spot or streak, about four pounds six, to about four pounds eight ounces—high standing, boney, and black legs—close feathered, short necked—small snake head, and full dark eye—their walk easy, firm, and majestic, and their breast gracefully prominent, their shoulders broad and up, and their body gradually tapering to the tail; their actions were in unison with their shapes. To enumerate the superior quality of these cocks would be reciting again those of the Shropshire, and like them when crossed, they lost their original goodness; they became soft feathered, and partook of all the variety of the greys. Had these birds enjoyed a judicious cross selected from those that were left—I have not a doubt but they would have been excellent for many years. The only cocks that bore any similarity to those, were bred by Mr. Hopkinson, and what few I saw of them fought at Nottingham. I, at that juncture, entertained an idea that they were a part of the same family.

Unfortunately, three months previous to my cocks being two-year-old, I was abroad, and was nearly two years and a half absent; of course they were entirely lost to me, for on my return they were differently disposed of."

PERILS OF SEA-FOWLING.—A father and two sons were out together, and, having firmly attached their rope at the summit of a precipice, descended on their usual occupation. Having collected as many birds and eggs as they could carry, they were all three ascending by the rope—the eldest of the sons first, his brother a fathom or two below him, and the father following last. They had made considerable progress, when the elder son, looking upwards, perceived the strands of the rope grinding against a sharp edge of rock, and gradually giving way. He immediately reported the alarming fact. "Will it hold together till we gain the summit?" asked the father. "It will not hold another minute," was the reply; "our triple weight is loosening it rapidly!" "Will it hold one?" said the father. "It is as much as it can do," replied the son; "even that is but doubtful." "There is then a chance at least of one of us being saved; draw your knife and cut away below;" was the cool and intrepid order of the parent: "Exert yourself, you may yet escape, and live to comfort your mother!" There was no time for discussion or further hesitation. The son looked up once more, but the edge of the rock was cutting its way, and the rope had nearly severed. The knife was drawn, the rope was divided, and his father and brother were launched into eternity!—*Stanley's History of Birds.*

LEAGUES AMONG ANIMALS.—Leagues offensive and defensive between animals of different species, are by no means uncommon. The following instance of this kind of alliance occurred in Segovia about twenty years since; it was related to me by a Spanish friend, who was acquainted with both the bipeds and quadrupeds who figure in the story.—The two eldest daughters of a family in Segovia were particularly fond of pets of all kinds and of which they had a large number. Amongst these were a dog, a ram, and a guinea-pig. These animals appeared to be gifted with no small portion of sense. Every day at school time they were found waiting for their young mistresses at the garden door, and as soon as they came, one of the girls would get on the back of the ram, the dog would carry their books, and the guinea-pig walked behind like a footman. After leaving their young mistresses at school, the animals went home, but they never failed to return to school precisely at twelve o'clock, when the other sister would then ride and they would all go home in the greatest order and regularity. If a dog, modelled with the guinea-pig, the dog would carefully put down the books, and hasten to the defence of his friend; and if any one attempted to hurt the dog, the ram was already to protect him. The singular attachment of these animals to each other, their obedience, and their affection for their young mistresses, excited the admiration of every one who saw them.

ATTACHMENT BETWEEN ANIMALS.—The following incident of attachment between animals of a different species is related by the clever author of "Tutti Frutti":—"I have a poodle whom I would make tutor to my son, if I had one. I sometimes use him towards my own education. Will not the following trait of his character amuse you? He conceived a strange fondness, an absolute passion, for a young kitten, which he carried about in his mouth for hours when he went out to walk; and whenever he came to a resting-place, he set her down with the greatest care and tenderness, and began to play with her. When he was fed, she always took the nicest pieces away from him, without his ever making the slightest opposition. The kitten died, and was buried in the garden. My poor poodle shewed the deepest grief, would not touch food, and howled mournfully the whole night long. What was my astonishment, when the next morning he appeared carrying the kitten in his mouth! He had scratched her out of the ground, and it was only by force that we could take her from him."

## ON BEATING FOR GAME IN THE OPEN FIELDS.

BY A VOYAGER.

It is as certain as that I am now writing with one of Perry's three-pointed pens, that not one sportsman in every hundred, trying the English stubbles, beats them properly. Yet on this depends the amount of game he kills; or rather, for it is not *exactly* synonymous, the number of shots he gets.

Impatience is the besetting sin of almost every man of the pointer and gun; and it is a prime cause of this slovenly imperfect searching for game. He jumps over a gate, or rushes through a gap, and stalks towards that part of the inclosure where he judges the game to be crouched. This is certainly the way to get over the ground fast; but it is also the way to miss finding the game: and it is a most admired way of spoiling your dogs. But of this, more anon.

Another cause of this slovenly mode of beating, is having a large extent of country to beat over. "Is your's a good shooting district?" "Pretty well: I have right to sport over three thousand acres." When this is the response, he tolerably certain that he who thus answers does not beat his ground well. He is one of the if-I-don't-find-them-there's-some-in-the-next-field fellows.

Virgil has very justly observed—

"Laudato ingentia rura;  
Exiguum collit,"

which in plain English means that a wide extent of country is all very well, but that a small breadth is made the most of. Columella tells a story in point: "A man had two daughters, and a large vineyard, of which he gave a third part with his eldest daughter in marriage; and yet he gathered as much fruit as he did before. Afterwards, he married his younger daughter, giving with her another third of his vineyard as a portion; and still he found that the remaining third part produced as much as the whole had done." Now, why was this—but that because the third part remaining was by far better cultivated? That is a moral tale for the farmer; but I have one quite as *piquant* for the sportsman. A gentleman in one of our eastern counties had the right of shooting over one thousand acres of land, in the midst of a country well stocked with game. His game-book showed that he bagged on the average about one hundred and fifty brace of all kinds during each season. He shot with a single barrel. Circumstances arose which deprived him of the right of shooting over about half those thousand acres. Yet his game-book showed at the end of each shooting year that he still bagged his one hundred and fifty brace. Now why was this? His own answer is in four words: "I was more careful."

Having thus explained why a sportsman usually beats slovenly, let me advise my young friends of the shot-belt how to get over their ground more workmanly; and I will give the lecture in the words of one speaking from the actual experience of some years:—

"I never get over a gate or through a hedge into a field I intend to beat, without putting my dogs upon their guard. 'Take heed' are never misunderstood words of warning; and it is almost needless to observe, that I never allow my pointers to precede me in going into a field. When within the inclosure, if the wind be upon our noses, I at once cast them off, and make them quarter the ground closely until they reach the windward hedge. I then bring them round the entire of the hedgerows of the inclosure before I leave it. In these final circuits, in the course of the season, I get as many shots as I do in the open; for when birds have been well shot at, they most frequently alight close to a hedge, and run into any long grass or other high cover in its vicinity.

"If I enter a field on its windward side (that is, with the wind at my back), I walk quietly down one side, with my dogs well 'to heel,' until I get to the opposite side of the inclosure, and can begin beating with the wind upon our noses. If this be not done, the dogs must be liable to run over their game. It is not fair to them making them hunt down the wind; and if they are thus unfairly hunted, they will either quarter timidly, and point or check over every lark's trail, or they will refuse to hunt at all.

"I once shot to an old setter, who by no management could be made to beat down wind. If I entered a field on the windward side, whatever might be the size of the field, he would set off at full speed along one side until he reached the furthest hedgerow, and would then quarter the field regularly throughout. He found more game than any dog that went with him into the field. This dog I found belonged to one of the most-haste-and-least-speed sportsmen, who blundering on right a-head without pausing to look whether the wind was astern or athwart; yet he punished the dog unmercifully if he flushed the game. This was a hard school, and old 'Nelson' was soon taught the remedy; he sped away of his own accord to the leeward side, totally unmindful of his master's voice or whistle.

"This puts me in mind that in a former communication I observed, that I prefer a dog's name ending in O, because it can be most easily pronounced emphatically; but when beating for game, the whistle ought to be almost the only medium of obtaining a dog's attention. Game is not alarmed by that so much as by the human voice. 'Take heed' when the field is entered, and 'To-ho' when a dog is drawing to a point, are the only words necessary for the sportsman's vocabulary. The whistle, and a wave of the hand, are alone requisite to recall a dog to heel, or to guide him in the direction he is desired to beat."

In a future communication I will give some advice from the same source as to beating in cover.—*Sporting Review for September.*

"My dear Magnay," said Sir Peter Laurie, "I never shall put down suicide until we can punish it with death."

## GENERATION OF MOSSES.

Mosses, small as they are, and insignificant as they seem, abound everywhere, even in cultivated fields and gardens; the rare little moss, the *gymnostomum concinnum*, is found in gardens, with many of the *phases* and *tortulae*. They flourish chiefly in winter, and seem destined to keep fresh the verdure of the earth when other plants are withered and dead, and to protect the roots of those withered plants from the vicissitudes of the season; a provision which gardeners find it useful to imitate. In woods that are densely shaded, also, there is a great profusion of mosses, chiefly of the sort called *hypna*, which cover the soil when none of the larger plants could grow for want of air and light. When mosses grow in the water, as do all the *sphagna*, and many others, they not only purify it from corrupted vegetable matter, but they have a strong tendency to convert it into firm land, by forming an accumulating soil. We may often observe the top of a brick, or of a stone wall, green with moss, and sometimes tufts of grass and other plants growing there. Now, we ask, whence was the soil formed that supports the moss and grass? It was not there when the wall was built, and appears to have been carried thither; whence then has it come? We cannot, we confess, go to the very first beginning of the foundation of the manufacture of this soil, but we can go very near it. The first indication of vegetable life on the wall is that of a green silky looking substance, having somewhat the appearance of a coat of green paint. When this is examined by a microscope, it is found to consist of minute buds of moss. At this stage there is almost no support for these tiny moss buds, minute though they be, they never advance further than the bud, and die with the first dry weather which occurs, leaving their remains to rot, and form the first particles of true vegetable soil. As soon as a thin layer of soil is thus formed, a crop of lichens make their appearance, and go through the same process of growth and decay; and, if other circumstances are favourable, the soil soon accumulates to a sufficient depth for grass and other plants which can grow in little earth. If the wall in question be very old, other large plants, such as a wallflower and houseleek, will make their appearance. On old ruins you may even see trees, particularly those which bear winged seeds, as the ash and sycamore. Whence, however, the seeds are a tiny moss which first appears on wall, we cannot say, and in this consists the mystery. We have seen a house built of freestone, raised from a quarry more than a hundred feet below the surface of the soil, and in the course of one month the whole wall was as green with moss as if it had been painted. Now if we were to take the doctrine for granted, that every plant arises from seed, the many millions of seeds of these innumerable mosses must have come from the air, or must have existed for centuries in the stone underneath the earth. One or other of these must be the case. That it is not impossible they may have existed in the rock, several curious facts would lead us to believe. We know, for example, that seeds have the power of germinating and growing for several thousand years; for some wheat which was found wrapped up with an Egyptian mummy was quite fresh, and when sown, grew as well as if it had been gathered the preceding harvest. A more striking fact still is, that when a piece of land, which has never been tilled, is turned up by the spade or plough, it becomes immediately covered with a crop of annuals,—charlock, chickweed, shepherd's purse, and many others, not one of which may grow within a hundred miles of the spot. What is no less wonderful is, that all these annuals will again disappear as soon as the grass is again suffered to spread over the spot which has been dug up. We may likewise mention, what is well-known to farmers, that by scattering quick lime over a field which only produces coarse grass, this is destroyed, and other grasses of a better quality and previously unknown to the soil, spring up.

**FOX-HUNTING ON A RAILWAY.**—A few days ago, as the special train was returning from Sheffield, another race of an extraordinary character came off in the vicinity of Wharfedale-wood, on passing which, the engine-driver perceived an animal moving swiftly along the line. He was, however, speedily lost sight of, and the following morning, when the policeman commenced his customary inspection of the line, he discovered, writhing in the agonies of death, a fine fox! His nose had been completely taken off by the train, but he was un mutilated and apparently unhurt in any other part. This trophy of the superiority of steam over horseflesh and dogflesh was presented to the Directors, and when Reynard shall be preserved and hung in the office of the locomotive department, he will certainly prove an object of some curiosity, from the singular circumstances attending his death.

**ANIMAL ELECTRICITY.**—Mr. Glover has published the following method of receiving the electrical shock from a cat. Place the left hand under the throat, with the middle finger and the thumb slightly pressing the bones of the animal's shoulder, then gently passing the right hand along the back, sensible electrical shocks will be felt in the left hand. Very distinct discharges may be obtained, too, by touching the tips of the ears after applying friction to the back of the cat. It would be hardly necessary, we suppose, to hint how requisite that a good understanding should exist between the experimenter and the apparatus, lest shocks might be elicited more, electric than were to be wished.

**A STRANGE EXECUTION.**—In the year 1386, a sow ate part of the child of a day-labourer of Falaise, named Janet. This accident reached the ears of the judge, who condemned the animal to suffer publicly the penalty of retaliation, as prescribed by law. The face and one arm of the child had been devoured; the sow was mutilated in the same manner, and then hanged by the executioner in the public place, amidst a concourse of people. The judge presided at the execution on horseback, with a feather in his hat. The father was forced to attend by way of punishment, for not taking proper care of his child. The culprit, when brought to the gallows, was dressed like a man, wore a waistcoat, breeches, and gloves, and a human mask before her snout.—*Excursions in Normandy.*

## HYDROPHOBIA.

An idea has some time since been started and supported with considerable plausibility of argument, that hydrophobia is merely a nervous affection, very much, if not almost altogether, arising from the influence of the imagination; and that it is therefore as susceptible of cure as any other complaint connected with the nerves. Whether there be any truth in this statement, we cannot take upon ourselves to say. Our medical men ought to be the judges in this case, and should lose no time in ascertaining how far this most dreadful of all maladies can be cured by the course of practice suggested. The following is the account given by M. Buisson, a physician at Paris, of his experience of hydrophobia, and his mode of cure. It is extracted from a treatise addressed to the French Academy of Science in 1838, and appeared lately in a London newspaper.

M. Buisson had been called to visit a woman, who for three days was said to be suffering under this disease. She had the usual symptoms—contraction of the throat, inability to swallow, abundant secretion of saliva, and foaming at the mouth. Her neighbours said she had been bitten by a mad dog about forty days before. At her own urgent entreaties, she was bled, and died a few hours after, as was expected.

M. Buisson, who had his hands covered with blood, incautiously cleaned them with a towel which had been used to wipe the mouth of the patient. He then had an ulceration upon one of his fingers, yet thought it sufficient to wash off the saliva that adhered with a little water.

The ninth day after, being in his cabriolet, he was suddenly seized with a pain in his throat, and one, still greater, in his eyes.

The saliva was continually pouring into his mouth; the compression of a current of air, the sight of brilliant bodies, gave him a painful sensation. His body appeared to him so light, that he felt as though he could leap to a prodigious height. He experienced, he said, a wish to run and bite—not men but animals and inanimate bodies. Finally, he drank with difficulty; and the sight of water was still more distressing to him than the pain in his throat.

These symptoms recurred every five minutes, and it appeared to him as though the pain commenced in the affected finger, and extended thence up to the shoulder.

From the whole of the symptoms, he judged himself affected with hydrophobia, and resolved to terminate his life by stifling himself in a vapour bath. Having entered one for this purpose, he caused the heat to be raised to 107 deg. 36 min. Fahrenheit, when he was equally surprised and delighted to find himself free of all complaint. He left the bathing-room well, dined heartily, and drank more than usual. Since that time, he says, he has treated in the same manner more than eighty persons bitten, in four of whom the symptoms had declared themselves, and in no case has he failed, except in that of one child, seven years of age, who died in the bath.

The mode of treatment he recommends is, that the person bit should take a certain number of vapour baths, (commonly called Russian,) and should induce, every night, a violent perspiration by wrapping himself in flannel, and covering himself with a feather bed; the perspiration is favored by drinking freely of a warm decoction of sarsaparilla.

He declares he is so convinced of the efficacy of this mode of treatment, that he will suffer himself to be inoculated with the disease. As a proof of the utility of copious and continued perspiration, he relates the following anecdote:—A relative of the musician Gretry was bitten by a mad dog, at the same time with many other persons, who all died of hydrophobia. For his part, feeling the first symptoms of the disease, he took to dancing, night and day, saying 'that he wished to die gaily.' He recovered.

M. Buisson also cites the old stories of dancing being a remedy for the bite of a tarantula, and draws attention to the fact, that the animals in whom this madness is most frequently found to develop itself spontaneously, are dogs, wolves, and foxes, which never perspire.

## A GOOD DAY'S SPORT.

We understand several of the Civic Companies have invited Prince Albert to a day's sport in the City. They have offered to collect in the area of the Stock Exchange all the bulls and bears that are in the habit of prowling about the neighbourhood. As soon as these are dispatched, a number of desperate *Stags*, that have been brought up expressly by the railways, will be driven from Capel Court into the interior, and His Royal Highness will be armed with unlimited power to hunt down as many as he pleases. The lame ducks of the City will be reserved for the last, as an especial treat.

The large room at LLOYD'S has been fitted up handsomely for the occasion, so that His Royal Highness will be put to no inconvenience or fatigue, in firing at his leisure from a magnificent throne erected at the largest window. Weippert's Band will be in attendance. In fact, nothing has been neglected to make this "Civic Battue" worthy of the noble guest for whom it has been provided.—*Punch*.

## EPIGRAM WRITTEN AFTER GOING TO LAW.

This law, they say, great Nature's chain connects—  
That causes ever must produce effects.  
In me behold *revers'd* great Nature's laws,  
All my effects lost by a single cause.

## PROSPECTUS.

[We copy the following well-timed advertisement from "THE GAMP PAPERS, chiefly relating to things in general," by Mr. Albert Smith.—Ed. S. MAG.]

GREAT ANTIPODEAN EMIGRATION RAILWAY, for going right through the earth from London to New Zealand direct, without touching anywhere, but at the centre for fresh fire.

Capital, £100,000,000,000,000,000,000,000.

In as many Shares as can be disposed of; one-half to be raised in Australia, and the other in England.

Deposit £1 per share, which, in the event of the bill not passing, will be returned, the directors intending to go to New South Wales on purpose, for the greater benefit of the New Zealand shareholders. Should it pass, there will, no doubt, be a handsome dividend immediately for the subscribers, and the committee wish they may get it.

## PROVISIONAL COMMITTEE.

Chairman, The Hon. Robert Macaire.  
Deputy chairman, The Chevalier d'Industrie.

Sir Roderick Doo, London.

The Hon. West Middlesex, Chairman of the Golden-square and Marylebone-lane Extension Railway.

Maida Vale, Esq., Pine Apple-gate.

Muswell Hill, M.P., House of Commons.

Sir Sadler Wells, Bart., Clerkenwell.

Mark Lane, Esq., Fenchurch-street.

Brook Green, Esq., Hammersmith.

The Hon. Percy Street, Bedford-square.

Black Heath, Esq., Greenwich.

Engineer, The Baron Munchausen.

Acting Engineer, Samuel Gulliver, Esq.

Solicitors, Messrs. Bam, Boozle, and Nogo.

Bankers, The Union Bank of Botany Bay.

Secretary, Jeremiah Diddler, Esq.

\* The most careful estimation drawn from official statistics proves that traffic is at present immense between New Zealand and England. The returns of this traffic are very great; the returns of the travellers are less so, as they are eaten occasionally, on solemn feast days, by the natives, but it is hoped the humanising influence of the railways will abolish this cannibalism. The directors volunteer to be eaten first.

As New Zealand is our antipodes, people going into the railway the right side up, here may be expected to come out topsy-turvy at the terminus. To obviate any inconvenience, arising from this method of travel, the speed will be so great, that the passengers will be totally unable to tell whether they are on their heads or their heels.

The fire will be procured from the centre of the earth, at next to nothing, it being affirmed by clever geologists that it is always burning there. The directors beg to caution the public against "Anti-megatherium," who has been engaged to write in *The Times*, and disprove this.

The directors calculate that the establishing of this railway will get everybody on the most direct line for Botany Bay.

## FORM OF APPLICATION.

To the Provisional Committee of the Antipodean line.

Gentlemen,—Please to allot me ever-so-many shares in the above company. And I hereby undertake to accept such shares, or any smaller amount that may be allotted to me, and to pay for them when I can.

I am, gentlemen, your obedient servant,

Name	Harris.
Profession	Benevolent Buffer.
Residence	14, London.
Reference	Mrs. Sairey Gamp, Kingsgate-st.
Date	Aug. 14, 1845.

THE WRONG CONVEYANCE.—"May it please your lordship," said a counsel, the other day, addressing one of the judges, "I brought the prisoner from the gaol on an *habeas corpus*." "There's a crammer!" said a fellow in an under tone, who stood in court, "I'm blowed if I didn't see him brought here in a cab."

SALT MINES.—The salt-springs of Cheshire and Droitwich contain twenty-two per cent. of salt. At Northwich there is a bed of solid salt. In most countries salt-rock is below the surface, but in Spain, &c., it is above. The salt-mountain at Cordova is three hundred feet high; and there are others still higher, and several of them. In Tyrol the salt-galleries are horizontal in a mountain. In Peru salt-mines exist ten thousand feet above the sea. The Cheshire bed of red-salt are twenty to thirty yards thick, between thick beds of sandstone, limestone, and clay. At Cracow the mines extend in vast caverns, sustained by pillars of salt, and have been wrought for twelve or thirteen centuries. Salt is either a result of the desiccation of salt-lakes, or an accumulation of horizontal strata, carried into masses by tides.

SPEED OF THE EAGLE.—An eagle can fly in a minute 6013 English feet. A hawk belonging to Henry II. king of France, flew away from Fontainebleau, and was caught in twenty-four hours after at the Island of Malta. In that time, therefore, this bird had travelled a thousand English miles, which make about forty-two miles per hour or 3600 feet per minute.

A little boy who had been at church, came home like to break his heart with crying. "What's the matter with you?" inquired his mother. "Parson says I'm to be born again; and I'm afraid I'll be a girl next time!"

# ADVERTISEMENTS.

## THE PRINCE AND PEOPLE'S CRAVAT.

**THE ALBERT PATENT ELASTIC SPRING CRAVAT**, is the best, most durable, and elegant wear.  
Extract of a Letter from G. E. Anson, Esq., Treasurer to His Royal Highness:—  
"The Prince thinks the Cravat most comfortable to wear—the contrivance very ingenious, and will give his permission for them to come under His Royal Highness's patronage."  
Agencies granted in Provincial Cities on most favourable terms by the Patentees, F. Hughes and Co., anatomical mechanics, Manufactory, 247 High Holborn, 432, Strand, and 26, Lombard-street, London.

**BATHES' CESAREWITCH STAKES**  
SWEEPS; Green Dragon, Fleet Street.  
Subs. 1st 2nd 3rd Starters  
50 at 10s. £14 0 0 £5 0 0 £2 0 0 £4 0 0  
50 5s. 8 0 0 3 10 0 1 0 0  
**CAMBRIDGESHIRE STAKES.**  
Subs. 1st 2nd 3rd Starters  
78 at 10s. £20 0 0 £9 0 0 £5 0 0 £5 0 0  
78 5s. 12 0 0 5 0 0 2 10 0  
All money divided less 5 per cent. Post office orders punctually attended to. Drawing nights Monday and Thursday, 5s., 10s., and 20s. Sweeps for the Derby 1846, are fast filling: two horses each.

**T. PARISH, SWEEP NOW OPEN.**  
White Horse, Fann-street, Aldersgate-street.  
**CESAREWITCH STAKES.**  
Subs. First Horse. Second. Third.  
50 at 5s. 0d. £9 0s. £2 10s. £1 0s.  
50 at 2s. 6d. 4 10s. 1 5s. 10s.  
**CAMBRIDGESHIRE STAKES.**  
78 at 5s. 0d. £13 0s. £4 0s. £2 0s.  
78 at 2s. 6d. 6 10s. 2 0s. 1 0s.  
To be drawn next Tuesday, Wednesday, Thursday, and Friday. A 2s. 6d. and 5s. 6d. Derby Sweep for 1846 open, to be drawn as soon as full, of which due notice will be given. The above prizes will be paid, 5 per cent. less, the day after the races. Post-office Orders attended to. Tickets sent to any part of the country.

## TO SPORTSMEN.

**SHOOTING, HUNTING, FISHING, and DEER STALKING KNIVES.** J. B. DURHAM, Manufacturing Cutler, respectfully invites the attention of Sportsmen to his Immense Stock, which includes all the Newest Patterns and latest improvements, and all warranted of the best quality. Knives of every description made to Order on the shortest notice. Old knives, &c. polished and repaired. 261, Regent-street, near the Polytechnic Institution.

**THE SECRET COMPANION. A MEDICAL WORK ON NERVOUS DEBILITY and the concealed cause of the decline of PHYSICAL STRENGTH and the loss of MENTAL CAPACITY,** with remarks on the effects of SOLITARY INDULGENCE, neglected GONORRHOEA, SYPHILIS, SECONDARY SYMPTOMS, &c. and Mode of Treatment; followed by observations on MARRIAGE, with proper Directions for the removal of all Disqualifications. Illustrated with Engravings, shewing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell-square, near the British Museum London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges-street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

**THE CORDIAL BALM OF ZEYLANICA: OR NATURE'S GRAND RESTORATIVE.** is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c.

This Medicine should be taken previous to persons entering into the Matrimonial State.  
Sold in Bottles, price 4s. 6d., and 11s. each, or the quantity of 4 in one Family Bottle for 38s., by which one 11s. Bottle is saved.

The 25 Cases may be had as usual.

**BRODIE'S PURIFYING VEGETABLE PILLS.** are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 1d., 2s. 6d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell-square, near the British Museum, London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. BRODIE and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of £1, and for all cases the most inviolable Secrecy may be relied on. Only one Personal Visit required to effect a Permanent Cure. Country Vendors can be supplied by all the wholesale houses in London.

Observe—27, Montague-street, Russell-square, near the British Museum.

**STOVES.**  
**THOMAS WALKER'S PATENT SELF-FEEDING PHOENIX STOVES**  
**THESE** admirable Stoves require fuel but once a day, show a bright fire, are free from dust and unpleasant effluvia, have a great radiating surface, equally heated, produce uniform and perfect combustion, and have therefore no explosive gases; are durable, economical, ornamental, and take up little room; and are adapted for ascending or descending flues, free from danger or fire, and may be used as an open Stove, still requiring fuel but once a day.

302 Oxford Street, London, or at 58, Oxford Street, Birmingham,  
where the Stove may be seen constantly in use, and where Prospectuses and respectable Testimonials may be had.  
Prices—3, 4, 5, 6, 9, 14 and 16 guineas; the two last are for churches and other large buildings.

On Saturday, October 11th, will be Published, a New Weekly Publication, entitled

**THE PARLOUR ORACLE, and TRAVELLERS' COMFORT**, 16 pages Demy Quarto 48 Columns.

In the great Age of Literature, Art and Steam, it may be fairly asked why another Candidate for Fame seeks the already crowded field:—the answer is, that there are at all times thousands of Trades and Professions thirsting after information combined with cheerful amusement, and that even the gigantic power that is daily and hourly wielded, fail to satisfy the craving appetite of the million.

Like a Dwarf when ushered into the presence of Giants, we for the moment shrink back appalled at the fearful array of rivalry before us and wonder at our temerity; but it is respect and esteem for our fellow Labourers that infuses awe into our hearts, not without a lurking feeling that the right hand of fellowship will be extended to us with bounty, good-will and fervour, seeking not the jostling of any fellow labourer out of the broad path he has chosen for himself, we incline to work shoulder to shoulder, and heart to heart, in securing the happiness of all mankind.

To one great and important body we would address ourselves, conscious that an appeal to their judgment and support will not be made in vain; we mean "The Licensed Victuallers of the United Kingdom." It is the intention of the Proprietors of the Work, to devote a portion of its columns to their interest; and while strenuously advocating the many and well-founded claims they have upon the public body at large, it will be found that generally its pages will be a never-failing source of Amusement, not only to the Worthy Host, but likewise, the Welcoming Guest. Politics will be entirely excluded, and Party Spirit in its pages have no existence; but the Spirit of Good Humour, Good Fellowship, and Good Feeling, sparkle in its pages, eye, with as ready a glow and joyous a chirrup as any Bottle in "Mine Host's" Cellar.

All Orders for the Work to be addressed to the Publisher. Published by E. DIPPLE, 43, Holwell Street, Strand, London.

\* \* \* All Communications to be addressed to the Editor, 42, Holwell Street, Strand.

**THE SILENT FRIEND; a Medical**

Work on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and L. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 63 Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

**THE CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 38s., by which 11s. are saved. The Five-pound cases may be had as usual.

**THE CONCENTRATED DETERGENT ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin. Secondary Symptoms.

**PERRY'S PURIFYING SPECIFIC PILLS**, price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Stricture, Inflammations, Irritation of the Bladder, &c., without hindrance to business.

Consultation fee, (if by letter,) £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

## TO THE TRADE AND PUBLIC.

Home! Home! Sweet Home!

Those who are desirous of making Home happy, and the Evening pass joyfully, should buy No. 1. of

**THE TOM THUMB SONGSTER.**

There they will find amusement for weeks. No. 1. contains 64 pages, beautifully printed, and upwards of 80 of the best Songs extant, in a neat Pocket size, with an illuminated Wrapper and a splendid Portrait of the justly celebrated Sweeney, the Banjo Player. Amongst the Songs will be found many sung by that much lamented gentleman. London Office, No. 1, Shoe-lane; and all Booksellers.

## THE MOST POPULAR WORK OF THE DAY.

Yesterday was published, Price One Penny, Beautifully Illustrated, No. 54, of

**THE MYSTERIES OF LONDON; By GEORGE W. M. REYNOLDS, Author of "Pickwick abroad," "Robert Macaire," "The Modern Literature of France," &c.**

The present Number introduces the reader to the house of the Public Executioner, and gives an account of various strange adventures which occurred in the Gipsies' Palace in Saint Giles's.

Part XII. Price Five Pence, is now on sale. LONDON: G. VICKERS, and all Booksellers & Newsmen. All the back numbers are now in print.

## THE EARL OF ALDBOROUGH

CURED BY

## HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st. Feb., 1845.

To Professor HOLLOWAY.—

SIR,—Various circumstances prevented the possibility of my thanking you before this time for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either.

Your most obliged and obedient servant, (Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing. Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.

SIR,—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c., &c., (Signed) THOMAS TAYLOR.

These truly invaluable Pills can be obtained at the Establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicines throughout the CIVILISED WORLD, at the following prices:—1s. 1d., 2s. 9d., 4s. 6d., 11s., 22s., and 38s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, the SIXTEENTH EDITION, illustrated with cases and Full-length Engravings, price 2s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 3s. 6d.

LONDON:—Printed by WILLIAM SMITH, of White Hart Street, in the Parish of St. Mary-le-Strand; and Published at the OFFICE, 43, Holwell Street, Strand, by E. DIPPLE.—Thursday, September 25th, 1845.

## SPORTING DOGS NO. III.--THE HARRIER.

HE third of our series, the POINTER, and GREYHOUND forming the first and second, is the Harrier.

This dog is now almost universally used in Great Britain for hare hunting. He was originally generated in a double cross, between the small beagle, the southern hound, and the dwarf fox.

There are, however, various harriers produced by crosses introduced in breeding, dictated by knowledge and experience, and depending on the kind of country they hunt in, and the wish or fancy of the owner of the pack: all of which are a great alteration in the blood.

The harrier pursues the hare with great eagerness and speed, allowing her but little time to breathe or double. The keenest sportsmen often find it difficult to keep up with this dog, and with a strong hare it is rather fatiguing work. There is a great deal of

melody and cheerful harmony in the voices of harriers during the chase.

Mr. Beckford, who was justly esteemed one of the best judges of dogs in Britain, endeavoured, as far as possible, to breed his harriers with much bone and strength within a small compass, and, at the same time, of a handsome make. These respective qualities he obtained; and his hounds ran remarkably well together, went fast, had all the alacrity that could be desired, and would hunt the coldest scent.

Although the harrier is the best adapted for hare hunting, yet there are situations where he is too weak, being ill-suited for swampy and marshy lands, such as those of Lancashire and Lincolnshire, and many other places. The large low southern hound seems best calculated for such localities. Harriers which are of a larger description, and

crossed for the purpose of speed, are only superior in open countries, where, for want of covert, the hare will run five or six miles right out without a single turn. In such cases the pleasure of the chase may be compared to those of fox-hunting.

Harriers, in Mr. Beckford's judgment, to be good, must be kept to their proper game. Hounds cannot be perfect unless used to one scent, and one style of hunting; to run fox with them teaches them to skirt, and is of great disservice to them. The high scent which a fox leaves, the straightness of his course, the eagerness of the pursuit, and the hallooing that usually accompanies it, all contribute to spoil a harrier. The BEAGLE will next claim our attention:—

Two of one stock, but separate seed,  
And differing but in cross of breed;  
The HARRIER, slim, light-limbed, and tall,  
The BEAGLE, thickest, short, and small;  
Sturdy and strong—will leap and bound  
O'er mountains or by marshy ground—  
Nor soon will he fatigue betray  
In laggard limb, or fainting bay;  
True to the Huntsman's whip and horn,  
As sunbeams to a summer morn;  
And oft as fresh, at hunting's close,  
As dew-drops on a summer rose.  
'Twas erst his task, on scented air,  
Full to her form to trail the Hare.

But he who keeps the Harrier Pack  
Must speed them o'er a lighter track,  
Where their blythe cry an echo thrills,  
Unbroken by tall rising hills:  
Where—save their fleetness mock his flight—  
The Huntman keeps them still in sight,  
Unless, perchance, the leafy screen  
Of copse, or cover, intervene!  
That springs up to divide the chase,  
And from the riders hides the race!

#### A "BAD FIX" IN A BEAR FIGHT.

We have a friend, residing in the state of Louisiana, who is famously fond of bear hunting. This penchant has led him into many imminent perils, in some of which, had it not been for his brave heart, strong arm, and eagle eye, he must long since have fallen a victim.

One of his adventures, in an extensive cane-brake, it is our purpose here to relate; not so much because it was one of danger and hardihood, as because it exhibited the spirit, coolness, and prompt action, so essential to the hunter of these "varmints." These cane-brakes are matted together by an undergrowth of vine and briar, and are intersected by running swamp streams, so as to render them almost impenetrable.

Our friend G—, on a hunt once, near the close of a day, had penetrated some distance into a cane brake, bordering on the Washita, when his dogs—two very valuable ones—"bayed" a magnificent bear! Magnificent, we presume, because he was monstrously strong and full of fight.

G—, guided by the baying of the dogs, hastened towards the scene of conflict, as fast as it was practicable to *hasten*, where you are obliged frequently to crawl on hands and knees, and sometimes to cut your way with your hunting knife. After considerable difficulty, however, he obtained a sight of the ferocious animal; the two noble dogs, true to their training, were keeping him in check, though they had been handled very roughly. G—fired as soon as he had obtained his distance and aim, and although the ball took effect, it was not in a vital place. The enraged animal now sprang upon one of the dogs, and gave the brave creature a mortal wound. G—, exasperated at the sight, for he prized his faithful followers almost as dearly as himself, threw down his gun, drew his knife, and crept into the terrible fight, for, reader, you can't *rush* into a fight in a cane brake! Cautiously he approached the foe until he was near enough, when, upon his knees, and with his arm stretched across the animal, he suddenly gave him three deep wounds upon the off or further side. He knew well that this was his only chance, for the instinct of the animal prompts it always to turn and snap at the quarter from which it is hurt.

"The critter's got more lives than nat'rally belongs to a bar, any how," ejaculated G—, as he saw the monster still strong and vigorous, and rending with his tusks, again and again, the body of the dog, which he held firmly in his embrace. G—gave his unyielding enemy another fearful wound upon the farther side, as before, when his knife by a sudden movement of the bear, slipped from his grasp, and the brute was upon him! G—extended his left arm for the clutch, but in a moment the bear's tusks were crunching his hand, and, at the same instant, he felt himself in a close hug! This was rather a "bad fix." G—turned and looked upon his remaining dog, which

had previously been of great assistance in attracting the bear's attention; he said but a word to him—the affectionate creature gave one bound, and had the bear again fast by the throat. This new attack gave G—his freedom; and in an instant he had recovered his weapon, and in another its keen point was buried deep in the brute's heart.

"Perhaps," says G—, "you never did see a bar roll-over like that one!" Our sporting friend has never recovered the free use of his left hand, but he is still right hand man in a hunt. As he modestly expresses himself, "I aint what I used to was in a bar fight; but when I'm pushed, I'm some yet, I reckon."

IGNORANCE AND INNOCENCE.—A simple ostler being one day, in confession to his priest, was asked by the father, if he had never greased the teeth of the guests' horses, to prevent their eating their allowance of hay and oats? "Never," replied the ostler. In a subsequent confession, the ostler acknowledged his frequent commission of that fraud. "How," said the priest, "I remember at your last confession, you said you had never done so." "No more I had then," answered the ostler; "for, tiff you told me. I never knew that greasing a horse's teeth would prevent his eating; but since you first put it into my head I have been tempted to try it."

HARVEST BELL.—It has been the custom, from time immemorial, for the parish-clerk of Driffield to ring what is called the "Harvest Bell." This custom is observed by giving the principal bell of the church a merry swing for several minutes, at five o'clock each morning, and at seven each evening, to warn the labourers in the harvest fields when to commence and quit their toils. Before the use of clocks and watches this custom would, doubtless, be of much service. The clerk is rewarded for his trouble with a small portion of corn from each crop, which, like tithes, was formerly paid in kind, but is now received by an equivalent in money.

HOW TO GET A COMFORTABLE WARM DURING THE COLD WEATHER.—Enter a coffee-room, inquire for a gentleman you are sure is not there, stand before the fire, read all the newspapers, and then leave word, if any one should inquire for you, that you will call again.

SPORTING IN THE NEW FOREST.—Independently of fox-hunting, the New Forest presents to the man fond of sporting in general a rich fund of amusement, provided he can obtain permission to follow his favourite pursuits unmolested. Great numbers of wild fowl of every description, ducks, teal, widgeon, geese, &c. &c., not only frequent it in immense flocks during the winter, but are likewise bred there: the snipe-shooting is in many parts superlative; and hares, rabbits, partridges, and black game are also abundant, to say nothing of pheasants, which are in many parts preserved by the landed proprietors bordering on, or in the centre of the forest, although we believe they are not fed on the royal preserves. We have likewise heard it asserted, or read in some periodical, that some few packs of grouse are occasionally met with by the shooter. The royal chase is looked after by thirteen keepers, who have each his separate walk; but in spite of their numbers and vigilance, poaching, especially deer-stealing, is carried on, as we are informed, to a pretty considerable extent. One or two of the gun-makers in Southampton are the best men to apply to for the purpose of being put in the right way to obtain permission to shoot in the forest, and we presume that the key that will open the head-keeper's heart is not made of iron.

SPORTING NEAR BEACONSFIELD.—During the week, two would-be sports men have been amusing themselves in the endeavour to kill game on a very large manor in the neighbourhood of Beaconsfield. After sundry efforts they managed to kill a very valuable pointer, instead of a hare, at which they both aimed. It appears they did not "Count" upon this piece of luck.

A Tipperary Rockite sends a letter of advice to a neighbour, about taking a certain piece of land or letting it alone; and ends with this pithy question, "What's the whole world to a man if his wife be a widow."

VERY DISCOURAGING.—We saw a fellow run plump against the steps of Dr. Tucker's church yesterday, three times in succession. The first time he tripped a foot, and after staggering a moment, reached a pace or two, and tried again. The second time he "went further and fared worse;" the third time he sprawled his whole length on the top step or platform. "Are you blind or drunk?" asked a gentleman who was passing. "Neither, exactly," said the man of reverses, "but I'm getting *almighty discouraged!*"—*American Paper.*

TO MERCHANTS.—Where would you consign a cargo of tortoise shell cats? To Cape Horn.

Where would they be found, if overboard in a storm? On the comb of a wave.

"We met—'twas in a crowd—and I thought he would shun me"—as the policeman said to the pickpocket.

"I don't believe in the *re-appearance of spirits*"—as the tippler said when the landlord locked up the bar.

Why is an industrious tailor never at home? Because he is always cutting out.

The Irish lodger at Mrs. Tomkin's says, that the baby down stairs is "a crying nuisance, and which requires a-bating."

## NATURAL HISTORY OF SPORTING.

THE RABBIT.

**I**N future numbers, as has been already said on several isolated animals, we intend to quit the brief generalizations of these sketches; thus the PIGEON, the RABBIT, and the DOG, &c., will receive at our hands a due consideration of their several varieties, in full and continuous treatises after the fashion of that of the GAME COCK at present in progress in these columns.

"Rabbit-keeping is practised by a few individuals in almost every town, and by a few in almost every part of the country; but thirty or forty years ago, there were one or two very considerable feeders near the metropolis, keeping each, according to report, from fifteen hundred to two thousand breeding does. These large concerns have ceased, it seems, long since, and London receives the supply of tame, as well as wild rabbits, chiefly from the country.

The only considerable rabbit-feeders of whom I heard, some years since, were two gentlemen, the one resident in Oxfordshire, the other in Berks. The former fed some hundreds, and it was said, intended to double his stock. The huts were placed in a small building, set apart for that purpose. The then stock produced one load of dung per week, two loads of which were sufficient to manure an acre of land. Three dozen of rabbits per week were sent to the London market, but keep and attendance reckoned, no other profit accrued, excepting the dung, the price of which used to be eight-pence per bushel, and I believe thirty-six bushels are reckoned a load. The Berks gentleman, according to the survey of that county, fed white rabbits, on account of the superior value of their skins, for their application of late years to the purpose of trimming. Twenty does and two bucks were my largest stock. The rabbit-house should stand upon a dry foundation, and be well ventilated. Exposure to too much humidity, whether externally or internally, is fatal to rabbits, which are liable to the rot like sheep, and from the same causes. The rains of 1799, which continued nearly four months, destroyed my stock of rabbits, which were huddled in a boarded shed, not well defended from the cold and moist air. Ventilation and fresh air are also necessary, where considerable numbers of these animals are kept, which will not else remain healthy, or prosper for any length of time; and even sudden mortality may ensue from impure and stagnant air. A thorough draught or passage for the air is thence indispensable, and should be contrived in the building, with the convenience of shutting such opposite windows or doors in cold and wet weather.

The hutch or hutches are generally placed one above another, to the height required by the number of rabbits, and the extent of the room. Where a large stock is kept, to make the most of room, the hutches may be placed in rows, with a sufficient interval between, for feeding and cleaning, instead of being joined to the wall, in the usual way. It is preferable to rest the hutches upon stands, about a foot above the ground, for the convenience of cleaning under them. Each of the hutches intended for breeding, should have two rooms, a feeding and a bed-room. Those are single for the use of the weaned rabbits, or for the bucks, which are always kept separate.

When much green meat is given, rabbits make a considerable quantity of urine, and I have sometimes seen occasion to set the hutches sloping backwards a few degrees, a very small aperture being made the whole length of the floor, to carry off the urine. A sliding door in the partition between the two rooms, is convenient for confining the rabbits during the operation of cleaning; which, indeed, is a good argument for having all the hutches double, it being more troublesome to clean out a room with a number of rabbits in it, than with only one. It must not be forgotten, that the teeth of rabbits are very effectual implements of destruction to anything not hard enough to resist them, and their troughs should be bound with some-

thing less penetrable than wood. As they are apt to scratch out their food, and dung in it, I have often thought it might be useful to adopt the feeding troughs with moveable boards, as well for rabbits as hogs.

The floor of the hutches should be planed smooth, that wet may run off, and a common hoe with a short handle, and a short broom, are most convenient implements for cleaning these houses. The object being to obtain the dung pure, for sale, no litter should be allowed; but on a farm where the dung is expended at home, the hutches should be littered with refuse hay or straw, perfectly dry. The rabbit-house to contain a tub for the dung, and a bin for a day's supply of hay, corn, roots, or other food, which should be given in as fresh a state as possible.

As to the varieties of form and colour, in the rabbit, the short-legged, with width and substance of loin, generally few in number, and to be obtained only by selection, are the most hardy, and fatten most expeditiously, taking on fat both internally and in the muscular flesh. They have, besides, the soundest livers—the rabbits being generally subject to defects of the liver; they are the smallest variety. There is a very large variety of the hare colour, having much bone, length and depth of carcase, large and long ears, with large eyes, resembling those of the hare. They might be well taken for hybrid or mules, but from the objection of their breeding. Their flesh is high coloured, substantial, and savoury than that of the common rabbit; and they make a good dish, cooked like the hare, which, at six or eight months old, they nearly equal in size. The large white, and yellow and white species, have whiter and more delicate flesh, and, cooked in the same way, will rival the turkey.

With respect to colour, I have always preferred the wild colour, and black, finding the skins of full as much worth as the white. The Turkish or French rabbit, with long white fur, differs little from the common varieties; nor did I find their skins of more value, either for sale or home use. I have been in the habit of drying the skins, for linings of night gowns, and other domestic purposes; but have always found reason to prefer the short, close fur. The large above-mentioned—indeed any peculiar varieties—must be sought among the London dealers.

Of late years, in London, the term *smut*, has been applied as a mark of distinction in the rabbit. Thus there are single and double smuts. The smut consists of a black spot on the side of the rabbit's nose; when there are two black spots, one on each side of the nose, it constitutes a double smut. Generally, the rabbits are prized for the number of these black spots upon the head and body, and for the fineness, length, and size of the ears, which occasions their falling about the head, in a manner different from the common rabbit. Black and tortoise-shell are the favourite colours.

Rabbits are divided in four kinds—warreners, parkers, hedgehogs, and sweethearts. Burrowing under ground is favourable, it appears, to the growth of fur; and the warrener, though a member of a subterraneuscity, is less effeminate than his kindred who roam more at large. His fur is most esteemed, and after him comes the parker, whose favorite seat is a gentleman's pleasure-ground, where he usually breeds in great numbers, and not unfrequently drives the hares away. The hedgehog is a sort of vagabond rabbit, that travels, tinker-like, throughout the country, and would be better clad if he remained more at home. Sweethearts are tame rabbits, and their fur, though sleek, is too silky and soft to be of much use in the important branch of hat-making.

**Breeding.**—The doe will breed at the age of six months, and her period of gestation is thirty or thirty-one days. It should be premised, that the buck and doe are by no means to be left together; but their union having been successful, the buck must be immediately withdrawn, and the doe tried again in three days; in fact, with rabbits, this business is conducted on the same principle as in the stud. Like chickens, the best breeding rabbits are those kindled in March. Some days before parturition, or kindling, hay is to be given to the doe, to assist in making her bed, with the flue, which nature has instructed her to tear from her body for that purpose. She will be seen at this period sitting upon her haunches, and tearing off the flue, and the hay being presented to her, she will, with her teeth, reduce and shorten it to her purpose.—Biting down of the litter or bed, is the first sign of approaching pregnancy. The number produced, generally between five and ten; and it is most advantageous always to destroy the weak and sickly ones, as soon as their defects can be perceived, because five healthy and well-grown rabbits are worth more than double the number of an opposite description, and the doe will be far less exhausted. She will admit the buck again with profit at the end of six weeks, when the young may be separated from her and weaned. Or the young may be suckled two months, the doe taking the buck at the end of five weeks, so that the former litter will leave her about a week before her next parturition.

A notion was formerly prevalent, of the necessity for giving the buck immediately after the doe had brought forth, lest she should pine, and that no time might be lost; and if it were intended that no time might be lost in destroying the doe, such, indeed, would be the most successful method. Great care should be taken that the doe, during her gestation, be not approached by the buck, or indeed by any other rabbit; as from being harassed about, she will almost certainly cast her young. One doe in a thousand may devour her young; a sign that she ought to be otherwise disposed of. Some does admit the buck with difficulty, although often apparently in season; such should be immediately fattened off, since it can never be worth while to keep an objectionable individual for breeding, of a stock to be produced in such multitudes. Should the doe be weak on her bringing forth,

from cold caught or other cause, she will drink bear-caudle, as well as any other ldy; or warm fresh grains will comfort her; a malt mash; scalded fine pollard, or barley-meal, in which may be mixed a small quantity of cordial horse-ball.

(To be concluded in our next.)

#### JOE MILLER'S NOTES ABOUT DONCASTER.

The Doncaster St. Leger has at length been run, and some of the disappointed bettors have "run" after it. Had they listened probably to their "betters," such a movement would have been avoided. We believe that many a thief in a "pea" jacket practised the thimble rig. The bell tolled at the commencement of each race, but it told anything but which horse would win. People were running about the Joekey Club Stand, but in the Stand itself there was not even *standing room*, and many were so fatigued, they said they could "stand it no longer."

During the races there were several "walks over," and the result of those matches which were contested, caused many to "walk off." Some of the speculators "bolted," as well as the race-homes; the former jockeying their dupes more cleverly than the silk-jackets jockeyed their animals. Altogether the Doncaster week was a rare one for doing business. Cattle were run off their legs, and "legs" were run off the course—this was a "matter of course." Let us proceed to the sport; before which, however, it may be as well to mention that there were numerous *false* starts for the races, but more *real* ones with the money.

Her Majesty's Plate of 100 guineas—a better collection than could have been made in a church—was won by Mr. Cook's Shadow, followed by Colonel Cradock's Jinglepot. Animals, we believe, are apt to run pretty fast with a tin canister at their tails; hence, probably, the reason Shadow tried to disengage himself of a Jinglepot. At all events, he realised the saying—"coming events cast their shadows before." The account further states, that "Cook Robin made the running to the Red House." This is nothing new, as cock robins are always attracted to all sorts of houses.

A Plate of 50 sovereigns, was won by Mr. Dawson's Sheet Anchor, beating the second horse by 300 yards. This was characteristic, as a sheet anchor ought always to be allowed "a cable's length." The result proved his jockey had his eye well to "windward" in the race, which probably caused some of the competitors to "blow hard."

The "Great St. Leger Stakes," were ungallantly snatched away from a young lady belonging to Major Yarbrough, named Miss Sarah, but Miss Sarah *who*—is not mentioned. The gentleman who won the prize was the Baron, but of what house is not stated; it couldn't have been "The Last of the Barons" of Sir Lytton Bulwer, because it was *first*. They sprang away beautifully, and one would almost imagine it was an elephant between the Baron and the said Miss Sarah—Girls will run after a title occasionally. Moreover, the Baron was bred in the sister isle, and Hibernians are particularly fascinating to the fair sex.

The Scarborough Stakes, were carried off by Mr. Hawley's Comrade, but we cannot discover much *camaraderie* in running away from one's companions. Had Comrade been an Irish horse, the affair might be accountable.

Captain Payton's Extremepore was *last* for the Great Yorkshire Handicap, out of a field of about a dozen horses. This is easily explained, however, as the strict translation of *Ex-tempore* means "out of time."

A considerable "stir" was made in the 300 guinea Cup race, and Mr. Hill's Sweetmeat gained the prize after a melting run. Here, it must be admitted, the *bonbon* (*Anglice* Sweetmeat) proved quite a *bonne bouche* to the lovers of sporting.

The last race was a match between Mr. O'Brien's the Traverser (not O'Connell), and Mr. H. Johnstone's Lord Harry, which was won by the former. Had it been a race with the Irish State Traverser of Derrynane Abbey, he would have come in second best, and been not only followed, but overtaken, by a certain *Old Harry*, instead of, as in the present instance, a Lord Harry.

With this we must terminate our account of the Doncaster Races, trusting the accounts of those more interested will be wound up in an equally satisfactory manner. We should add, that, in consequence of the slow pace which characterised most of the running, the races were regarded as a mere *Donkey-sir* affair throughout. The name of the locality is unfortunate.

**VERY TRUE.**—"This is a dead take in," as the minnow said when swallowed by a pike.

**MACKEREL.**—It may be considered singular, but it is a fact, that mackerel are to be found on none of the tropical coasts but one, and that is the south coast in the island of St. Helena, and here they are captured all the year round. Indeed the above island may be considered remarkable for three distinct productions, viz.:—Rabbits, rats, and mackerel. The former are distributed all over the rocks, whilst the second class of animals over-spread the insular colony, and operates as a destroying plague, and the fish above named is the only one that stands by the island throughout the year.

What can be the meaning of playing up "mag's diversion?" asked some one of somebody else. Somebody else answered, and correctly, we think, "Getting as much fun as you can out of a brown."

"From our private correspondent," as the father said when he received a letter from his son who had enlisted as a common soldier.

#### DEER-SLAYING IN GERMANY.

BY CRAVEN.

[As it would be impossible to leave the recent much commented, or *Royal Sport* in Germany, without a word in these pages; we extract the following account by an eye-witness, from the *Sporting Review* for October, as decidedly the best that has yet been submitted to the public.—EDITOR SP. MAG.]

This is an affair of which every body, I should think, has heard. I too had heard of it and read of it, and been told of it; and now I have seen it, and the upshot is—I am content for the rest of my life to abandon all visions of the Black Forest and Demon Hunters for a meet at Oadby toll-bar, or in the vale of Belvoir. See what raw-head-and-bloody-bones stories "Griffins" send home from John Company's hand about tigers, enough to turn the best patent wig into a *cheveux-de-frise*; and yarns about chasing the grizzly bear—or "pig-sticking," as they facetiously call it—done up with horrors about lacerated femoral arteries, and horses turned inside out, enough to sicken a college of surgeons. I eschew them—disbelieve them—utterly repudiate them. If men must pursue the reproof of Israel, let them go into Berkshire, take their poodles with them, sit down in the neighbourhood of a good sty, and be happy: as for tiger-shooting, I am quite persuaded that better cannot be compassed in the empire of the Great Mogul than may be had in Regent-street any fine evening when grimalkin goes freely abroad. On the eve of starting for Doncaster Races, I put my paper before me, on which I had traced the memories and impressions of two episodes in German sporting which recently fell under my observations. I had already gathered into words my feelings on those exhibitions, wherein, I did "nothing extenuate," most certainly I did not "set down aught in malice." They were written while yet the scenes were fresh to my recollection and imagination, and I cannot lay them more vividly before the reader than by means of the pictures sketched while yet the subject had a local habitation in my mind's eye. The first relates to a chase of the wild deer got up among the pine forests of Thuringia, for the especial honour and amusement of Queen Victoria, her consort Prince Albert, and the English Court, by the reigning Duke of Saxe-Coburg-Gotha. It was, of course, on the grandest and most approved scale of such stern passages of woodcraft known to the country; it was, obviously, the national fashion of such princely field-sports; for the actors did their ensanguined essay like men whose hearts long custom of cruelty had turned to stone.

It was on Saturday, the 30th of August last, that, in contemplation of a grand forest *chasse* announced for the forenoon, I drove over, at the best pace of German posting, from the pleasant little city of Gotha to Reinhardtshunn, a chateau of the reigning Duke, some nine English miles distant. The day was fearfully hot; and, as I went on my way sweltering, it was no wonder doubts would arise as to the sport which should come of the hunting. A right royal company was assembled, consisting of the august persons already alluded to, the King and Queen of the Belgians, and dukes, princes, and potentates enough to furnish a new volume of the Red Book. I am aware that all the journals of the day spoke of this dire issue, which shall descend to posterity in company with the gory records of Chevy Chase. But, without offence, I may take credit for noting it with more of a sportsman's unction than many of those who have given their impressions of it; therefore, to our tale.

The cortege being formed, defiled through the grounds of the chateau, and passing the village of Verstadt, got up like a scene in a maledrame for the occasion, began to ascend the mountain range which forms the noble belt to the southward of Reinhardtshunn, by a road worthy of the Simpson. After following this fine highway a liberal German mile, the hunters at once plunged into the pine forest by a rude cattle-pass, then made smooth for the gentle train—newly laid with fine gravel and fresh greensward...for

"There are few who frequent that moss-covered road,  
Where the hunter of deer and the warrior trode,  
To his hills—"

Where the hill-side jutted into a sort of ledge, they royal troop drew up, and there, in the midst of that vast amphitheatre, you saw a green hill, placed as it were by the cunning of man's hand, for the purpose to which it was applied. From the valleys to the north and south arose gently swelling causeways, heath-covered, leading to it by paths that seemed to solicit the foot. The summit was crowned by a small pavilion, built of the sweet new sod, and festooned with purple heath and the blue dell flower. Never was there bower more suited to the spot. It stood, as I have said, on the highest point of the small green hill. On those sides to which no causeway led were stretched down to the valley strong nets of rope, some ten or fifteen feet in height, and covered with snow-white canvas, that, from those on a level with it, all sight within should be shut off. These barriers at intervals had small flag-staffs attached, from which scarlet and blue and green and white steamers were waving; for, thanks to Zephyr, a breeze would ever and anon steal over us from the mountain tops, or we had perished in the stark sun glow. Within this enclosure were men in gay uniforms of Lincoln green, bedight with much gold and streaming with plumes; these were the chassurs of his Highness the reigning Duke; and beside them were numerous foresters, and a miscellaneous crowd of peasants in sky-blue *Mouses*, whose business and attire in that presence puzzled me for the nonce, but who were a most characteristic body, as will presently be shown.

During the space occupied in this brief sketch of the scene, the reader will suppose the royal party have passed from their equipages on the ledge of jutting rock to the green hill in the centre of the mountain amphitheatre—to the air of “God save the Queen.” The serious business of the day was now at once put in motion, to the intense anxiety of the multitude that thronged the mountain-side from whence sight of it might be had. In the pavilion were assembled her Majesty of England, the Queen of the Belgians, the Duchess of Alexandrina of Cobourg, and one of the English Ladies in waiting, as Spectators; the King of the Belgians, Prince Albert, Duke Ferdinand of Coburg, and the Prince of Leiningen, as actors; the whole giving you the idea of a shooting-party about to commence operations in an opera-box. Apart from the pavilion some fifty or a hundred yards, such of the guests of the Duke as were entitled to slay deer in the sovereign presence—for here privilege is paramount—were placed, a small table being provided for their accommodation, for some reason or other. Store of fire-arms, ammunition, and the like, were of course in readiness, and here and there a noble hound straining on the leash. The beaters scour the forest dells north and south—the bugle sounds. Hah! There they come, by St. Hubert! a gallant herd, all stags of ten. How the rifles fly to the shoulder! how the welkin rings with shot and shout! See that antlered chieftain pauses, tosses his front on high, bounds into the air, and falls—stark and stiff; the rifle has rung his dirge!

Let me here, on the threshold of a tale I would fain not tell with discourtesy, but which I am bound to tell in its truth, and its whole truth, disclaim all design of dealing with it in an unbecoming spirit. It was parcel of the customs of a country with whose usages I was familiar; peradventure for that cause it struck me with a feeling more unkindly than it deserved. But apart from the natural distaste it was likely to excite upon the common principle of humanity, I was born and bred a sportsman, and the *battue* of the wild free birds of the air at home was a thing I could never reconcile to my prejudice—if you will. Is it, then, a matter of surprise that my heart should recoil from seeing a hecatomb of vension sacrificed without as much excitement as would go to the execution of a minut, or as much skill as would be required for bagging a sparrow on the house top? I am not going to rush upon the philosophy of field-sports: we will appoint to every man his taste—this shall affect a hare for the sake of the chase, that for sake of the currant jelly. But I am going to narrate a passage of woodcraft, got up for the recreation of an English monarch in the wild forests of Thuringia; and, if I am perforce to convey a just idea of it in such wise as one might sing an Easter-Monday on Epping Forest, it may be allowed me to crave allowance for the delicate situation in which I am placed.

The area of the sport was one over which might appropriately have been written the motto of Dante's *Inferno*. All who entered it might, indeed abandon hope. It was surrounded on three sides by barriers not to be scaled by anything without wings; on the fourth, it was guarded by an army of chasseurs. You will suppose a herd of bucks and does driven into it, like sheep into the pens at Smithfield. At first a royal shot assails them point blank, or at what *Sir Lucius O'Trigger* calls “a gentlemanly distance.” This misses, happily, and then another succeeds and another, each in due order of precedence. Should none of them carry their billet, then the chasseurs fire a volley, not at this or that particular individual of the sylvan company, but “into the brown of them,” as the poacher says of a covey. Down they come, like leaves of autumn; but the worst remains behind. Here is one, the blood pumped out of his mouth by his sighs of agony; there, another, dragging his shattered limbs, or striving to crawl, snake-like, into some covert to die. See how they have riddled that shivering wretch that is raining gore from flank to shoulder, and not one merciful bullet has hit a vital spot! Fie, my Lord! never shoot with charges that but graze the quarry. Look, ye have only broken that fawn's leg—poor devil; how she limps along, the tears coursing down her pitiful cheeks. Well done, good Samaritan in blue blouse! There, draw thy humane knife across her throat!

It was past noon when the wild hunt of Thuringia began, and already by one of the clock, p.m., many of the harts of grease had fallen. The royal box—that is to say, pavilion—was a battery, from which much execution was done. It was strange—passing strange—to see the Queen, now half hidden, now half revealed, as the smoke curled, and the fire flashed from the chamber within which they stood, as indifferent as if it had been her boudoir. Four royal ladies with parasols, and four royal gentlemen with fusées on active duty, in a room twelve feet square, is a sight, I believe that never was seen in Christendom, nor on the face of the earth, before the 29th of August, 1845. Then did the shooting go ahead in the house and out of doors, till the clock told half-past two of the afternoon, and the bugle sounded a parley. Pass we the episodes of such cavaliers' prowess; it behooves not to tell who brought his venison down at a long shot, or who did it to death within pistol-range. Had a sporting coroner sat upon the deer that lay weltering in their gore, peradventure there would have been as many verdicts of “Accidental Death” as of “*Willful Murder*.”

Of the latter some of the most dreadful cases, indeed, occurred ever paralleled in the Newgate Calendar. The reader will remember the body of men I spoke of as wearing blue frocks. These were in the service as butchers belonging to the retinue. These persons' duty it was to scrutinize the objects at which the august marksmen fired, and finding they had more or less life left in them, to cut their throats without remorse. Lead! to

see how the gentle does and graceful fawns would writhe and struggle, in the gripe of those last officers of forest law, might have turned the heart of a carcase-butcher in Leadenhall market. . . . At the close of the sport the dead and dying were collected, and placed in a line along the side of the path by which her Majesty was to reach her carriage. But, though the business of the day was done, the *gardes de chasse* were peddling a little on their own account.

While they strew'd the victims around the spot  
Where the Court was about retiring,  
We heard the random and farewell shot  
That the foe was sullenly firing.

The number of deer slain in this couple of hours was forty-eight, of which twenty-five were stags. To these may be added at least a dozen that the hounds, laid on the trail, would find in their last agonies on the verges of the forest. Thus sixty are accounted for—or a stag to every two minutes. Was not this an unheard-of massacre?

Once again I protest that no inward spirit has moved me thus to speak of the woodland pageant laid before the Queen during her German tour. No doubt German gentlemen from their youth up, are trained to such exhibitions, and we know that habit is second nature. Let it be so in the forests of Thuringia; I am no Quixote of woodcraft; but oh, let it find no favour or countenance in our own land! Away with the secret, solitary vice—the *battue*—from merry England. I would not seem to give an importance to sporting which it does not merit; it has a popular influence, also here unknown. Englishmen think, and I know rightly, that the principle of our national sports has a healthy effect on the national character. Whatever our vices, we are not a cruel or an untrustworthy people. Fair play is the system of our sporting: fair play is the adversary of cruelty and deceit. So long, then, as they trespass neither on harmony nor kindness, let our national sports be had in good account. It was therefore that I saw with little favour the scenes thus enacted before the sovereign of our land.

#### NOTICE:

THE PROPRIETORS OF THE SPORTSMAN'S MAGAZINE have determined on presenting their readers with a SPORTING ALMANACK, equal in quality, contents, and arrangement, to either of those published at TWO SHILLINGS or HALF-A-CROWN, on the following conditions. With an early number (hereafter to be announced) will be presented to every subscriber a COPY of the ALMANACK, for one week, at the charge of three half-pence for the ALMANACK, and three half-pence for the current Number, should the subscriber wish them both. The price of the ALMANACK to non-purchasers of the Number, will be raised to SIXPENCE after the lapse of that period; the three half-pence being merely charged as the cost price of paper and print.

Part V., for October, of the SPORTSMAN'S MAGAZINE is now ready, in an embellished wrapper, price Sevenpence. All the back numbers are in print; the Stamped Edition of No. 18, containing the fullest, fairest, and best report of the GREAT FIGHT FOR THE CHAMPIONSHIP, will be kept for some time longer on sale. Office, 42, HOLLYWELL-STREET, Strand; where all communications for the Editor should be addressed.

#### CORRESPONDENTS.

L. J.—Johnny Hannan was born in London. We are sure that *Bell's Life* has answered your question a dozen times. The late Deafun did not fight without his truss. Brassey is dead. Bendigo beat young Langan, Jan. 24th, 1837, and received a champion's belt from Jam Ward, after his fight with the Deafun in February, 1839.

WHIST. L. B. submits the following question:—A, B, C, and D eat for partners at whist; A turns up the king of clubs, and the other three each turn up a queen; the three queens of course cut again, when B turns up the four of spades, C the king of hearts, and D the ace of spades. Who is A's partner?—C.

PAUL PRY.—Can you not find a more profitable exercise for your ingenuity than framing questions to give us trouble.

J. TENNYSON.—Read our account of the fight; you will there find your question answered. Pay your bets; the position which Spring has taken up in his letter is illogical and indefensible. There is no point of similarity between the case of a fight, decided upon the ground, by the referee, upon appeal from the umpires, and a *legalised horse-race*. The court will not try whether Caunt or Bendigo won the fight (they did try, however, which horse was first for the Derby and gave it to Orlando for good and sufficient reasons); all that the result of Caunt's action against the stakeholder (should it prove successful), will establish will be the fact, that the gentleman holding stakes for the battle, did hold 200*l.* on the part of Caunt (which he of course will not deny), for an *illegal purpose*, and therefore, *must give it back again*. Bendigo could have had his 200*l.* out of the same gentleman's hands, if he had ever so fairly lost the fight. The *actual battle-money* is given up in accordance with the referee's decision, and bets go with the battle-money.

EAST-ENDER.—Bill Jones, the present landlord of the Grape, Alhambra Street, did beat Tom the Greek, in 1842. Jem Burn never beat Ned Neale, on the contrary, “the boot was on the other leg,” on two occasions—he beat one O'Neale at Chertsey, in 1834, but that was not “the Streatham Youth.”

DRAUGHTS, Emmerson.—Can I huff my friend for inadvertently only taking one man when he can take two, and without injuring his position on the board?—Yea.

J. ROBINSON.—Yea; look at the lists we have already given; in 1801 Eleanor won both Derby and Oaks.

CRIBBAGE, “A Young'un.”—Four fives and a ten count twenty-eight. Four threes and a nine twenty-four.

**W. ENDERBY.**—It was a mere typographical error. The statement in "*Bell's Life*," was an oversight owing to haste. Miss Elis received forfeit, not Lord Glasgow's Whip Colt.

**SARAH, Leeds.**—It appears that your pony has contracted a cough, which has become chronic. The disorder is as often caused by unrestricted quantities of hay, especially bad hay, as any atmospheric influence. This fact is no less remarkable than true; though the way in which food taken into the stomach affects the lungs, or rather the larynx (for that is the seat of chronic cough, would take us too long to explain here.) It is generally observed, that horses with chronic cough have immoderate appetites, especially for hay; is this the case with yours? If so, try green food, bran-mashes, and succulent substitutes, and two to one but the disorder (called cough) will disappear. At the same time try half an ounce of nitre in a little corn twice a day. Opium often stops it, but is a mere temporary remedy. The disorder invariably returns; of course, when you give him moist food, you must restrict him a little in water, of which (from the inflammation of the larynx) he drinks more than does him good. Or instead of the nitre give the following: of nitre, levigated antimony, and powdered resin, each two drachms, mix for one dose, and give every morning in a mash, until it acts as a diuretic. The following is the best diuretic cough ball we know of:—

Strained turpentine, 8oz.

Yellow resin, 8oz.

Olive oil, 2oz.

Hard soap, 8oz.—Put in a pan and melt, then stir in:—

Ginger, 6oz.

Allspice powdered, 6oz. Linseed powder enough to make it into balls.

About an ounce, or an ounce and a half, to be given two or three successive mornings, till it act as a diuretic. This composition will keep a very long time if put in a jar and tied over with bladder. The skin diseases of dogs are often remarkably obstinate; that of yours we take to depend on disordered secretion, and perhaps diseased liver. The dog not perspiring through the follicles of the skin, causes the mercurial class of remedies to be slow in their apparent effects: try a mild mercurial purge (in mild doses), which we recommended in a kindred case in No. 17. Next week we will give you, if you wish it, an approved formula for mixing and administering one, if you will in the mean time, send us a rough guess of the size (or weight) of your animal.

"**SENSIBLE!**" apply to Jemmy Shaw (you will find him at Caunts), to Homer Howden at Peter Crawley's, or to Alic Reed at Owen Swift's. They will tell you the terms, which will be doubtless accommodated to suit the state of your exchequer. The same to "A Subscriber."

**BILLY BANG, Dorking.**—Are rabbits game, and can they be shot without a license? A person requires a game certificate for shooting rabbits. No certificate is necessary for carrying a gun merely for the purpose of shooting sparrows or larks.

**S. TURNER.**—We do not believe there was anything the matter with him. His subsequent race proved him a mere impostor. Connaught Ranger, Ould Ireland, Merry Monarch, and Old England were the tools by which the public pocket was picked.

**CRICKET.** T. A. L.—Most certainly not out; the hand is part of the bat, while holding it. To the second query, no.

**SENEX.**—Pilch, although a Kent player, is a native of Norfolk, and has played with that county.

**MARCUS.**—If you were to mark us and our remarks on the subject, you would not have occasion to put so many very trivial questions. We do not think you ought to apply to us, when a copy of the Rules of the game, and many useful hints thereon, would solve them, at the cost of a brace of Joey's. Obtain "Clark's Cricketer's Handbook," and save your postage pence.

**P. O. P.**—It is our purpose during the winter months to continue a series of sketches, to be called "CROTCHETS ON CRICKET," in which Ned Rub's intention is, that the heroes of the past season shall fight their battles o'er again. NED RUB.

**COOBY.**—Your letter is so good in temper and spirit, that we owe you a word or two of apology. A handwriting, and we see a pretty variety of scribbles, resembling yours in neatness, but, to our optics, a disguised one, bore a strong family resemblance to yours, and contained phrases of very similar construction. We destroy some dozens of letters per diem, which are "*de omnibus rebus et quibusdam aliis*," yet some people are so unconscionable as to ask us a week or perhaps a month after to recollect, (and affect surprise if we do not) that "on the—th I addressed you" &c. &c.—The gent whose signature we took to be an alias of yours was one of these: if wrong we are sorry for it. He asked, modestly, an answer by post, and was "very much surprised at not receiving one" and so forth. Two secretaries at £100 a year each, and a stationer's bill of half that amount, the occupation of our own time, and a payment of some three or four shillings a day in postage stamps, would be the result of an offer to give separate answers to correspondents, yet some purchasers of a paper out of which the vendor gets a halfpenny and ourselves the fraction of one, (for investment of labour and capital) professes "surprise" that we do not answer him as "politely requested." Some people have droll notions of their own importance, and we are glad to oblige "Coby" from being one of them. You can get the paper by ordering it of any newspaper publication vendor in your neighbourhood. It would cost us 4d. per copy to send it by post within the boundaries presented by the list for the circulation of stamped papers by the general post, or you one penny each copy if sent without any stamps but the one on the sheet itself, which seems a singular anomaly, but there is a reason for it.

\*\*\* Pressure of matter has occasioned the postponement of the continuation of the papers on the "GAMECOCK."

#### THE MOON IN OCTOBER.

New Moon, 1st	...	10 50 morn.
First Quarter, 8th	...	11 31 morn.
Full Moon, 15th	...	9 56 morn.
Last Quarter, 22nd	...	9 14 morn.
New Moon, 30th	...	11 42 morn.

#### OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

**SUNDAY, 12th.—31st SUNDAY AFTER TRINITY.**—Lord Ellenborough arrives in a high state of ferment from his work in the East, 1844.

**MONDAY, 13th.—NEWMARKET SECOND OCTOBER MEETING.**—Most seeds and fruits are now perfectly ripened, and furnish their share of subsistence to man, bird, and beast. This is a time of abundance, a season of plenty, and that portion which cannot be consumed at the period of its maturity is stored up in various ways, and by different means, as provision against a time of need. Though we boast not the vine and its clustering grapes, or tread its juice into our vats, the animation of the wine countries is nearly equalled by the hop-gathering and cider-pressing of our midland, western, and southern counties.—Game in season.—Grouse, partridges, pheasants, hares, snipes, wild fowl.

**TUESDAY, 14th.—THE CHAMBERLAIN STAKES DAY.**—The public for shorter hours, having themselves always endeavoured to "serve" persons in distress.—Government advices for tenders for the Fleet Prison. N. B. Lord Brougham has removed the *Statutes* under £20.

**WEDNESDAY, 15th.—THE CHAMBERLAIN STAKES DAY.**—The public for shorter hours, having themselves always endeavoured to "serve" persons in distress.—Government advices for tenders for the Fleet Prison. N. B. Lord Brougham has removed the *Statutes* under £20.

**THURSDAY, 16th.—Northallerton Races.**—Welshpool Races.

**FRIDAY, 17th.—The Prendergast Stakes run for.**—Blessings of the Penny Postage. Creditors now write three times for the settlement "of that small account."

**SATURDAY, 18th.—Cheadle Horse Fair.**—HINTS FOR EVENING PARTIES. Now convert old gossamer into opera hat, by doubling it up, and lay in small talk for evening parties. Now practise the Polka with arm-chair, and rub up old imitations a la Joel of neighboring horses, and sawing wood. Now read up familiar jokes, and learn new jokes for quadrilles. Now study in the looking-glass for comic song, and four Postillon's wig for masked ball. Now compose speech to toast "the Ladies," and commit to memory a "Return thanks" when your "health" is proposed at supper.

#### TIDE TABLE FOR THE WEEK.

## The Sportsman's Magazine.

FOR THE WEEK ENDING OCTOBER 18, 1845.

#### FIELD-SPORTS FOR OCTOBER

**HEASANT-SHOOTING** commenced with the first of October, probably, too, by this time, a few woodcocks will in some parts of the country have presented themselves to the sportsman.

Pheasants have by no means yet attained their growth, though this is the period appointed by law to commence their destruction; but they will be found somewhat more backward this season than they were for many preceding years, and this arises from the fine spring weather setting in much later than usual, and thus retarding the breeding of those elegant birds. There are many varieties of the pheasant, several of which are found in this country. It has been said that they may vie with the peacock in beauty, and if the comparison were meant with the golden pheasant, certainly, we never saw a bird which equalled that portion of the species in beauty; these birds which historians inform us came originally from the East, are equally as hardy as the common pheasant, so prolific in this country, and so thickly scattered over it. In some parts of the kingdom, the golden pheasant is to be seen at large, and may, probably, in the course of years, become as general and as numerous as the commoner sort. The ring-necked is also occasionally met with, as are the white and pied kinds, but the Bohemian, the largest, the boldest, and, no doubt, the most hardy of the tribe, never, except in the aviary, where like others of the species, it will propagate. The male of the Bohemian pheasant will, we have every reason to believe, couple with the domestic hen; though we are sceptical as to the conjunction of the latter with the common pheasant.

The rearing of pheasants in mews or aviaries has, generally speaking, been unsuccessful; and at the present time is only partially understood. A cunning keeper, or at least one who stood well with himself, (servant to the late Duke of Northumberland, if we mistake not), stumbled upon a method which proved very successful in promoting the health and vigour of these birds. He observed them busily pecking at some carrion, and immediately concluded that they were carnivorous, and, consequently, ought to be supplied with the sort of food which, he conceived, he had observed them so greedily devour. He accordingly gave it them; the birds thrived, and, of course, he persevered in a plan entirely new, and which was attended with uncommon success. The man, imagining he had made a wonderful discovery, assumed a great degree of reserve, and wished every one to suppose that he was really possessed of "secrets worth knowing," and which would require something

more than common intellect even to comprehend. However, either through the influence of his master, or some other means, several persons became acquainted with the mystery; and the pheasant was set down as positively and absolutely a carnivorous bird. This idea was inconsiderately propagated by men of education, and received a degree of thoughtless confirmation, perhaps, upon the authority of Buffon, who, when speaking of the pheasant, observes, "that one of the king's sportsmen, shooting at a parcel of crows that were gathered round a dead carcass, to his great surprise, upon coming up, found that he had killed as many pheasants as crows. It is even asserted by some (he continues), that such is the carnivorous disposition of this bird, that, when several of them are put together in the same yard, if one of them happens to fall sick or seems to be pining, that all the rest will fall upon, kill, and devour it!" The fact is, that whenever the pheasant has been observed busily pecking at carrion or dead carcasses, it has not been devouring the flesh, but picking off the maggots, or animalculæ which have been produced by the striking of flies, and of which, as well as of insects in general, it is remarkably fond. Hence, those who are anxious to breed and rear pheasants in a domestic state, will easily perceive the meaning of the foregoing observations, and will not fail to profit by them also.

Pheasants will take to roosting in the trees earlier than usual this year, as the land will be cleared sooner; but we are of opinion, that when there remains plenty of ground cover, such as corn or potatoes, these birds sleep under its protection. As soon as they mount to roost, nocturnal depredation commences, and for this species of plunder, the air-gun has become a favourite instrument with poachers.

Throughout the month of September, and something earlier, parties of fellows are frequently to be seen pursuing what they call *flappers*, with water-spaniels. These flappers are young wild ducks, before they are able to fly, which, when pursued in the water, continue by diving to elude their enemies for some time; but becoming so far exhausted as to be no longer able to make their way under water, they flap their wearied wings on the surface, in order to accelerate their progressive motion, and hence are, no doubt, called *flappers*. It is not legal to kill wild ducks, or what are called wild fowl, between the first of June and the first of October—perhaps this is not generally known. "If any person whatsoever shall, between June 1, and October 1, take or kill any wild duck, teal, widgeon, or any other water-fowl, and shall be convicted thereof, he shall, for every such fowl, forfeit five shillings, or be committed to the House of Correction for a period not exceeding one month, nor less than fourteen days, to be whipped and kept to hard labour."

In regard to Grouse-shooting, we refer our readers to our preceding numbers.

Towards the latter end of the month of September, a solitary woodcock will sometimes be found; though these wanderers are generally more plentiful about the middle of November than at any other period. Concerning this bird, more will be found under its picture in another column.

We never recollect a season when so few swallows were to be seen; those, however, which visited us, seemed to be affected by the intense heat that prevailed for a considerable part of the latter summer. This we noticed in the latter end of July, and particularly, in the first weeks of August, when, from ten o'clock till nearly five, not one of these birds was to be observed on the wing—they had retired, we apprehend, during that period, from the excessive warmth which prevailed.

This may be regarded as the season of preparation, as fox-hunting seldom commences till towards November. The Cheshire fox-hounds begin to hunt for the season the first Monday in November.

Coursing commences in September, but will not become general before this month. Those who are attached to this diversion, and are indifferent to the fowling-piece, will, owing to the favourable harvest weather, be enabled to enjoy their favourite amusement sooner than usual. The same remark will apply to hare-hunting.

ANGLING—This is a propitious month for bottom, or float-fishing, either in rivers, ponds, lakes or meers. The lovers of salt-water angling may now catch *whiting*, *plaice*, *crabs*, and *codlings*, with the lug or sand-worm. *Perch* will take a live bait with the greatest avidity, and it is in the month of October, indeed, that this fish—and we know of few things superior to one of two or three pounds weight—is in the highest perfection. *Carp* are also in condition, and will be on the feed early and late; this the angler should turn to instant advantage, especially as about this time they begin to retire into deep water, and grow indifferent to the baits and lures of the fishermen,

be they ever so skilful or choice. Not so with *roach* and *chub*, now also good and healthy; they will bite freely, and continue to do so till the May-flowers come again. Even *dace* are become a firm, well-flavoured, and nutritious food, and no extraordinary portion of skill will be requisite to capture them.

Those sedentary fishermen—children of patience, surely—who delight in trying for *barbel* in the "bosom of old Father Thames," should be on the alert, and have their punts pitched ere it be well light, and be themselves prepared, like provident adventurers, with requisite tackle and proper baits. *Gudgeons* will still follow the rake, in the Lea, Thames, and other streams which afford them haunts.

*Trout* are big bellied, and will soon cease to be fair game; the fly-fisherman may still, however, find sport in whipping, or clapping, for *grayling*, *chub*, *dace*, and *bleak*, either with a natural or artificial bait.

*Jack* and *pike* are getting strong, and show themselves by rolling about in the deeps. Some sizeable ones may be now killed. In our next we shall speak more fully on the subject of trolling.

That scarce, but truly delicious fish, the *smelt*, will eagerly take a bait. They are to be found in salt-water harbours, bays, and docks, and also in the city canal crossing the Isle of Dogs, during this and the following month. They should be angled for very early in the morning, and the fisherman should bait with the belly-part of an eel, and try in deep water, and about the heads and bows of shipping. *Flounders* and the small eel called a *grig* will take a worm-bait all day, and the larger ones, which run only from sun-set to sun-rise, called the *glut eel*, will swallow a fish-bait (minnow, &c.) very freely during the dark nights, in all rivers, pools, and ponds, in which these "snakes of the waters," as we have heard them called, are most usually found.

## BRITISH BIRDS,--NO. XV.

THE WOODCOCK.

**W** LEAK winter's harbinger the shy Woodcock here stands pictured. Although this year we have seen the usual sprinkling of paragraphs, as to the flushing of solitary specimens of this delicious bird, we doubt, except in unusually severe and early seasons its general migration to the British shores; it seems possible that the individuals met with one of the few who remain behind from various causes, and summer in the island in retired and unfrequented spots.

The woodcock seldom takes wing unless disturbed; but at the close of day, leaves its favourite haunt under thick covers in rotten ditches, woods, &c. and wanders in search of food, directed by an exquisite sense of smelling, to those places most likely to produce its natural sustenance; and by still more exquisite sense of feeling in its long bill, which it thrusts into the soft earth, not a worm can escape. The eyes of the woodcock are large, and well calculated for collecting the faint rays of light in sequestered woodlands, enabling them to avoid obstacles in their nocturnal excursions. The nerves in the bill, as in that of the duck tribe, are numerous, and highly sensible of discrimination by the touch. An erroneous idea prevails that the woodcock lives by suction.

Easterly or north-easterly winds are supposed to be most favourable to the migration of the woodcock. On their first arrival they are poor, as if wasted by want of food and a long journey; and so sluggish, that after being flushed and shot at they will drop again at the distance of a

hundred yards. Mr. White, in his History of Selborne, observes, that he is not able to determine whether this laziness be the effect of a recent fatiguing journey; but that from a variety of observations he has made, they seem singularly listless upon the approach of snowy or foul weather, which Mr. W. conceives to arise from an eagerness after food: the taste of the flesh is also different from that which it acquires by a residence in this climate. If killed just before his departure, he bleeds more freely than at the beginning of winter. The woodcock, when undisturbed, will continue for weeks together in the same cover. This bird first appears on the eastern coast of Scotland, but is seldom seen in the central parts of the kingdom until the middle of October, and forsakes us in the spring. It sometimes happens that a few woodcocks will remain in England during the summer, and breed; but this is of rare occurrence; the probability is, that they have been wounded, and therefore unequal to a flight across the trackless ocean.

In November and December, 1823, upwards of two thousand woodcocks, in their migration to this and other genial climes, were caught alive on the island of Heligoland, in the German ocean, towards which they had been driven, exhausted, by a gale of wind. A great number were sent to the continent, and sold at from sixpence to ninepence each. Several were caught alive also at Harwich.

The woodcock, though generally slow and sluggish, is, nevertheless, capable of winging its way with more than ordinary speed. In the olden time woodcock-hawking was a favourite amusement. When this diversion was followed on the coast, it was no uncommon occurrence for the woodcock to take to the sea, when the pursuer and the pursued were frequently swallowed up in the waves; or, at least, the hawk was seldom recovered.

Woodcocks have, for some centuries, been in high estimation; consequently, before the art of shooting flying had made much progress, they were sought for on the ground by the fowler; but by far the greater quantity were taken in nets and springs, both of which are still in partial use, but the former are more destructive.

#### WOODCOCK SHOOTING.

NOVEMBER, December, and January are the best months for bagging this much-coveted bird. Their food consisting of worms and small insects, which they find in swampy rills and bogs, they may be said almost to live upon suction for which their long bills are peculiarly adapted. They seldom feed in the day-time, unless the previous night has been too light to enable them to seek their food, for the conformation of the iris of the woodcock is such as to prevent him seeing so well in the light as the dark. When the moon is at the full, they are more shy and wild, because, being obliged to look for food, they are on the alert to hear the slightest noise, and instantly take wing; but if they have fed well, they become inactive, indulge in sleep, and rise slothfully, and when sprung by the dogs consequently become an easy prey. After February, they are found but

scantily, and in March make a final exit. When about to leave the country they go towards the sea-shore, and wait for favourable winds, resting in the small stunted furze with which the cliffs and hills abound; where, for a few days, the sportsman may have excellent sport. In cold, dry, windy weather, the woodcock is found in woods which have not much underwood, and very frequently under holly bushes. In frosty weather, they resort to alder covers at the foot of woods, or in dells, where there is soft and muddy ground for their boring for food; and often when they have fed well during the night, to some sunny hedge-rows, or woods, whose open spaces admit the rays of the sun; and generally fly swifter during frost than at any other time. It is said the woodcock is an easy bird to kill, from his slow flight. This may be the case on his first arrival; but after being disturbed, or shot at, his flight becomes exceedingly rapid and irregular; especially if sprung in timber wood, where he has to mount high to get above the trees. Spaniels are esteemed the best dogs for hunting the woodcock; and, taking all things into account, no other dog can be so useful to get through brakes, woods, &c.; besides, in deep covert, his quest on its springing gives you notice the game is on the wing. In marshy fells, where he is generally hunted in frosty weather, the setter is likely to give you sport, inasmuch, as seeing him draw on the bird gives ample warning; besides which, he will range more covert, and is quicker in his hunting. A marker as well as a retriever are two indispensable.

In order to mark woodcocks successfully, the nature of the country must be taken into consideration, and one or two persons should be stationed on the outside of the covert on an elevated spot; at all events one where the most extensive view can be commanded. When those who are beating the covert spring one of these birds, they should instantly proclaim, "Mark, cock!" with an intimation where, such as right, left, up, down; which expressions should be clearly explained to the markers and all in company, before commencing operations: this is necessary, because the smallness of these birds, their very quiet manner of flying, and their colour may not be sufficiently conspicuous to attract the eyes of the markers; and as soon as they have gained the height of the trees, they skim along close to the tops until they have reached the outside, when they usually descend nearly to the ground, or, if the wood be large, fall into it again at some spot to which they have previously resorted. Their usual places of resort when not in covert are ditches, hedge-rows in moist situations, often in old unfrequented lanes, and in the sides of pits or ponds; but they will sometimes, when flushed, drop in the middle of fields, especially fallows, where they will lie as closely as possible. These circumstances are worthy of attention, inasmuch as in cases when the bird cannot be exactly marked, the most likely places should be beat for the purpose of re-finding him; but when that has been done without success, other parts must be tried, for it is very unsatisfactory to go away and leave a woodcock in the open.

### HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD IV. 1798—1880.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF OCKLEY.

#### CHAPTER VIII.—continued.

MR. JOHN GULLY.

After considerable bustle, confusion and altercation as to the place where the fight should come off, it was judged expedient, to prevent disappointment, that the contest should be decided in Sir John Sebright's Park, Hertfordshire. Notwithstanding it was several miles from the spot first intended for the set-to, neither the multitude repaired, without murmuring, in the quickest and best manner they were able. The string of messengers, and persons upon horseback, travelling in haste to arrive at the destined spot, taggared all description. Upon their arrival in the park belonging to that Baronet, a good piece of ground was selected for the purpose, and a forty feet ring soon formed, which was well secured by pedestrians and horsemen.

The weather was unpropitious; yet although the rain had poured down in torrents, the numerous spectators placed the annoyance of a soaking completely out of the question. Every thing being ready for the contest, the combatants made their appearance in the ring, attended by a numerous assemblage of pugilistic heroes, and were greeted with reiterated plaudits from the anxious spectators.

Gregson was seconded by Harry Lee; Joe Ward acted as second to Gully, and Bill Gibbons was his bottle-holder. Captain Barclay undertook the important situation of umpire. Both the combatants fought in white breeches and silk stockings; and owing, it is said, to Gregson having spikes in his shoes, which were objected to, they contested the battle without them.

#### THE FIGHT.

1.—After the accustomed salutation, the combatants placed themselves in erect postures, and minutely observing each other's intent, continued sparring for five minutes, during which time Gully retreated round to the exact part of the ring where he first entered; the greatest anxiety now prevailed for his safety, and so alarmed were his attendants, that Bill Gibbons and Joe Ward put their hands over the stakes of the ring, apprehensive, from the strength and

weight of Gregson, that Gully might be driven upon one of them, which might have broken his ribs. Gregson having made a feint with his left hand, Gully lashed out most tremendously with his right, catching his antagonist on the left temple with such severity, that the big'un fell like an ox. [An uncommon silence prevailed throughout this round; the odds instantly rose upon Gully.]

2.—Gregson's powerful arm broke through Gully's guard; and he got in a most tremendous blow upon his breast, which sounded like a stroke upon a drum; Gully rallied, hit up at Gregson, caught him on the balance and sent him down, [A few absurd cries of "fool, fool!"]

3.—Both combatants cautious, resorted to sparring for nearly five minutes, without any blow being exchanged; at length Gregson endeavoured to put in a most tremendous smash, which Gully stopped with his left arm, and fell. [It was from this blow, it is supposed, that Gully's arm has never been well since.]

4.—A severe rally; dreadful blows given and taken; Gully in stopping, fell.

5.—In this round the combatants were miffing away against the ropes, when Gully, on going in, was knocked down neatly.

6.—Some severe blows exchanged; Gregson rushed in and caught Gully by his thighs, lifted him from the ground, threw him down, and fell upon him, nearly knocking the breath out of his body. [At the present day this would have lost the Lancashire man the battle.]

7.—Both upon their mettle, and every exertion made upon both sides for the advantage, when Gully, by several severe blows, rapidly following his man right and left, beat Gregson out of the ring, and both fell.

8.—Gully's superiority began now to appear, not only as to science, but as tending to terminate the fight; his antagonist's head displayed considerable punishment, and the round ended by Gregson being felled.

9.—Some blows were exchanged, the men closed and fell.

10.—This was a terrific round—the hits were tremendous in the extreme—Gregson's head was frightful, literally covered with blood, and his left eye nearly closed, he was quite confounded, fighting rather after the Lancashire method, without any pretensions to stopping or avoiding—and, notwithstanding Gully went down, it was evidently in his favour.

11.—Gregson rallied with determined game, but without doing much execution; he was ultimately knocked down. Gregson appeared on the decline.

12.—Gregson stood up, and put in a good blow on Gully's chest, who imme-

diately returned it by a tremendous hit that knocked him down, and planted another while he was falling—[another cry of "foul!"]

14.—Gregson nearly blind, appeared much confused, and seemed more an object of punishment, than capable either of defence or offence. Gully put in three terrible hits without a return, and Gregson as before was levelled.

15.—Gregson attempted to rally; but Gully, aware of his intention, hit up, and down went the Lancashire hero.

16.—Gregson, endeavouring to make use of what little strength remained, ran in; but it proved of no advantage to him. In closing both fell.

17.—Gregson, in this round, let his temper get the better of his judgment, and he was most terribly punished for his rashness. He ran in almost headlong upon Gully, who, cool and collected, viewing the advantage which presented itself, upper cut him, then hit him where he pleased, and stopped his opponent's blows with ease. Gregson almost insensible, from this repeated punishment, turned his back upon his adversary, and, as if panic-struck, made for the ropes. Gully following him, and changing his position caught him, fished him, till he was nearly exhausted, and then let him fall.

18.—Gully completely master of the field; Gregson groggy and punished in all directions. Ultimately Gully knocked him down.

19.—A few blows were exchanged, when Gully fell.

20 to 22.—It was all up with Gregson—Gully was every thing in all these rounds, and beat his opponent terribly; still Gregson closed and hugged him *a-la-brain*, in all of them, and they both fell. [Twenty to one against Gregson.]

23 and 24.—Gregson's game would not suffer him to say No; he stood up uselessly, as his incapability was manifest to all the spectators.—Gully put in a tremendous hit under his opponent's ear, which put an end to the contest. Gregson being so completely finished, as to be deaf to time.

The superiority of Gully in this battle was evident, and, throughout the fight, which lasted for fifty-eight minutes, there was no comparison between the quickness, hitting, and confidence, of the combatants. Several of the fighting men, and many good judges of pugilism, had great doubts as to the event of the battle, from the determined manner in which the former battle had been contested, and several entertained a strong opinion that Gregson, by being able to add science to his great strength, from the improvement he had evinced in sparring, had much increased in his favour. Gully possessed so much confidence in his own abilities, that, a few minutes before he entered the ring, he offered to back himself for fifty pounds (in addition to what he had already betted) that he was the winner.

Gully had signified his intention of quitting the profession of the pugilistic art, some time previous to his last contest with Gregson, but conceiving himself bound in honour to accept the challenge of the latter, he had now given him the opportunity of a second trial, he therefore informed the sporting world it was his decided intention never to fight any more; and that, in the above battle, he had fought under considerable disadvantages, owing to his left arm having been previously injured. He now took his leave of them, to follow his profession as an innkeeper, at the sign of the Plough, in Carey-street, Lincoln's-in-Fields; to which place he was conveyed, with all the honours accompanying victory, in the barouche of a nobleman of sporting celebrity.

Mr. Gully, as a pugilistic, has well earned a niche in the temple of pantheistic fame; and if his battles were not so numerous as many other professors have been, they were contested with a decision of science and game, rarely equalled, perhaps never excelled, and justly entitle him to honourable mention in the records of boxing. His practice, it was well known, had been very confined, and his theoretical knowledge of the science could not have been very extensive, yet his natural courage and quickness surmounted these difficulties, and, with a fortitude equal to any man, he entered the ring a most consummate pugilist. Though his frame was never a model of symmetry, he had many points of the athletic build. His height is about six feet.

In consequence of Mr. Gully declining to hold the championship, it descended with all the honours, to the trusty keeping of honest Tom Cane.

We cannot conclude this sketch of Mr. Gully without remarking that, with the knowledge of the world, he unites the manners of a well-bred man; intelligent and quick of observation, he united with those qualifications, when moving in a less elevated sphere, that proper sense of his own capabilities, which generally attends intelligence and merit. After a few years passed in the occupation of a tavern-keeper, in which he earned general respect, he was so fortunate in turf speculations, and so well served by a sound judgment in racing matters, that he retired and became the purchaser of Ware Park, Hertfordshire. Here he associated with the first circles of the county; fortune still smiling on him, he became a spirited breeder and race-horse proprietor, an owner of collieries, and lastly, in 1832, attained the proud position of one of England's senators; being returned to parliament as representative for Pontefract, in the first reformed parliament. We recently heard a

blockhead object that Mr. Gully was originally a butcher, (true he was a master butcher of respectability,) so was the father of Cardinal Wolsey. Mr. Gully adds another proof to the fact, that all pugilists are not unfit members for polished society, and that

Honour and worth from no condition rise,  
Act well your part—there all the honour lies.

(To be continued in our next.)

## LONDON INTERVIEW.

(For the Sportsman's Magazine.)

### THE CASTLE TAVERN, FOLBORN.

Breathes there a cove with soul so dead,  
Vot never to himself hath said  
"I'll go this night to Spring's?"  
If such there breathe go mark him well,  
No British sports his beam swell—  
A dung-hill without wings.

(GHOST OF OLD JACK.)

JACK SCROGGINS! Alas, poor Jack! thy spirit still lingers. What visions of wittels rises in the mind's eye, in retrospectively glancing at the everlasting cravings of thy once voracious wittals, when as a "retainer at the old Castle," thou didst flourish in years gone by.

Yet kindly we'll think of the spirit that's gone,  
Now of grubb or of bubb, we'll upbraid him;

But little he'll reck if you let him sleep on,  
'Neath the turf where his brother pugs laid him.

But we must "hack back," and bring ourselves to anchor in the long hall of this stronghold of Pugilism. But the past will dance Jim Crow with our brains, recalling the days when Gregson was the bold and bardie chieftain of these antique halls, wherein his muse has oft tuned his "merry minstrel lay," charming his brother knights of the knuckle to the courageous tourney. And where is Beleher? Another chieftain whose word was law in this stronghold, echo answers. (An Irish echo). "A stout old man, a living at Finchley," and same answers everywhere in the pages of the Sportsman's Magazine. Next comes the present chivalric baron of this feudal pile, the ex-champion of England. Thomas Winter Spring, in worth a man, aye, and an "Englishman," sirs, from top to toe, my lords, from head to foot. Only on that score do not make any mistake about his height; inasmuch as he has a telescopic throttle, wherewith he can give and take two or three inches. This respected prop of the P. R., is invariably surrounded by some of the right sort of regulars. Venerables with barnacles on nose, and corporations with good escon lined, full of wise saws and ancient milling: they are great in connecting bets, suppers, and racing lotteries. Their gastronomical nous is faultless, and most of them members of a nose club of that ilk, held in the Banquet-hall, where their rosy mugs are made if possible mellowed. Several of these veterans were members of the celebrated "Daffy Club," whose orgies once made the Castle ring again.

The remarkable who honour the Castle with an occasional stay, are Legion: not a night passes but some one eminent in his line comes the amiable, and floors the toga of his greatness. The veritable Vincent, as Sir Morgan O'Dogherty terms the worthy Editor of "Bell's Life," is a frequent guest; and when his humour is pricked, sets the jaws of his hearers going faster than any atmospheric engine on record. His cotemporary of the "Era," although slower with his wit, lays down the law here with marvellous acuteness on sporting matters. The Bishop of Bond-street is a trump-card at the Castle, his patriotic perseverance in demolishing the pedestrian dog stealers, bangs Hampden's demolition of the haughty cavaliers all to fits; the deserves the unqualified admiration of every sportsman. He can afford to laugh to scorn the sneers of the cat-loving quaker Bright. The revered Bishop was 700l. out of pocket ere his pet bill was consummated by our sovereign lady: does that not deserve a testimonial. By the way, our noble hosts testimonial goes but slowly on—the railway mania is sapping all the finer feelings of our nature. Burke of trotting notoriety, frequently whines out some deed of glory past; the amateur mill between this gallant gent. and Mr. R. Chilcott would shame our present dubious champions, if they have any shame in their corporalities. There is not a hostel in Jem Grant's own Great Metropolis, that has such a stream of strangers visit it as the Castle. It is not very long odds but, go what night you will, there is present a native from every county in England, aye, and from the sister kingdoms, and America, and the colonies to boot: therefore it needs no recommendation to those who admire Pope's axiom:—

The proper study of mankind is man.

To give one of the best of Britain's champions a call.

Independently however of the human animal, there are others that will well repay the Connoisseur for a peep; I refer to a matchless collection of stuffed birds and sporting animals of all kinds, that garnish the walls. No wonder Jack Scroggins had a perpetual appetite, if we fancy his hungry eye surveying the tantalizing fat un's; how nicely that hare would jug; how richly those plump rabbits would go down with "injon sarce!" and those dainty tit-bits beneath that beautiful plumage, what a dish for poor Jack's imagination! Then the assortment of sporting prints is first rate; including that now rare chief-d'œuvre of Cruickshanks. A Panoramic View of a Fight from the tops for choice at this same Castle, to the 24 foot roped arena on the green sward of Moulsey. Among other curiosities are two capital paintings of our host; the card of admission, &c., of the Pugilists, at George IV. Coronation; and a Poker, a cross between a gas-man's and a cook's, just such an one as a frantic repaler would like to make a saxon "listen to rayson with." There is another curiosity—and that's the waiter; he is a *real one*, and that's a devilish difficult animal to find now-a-days his sub. By the time this is in print he will have fought Burmash, and perhaps in this same number Mr. Editor, will appear *your* report of the mill. He is own brother to the late Brighton Bill, for whose sake I wish he may win. And now courteous Lector, I will take the liberty of pulling up, with the observation, that if you have not yet visited the Castle, you have left "a scene of life" unvisited, which is an oversight you cannot too soon repair.

SNOB.

#### A SPORTING ANECDOTE OF WOLF HUNTING.

[THE following hasty anecdote is from a translation of a French work, called *Le Chasseur au Chien d'arrêt*, now appearing in portions in the pages of the "Sporting Magazine," it is a delightful and instructive work, and appears spiritedly and admirably translated.—ED. SP. MAG.]

When shooting one day near Chenévères-sur-Marne, I killed four red-legged partridges, which I presented to Madame P. at Nogent. Some days after, many jokes were passed on the subject, pretending I had purchased them in the market. These conjectures were grounded on the fact that they had all a green ribbon on the right leg, an ornament which partridges are not in the habit of attaching to the legs of their young. I know not what to answer, as I had not seen the ribbons in question. The following day I returned to the wood; a red-legged partridge got up, and was killed. I examined it, and I found a green ribbon. I followed my sport: a double shot; a brace killed; two green ribbons. I soon ascertained that the daughter of an illustrious Field Marshal had nursed these interesting birds, and that she had thus marked them with the hope of finding them again; nevertheless we ate them: *sic vos non vobis*.

This recalls to my memory another anecdote: We were in Poland, encamped near the little town Sochacew, about sixteen leagues from Varsovie. We were told that in a neighbouring forest there was an abundance of wolves, and all the Sportsmen of the regiment started one fine morning for a wolf-chase. The dogs were thrown in: I placed myself; a wolf appeared within twenty paces; I killed her. Helas! all the Sportsmen ran to see: the wolf was a superb one, but she had only three paws; one of her front ones was wanting.—"She lost the other at the battle of Eylau," said an old trooper. Another wolf was killed; we looked; she was similar to the first: her leg was cut off; the skin had grown over the wound; one might have believed her to have been so born. A third, a fourth fell to our shots, and our astonishment doubled on each occasion; they had only three legs, and that wanting was invariably a fore leg. A wit of the regiment desired to prove to us that in Poland wolves were so born. Some began to wonder and believe, inasmuch as they could scarcely credit that four wolves should be all wounded in exactly the same manner. I wished to have my heart at ease on this point, and also to know the reason of so curious a fact. I therefore directed my steps towards the habitation of the Forester, about two leagues from the place where we were shooting, and this was his answer: "The skin of our wolves are very valuable as a merehandise. In the spring we endeavour to discover the place where the female has deposited her whelps, and we cut off the fore-leg of all the young females: the mother licks the wound, which soon heals; when the time of rutting commences, they draw from the neighbouring forests all the male wolves, as with three legs they wander less and remain at home, and thus we are plentifully supplied." This explanation appeared to me to be very satisfactory, and I astonished our naturalist when I proved to him that in Poland wolves, wishing to remain in the class of quadruped, had the excellent habit of being born with four legs as elsewhere.

A CON.—Why are ladies' dresses about the waist like a general meeting? Because there is a great gathering there, and oft, a great bustle too. H

#### A DAINTY DISH TO SET BEFORE A QUEEN.

Sing a song of Gotha—a pocket full of rye,  
Eight-and-forty timid deer driven in to die;  
When the sport was open'd, all bleeding they were seen—  
Wasn't that a dainty dish to set before a Queen?

RABBITS.—When I lived at Seaton Sluice, my companions and I used to go at nights with a dark lantern on Harty Links, and catch rabbits with sea ferrets, as we called them. We got large crabs (commonly called dog crabs) from off the rocks; we stuck a lighted candle about one inch long on the crab's back, and sent them into the holes, before which we placed a net. Before the crab got far into the hole, the rabbits came tappy lappy into the nets. In this way we caught numbers of them in a short time.—J. P., in *Gardeners' Chronicle*.

DEATH FROM GLANDERS.—This frightful disease, which continues to baffle human skill, and the healing art, lately attacked a fine young man, aged 20, residing at Rathferland, Newry. The deceased, who was a servant, caught the disease from a distempered horse. He was some time ill before he sought medical advice. When the physician saw him, his chest was oppressed nearly to suffocation. He had great pains in his head, back, left shoulder, and arm, with stiffness and pains in all his joints. His left knee was swollen and tense. His skin was hot, and the pulse was 118. Thirst and loss of appetite ensued. In two days after the physician saw him, his body was thickly studded over with tumours, and his face and eyelids were seized with ædematous. The skin continued hot, and the pulse was 110. His urine was the colour of double X porter. The day preceding his death, the symptoms rapidly increased; the nose, eyes, and tumours, discharged foetid matter, his breathing became low and hurried. His pulse was 80, and he died in dreadful agony at midnight. The physician who attended him, said that he prescribed medical treatment with no hopes of recovery, but merely to lessen, if possible deceased's sufferings.

SHOWER OF SNAILS.—During the storm which passed over Cheltenham on Sunday afternoon, a large quantity of snails fell on the grounds of Captain St. Clair, at Staverton. The gallant captain has kindly furnished us with a number of the insects, which may be seen at our office. He states that some of his grounds were literally covered with these curious visitors from the upper regions.—*Cheltenham Chronicle*.

HOW TO PREDICT THE WEATHER.—Many rules for predicting the characteristics of forthcoming seasons have from time to time been put forth. The following we have from an intelligent farmer, who has made the weather his study for twenty years past:—"Observe the wind," says he, "when the sun crosses the equinoctial line, about the 30th of March and the 12th of September. If the prevailing wind be in an easterly direction, a dry season will follow; if in the west or south-west, the succeeding season will be distinguished by rain. I have remarked this for years, and by noting it have been enabled to predict the weather with an accuracy that has surprised many."—*Brighton Herald*.

SIGNS OF WINTER.—A woodcock, in most excellent condition, weighing twelve ounces and a half, was shot in the neighbourhood of Tiverton last week. This is an unusual occurrence at this season of the year; and, if the predictions of the knowing countrymen be verified, an unusually severe winter will follow.

THE ASS.—We all talk of the ass as the stupidest of the browsers of the field; yet if any one shuts up a donkey in the same inclosure with half a dozen horses of the finest blood, and the party escapes, it is infallibly the poor donkey that has led the way. It is he alone that penetrates the secret for the bolt and latch. Often have we stood at the other side of a hedge, contemplating a whole troop of blood mares and their offspring, patiently waiting while the donkey was snuffing over a piece of work, to do which all but he felt themselves incompetent.—*Quarterly Review*.

THE FISHERIES.—The fence time in the Severn, during which it will be unlawful to fish there, commences on the 14th instant. The fence months for the Wye, in the counties of Radnor, Brecon, and Hereford, commence on the 15th of September, and end on the 11th of February, both days inclusive; and for the Wye, in the counties of Gloucester and Monmouth, they commence on the 16th of September, and end on the 10th of February, both days inclusive; and we are glad to hear that the associations are determined to enforce a rigid observance of the law in this respect.

SALMON FISHING.—Angling was first-rate in the Ness the last fortnight. On the 26th ult., Alistair Fraser, son of Affleck Fraser, Esq., and another young man, landed no less than ten salmon and grises, weighing from seven to eleven pounds each; and on Monday, Capt. Cator took nine very fine fish. Some days ago, there was caught in the Spey, near Orton, a salmon, which weighed upwards of forty pounds.—*Inverness Courier*.

TRUE GREATNESS.—Near to this (Salisbury) is some of the property of the Fox family, now Lady Holland's. An old man told me that his father had been huntsman to Lord Holland. I asked him if he remembered Charles James Fox. He thought he had heard of him. But the great man of the family was Henry Fox; he was the one to go in at the hounds!

HOW TO GET A TIGHT RING OFF A FINGER.—Thread a needle flat in the eye with a strong thread; pass the end of the needle with care under the ring, and pull through a few inches towards the hand; wrap the long end of the thread tightly round the finger, regularly, all down to the nail, to reduce its size. Then lay hold of the short end of the thread and unwind it. The thread pressing against the ring will gradually remove it from the finger. This never-failing method will remove the tightest ring without difficulty, however much swollen the finger may be.

One day, at dinner, Curran said to Father O'Leary, "Reverend father, I wish you were St. Peter." "And why, counsellor, would you wish that I were St. Peter?" asked O'Leary. "Because, reverend father, in that case (replied Curran) you would have the keys of heaven, and you would let me in." "By my honour and conscience (replied the divine) it would be better for you that I had the keys of the other place, for then I could let you out."

\* **ELASTIC WOOD.**—Fishing-rods, unless made of bamboo, have generally ash for the lower joint, hickory for the two middle pieces, and a strip cut of a bamboo of three or four inches diameter at the top joint. Archery bows are another example of elastic woods; the "single-piece bow" is made of one rod of hickory, lancewood, or yew-tree, which last, if perfectly free from knots, is considered the most suitable wood; the "back or union bow" is made of two or sometimes three pieces glued together. The back piece, or that farthest from the string, is of rectangular section, and always of lancewood or hickory; the belly, which is nearly of semicircular section, is made of any hard wood that can be obtained straight and clean, as ruby-wood, rose-wood, green heart, kingwood, snakewood, and several others; it is in a great measure a matter of taste, as the electriciv is principally due to the back piece; palmyra is also used for bows.—*Holtzapfel*.

**THE SILKWORM.**—The eggs of the silkworm should be kept during winter and spring in a dry place, but not warm, or they may possibly be hatched too soon. When hatched, the young worms must be fed at first upon young lettuce leaves, and lifted on them one at a time with a pin. Lettuce leaves are the best substitute for those of the mulberry; but the latter should soon be given to them, for if they are kept wholly on lettuce leaves they will never produce much or good silk. They should have fresh leaves three or four times every day; the leaves of the mulberry may be kept fresh by being laid flat in an earthen jar, and pressed down by some weight; the jar should be kept in a cool cellar or buried in the ground. When silkworms begin to put forth threads of silk from their mouths, put them in a paper cone, about the size of a wine glass, and pin this up to the wall or wainscot, or to a line. About eight days after the worm has spun its ball of silk, when you can hear the chrysalis rattle in the inside by shaking the cone, begin to wind off the silk on a reel having four or more rollers or spokes, and made to turn with a handle. It takes about ten cocoons to make a thread sufficiently thick for winding; put these all into warm water, ten at a time, and stir them about until you get hold of an end from each, and so wind the thread from all together, keeping up the same number, ten, always. When you come to the chrysalis, take it out and lay it on paper to dry. In about a month it will transform itself into a moth, lay eggs, and die. It takes 2,800 worms to produce a pound of silk.

Mathews, the clown, declines ascending again with Green, the aeronaut—he says, though G. and he are both good-tempered men, the balloon no sooner rises than they have *Aïa* words.

An old Irish earl, who in the disturbed times burnt down the magnificent cathedral of Kildare, being some years afterwards rated for the act, excused himself by saying, "I would never have done it, but that I thought the archbishop was inside!"

**COURTESY BY STEAM.**—Passengers who neglect to pay their passage on board the steamer Vermilion, on Lake Erie, are genteelly flogged by the officer of the said boat.—*New York Herald*.

**TWO MORE OF 'EM.**—Why is a woman who sells curds and whey the most independent person in the world? Because she never gives way (whey) to any one.

Why were the days of Queen Elizabeth like the present? Because *long trains* were in vogue.

**THE PRINCE OF WALES'S SPELLING-BOOK.**—We understand that a Spelling-Book is in preparation for the use of the heir to the throne, in which the examples of his Parents will be put forth in a Series of Easy Lessons, in one Syllable. We have been favoured with a sight of a specimen, which proves how the tastes and habits of papa and mama may be pleasantly put forward for the imitation and admiration of the infant.

#### LESSON I.

The Deer is a poor weak Brute, which it is good to Kill. It was once the Plan to Hunt the Deer; but it Runs so fast, that it puts one quite in a Heat to try to Catch it. A PRINCE should not get Hot, or be at much pains to Hunt the Deer, but should have the Deer all Caught, and put in a small Space, which they can in no way get Out of. Then the PRINCE should come with his Gun, and Shoot at the Deer, when he must Kill some. It is fine Sport to see the Deer fall Dead in the Place, where they are all put so Close that a PRINCE, Shoot how he will, must Hit some of them. If you are a good Boy, you shall have a Gun, and some Deer to Shoot at with the Gun; and then they shall be all put Dead in a Row, for you to look at them. Oh! what nice Sport for a PRINCE of the Blood! —*Punch*.

**PROLIFIC WHEAT.**—In the harvest of 1840, Mr. C. Spring, of Soham, Cambridgeshire, gathered from one of his fields 18 very fine ears of wheat (which were five, six, and seven set,) the proceeds of which filled a common wine glass. The above was planted the following autumn, and produced one peck, which was again planted, November 3, 1841, and produced seven bushels and one peck; planted the same, November 2, 1842, the produce, 106 bushels and two pecks; which was again planted in the autumn of 1843, and produced 1,868 bushels. Thus the increase from the 18 ears, in the short space of four years, was the enormous quantity of 467 combs.

**CAUTION TO SPORTSMEN.**—As the shooting season has commenced, it may not be amiss to mention, by way of caution against accidents, that "any person shooting with a gun or pistol, within 50 feet of the centre of a carriage way," is liable to a penalty not exceeding 40s., and costs of proceedings, over and above any damage which may be done. Any person may prefer information, and produce a witness who saw the gun or pistol fired off.

**CHANGES IN THE ANIMAL SYSTEM.**—The bodies of animals are continually undergoing a series of insensible changes of substance, of which they are entirely unconscious. We look at our hand to-day as we write, and we fancy it is the same in substance as it was yesterday, or last year—as it was ten years ago. The form of each finger, of each nail, is the same. Scars made in our infancy are still there. Nothing is altered or obliterated; and yet it is not the same hand. It has been renewed over and over again since the days of our youth. The skin, the flesh, and bone, have been frequently removed and replaced. And so it is more or less, with our whole body. The arms and limbs that sustained us in our schoolboy struggles, and are long since consigned to the dust, have, perhaps, lived over again more than once in plant, or flower, or animal. In from three to five years, the entire body is taken out and built in again with new materials. A continual activity prevails among the living agencies to which this hidden work is committed. Every day a small part is carried away, just as if a single brick were every day taken out of an old wall, or a single wheel out of a watch, and its place supplied by another.

**PATRIDGE SHOOTING.**—Colonel Hawker observes, "Most young sportsmen, and many old ones, fancy that nothing great can be done on the first day, without they go out as soon as they can see to distinguish a bird from a dog." This, for several reasons, the Colonel considers to be the very worst method that can be adopted; and much game as the Colonel has seen killed in a September day, he does not recollect one solitary instance of anything extraordinary being done very early in the morning, though many persons may talk of killing ten and even twenty brace before breakfast. Colonel Hawker briefly states the great object in partridge shooting is, first to have markers judiciously placed, and then to disperse the birds; the best way to do which, is to head your dogs, by taking an extensive circle. The second is, to make no more noise than what cannot absolutely be avoided, by doing as much by signal and whistling, and as little by hallooing, as possible. Thirdly, go first on hills to find, and drive down from them the birds, and then in vales to kill them. Fourthly, when distressed for partridges in a scarce country; at the end of the season, take a horse, and gallop from one turnip-field to another, instead of regularly slaving after inaccessible coverts. After a storm, as soon as the ground is dry, or the next day, birds will lie in a calm; and, after a calm, they will lie in windy weather. Birds are frequently as much on the listen as on the watch; and this is why, towards the end of the season, we sometimes do best in boisterous weather.—*Instructions to Young Sportsmen, 9th Edit. 1844*.

#### READINGS IN NATURAL HISTORY.

The Stag is a railway ruminant, and belongs to a common herd that may be seen loitering about the neighbourhood of the Stock Exchange. The Railway Stag has his head full of branches, but he sheds a new branch directly there is any premium. He is exceedingly fleet of foot, and when he is once off there is no catching him. Some Railway Stags are, however, distinguished by a sort of waddle, like that of a lame duck of the Stock Exchange. There are strange stories told of the various forms assumed by the Railway Stag; for the animal is exceedingly cunning, and will resort to any artifice to keep out of danger. The Railway Stag often causes great annoyance to the bulls and bears in the neighbourhood of the Stock.—*Punch*.

"No noise is good news," as the culprit said to the hangman.  
"I'm a victim to an artificial state of society," as the monkey said when they put trowers on him.

What is a *Green Grocer*? One who gives good weight, and doesn't fee great people's servants.

#### DR. WATTS MODERNIZED.

Had I the strength this world to crash;

Or eyes the universe to scan;

I would be measured by my cash—

The *TIN*'s the standard of the man!

#### A GRAVE QUESTION LIGHTLY ANSWERED.

"Old man, old man, why digg'st thou that grave?"

I ask'd as I pass'd along;

For in the midst of London streets, I met

A dense and a dingy throng.

'Twas a strange wild deed, and a stranger wish,

That his body thus should lie,

'Midst the troubled mass of busy men,

All passing him idly by!

So I said, "Old man, why digg'st thou that grave,

In the heart of London Town?"

And the deep-toned voice of the digger replied,

"We're layin' a gas-pipe down!"

**THEY'RE GETTING HONEST.**—During the past six months no less than one hundred coats and two hundred umbrellas and parasols have been left in the different carriages and cabs, and have been forwarded to the Hackney carriage office, in accordance with the above act.

**A PARTIAL REPEAL.**—Sir Hugh Munro has given liberty to his tenantry to shoot all kinds of game, upon condition that they guard his estate against poachers.

A countryman, being a witness in a court of justice, was asked by the counsel if he was born in wedlock. "No, sir, (answered the man,) I was born in Devonshire."

**NO DANGER YET.**—We are told that the Governor of the island of Tobago is "dying by inches." The patient, however, is safe as long as death does not reach the feet. We know many people in the silk trade who have been *dyeing by yards* many years, but who are still in the land of the living.

# ADVERTISEMENTS.

## DONCASTER ST. LEGER.—PAUL ASHLEY'S DONCASTER ST. LEGER SWEEPS, for 1845, are Gone to the following TOWNS and PLACES, viz:—

First 25 Swp.	1st prize, to Hoyland	£350 0 0
	2nd do., with interest, to Sheffield	41 15 0
	3rd do., to Leicester	20 0 0
Second 25 Swp.	1st do., to Barnsley	350 0 0
	2nd do., to Abbot Repton	40 0 0
	3rd do., to Sheffield	30 0 0
First 25 Favr.	1st do., to Rainhill	70 0 0
	2nd do., to Chertsey	30 0 0
	3rd do., to Littlemore	10 0 0
Second 25 Fav.	1st do., to London	70 0 0
	2nd do., to London	20 0 0
	3rd do., to Chichester	10 0 0
Third 25 Fav.	1st do., to London	70 0 0
	2nd do., to Hull	20 0 0
	3rd do., to London	10 0 0

To be drawn next Tuesday, Wednesday, Thursday, and Friday. A 2s. 6d. and 5s. 6d. Derby Sweep for 1845 open, to be drawn as soon as full, of which due notice will be given. The above prices will be paid, 5 per cent. less, the day after the races. Post-office Orders attended to. Tickets sent to any part of the country.

## WORTHY OF NOTICE.

### A SUPERFINE BLACK DRESS COAT for TWO GUINEAS, at KISCH'S WEST END ECONOMICAL, CONTRACT, CLERICAL, and GENERAL OUTFITTING ESTABLISHMENT, 40, Cranbourn Street, Leicester Square.

Inventor of the Improved Style of PALETOT. A Book containing list of prices and mode of self-measurement will be forwarded (on application) post free.

Observe the address, 40, Cranbourn Street, Leicester Square.

### STOVES. THOMAS WALKER'S PATENT SELF-FEEDING PHOENIX STOVES

THESE admirable Stoves require fuel but once a day, show a bright fire, are free from dust and unpleasant effluvia, have a great radiating surface, equally heated, produce uniform and perfect combustion, and have therefore no explosive gases; are durable, economical, ornamental, and take up little room; and are adapted for ascending or descending flues, free from danger of fire, and may be used as an open Stove, still requiring fuel but once a day.

302 Oxford Street, London, or at 58, Oxford Street, Birmingham, where the Stove may be seen constantly in use, and where Prospectuses and respectful Testimonials may be had.

Prices—3, 4, 5, 6, 9, 14 and 16 guineas; the two last are for churches and other large buildings.

Prendergast Stakes drawn To-morrow, Monday and Thursday; a few vacancies— 5s. and 10s. Sweeps open for the Criterion Stakes. All money divided, less 5 per cent. Post office order attended to.

Just Published, the SIXTEENTH EDITION, illustrated with cases and Full-length Engravings, price 2s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 3s. 6d.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope,) 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration.** The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 63 Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

THE CORDIAL BALM OF SYRIACUM is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 3s., by which 11s. are saved. The Five-pound cases may be had as usual.

THE CONCENTRATED DETERSIVE ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin. Secondary Symptoms.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c., without hindrance to business.

Consultation fee, (if by letter,) £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

## TO SPORTSMEN.

**SHOOTING, HUNTING, FISHING, and DEER STALKING KNIVES.** J. B. DURHAM, Manufacturing Cutler, respectfully invites the attention of Sportsmen to his Immense Stock, which includes all the Newest Patterns and latest improvements, and all warranted of the best quality. Knives of every description made to Order on the shortest notice. Old knives, &c. polished and repaired. 261, Regent-street, near the Polytechnic Institution.

**THE SECRET COMPANION. A MEDICAL WORK on NERVOUS DEBILITY and the concealed cause of the decline of PHYSICAL STRENGTH and the loss of MENTAL CAPACITY, with remarks on the effects of SOLITARY INDULGENCE, neglected GONORRHOEA, SYPHILIS, SECONDARY SYMPTOMS, &c. and Mode of Treatment; followed by observations on MARRIAGE, with proper Directions for the removal of all Disqualifications.** Illustrated with Engravings, showing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell-square, near the British Museum London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 68, Oxford-street; Barth, 4, Brydges-street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

**THE CORDIAL BALM OF ZEYLANICA; OR NATURE'S GRAND RESTORATIVE,** is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c.

This Medicine should be taken previous to persons entering into the Matrimonial State.

Sold in Bottles, price 4s. 6d., and 11s. each, or the quantity of 4 in one Family Bottle for 3s., by which one 11s. Bottle is saved.

The 25 Cases may be had as usual.

**BRODIE'S PURIFYING VEGETABLE PILLS.** are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 14d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell-square, near the British Museum, London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. Brodie and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of £1, and for all cases the most inviolable Secrecy may be relied on. Only one Personal Visit required to effect a Permanent Cure. Country Vendors can be supplied by all the wholesale houses in London.

Observe—27, Montague-street, Russell-square, near the British Museum.

## THE EARL OF ALDBOROUGH CURED BY HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb., 1845.

A Wonderful Cure of Dropsy of Five Years' standing. Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.

SIR,—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c., &c.

(Signed) THOMAS TAYLOR

These truly invaluable Pills can be obtained at the Establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines throughout the CIVILIZED WORLD, at the following prices:—1s. 14d., 2s. 9d., 4s. 6d., 11s. 2s., and 3s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

LONDON:—Printed by WILLIAM SMITH, of White Hart Street, in the Parish of St. Mary-le-Strand; and Published at the OFFICE, 43, Holywell Street, Strand, by E. DITTLE—Thursday, October 24th, 1845.

[Stamped to send free by Post, Twopence-half-penny.]

## A GERMAN DEER.

FROM A PICTURE BY REISENGER.

**T**HERE the reader has a German deer from a picture by a German artist, and we do not know that we have ever seen the "buck-leap" better delineated. This animal has of late, from certain royal exploits, become so celebrated that we are happy in giving the readers of the *SPORTSMAN'S MAGAZINE* a picture of one of these "locomotive venisons" in his leathern "habit as he lived," for, perchance, the original fell at that *fusillade* at Gotha, where the eminent eminent, Serene, unsportsmanlike Gotha, did, do to death, some two-score of these vigorous antler-bearing victims. But enough of this subject, for truly the subject of our picture has a haunch that might make even an alderman long, if not for a "long shot," for "close quarters" with that same, armed with knife and fork, and charged with currant jelly. As, however, it is our intention to give the reader a lengthy say, when we come to picture our British red deer, we will here dismiss its German cousin by observing, that in his land no "hark forward, hark forward, tantivy" makes echo merry as though she dallied with the huntsman's voice, yet, as in other quarters nearer home, the spirit of ancient days is cherished, and the game will soon be a-foot, we will turn back to some venerable authorities and cull a profitable lesson or two from "ane" compendious and useful

tome on the art of venerie," wherein is promised "full instructions for all manner of hunting," &c. &c., so that we may say, with another piece of antiquity,

"A sportsman's skill whoever means to claim,  
Must read our book, and then he'll know his game."

The old harts are known by their slot, and an experienced huntsman, by the treading of the animal's foot, will trace him to his haunts. "If you find," says an experienced authority, "the treading of two deer, the one *long* and the other *round*, yet both of one bigness, yet the *long slot* will indicate the *hart* to be much larger than the *round*: and besides, the old hart's hind foot doth never over-reach the fore-foot, that of the young ones do."

"A chief huntsman to Lewis the Twelfth of France affirms, that on a time, they having a hart in chase, on a sudden the hounds were at fault, so as the game was out of sight, and every dog at fault, and every hunter amazed,—at last the fraud of the crafty beast became discoverable. There was a great white thorn, which grew in a shadowy place, as high as a moderate tree, which was encompassed about with other smaller shrubs; into this the hart having leaped, stood there aloft, the boughs spreading from one to another, and there re-

mained till he was thrust through by the huntsman, rather than yield himself up a prey to the hounds.

"In seeking of deer in high woods," saith my authority, "you must have regard to two things; that is, the thickets of the forest, and the season. If it be in very hot weather, grates, horse-flies, and the like, drive the deer out of the high woods, and they disperse themselves into small groves and thickets, near places of good feeding. According to the coverts which are in the forest, so must the huntsman make his enquiry: for sometimes the *hart* lies in tufts of white-thorn, sometimes under little trees, other whiles under great trees in the high woods, and sometimes in the skirts of the forest, under the shelter of little groves and coppices. And, therefore, the huntsman must make his ring-walk large or small, according to the largeness of those coverts."

Modern field sports, although the game that conduces to them are for the most part of the same kinds and quality, leaving out of the question those that may be considered ferocious, differ materially in their management, it may be, from those which exercised the skill and perseverance of our fathers' fathers; yet as I shall, at a more apt and convenient season, have opportunities to illustrate the things that be, let us steal another hint or two from the book-legacies which those who sleep soundly after "life's fitful fever" in their sod-covered graves, or prouder mausoleums, have bequeathed to us.

It will be noticed that mention is made of blood-hounds as chief assistants in the ancient chase; but I should suppose that these terrific, but staunch, animals were but sparingly drafted into the pack, and used, as coursers use a spaniel, to stick to the prey after the *gazehounds* have lost a view.

The directions to unharbour a hart and cast off the hounds are these:—"When the relays are well set and placed, let the huntsman with his pole walk before the kennel of hounds; and being come to the blemishes, let him take notice of the slot, and such other marks as may be observed from the view of the deer, in order that he may know whether the hounds run riot or not.

"Then the huntsman must cast abroad about the cover, to discover the *hart* when he is unharboured, the better to distinguish him by his head or otherwise.

"If the blood-hound, in drawing, chance to overshoot, and draw wrong or counter, then the huntsman must draw him back, saying, *back, back, soft, soft*, until he hath set him right again; and if he perceive that the hound hath mended his fault, by his kneeling down and observing the slot or ports, he must then cherish him by clapping him on the back, and giving him encouraging words; thus must he draw on with his hounds till he descries the deer.

"If the huntsman have the *hart* in view, he ought still to draw upon the slot, blowing and hallooing till the hounds are come in. When he finds they are in full cry, and take it right, he then may mount, keeping under the wind and coast, to cross the hounds that are in chase to help them at default, if need require."

A deer, when hard pressed, will frequently and eagerly take to water, and so cover himself under it, which is called taking soil, that his nose and forehead, &c. will be the only parts perceptible; in such cases the old hounds should be especially attended to, for they will hunt more leisurely and steadfastly than the young ones, which will often overshoot the game.

When the prey is nearly spent, he will run stiff, high, and faulteringly; his mouth will become black and dry, and the foam will have left it, and the tongue will hang out from between the teeth, and you may also mark his sinking by his slot; for he will compress his claws together, and presently again open them wide, making considerable glidings, and striking his dew-claws upon the ground, following the beaten tracks without doublings, and sometimes going along a ditch or hedge side, seeking a gap, not having strength to leap it, and yet sometimes a dead-run deer will take, and succeed in making very extraordinary and almost incredible leaps.

## CORRESPONDENCE.

### HYPHROPHOBIA—RABID BITE.

Sir,—Perceiving in last Sunday's paper two deaths, one of a youth, the other of a valuable animal, from this dreadful disorder, I trust the following remarks will not be thought out of place.

When a dog, or any other animal, has been attacked by one that is rabid, it is evident that a difficulty presents itself which does not exist in the human subject. The incapability of pointing out the wounds that may have been

received, and which the hair may prevent from being observed, renders it necessary that a very minute examination of the body should take place; by turning the hair deliberately back, after which, to remove any rabid saliva that may adhere to the coat, the animal should be washed, first, perhaps, with warm water, in which arsenic has been dissolved in the proportion of one dram to every quart of water. This washing is very necessary, as it is almost impossible to detect the minute bites a dog may have received. I have heard of potash, or soda, being dissolved and used when a moderate ley. During this washing, the eyes should be carefully guarded, and the wounds should be pressed to excite a fresh flow of blood. This operation is purposed to secure the animal from any accidental virus, which may yet be hanging about. After these precautions we proceed to the actual removal of the bitten part or parts.

The use of caustics has been objected to, as not carrying the destruction of the lacerated parts far enough, the formation of the eschar preventing the further progress of the caustic; but this I feel assured is not a powerful objection. If the nitrate of silver be formed into a point, and a moderate friction be kept up by it over the eschar, the decomposed portions are removed by rubbing, and the canterization goes on to any depth required. In penetrating wounds made by the teeth, the probe having detected the course of the wound, the knife may be employed to dilate, and render it accessible to the approach of the caustic; in which case equal certainty is gained by one as by the other, with less loss of substance. It has been said that caustics cannot be conveniently applied to the bottom of a deep wound, in which case the knife may, perhaps, be best employed in dissecting out the whole cavity with all its surrounding parts. Towards animals, particularly of the larger kinds, where despatch is necessary, and where deformity and a destruction of parts are not of so much consequence, such an excision may be considered preferable.

Excision of the affected part is practised by most in preference to canterization, but as each mode of operating contains its peculiar advantages in peculiar cases, a skilful practitioner will confine himself to neither, but will use the one or the other as occasion suits, or will often unite them in the same operation.

The excision of parts where much is to be done is certainly quickly performed, yet in the operation it is prudent, though not necessary, to wipe the blade carefully and frequently, lest every fresh stroke of the knife make a new morbid inoculation, and the means we use to preserve life be ultimately the cause of death.

I have thus concluded the remarks on hydrophobia, which I have been induced to offer to your notice; should they prove of the slightest use to the public, the warm interest which I have taken on this subject will be amply rewarded.

Yours, &c. H. C.

## MOOSE-HUNTING IN NOVA-SCOTIA, WITH SOME NOTES ON THE NATIVES.

(FROM A SUBALTERN'S JOURNAL.)

[The following admirable sketch, in its hardihood, its endurance of privation, its love of sport, and lastly, its humanity, shews the instinctive spirit of the English Sportsman. It should be read, and re-read by the admirers of the "German Woodcraft," and farm yard battues.—ED. SPORTSMAN'S MAG.]

THE time of year chosen for our expedition to hunt the moose-deer in his native woods, was the bleak month of February. Winter had set in with more than usual rigour of a Nova Scotian climate: there were yet no indications of returning spring to cheer the heart and gladden the eye; snow reigned despotically, and nature tenaciously adhered to her bridal garb of spotless white. The tops of gigantic forest-trees—primeval with the world's creation—wore her livery, and towered aloft in their hoary caps; whilst pathless snow-wastes exhibited to view the tiny track of the field-mouse, or displayed on its otherwise untrodden surface the fairy-foot of the squirrel.

On the morning of the 16th of February, Captains M. and L., Mr. F. and myself, commenced our expedition. We quitted Halifax when all its gay folks were asleep, (and dreaming, perchance, of many a fair face of the night before,) seated ourselves in a sleigh tandem—not omitting, however, to take with us a due quantity of mutton-hams, rounds of beef, salt pork, biscuits, tea and sugar, and a fitting proportion of the spiritual: of all which each person carried his own share for the journey. We proceeded in our tandem a distance of twenty-three miles, to the place of abode of Mr. Joe Frizzle\*, whom, with another man, we had engaged to

\* Not a fictitious name.

accompany us as our guide, as well also as to help to carry a portion of provisions.

In height, Joe Frizzle was about four feet nine inches, slightly made, of a dark complexion, with a beard, that, if suffered to grow unmolested, might excellently well have performed the work of a scrubbing-brush: his knees showed an awkward inclination to turn out, whilst his feet seemed disposed to turn inwards; thus, he was admirably adapted by nature to walk in snow shoes.†

Each of our party wore fearnought caps and trowsers, a long double-breasted cloak of blanket, fastened round the waist by a belt, of which, however tastes might disagree as regarded the ornamental effect, gratitude, it is to be hoped, will never hesitate to acknowledge the usefulness, since, by drawing in a hole or two of the strap, the cravings of hunger, and the yearnings of a good appetite are checked—in cases, too, that seem

to render the obtaining a dinner in the woods by no means so certain as desirable. An axe and a skeene, or *couteau de chasse*, hung in this belt: we each carried our own knapsack, filled with provisions, and a few requisite articles of clothing for change, viz., socks, dry moccasins,\* drawers, and a blanket to sleep in. Thus equipped and attended we pursued our way, the two men following with their loads on a truck: whilst at all the cottages we passed, we endeavoured to collect a sufficient quantity of milk to carry with us. After a walk of five miles along the road, we struck into a by-path, full of deep ruts in the snow; of which ruts, (being yet unable to use snow-shoes) we took advantage to walk, though unhappily not without experiencing extreme discomfort in those portions of the feet sometimes called lower digits, which fashion has decreed can never be named in downright English to ears polite.

(To be concluded next week.)

GEORGE NICHOLLS, (THE CONQUEROR OF CRIBB).

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

### CHAPTER IX.—GEORGE NICHOLLS.

GEORGE NICHOLLS here finds a niche, principally from the circumstance of his early victory over the renowned Tom Cribb; his other fistic exploits, though numerous, not being of celebrity enough otherwise to entitle him to the distinction. Nicholls, who was one of the numerous stars of the Bristol school, was born in that city, in the year 1775. Of his early exploits, Pierce Egan enumerates a goodly array, but like the exploits of "the heroes before Agamemnon," we find no record of them save in his pages, as they were minor provincial affairs. The most remarkable of them were as follows:—

At 17 years of age he entered the ring with a man of the name of

† Snow-shoes; wooden frames in the shape of the bow of a racket, and worked with either horse-hine or moose-skin, similar to the former: at the widest part of the frame, there is a cross-stick for the foot to rest upon, and near the centre is an opening left to facilitate going up hill.

Hocky Harding. It was only for a guinea a-side, and it took place on Durdham Downs. Nicholls had for his seconds Applebee and George Davis. In forty minutes Harding was defeated; and the punishment he received was terrific. This latter boxer had gained considerable notoriety in having made a drawn battle, after a desperate fight, with the celebrated Bill Warr.

A week after the above battle, the brother of Harding, anxious to have a turn with Nicholls, fought him on Durdham Downs, for a guinea and a half a side, but, in the second round, Harding, receiving an ugly knock, exclaimed "I've had enough; George shall not serve me as he did my brother." Applebee and Davis were also seconds to Nicholls on this occasion.

A sailor, who weighed 13 stone, challenged Nicholls, for a guinea a-side. This battle took place in the Back Fields, near Lawford's

\* Moccasin; an Indian shoe, made from the hock of a cow or moose. It is fitted to the foot, and tied round the ankle.

Gate. The man of war was a troublesome customer, and did not give it in till one hour had expired.

Bill Thomas, a butcher, of Chapstow, had so good an opinion of his milling qualities, that he sent a public challenge to Bristol to fight the best man in that city. Nicholls accepted the challenge without delay, and he also won it off-hand.

Morris, a fine, well-made man, weighing 13 stone, entered the list with Nicholls, for one guinea a-side, in St. Philip's Marsh. It was a determined fight, but Morris was defeated in one hour.

A Soldier, who weighed 14 stone, and who (it is said), the late Jem Belcher had refused to fight, was defeated by Nicholls in great style.

Samuel Carter, in the course of one hour, after a good battle, surrendered to Nicholls.

On the same day that Bill Belcher conquered David Davis, in St. James's Churchyard, George Nicholls obtained victories over Bill Lewis, and also Evan Lewis.

In a room at Priddy Fair, one Barnes, who had challenged all England, proved an easy customer to George Nicholls.

Leonard, the champion of Bath, was matched against Nicholls for five guineas a-side. Bob Watson and Tom Davis acted as seconds to our hero. This battle took place on Lansdown, the same day that Spaniard Harris and Bill Cox fought. The Bath Champion was dreadfully beaten, and both his peepers were soon closed; while Nicholls received but a slight injury.

The fame of Nicholls was now so completely established from numerous victories, that he was backed to the end of the chapter, without the slightest hesitation. However, in his contest with one Reaver he was defeated. It was afterwards ascertained to have been a cross. It is stated by Pierce Egan, that Nicholls was victor in 49 battles out of 50.

We will now quit these dateless records of Nicholls's triumphs over the "illustrious obscure," to come to his crowning achievement, an exploit which has fixed his fame. It has been repeatedly urged that this overthrow occurred during the brave Tom's novitiate, but he had beaten that renowned pugilistic veteran of the old school, George Maddox; Tom Blake; and Ikey Pig; all of them men of notoriety as pugilists. The success of these contests had rendered Cribb somewhat conspicuous, and he was rising fast into eminence and fame, when he entered the lists with Nicholls, for a subscription purse of £25, at Blackwater, 32 miles from London, on Saturday, July 20, 1805, made up by the amateurs, to compensate them for their loss of time, in being deprived of witnessing the intended fight between the Game Chicken and Gulley. Tom Jones seconded Nicholls; and Dick Hall was the second to Cribb. The odds upon setting-to were greatly on the side of Cribb, who was the favourite; but Nicholls was aware of Cribb's method of fighting, and fought him after the style of Big Ben, in his contest with Tom Johnson. Nicholls, like a skilful general, armed at all points, was not to be deluded by the feints of the enemy. The system of milling on the retreat, which Cribb had hitherto practised with so much success, in this instance failed; the coolness and good temper of Nicholls appeared so eminently throughout the fight, that not only did he preserve his fortitude, but added vigour to his judgment. Hence, both in attack and defence, the future champion found in Nicholls a steady and decisive fighter. Cribb became puzzled and perplexed at finding his tactics foiled; the advantage he had derived in former contests, by drawing his opponents, and then punishing and irritating them in their pursuit, so as to make them throw their blows out of distance, and consequently render them feeble, ineffective, and uncertain, was rendered entirely unavailing. George would not suffer Cribb to play round him, whereby his operations might become confused, but, with a guard like Ben's, firm in the extreme, his attitude was towering and impregnable. Nicholls could never be induced to quit his position without putting in a tremendous hit, waiting with the utmost skill for the attack of his opponent, and then give the return with almost unparalled severity. George scarcely ever failed in breaking through the defence of his adversary, and ultimately concluded the round with a knock down blow. Nicholls was a tremendous hitter; and his one, two, rendered him truly formidable. The science and ability displayed by Nicholls, in this contest, completely astonished the Sporting World; many of whom, in obtaining such knowledge, found that they had procured it at no trifling expense.

The odds at setting-to were considerably in favour of Cribb, from the glutony he had displayed in his previous battles; Nicholls having fought but once before, with Paddington Jones, which con-

test was considered a drawn battle, and did not stand so high in the opinion of the amateurs as his opponent; nevertheless he was admitted to be thorough bred. The first round was well contested, and good specimens of the art upon both sides; at length Nicholls, with a tremendous left-hander, knocked Cribb down. In the second and third the advantages might be termed reciprocal; but, in the fourth round, Cribb put in a terrible blow under Nicholls's right eye, that made it twinkle again; this, however, by no means disturbed his method of fighting, and he kept his temper wonderfully. The following rounds to the eighteenth were well contested, and though one of Cribb's eyes was nearly closed up, the amateurs were not fickle in their opinions, and still looked upon him as having a fair chance of success. In the various rounds after this period, till the forty-second, the science and adroitness of Cribb were excellent, and his rallies courageous and formidable. Nicholls now became the hero of the scene, and showed himself off in good style, by exhibiting gaiety and confidence, and putting in his one, two, with considerable effect. Cribb, at this period of the fight, became much distressed, and endeavoured to recover his wind and strength, with his usual ingenuity—fought very shy, and had recourse to shifting; but as he was severely beaten, his distances became incorrect, and he fell several times, in endeavouring to make his blows: still his game was prime, and he protracted the fight while a single chance remained, and the amateurs still fancied him, and sported upon his head with firmness; but all the manœuvres of Cribb were unavailing, and in the fifty-second round, he was compelled for the first and last time to utter the reluctant sound—*KNOWS!*

At the time Cribb lost this, he was considered little more than a game man, and a promising young fighter; and even his most sanguine friends, at that period, had not a distant idea of his possessing that high pugilistic talent he subsequently promulgated, and which placed him in the proud and enviable position of Champion of England.

Nicholls now retired from the ring, and returning to his native city invested the money he had gained, and which had been somewhat augmented by the subscriptions of several patrons of manly courage, in a butcher's shop, in Gloucester-lane, Bristol. Here he added another to the innumerable contradictions to those maligners of pugilism, who would identify it with ruffianism, by earning in a long life the character of a quiet, inoffensive, nay, a retiring man. In fact, all who remember him describe him as "shunning general company, rarely visiting a public house, and of a somewhat religious turn of mind;" the leisure time his business afforded him being occupied in angling—his favourite recreation. He died at his native place, June 6th, 1832, in the 58th year of his age.

#### SONG OF THE STAG.

(From Punch.)

THE Railway-lists proclaim the fact,  
 "Deposits paid this morn'g."  
 All who have cash must sign the act,  
 All who have none must mourn.  
 Bulls, bears, around the alley throng,  
 It is the settling day;  
 Then raise the burden of our song,  
 At last the stag must pay.  
 With a hey-ho chivey!  
 Hark forward, tantivy!  
 Then raise the burden of our song,  
 At last the stag must pay.

Lists, prices current, pass around,  
 Their talk is of the Rail,  
 The alley echoes with the sound,  
 And Capel Court looks pale.  
 The banks fill with an anxious throng,  
 And money's stiff, they say;  
 The settling's come, too true our song.  
 At last the Stag must pay!  
 With a hey-ho, &c.

Poor Stag, for Cash thy brokers bare,  
 And useful is thy face:  
 All thy addresses serve no more—  
 Thy rigs are out of place.  
 But when the alley runs thee down  
 As a tremendous doo;  
 'Tis sad to think that half the town  
 Is just as bad as you.  
 Then hey ho, chivey, &c.

## CORRESPONDENTS.

- A. SUBSCRIBER, Liverpool.—Chester Races begin on Monday the 20th of this month; there will be three days racing we believe.
- A. SUBSCRIBER, Newport, I. W.—There are several books on cocks and cooking; but none very modern that we know of. The work we have largely made use of by the well known Mr. Sketchley, was published some five and twenty years since, at Burton-upon-Trent, and we do not know how it is procurable, having been printed for its author, and out of the book market for years; we have ourselves often looked for a copy in vain, among the second hand booksellers. The publishers know nothing about it. The "SPORTSMAN'S MAGAZINE" is a continuation of the "SPORTING WORLD," edited by the same individual. There are nine numbers of that, containing the opening chapters of the HISTORY of BOXING, &c., they may yet be had by order from our publisher, (in complete sets).
- B. D.—The term "Anthelmintic" is applied to medicine to carry off a worms or bots, from the intestines.
- OLIVIOUS OLIVER.—Haven't you an opportunity of seeing carriages in any thoroughfare? are you purblind as well as forgetful? The left is the "near side," the right the off side.
- E. L. B.—You shall have all the varieties of the Dog and Horse, in succession. Would you like the whole circle of Natural History, and every variety of Sporting fully illustrated, and all its multitudinous topics exhausted, in one three-halfpenny number?
- J. CULL.—Our contributor "NED RUE" has promised to do the needful in regard of cricket. The numbers of the "SPORTING WORLD" may be had (in a complete set), from Mr. Dipple, our publisher. We shall be glad to hear from you on the other topic.
- A. LOVER OF THE HORSE, Croydon.—Look under "WRINKLES FOR THE GROOM," in our next number, and perchance you will find something to the purpose, in reply to your question.
- CANICERS.—The disorder in your spaniels' ear resembles *formica*, which is a sort of local mange, generally attributed to the deposit of the ova of fleas; tobacco water will destroy the larvae, and cure the disease.
- C. P.—There is considerable merit in the sentiment and construction of your song of "The Poor Old Horse." We will give it another glance over, and if upon a second perusal we can just here and there touch up the metre, (and a slip or two in grammar) we will, and then insert it. The idea is a capital one, although here and there the thought is better than its style of expression.
- A. SUBSCRIBER, d'Olier Street, Dublin, will find himself answered, under the head of a ditto, at Newport, Isle of Wight. We have just counted five letters arrived this week, bearing this unidentifiable a signature.
- J. WINFIELD.—Lake Winander or Windermere, &c. (as we stated in the number you referred to) in the county of Lancaster. Vide FIELD BOOK, p. 96, article CHAR.; Sir Humphrey Davy's Salmonia, Walton's Angler, p. 167, (Rennie's edition), and the quotation there made from Camden's Britannia. The *Bell's Life* answered you wrong, and if you have paid, claim back your money.
- YOUNG SCOTLAND, Edinburgh.—Every No. of this paper is now in print, and may be had by order. The stamped edition of No. 18, will be forwarded direct upon receipt of three postage stamps; if any vendor in "Auld Reekie" says they are not procurable, the truth is not in him. Show him this. We publish a stamped edition every week, which may be had by order from 42, Holywell Street or through the newsmen.
- H. HUNTER, Romford.—We are preparing a complete series of papers on the HORSE, to be illustrated by a dozen engravings at least; these will contain the best collection we can procure of celebrated trotting horses' performance, when we come to that description of animal.

## OUR WEEKLY CALENDAR.

## AN EXPERIENCE IN JET AND BARNET.

- SUNDAY, October 19th.—TWENTY-SECOND SUNDAY AFTER TRINITY.—PREVENTION OF SMUT IN WHEAT.—Dissolve 5 lbs. of blue vitriol in 5 gallons of boiling water and put the solution into 30 gallons of cold soft water. Place the whole in a tub; put the seed wheat into a basket and thus immerse it in the liquid for one minute. Drain, then turn the seed upon the floor. It will be immediately ready for use; but, if drilled, it should be left for 12 hours to dry.
- MONDAY, 20th.—Amesbury Champion Coursing Meeting.—CHESTER RACES.—Can-  
nock Races.—Battle of Navarino, 1827.—  
Through forest paths, o'erstrewn with rustling leaves,  
October comes, to deck the fading year;  
And of its spoil a varied chaplet weaves,  
Ere long to hang on pallid Autumn's bier.
- TUESDAY, 21st.—Ashford and Woodbridge Fairs.—Battle of Trafalgar, 1805, death of Nelson.—A newspaper complaint of the number of robberies in Hyde Park. "What a shameful attack on the lungs of the metropolis," says a wag.
- WEDNESDAY, 22nd.—Southport (South Lancashire), Coursing Meeting.—Derby Races.—Dog stealing.—Several ladies apply to the Bishop of Bond Street, to ascertain what has become of their "pets." One old lady who has lost her teeth, says it's very strange that her "pug" don't "turn up," the bishop thinks pugs always do.
- THURSDAY, 23rd.—Cardington Coursing Meeting.—Royal Exchange founded, 1667.—Battle of Edgell, 1642.—HOW TO PREVENT FITS.—A particular friend of ours lately consulted a facetious medical man, as to how he should prevent certain fits, into which his spick little boy was apt to fall. "Fits, fits!" replied the man of drugs; "really the most certain way I know of avoiding a fit is to go to Moses and Son."
- FRIDAY, 24th.—Winchester Fair.—Clock behind Sun 15 m. 43 secs.—Sir Cloudesley Shovel wrecked in the Scilly Islands, 1707.
- SATURDAY, 25th.—St. Crispin's Day.—Battle of Agincourt.—William Hogarth the great painter died, 1764.—Shameful case of Child Dropping.—Some heartless person, supposed to be connected with the Admiralty, is announced in the papers, as having "dropt another buoy" at the Nore. Suspicion attaches to one of the Elder Brethren of the Trinity House.

## THE MOON IN OCTOBER.

New Moon, 1st	10	59	morn.
First Quarter, 8th	11	31	morn.
Full Moon, 15th	9	55	morn.
Last Quarter, 22nd	9	14	morn.
New Moon, 30th	11	42	morn.

## TIDE TABLE FOR THE WEEK.

		High water at London Bridge.					
		morn.	aft.			morn.	aft.
Sunday, Oct. 19th	...	4 5	4 21	Wednesday, Oct. 22nd	...	2 56	6 18
Monday, 20th	...	4 40	4 58	Thursday, 23rd	...	6 43	7 7

				Saturday, 25th	...	8 58	9 38

## The Sportsman's Magazine.

## OUR ALMANACK, &amp;c.

N surmounting a tedious ascent, it is natural to turn and take a survey of the road by which we have achieved the object of our aspirations. Just so do we feel as we hastily turn over the leaves of "a set" of the SPORTSMAN'S MAGAZINE, from its first to its last number. Untiringly and perseveringly have we gone on, at a loss of labour and of hard cash—which those uninitiated in the mysteries of paper and print would hear with incredulity, and scarcely comprehend even upon explanation—in the conviction that the class with sporting tastes was sufficiently numerous to support a cheap weekly sporting miscellany of a better description in matter and embellishment than they had hitherto been accustomed to have placed within their reach. For many weeks we worked hard and paid for it, until by dint of perseverance—the quality which enabled the mouse to eat the cable in two—we overcame the barrier, which we strongly suspect prevented in some quarters our general circulation and publicity. This we effected mainly by taking out a STAMP, which enabled us to give news in that edition of our little miscellany. May we not point with pride and gratification to the way in which our promise of keeping our word with the subscribers to that edition has been carried out, so far as the Turf and Ring are concerned? And now comes the *per contra*; through the kind patronage of the public we have reckoned our sale by thousands, and anxious to give them the benefit of the stamp without extra charge, we fixed twopence halfpenny as the price of the stamped edition: but lo; at once starts up a difficulty, which not only cuts away all profit from our stamped edition, but makes us positive losers. The Vendors must have their proportionate per centage on twopence halfpenny; additional type must be set, and Somerset House will have 2s. 2d. for 26 copies, which must be sold as 24 to the trade. Hence, independent of a large outlay to a gentleman of the first talent for exclusive reports (which we publish on Thursday, three days before their appearance in any other paper), we lose upon every stamped copy of the Magazine. These be good and sufficient reasons for raising the stamped edition to THREEPENCE, which will henceforth be its price; meanwhile those who have subscribed for the quarter will still be held faith with, and charged twopence halfpenny, as heretofore.

And now a word or two on another subject; anxious to deserve and preserve the patronage of our old subscribers, we have decided on issuing a "SPORTING ALMANACK" with our TWENTY-FIFTH NUMBER, on the following conditions. Every subscriber who may purchase Number Twenty-Five within a week of its issue will be entitled to a presentation copy of the Almanack for Three-Halfpence; (the Paper and the Almanack together for threepence.)—The Almanack alone will be raised to SIXPENCE immediately after that period, as THREE-HALFPENCE will be less than the wholesale cost PRICES of its PAPER and PRINT. Subscribers therefore had better procure their copies by order early, as the number of Almanacks given will be limited to the number of copies of the Magazine—although the Magazine will be sold without it, if desired. The same week the Stamped Edition (with the Almanack ALSO STAMPED), will be 5d.—The Almanack will be superior in contents, and equal in mechanical execution to anything hitherto published at HALF-A-CROWN!!

"You'll never reach me in my upper notes," as the lark, when high in the air, said to the opera singer.

## BRITISH BIRDS. NO. XVI.

LAPWING, OR PEWET.

**T**HIS, we hope, will be considered a pretty faithful representation of a species of bird common with us during several months of the year, as well as a pretty picture. The lapwing has obtained its *second* appellation from the *peculiar cry* or *twitter* it utters, and which is plainly distinctive to the ear—"Pe-wet, Pe-wet!" They are found on moors, being a water-fowl occasionally in large flocks, and they form their nests in rough grass or sedgy stools upon the ground, which, from the eggs being nearly similar in colour to the moor-land, and like the plover's, are not easily discovered. When their seat is approached they use cunning to prevent its discovery; continuing to hover by degrees from it, and drawing the intruder away by their cries, leading him to imagine that their home is far distant from the spot where it actually has been fashioned. In ploughed lands they rise before the husbandmen in screaming flocks. They are not followed for gain even by the lark or field-fare shooter, little profit arising from their destruction: yet, as they are a species of *winged nature*, belonging to the ornithologist, and the lover of natural history, we have thought a pretty representation of them could not be unacceptable to our numerous subscribers.

! POSITIVES AND COMPARATIVES.—1. The Vauxhall Balloon Steeple Chase was a "Green" affair, but the Rifle Brigade and the '82 Club of Repealers are *greener*.

2. The ladies call Tom Duncombe a *smart* man, but the cat-o-nine-tails is a *smarter*.

3. A basin of Scotch oatmeal is *thick*, but the head of a fool is *thicker*. [This comparative is easily tested.]

4. Anything tart is a *sharp* affair, but a churchwarden who steals the parish funds is a *sharper* [We leave the reader to apply this comparative as he pleases.]

5. Juggernaut is a very *idol* gentleman, but Dr. Johnson wrote for an *Idler*.

6. When the heat is at 100 degrees, it is a *warm* day, but old women of cooks will tell you that a saucepan is a *warmer*.

7. A man who is losing his senses is a *strange* individual, but we have seen Mr. Macready act the part of a *Stranger*.

8. A Yarmouth bloater is *salt*, but a psalm book is a *psalter*.

9. A chestnut horse is a *brown* animal, but a baker's oven is a *browner*.

10. A puncheon of spirits is frequently a *rum* article but a large glass is a *runner*.

A RAILWAY PANIC.—The *Boulogne News* emphatically calls upon the public to refrain from railway speculation, on the ground that many schemes will be unfinished for want of the necessary iron. To say the truth, we do not anticipate a stoppage from want of iron, though we expect there will some day or other be a frightful smash for want of tin.

## GALLERY OF SPORTING CELEBRITIES. NO. I.

THE EARL OF ALBEMARLE.

**B**EHOLD, gentle reader, "readers are always gentle," a pencilling of the most noble William Charles Keppel, Earl of Albemarle, and Master of the Horse to His late Majesty William the Fourth. In this office (held during the present reign by Lord Jersey,) the Earl whose figure-head decorates this column, earned "golden opinions from all sorts of men," and at "royal Ascot," where his horse, THE EMPEROR, was twice winner of the Gold Cup; the first time in the presence of the Autocrat of all the Russias; and the second this present year, winning the gorgeous present named after the Czar, who munificently founded it, and which will be found pictured in No. 5, of the SPORTSMAN'S MAGAZINE. The Earl himself is quite thorough-bred, and traces his pedigree back to Arnold-Joost Van Keppel, Lord of Voerst, who was descended from one of the most ancient houses in Guelderland; and as his ancestor accompanied King William to England in 1688, who can have had a better title to be Master of the Horse to King William than the noble Earl? The Lord of Voerst married a daughter of Adam Vander Duin, Lord of St. Gravemoer, in Holland; and as peculiarities in sires and dams will tell even in a fourth generation, the scientific breeder will detect the yet un-

exhausted "Deutsch" blood in the "round stern" of frontispiece. His Lordship, while in office, conferred a lasting benefit upon the turf by reducing the distances and throwing open the King's Plates to three-year olds, and so striking at the monopoly established by a few stout, iron-limbed horses, who year after year carried them away without affording amusement to the spectators, and in many instances (in consequence of certain physical deficiencies which it would be superfluous to mention) without the possibility of their contributing to the breed of horses, for which these prizes were originally given. This he did as Master of the Horse, an office of high honour and great trust, and possessing a considerable share of patronage, of which he made due use, and provided for those whose claims are most important.

The Master of the Horse has the command of the royal stables, and takes cognizance of all the royal retinue in which horses, carriages, and their requisite attendants are concerned, attends upon her Majesty whenever they are employed, particularly upon public occasions and in processions of state. Should her Majesty be tempted to have "a day with the stag-hounds," his Lordship has to attend, and the establishment of the Royal Hunt is officially announced through his department. We may add that he is father to Lord Bury, one of the kindest hearted men and best shots in existence, and is as universally known as he is respected, as, if not a keen turfite, one of those best friends of racing, who always run their horses to "win if they can."

## GASTRONOMII, A MEM. OR TWO, ON THE PARTRIDGE.

(FROM THE CHASSEUR AU CHIEN D'ARRETT.)

The male of the red-legged partridge is known by certain small protuberances which appear on each foot; that of the common partridge by the chocolate-coloured horse-shoe on the breast. The 1st of October past partridges are full grown. A sportsman should be easily able to distinguish a young from an old bird: the one should be roasted, the other committed to the stew-pan. Cooks often are deceived, yet all men of taste know the worthlessness of an old partridge roasted. When emptying your game-bag they should be divided: the individuals destined for the spit, and those intended for the *purée*, or stewed in cabbage, and who figure in the first course, should be pointed out to them. The experienced sportsman well knows a young from an old bird; in the former the last feather of the wing, which terminates in a point instead of being rounded, is the colour of the feet, namely yellow; whereas that of the old bird is much darker. And with regard to the red-legged partridge, the young bird differs from the old, inasmuch as the second feather of the wing is transparent at the extremity. If you look as it in the light you will see an opening appear in two distinct lines.

A sportsman would always prefer a red-legged partridge to the common bird. It is a much finer bird, more difficult to kill, larger, and fills your game-bag sooner. But a *gourmand* ought to prefer the common partridge. Many may think this a heresy gastronomic, having always heard to the contrary, and always believed it, and it is painful to get over a long rooted opinion. I am well aware that in the market the red-legged bird sells at a higher price than the common one, and that the *restaurant* values it at fifty to an hundred per cent higher; but all this proves nothing: I have made the experiment twenty times at my own table. The two birds have been served together. Some distinguished friends carefully tested their separate merits, and the common bird has invariably received an honourable verdict in its favour, as possessing more flavour, juice, and taste. Try yourself, forget your ancient prejudices; "what beautiful feet, what beautiful plumage," will go for nothing in the judgment you will pronounce. These things are not eaten.

Partridges are said not to be easily digested. It has also other inconveniences.

Certain gourmands pretend that they are enabled to distinguish from taste the thigh on which the partridge sleeps, and say 'it eats better,' and that it has more flavour. I have often seriously endeavoured to make this trial, but I have never been enabled to perceive any difference. I therefore conclude there is some fault in my digestive organs, which have not all the sensitiveness they ought to have. It is a most delicious dish a well roasted partridge, but it is necessary that the nice leaf which well encloses his plump body should not permit the escape of any of its juicy flavour.

I am well aware that Doctor Pedro Recio de Agguero did not permit Sancho Panza to eat partridge, founding his orders upon the aphorism of Hippocrates,

Omnis saturatio mala, perdix autem pessima;

yet as the doctor refused other delicacies at the same time, such as tarts and sweets, we shall pay little attention to his authority, and less to that of Hippocrates. We shall eat many partridges, and wash them down with Burgundy, leaving the digestion to take care of itself.

To distinguish a *gourmand* it is commonly said that he does not like partridges without oranges. This proverb alone will prove that oranges are necessary to be eaten with partridges, if the experience of every day had not proved this great truth beyond all contradiction. A lemon may be used: I have known those, who, unable to obtain better, have permitted it; yet, when possible, never forget a sour orange.

A travelling painter, had been retained at a convent to take the portrait of its patron saint. His work being finished, all admired it, they placed it with pomp over the altar with the following inscription in letters of gold:—"Ad Majoram Dei Gloriam." The painter was thanked, overpowered with praises, and very badly paid. The evening previous to his departure from the convent, wishing to revenge himself on the monks, he got up during the night, rubbed out the portrait, and set to work. With a few strokes of the brush he altered the figure, previously represented in prayer as sitting on a sofa; before him was a well-covered table, on which, under his nose, was placed a roast partridge, the steaming odour of which promised to the happy expectant positive joy, and in the hands, previously pressed in the attitude of devotion, he placed a fine orange from which the saint appeared to press the juice with much satisfaction.

The next day the monks found their picture still over the altar, the motto was unaltered; you might still read—"Ad Majoram Dei Gloriam."

## THE GAMECOCK.

SECTION VI.—(Continued from page 367.)

COCKFEEDERS.

HOEVER of the profession may peruse these observations, will take the motive for the deed. It is a duty every feeder owes to his employer, as well as to himself, to see that the room is thoroughly cleaned and well aired, and that the pens are removed from the walls, taken out of the room, and well scraped and washed, and that they are as dry as the air can make them, by being exposed to it for at least eight or ten days previous to their being brought in,—that they may be properly and duly exposed to the warmth during the time the fire is continued. Pens contract a fustiness from being a short time out of use, more particularly when vacant the greater part of the year—so as to render them disgusting, and brings on nausea and distemper.

To see the lesser minutiae properly prepared is highly necessary; such as the straw, that it is clean thrashed, sweet, and very dry—and I should strongly recommend the use of distilled soft water, or at any rate the best soft water filtered that can be procured; and your barley thin skinned, old, white and dry, and deprived of the ends, as much as thrashing in a bag will effect: by so doing it will digest the easier. As to the other articles of diet, they must be left to the management and discretion of the feeder.

Coverings, according to the season, are used thick or thin, whichever of the two let them be remarkably clean, sweet, and well aired: I should prefer a regular set for the purpose, to be the master's property—I have seen very improper coverings. If your room is sufficiently large, and you have a regular set of pens, never suffer them to be fixed up to the walls, but put in frames with upright standards in the centre of the room—that is, double pens not directly opposite to each other, but one of the opposites a pen distant from the other. Cocks should be considered nearly stationary in their pens, they cannot avoid surrounding effluvia, and as walks imbibe much moisture they are long ere they emit it—and of course the humidity is imbibed by the pens. If the pens by being stationed in the centre become liable to partial air, I have known double doors made use of as a seclusion, and equally so for security—the fewer visitors the better, and as few handlers as possible. Cocks may be said to be immured in a prison, when in their pens—deprived of their natural air and exercise, debarred the enjoyment of proudly escorting their hens, in culling and selecting whatever contributes to their health—roused and ruffled by noisy and repeated pride, until he becomes jaded and hoarse, and shy even to his scanty meal: use reconciles him to his prison, and he becomes familiar to the offers of those artificial luxuries which warm and exhilarate the system, and help to soften the tediousness of confinement and intrusive handling. I think it is almost unnecessary to say any thing

upon the subject of cleanliness in every progressive step ; many little attentions are so many gradual promoters to their welfare. An industrious turn straw has it much in his power to contribute thereto, and in the department of shaking and raising the straw the dung falls to the bottom—and of course, must by heat become offensive ; surely it is no very difficult undertaking to thoroughly cleanse the pens, not only of straw but of every apparent filth—and the better to accomplish this, have two spare pens, marked Nos. 1 and 2, equally and delicately clean with the other one at the top, the other at the bottom—and these two pens will answer the purpose of your shifting the whole from top to bottom, until they are all finished ; and this may be done with the least possible trouble : two people may go through this necessary and cleanly operation without any injury to the cocks—the enjoyment of fresh straw every day must add much to their comfort. Several pens may be emptied in a large twig basket, in preference to emptying them upon the floor, which would create dust, &c. and so on to the end. A cock-feeder in London very high in esteem, every morning made use of a pint of the strongest vinegar he could procure, and with a large sponge washed the two divisions of each pen which the cocks fed through, and which he thought prevented any disagreeable consequences arising from the multiplied exhalations of the whole. This sponge appeared to me to be a very useful appanage to cleanse and absorb unnecessary moisture. Another excellent accommodation was that of hospital pens adjoining the room he fed in, these were also very clean and well strawed, for the purpose of those cocks that won, and the same number put upon the hospital pen as the cock fought out of : so that they were easily recognised, and the feeding pens by this method were kept pure and sweet. Pens might be constructed so as to take to pieces, cleaned and kept dry until wanted, and put together at a small expense, which I should recommend as preferable to all others.

Cocks are frequently brought up from their walks in damp and filthy bags, which is a bad practice, and never ought to be suffered. We cannot be too cautious in guarding against every possible circumstance that might introduce any unfavourable disease in the pens ; such has been the case frequently, and instances have been known from villainous motives.

In respect to feeding, it is a province I never encountered—nevertheless I have paid much attention to the different modes each feeder made use of, and although varied in several respects, yet each have fought with good and bad success in their respective modes. It requires an extensive practice to form a complete judgment of the condition of a cock on the day of fight—much depends upon a good finger, and a knowledge of that position a cock puts himself in, in and out of condition, exhibiting different feeds and forms ; it is not the feel that feeders are in the habit of using to know if a cock returns his meat, but that feel which gives to the grasp that firmness, compactness, warmth and fire, all of which are felt and seen :—the eye portrays the rest of his condition.

The firmness of his flesh indicates health and good feeding. The contraction of his legs to his body, vigor and heat ; and a cock under these circumstances, shews what is termed full of fight—the contrary is soon felt : for he is

Soft and heavy in hand,—  
Legs low and dangling,—  
Eyes dull and unmeaning,—  
And his whole cold to the feel.

When a cock arrives at the top or height of his feed, art can go no further, and when it takes place the day he fights much credit is due to the feeder ; for cocks retain that zest but a small time, and become retrograde every day after. All cocks when set, should be so ordered, that they should arrive at their proper fighting condition on that very day they are to fight—if either under or over, and his antagonist fortunately otherwise—it is at these critical failures that one side is so frequently cast in the back ground.

Cocks vary much in their mode of fighting ;  
Some are hasty and fiery,—  
Others cautious, wary, and close hitters,—  
Some wide and generally dry heeled,—  
Whilst many are lofty and darting.

Those that are low and fluttering, are seldom dangerous in their heels ; the latter description are those that are destitute of that tapering shape which so eminently distinguishes them in their superior mode of fighting. Cocks that are as broad behind as before, have their legs thrown out of the line of the body, and of course are wide in their fly and dry heeled.

To judge well of a battle requires much attention—a quick discerning eye—a knowledge of those parts of the cock most liable to sudden and destructive fate, and which turns the fluctuating tide of odds against them ; others that are more slow in their effects, yet fatal to their victory—many are momentarily crippled and yet not immediately detected : variously are the heels directed, and many parts are perforated with little injury in the heat of battle, although felt when cold—these are not alarming to the adept, and they take advantage of those who are : a cut throat is for the most part very conspicuous.

A well known amateur describing a battle has the following lines :—

“ New hostile rage each daring foe maintains,  
And death, as fate inclines, alternate reigns ;  
In various shapes the missive blow appears,  
And dire destruction 'midst the conflict bears—

Now purple life unloads the turgid veins,  
And gushing down the crowded circums, stains,  
Or stagnates, swells the throat, and vital air restrains.”

## SECTION VII.

### GENERAL REMARKS.

Breeding is involved in many difficulties, for cocks will partake of a variety of shapes ; and, with some feeders, a cock, full in its girth, and narrow behind, is preferred ; when, with others, a lofty spiring, narrow cock is approved. As this is a well-known circumstance, and if you breed to any extent, you have to combat with all their various partialities, if these fall to your lot who are enamoured of the former description, the cocks of the latter become a loss upon your own hands, although the breeder is confident they have every fighting excellence that can attach to the cock : and, although I have ever recommended the establishing the first class, yet there are certainly many instances where that partiality ought to be set aside. A gentleman of my acquaintance, who has been long in the habit of breeding some capital feathered Circhius, which are invariably lofty and thin, and such is the excellency of these cocks, that their average winnings have been nine out of thirteen for several years ; yet he is now so circumstanced, in respect to his present connections, that not one of these birds have been an object to the present feeder. This is not brought forward as being an advocate in promoting the breed of the narrow-shaped cock, yet cocks so eminent in their blood feather, and heel, are much preferable to those of superior shape, not so gifted. My friend is perfectly aware that his birds are esteemed deficient in shape, but he still means to persevere, rather than to hazard the giving them the so much esteemed shape required by a fresh cross, or the giving them up altogether, under the idea that he may lose in them what he esteems a superior acquisition. His unconquerable arguments are, that he had rather have them with their matchless heels, than the most esteemed symmetry without.

Feeders say they expect good shapes ; but what they call good shapes do not bring with them good heels. A lofty, narrow-shaped cock is wonderfully agile in his sparring, and for the most part more dangerous in his spins, than a contrary shape ; but a broad cock, with equal share of heel, must have superior resistance and power, and, if attainable, they are, without a doubt, the most to be approved. I should think my feeder nicer than wise were he to refuse cocks of mine of that description, merely because he did not like their shapes. Sporting gentlemen, one and all, give unquestionable preference to a cock with a good spur, as the most decided acquisition appertaining to a blood cock, therefore I cannot impeach my friend's attachment to his well-tried favourite birds. It is now full in my memory, “ says Mr. Sketchley,” that a set of cocks, the property of a Captain Barnes, a resident near Burton-upon-Trent, Staffordshire, where I formerly resided, fought a great many cocks of this description, save, that instead of their being equal in feather to the last recited, were perfect cuckoos—in most other respects, as to shape, similar. These cocks were still more lofty in their sparring, and an adversary had seldom the chance of a long battle : they were quick dispatchers, and deep game. These, notwithstanding their feather, which according to our ideas and modern improvement of breeding, would be sufficient to reject them in toto, were sought for with avidity, and no cocks had warmer advocates, or more general followers. These party-coloured birds are apt to degenerate in their constitutions, but that was not the case with them during their being in possession of their original owner ; for I had an opportunity of knowing them for several years. It was remarked that no cocks retained that beautiful vivid red, that lustre of health so every way conspicuous in these cocks. The vivacity of the eye, and their high beaming spirit, ranked them a superior class of birds. The attitude, carriage, or disposition of the whole body in these cocks were remarkably graceful, and their head and neck were always in proudly motion. At the decease of Captain Barnes, these cocks fell into the hands of the neighbouring colliers, became crossed with other fowls, and lost their original character.”

(To be continued in our next.)

## THE SPORTSMAN'S RESOURCES THROUGH THE PRINCIPAL COUNTIES OF ENGLAND.

BY ACTION.

That spirit of reformation, as it is termed by some, but by others more properly a mere restless change, which is so continually developing itself in every department connected with our expenditure and national amusements, has been stimulated and brought about, do doubt, by not only a vast overflow of population, but more especially by the increased facility with which our rising generation are enabled to avail themselves of the power to indulge in the frivolous amusements of our more mercurial neighbours on the Continent. We may add to this a general system of economy bordering almost upon the niggardly, which has rendered it ne-

cessary that the more aristocratic of our British sports should be, excepting in a few isolated instances, supported by joint contributions collected from the purses of those sportsmen who may be patrons of the recreations which we have alluded to, and of others who may be equally interested in their promotion.

Take fox-hunting for instance: out of the one hundred and odd packs which hunt the different counties of England, only about a dozen or fourteen are supported by the generosity of the worthy proprietors themselves: namely, those of Sir William Stanley, in Cheshire, the Duke of Cleveland, in Durham, the Duke of Beaufort and the Earl of Fitzhardinge in Gloucestershire, Mr. Asheton Smith in Hampshire, the Duke of Rutland at Belvoir Castle, Lord Yarborough in Lincolnshire, Sir Richard Sutton in Rutlandshire, Lord Fitzwilliam in Northamptonshire, and Lord Southampton in the Duke of Grafton's old country in the same county, Mr. Meynell Ingram in Staffordshire, Col. George Wyndham in Sussex, Lord Harewood and Sir Tatton Sykes in Yorkshire, and perhaps one or two more of minor note in remote and unheard-of corners. The above are all what may be termed close countries: the rest are kept up entirely by subscriptions, partly but in a small degree contributed by the proprietors of estates themselves, partly by a kind of tax *justly laid upon*, or in other words *expected* as a matter of course from strangers who may have been induced to reside during the winter months in the neighbourhood, the amount given being left to the generosity of the donor; and even, in too frequent instances, from small sums screwed from the pockets of the different innkeepers, horse-dealers, liverymen, &c., who may be fortunate enough to live within the boundaries of the said hunt so urgently requiring aid, and who may have been patronised by the custom of the members themselves. I was much amused, at the termination of last season, reading in a newspaper, that, in a county not one hundred miles from the centre of England, and containing one of the most fashionable of the spas on Dr. Granville's list, so great was the difficulty in raising the sum of money guaranteed to the master of the hounds for the support of his establishment, the subscribers were actually obliged to appeal to the generosity of the minor tradespeople and artisans of the place, a list of whom, with their small contributions was actually published in the county paper, and amongst them was inserted the few shillings extorted from the hard-earned wages of an industrious laundress! But such instances, I hope for the credit of our gentry, are rare, particularly in that district which had so long arrogated to itself the vaunted title of "one of the crack hunting countries of England!"

Then again there is shooting: how matters are altered during the last fifteen or twenty years in that respect! Why there is hardly an acre of ground, not even a snipe marsh, where the game is not directly or indirectly preserved, unless where it has been totally annihilated; that is to say, it is either overwhelmed with the more aristocratic nursery of the breeder of tame pheasants and hares, or taboo'd by the pot-hunting and avaricious occupier of a pitiful hundred acres, who, by sweeping his unsportsmanlike net at the commencement of each season, insures to himself, by the utter annihilation of the game, a few paltry shillings towards the liquidation of his landlord's rent. In former times, a fair sportsman, who might walk his way some ten or fifteen miles right across a country in his travels, would not have had a word said to him for a month together,—at least the chances of his not being interfered with were greatly in his favour; but since game has been looked upon as a mere article of commerce, and "trade's unfeeling train" has usurped the land, matters stand quite different, and unless a man may be blessed, as Somerville says, with "*hereditary wealth heaped copious*," he had much better keep to the high road in his rambles, as he cannot now have the privilege of enjoying an hour's shooting without paying most exorbitantly for the leave of beating over land where there is not a remote chance of finding a single feather, or of running the risk of being immediately pounced upon as a rogue and vagabond by the hired watchman of some aristocratic poultry-marchant.

Of fishing we may also say the same thing. The good old days of Isaac Walton and uninterrupted strolls along the verdant meadows in Spring are at an end, save by the silvery Thames, and some of the larger rivers in the neighbourhood of towns, where the remotest chance of catching anything but the courser kinds of fish seldom exists. I could enumerate, however, instances of the angler enjoying excellent sport occasionally in streams open to the public, but shall reserve them till their proper turn arrives in my notices of the various counties and their resources. Such halcyon days and tranquil scenes as the old father of anglers was wont to

describe have passed away, except to those who may feel inclined to belong to a club, or to purchase a ticket from some adventurous maker of fishing-tackle in the metropolis, or who can afford to pay for his diversion by staying at the house of some Piscean Boniface, who may have taken some water-side public-house and adjoining fishery as a speculation: and mind you, some of these amphibious gentlemen are more voracious in their calling than the otter itself: while others to their credit be it made known, build up to themselves everlasting respect by their moderate charges, urbanity of manners, and general deportment towards their guests. But more of this anon.

Under such an aspect, then, of our sporting resources, our true interest consists, rather in our support to the utmost of our power by the continued upholding of such systems, much as they require reformation in their minute details, than by a contemptuous attempt to cry down and not support a state of things which has at length become so general, popular, and unavoidable, and which has been brought about partly by unforeseen and uncontrollable circumstances, but as much as anything, by the apathy, ignorance, and consequent poverty, and in some instances by the contemptible avarice, of many of our great landed proprietors themselves.

It is the opinion of many persons, but only of those I trust who may be denominated "croakers," that the national sports and pastimes of this country are fast falling into disrepute; nevertheless, without doubt or hesitation we may say, that there is certainly a great change in the administration of them—viz., the presence of railroads, increase of population, and consequently a vast difference in the cultivation of the land; and, by no means the least, the abominable and useless state of the present game laws. All these tend materially to affect the enjoyment of our sports, and are causes over which the sportsman abstractedly cannot have the slightest control.

It is not my intention here to enter so far as I might do upon the subject of the amusements of the people in general: it is a field far too wide for me to explore at the present moment, necessary as such recreations are, not merely as healthful employments, but to look at the thing in a light as of the highest importance to the policy of this country. That a great deal of discontent and bitter feeling exists even amongst the higher classes of this community, every one who has the slightest powers of observation cannot avoid seeing. The vast difference in the amount of wealth possessed by gentlemen of the same rank, and the exclusive manner in which the more wealthy aristocrats enjoy to themselves those "out-of-doors" amusements, which seem by nature as if they had been sent for all to avail themselves of, must eventually generate heart-burnings in the breasts of those (and it is impossible to alter human nature) whose early habits have engrafted in them the same desire to pursue the sports of the field as their more menied and perhaps less worthy contemporaries. Pray do not suppose, gentle reader, for one moment, that I am radical in my politics, or that I am endeavouring in the slightest degree to depreciate our aristocracy, or their more expensive round of amusements: if that class give them up in disgust, farewell to the nationality of this country; let them enjoy them to their hearts' content: all I wish to point out is, that the less wealthy gentleman—mind you I am writing at this moment not upon the general sports of the people, but the field-sports of the gentlemen of England—may have the same facility of enjoying a morning's diversion with his fishing-rod or his gun as his more refined cousin with his twenty thousand a-year. Mr. Granctley Berkeley, in his lately published pamphlet on the game-law, said with very great truth, that the mass the gentlemen of this country preserved their game, the more good, in various ways, would accrue to the country at large, or words to that effect; but as I have not his pamphlet with me, I cannot give his sentiments in the identical words by which he expressed himself. I should like to see the whole of this country—that is, as much of it as is available for the purpose—preserved in a proper manner for the amusement of gentlemen. If we take a glance over the different agricultural districts, even within a hundred miles of the metropolis, we may see numbers of the most extensive tracts of land which are wholly given up to the merciless poacher, or the not less objectionable pot-hunter, which might be preserved at a comparatively trifling expense, and rented by a club or society of sportsmen, whose motive would be, not the slaughtering of the whole of the game in one short morning, as is the case with many of our more fashionable battue-shooters, but the option of going over the different beats, regulated by a code of rules agreed upon amongst themselves, whenever they might feel inclined to go down into

the country for a day or two's shooting. It is a well known fact that four-fifths of the men who go into the highlands of Scotland every year grouse and fishing are composed of the professional men of London and other large cities, who take this opportunity of breathing a little fresh air, and rubbing off the dust and smoke of that crowded Babylon. And why do they go to Scotland? Because that is the only country where shooting and fishing can be engaged upon those terms, expensive as they are: and I have no hesitation in saying that three parts of those professional men who take "their outing" in visiting foreign parts, and follow each other like a string of geese up the Rhine, and to the south of France, would, if even moderate shooting could be obtained, "change the venue" and seek for recreation in the stubble-field and turnips, instead of spending both their time and money in a most unprofitable manner, excepting to the hotel-keepers, as they listlessly saunter along the broiling streets of some foreign town. If we allow ourselves to reflect, but one moment, we shall see the expedience of encouraging our field-sports, not only with a philanthropic view towards those of our own *caste* as a means of promoting health, but also as a matter of policy will it be advantageous, as calculated to allay those symptoms of discontent of which we before spoke, and arrest them in their progress. We read in history of the consummate judgment of a *real* philosopher, who, when his city was besieged invented games to divert the attention of the inhabitants from the horrors of a blockade. Besides, there is no surer method of cementing the reciprocity of feeling and sympathy of spirit which ought to be cherished in every country between men of the same rank in society, than by encouraging those kind of sports and recreations which may be termed national.

In case then of such fearful presage on the score of mere nationality alone, and to put all selfish views out of the question, it is the duty of all who revere the manly and enviable characteristics of this country, to support in every way, by the best means in their power, our national sports; and by so doing, not indeed the least material part of the business, they would eventually considerably increase her pecuniary resources, and much of the money now wasted on the Continent would be spent here, and there would be no occasion to subject the frivolities of Paris, Aix-la-Chapelle, or Baden Baden, for the more manly and healthy recreations of fox-hunting, shooting, fishing, &c. *Sporting Mag. for October.*

### NATURAL HISTORY OF SPORTING.

THE TAME RABBIT.

(Continued from page 347.)

**ALTHOUGH** the Tame Rabbit, whose picture tops this column can hardly be considered within the legitimate scope of sport, yet is he, thanks to the "Fancy" who breed and patronize his many varieties, decidedly a *Sporting Animal*. Hence we shall offer no apology for its picture, but proceed at once to a resumption of the article broken off in the last number.

**Feeding.**—Upon a regular plan, and with sufficient attendance, it is better to feed three times than twice a day. The art of feeding rabbits with safety and advantage is, always give the upper hand to dry and substantial food. Their nature is congenial with that of

the sheep, and the same kind of food, with little variation, agrees with both. All weeds, and the refuse of vegetation, should be banished from rabbit feeding. Such articles are too washy and diuretic, and can never be worth attention, whilst the more solid and nutritious productions of the field may be obtained in such plenty, and will return so much greater profit. Rabbits may, indeed, be kept, and even fattened upon roots, good green meat, and hay; but they will pay for corn; and this may be taken as a general rule. Rabbits which have as much corn as they will eat, can never take any harm from being indulged with almost an equal portion of good substantial vegetables. However, the test of health is, that their dung be not too moist. Many, or most, of the town feeders never allow any greens at all; the reason, I suppose, because they feed almost entirely on grains. The corn proper for rabbits:—oats, peas, wheat; pollard, and some give buck-wheat. The greens and roots, the same as our cattle crops, namely, carrots, Jerusalem artichoke, and if potatoes, baked or steamed. Lucerne, cabbage-leaves, clover, tares, furze. I have had them hoven, from eating rape; and not improbably, mangold might have a similar effect. Clover and meadow-hay, pea and bean straw.

Rabbits are generally sold from the teat, but there is also a demand for those of larger size, which may be fattened upon corn and hay, with an allowance of the best vegetables. The better the food, the greater weight, better quality, and more profit, which I apprehend to be generally the case in the breeding of all animals. Some fatten with fresh grains and pollard. I have tried all wheat, and all potato oats, comparatively; but could find no difference in the goodness of the flesh. The rabbit's flesh being dry, the allowance of succulent greens may tend to render it more juicy; and I suppose the old complaint of the dryness of the flesh in Devon beef, entirely fed by hay, might be remedied in the same way. Rabbits are in perfection for feeding at the fourth or sixth month; beyond which period their flesh becomes more dry, and somewhat hard. It requires three months, or nearly so, to make a rabbit thoroughly fat and ripe; half the time may make them eatable, but by no means equal in the quality of the flesh. They may yet be over fattened, as appears by specimens exhibited a few years since, at Lord Somerville's show, which were loaded with fat, without and within, like the best feeding sheep; and at the late London cattle show, two were exhibited, one of them exceeding the weight of fifteen pounds.

Castrated rabbits might be fattened, no doubt, to the weight of upwards of ten, or even fifteen pounds, at six or seven months old. The operation should be performed at the age of six or seven weeks. I have not succeeded in castrating the rabbit, but am informed it is successfully practised in the land of capons, namely, Sussex, near Chichester, where on the average, not one in three hundred is lost by the operation, which is performed at five or six weeks old.

In slaughtering full-grown rabbits, after the usual stroke upon the neck, the throat should be perforated upwards, towards the jaws, with a small pointed knife, in order that the blood may be evacuated, which would otherwise settle in the head and neck. It is an abomination to kill poultry by the slow and torturing method of bleeding to death, hung up by the heels, the veins of the mouth being cut; but still more so the rabbit, which in that situation utters horrible screams. The entrails of the rabbit, whilst fresh, are said to be good food for fish, being thrown into ponds.

By 7 & 8 Geo. IV. if any person unlawfully and wilfully, in the night time, take any hare or coney, in any warren or ground lawfully used for the keeping thereof, whether enclosed or not, every such person shall be guilty of a misdemeanour; the persons guilty of the same offence in the day time, or using any snare or engine, are subject to a penalty of five pounds. But this does not extend to the taking, in the day time, any conies on any sea bank or river bank in Lincolnshire, so far as the tide shall extend, or within a furlong of such bank.

**Amphill Rabbit Bazaar.**—I have stated at the commencement of this article, that the large concerns had generally ceased. Of late, one has arisen at Amphill, Beds., upon a more extensive sale than ever before attempted, established by J. H. Fisher, Esq., an agent of his Grace the Duke of Bedford. Upon so extensive a plan, indeed, is this new undertaking, that it may be well styled our grand National Rabbit Bazaar. The building, situated on an eminence, is square, somewhat resembling barracks, with a court within the walls, and with thirty acres of fine light land adjoining, under culture of those crops known to be best adapted to the nourishment and support of rabbit-stock. It was proposed to keep between four

and five thousand breeding does, which number is probably now complete. The young rabbits, from seven to nine weeks old, are sent to Newgate and Leadenhall markets, fifty to sixty dozens weekly. The quantity of dung produced, which is reserved with the utmost care, and free from any extraneous substances, must be very considerable. A number of men and boys are employed in the concern, under the direction of an experienced foreman, and the utmost regularity of attention observed with respect to management, feeding, and cleanliness.

This bazaar has been honoured by the visits of persons of the highest rank; of his late Majesty, William IV., his Grace the Duke of Bedford, Lord Holland, Lord Vernon, and a number of ladies and gentlemen.

The wild warreners catch their rabbits with fold-nets, with spring-nets, and with "tipes," a species of trap.

The fold-nets are set about midnight, between the burrows and the feeding grounds; the rabbits being driven in with dogs, and kept inclosed in the fold until morning.

The spring-net is generally laid round a haystack, or other object of inducement for rabbits to collect in numbers.

The tipe or trap is a more modern invention; it consists of a large pit or cistern covered with a floor, with a small trap door nicely balanced, near its mouse. It used to be set by a haystack, but since turnips are now grown for the winter food, in an inclosure within the warren, the trap is placed within the wall of this inclosure. For a night or two the rabbits are suffered to go through the mouse, and over the trap, that they may be familiarised to where the turnips are grown, after that the trap-door is unbarred, and the number wanted are taken. In emptying the cistern, the rabbits are called, the fat ones are slaughtered, and the others turned upon the turnips to improve.

In shooting a rabbit, always consider the foremost half of him as your target, or he will probably be shot in a slovenly manner; and if there is an earth near, most likely scramble to it, and make his escape.

**GOOD NEWS.**—It is expected that at the next meeting of Parliament, the cotton Lords will be all worsted.

A ludicrous mistake happened some time ago at a funeral in Marylebone. The clergyman had gone on with the service, until he came to that part which says, "Our deceased brother or sister," without knowing whether the deceased was male or female. He turned to one of the mourners, and asked whether it was a brother or sister. The man very innocently replied, "No relation at all, sir, only an acquaintance."

**MUSK.**—Musk is a concrete substance, found in an animal having a near affinity to the deer tribe, a native of Thibet, China, and Siberia. The musk deer is a timid animal, and rarely appears during the day; consequently the musk collectors watch and surprise it at night. The best musk comes from China; and to have it genuine it should be purchased in the natural bag or pod, as it is very often adulterated. The Bengal musk is inferior, and that from Russia the worst of all. The hair on the pod of the best musk is a fawn colour; that on the inferior a dirty white. A variety of musk is found in the musk-rat of Canada, an animal about the size of a small rabbit. Musk is of a bitter taste, and of an odour more powerful than anything known; substances in its neighbourhood become strongly infected by it, and when once perfumed with it, long retain the scent. It has been known to affect chests of tea placed at a considerable distance, even though both had been packed up in leaden boxes; for which reason the East India Company gave an order not to import musk and tea in the same ships. Many persons dislike the odour. It has the property, when employed in very small quantities, of augmenting the scent of other substances, without imparting its own.

**SERVANTS AND THEIR "FRIENDS."**—Every master and mistress in the United Kingdom knows what a maid servant's "friend" is. Sometimes he is a brother; sometimes he is a cousin (often a cousin); and sometimes a father, who really wears well, and carries his age amazingly. He comes down the area, in at the window, or through a door left ajar. Sometimes a maid servant, like a hare, has many friends. The master of the house, after washing his hands in the back kitchen, feels behind the door for a jack-towel, and lays hold of a "friend's" nose. "Friends" are shy; sometimes a footman breaks a friend's shins by plunging into the coal cellar for a shovel of nobbles. We speak feelingly, our own abode having been once turned into a friend's meeting house—a fact we became aware of through a smoky chimney; but a chimney will smoke when there is a journeyman baker up it.

**THE CHURCH IN DANGER.**—The Ecclesiastical Commissioners and the church of St. Stephen, Walbrook, have simultaneously gone to decay. Age has cruelly perforated the roof of the latter, and the sacred edifice is absolutely more "holy" than "righteous." We understand the parishioners intend petitioning Churchwarden Gibbs to present the building with a new "tile." It sadly needs a covering.

## WEST COUNTRY PRACTICE OF "DOWSING."

[The following facts, arising from this singular practice, well known in Somersetshire and the adjacent counties, we are assured by an influential morning paper, may be depended on.]—*Editor S. M.*

"The ceremonial of dowsing is as follows:—The operator cuts a twig from the white thorn or hazel, which is forked at one end. He then takes in each hand one of the prongs of the fork, and holds them close to his body, just under the ribs, extending the handle, or stem, horizontally before him. Thus provided, he moves slowly over the ground which it is his intention to examine, and if there be water or ore underneath, its presence will be indicated by the repulsion of the rod towards his breast as soon as he arrives at the spot where the spring or the mineral is deposited.

"Let us now proceed to state the facts, in which the practice of discovering water in order to sink wells has been successfully and recently employed. The first instance mentioned occurred upon the lands of Wm. Edwards, Esq., of Sand, near Widmore, in the county of Somerset, a gentleman of a highly cultivated mind, and one who holds in great contempt the local superstitions of the peasantry. Some years since, however, one of his farms (now tenanted by Edward Tuckett,) being situated on an eminence, suffered severely from the want of water, and he determined to guard against the repetition of such an evil by sinking a well. It so happened, that just as he was about to put his plan into execution, he saw a man named Mapstone, employed on a neighbour's land in dowsing for water. Having entered into conversation with him, Mr. Edwards was induced to give him a trial at the farm, expecting to reap no further advantage from the experiment than that of a hearty laugh at its failure and absurdity. Mapstone, however, went to work in the manner already described with his instrument, the dowsing fork, and had not proceeded far before he stopped at a particular spot, declaring that water would be found within twenty feet of the surface. Two labourers were immediately employed at dig the well, and in three days, having perforated about nineteen feet, they arrived at a pure and abundant supply of water, which has never been exhausted in the driest summer that has taken place since.

"The next instance took place on the premises of Arthur Phippin, Esq., at Widmore, near Wells, Somersetshire; where, on Tuesday, 10th September, 1844, a person named Charles Adams, was brought from Rowborough, near Shipham, to dowsing for water. Adams is forty-three years of age, and has practised dowsing since he was thirteen, in the course of which time he has sunk upwards of 100 wells. Having cut from a hedge a forked white thorn twig of this year's growth, about eighteen inches long in each stem, he entered the garden, and walked about, with his apparatus projected in the usual way, to search for water. He had walked but a few paces over the soil when the fork was repelled, and the position of the spring discovered. This spring he traced west and east to a considerable distance, until he arrived over a covered well, of the existence of which he was totally ignorant, and there the instrument became so much agitated that it required a strong pressure to keep it down. All the spectators successively held one of the branches or stems, and every one of them was convinced by the resistance made to his effort that the ceremony was no delusion. Another experiment was made in the kitchen, the floor of which is covered with stone, and under which there are no springs. In the absence of Adams, three hats were placed, crown upwards, on the floor at equal distances, and under the centre hat were deposited three silver spoons. Adams was then called on to exhibit. To the two empty hats the dowsing fork was immovable, but when held over the centre hat, which covered the spoons, it was driven back towards the breast of the operator, just as when the presence of water was indicated. Another experiment was made on the same occasion. The three hats were again placed on the floor, the first covering a small diamond pin, the second three silver spoons, and the third a gold watch, chain, and seals. The first and second hats produced a powerful effect on the dowsing fork, that which covered the diamond pin being far the more powerful, while that which covered the watch, chain and seals, was but slight, being hardly perceptible to the different witnesses to the exhibition. Adams, who is a very sober, industrious man, can produce testimonials of his ability and success in this extraordinary process, from many persons of the highest respectability in the county of Somerset. He stated to the company, that he had recently been sent for by the Rev. Mr. Foster, at his seat near Sodbury, in Gloucestershire, to give advice on the subject of procuring water, that gentleman having, at considerable expense, sunk a well full sixty feet in depth, without arriving at a drop of water! Upon dowsing, Adams quickly discovered a spring within six feet of the well, which spring he conjectured to be about twenty feet under the surface, and on descending to that distance in the well, he perceived an oozing of water from its side. He accordingly recommended his employer to make an arch, of three feet by two feet in width, and six feet in length, from the spot in the well whence the water oozed, and that being accomplished, the workmen found an abundant supply of excellent water, which speedily filled the well to the extent of forty feet.

"We will only farther add, that the same experiment took place on the premises of John Barrow, Esq., a magistrate of the district, a gentleman in every way superior to the influence of vulgar prejudice, but at the same time too enlightened to shut his eyes with obstinate incredulity against anything capable of experimental proof.

# ADVERTISEMENTS.

## DONCASTER ST. LEGER.—PAUL ASHLEY'S DONCASTER ST. LEGER SWEEPS, for 1846, are Gone to the following TOWNS and PLACES.

First 25 Swp.	1st prize, to Hoyland	£250 0 0
	2nd do., with interest, to Sheffield	41 15 0
	3rd do., to Leicester	20 0 0
Second 25 Swp.	1st do., to Barnsley	250 0 0
	2nd do., to Abbot Repton	20 0 0
	3rd do., to Sheffield	20 0 0
First 25 Favt.	1st do., to Rainhill	70 0 0
	2nd do., to Chertsey	20 0 0
	3rd do., to Littlemore	10 0 0
Second 25 Favt.	1st do., to London	70 0 0
	2nd do., to London	20 0 0
	3rd do., to Chichester	10 0 0
Third 25 Favt.	1st do., to London	70 0 0
	2nd do., to Hull	20 0 0
	3rd do., to London	10 0 0
First 21 Sweep	1st do., to Leeds	60 0 0
	2nd do., to Doncaster	10 0 0
	3rd do., to Sheffield	5 0 0

Secnd 2. 6. Sweep	1st do., to Sheffield	6 12 6
	2nd do., to Sheffield	2 10 0
	3rd do., to Sheffield	1 0 0

P. A. has also 'drawn, exclusive of the above-named Sweeps, eighty others for different stakes during the Doncaster race week.

**MASTIFFS** of extraordinary size and pure breed for SALE.—FOUR BITCHES and THREE DOGS; and a two and a half year old dark fawn, black muzzle, bitch, 30in high; a light fawn bitch of immense power, 2 years old (in pup); two brindled bitches of first-rate character, 20 months old (in pup); a beautiful dark brindled dog, two and a half years old—matchless; a black dog, 20 months old; and a nearly 6 months old fawn black muzzle pup. Any of the above are worthy the attention of noblemen or gentlemen, as being the grandest specimens of the canine race, having been bred and reared regardless of trouble or expense. Apply to Mr. Slade Bull, Milford-lane, Strand.

TO BE DRAWN EVERY EVENING.

## T. PARISH'S DERBY SWEEPS for 1846, White Horse, Fann-street, Aldersgate-street, City, CAMBRIDGESHIRE STAKES.

Subs.	1st	2nd	3rd
78 at 5s. 0d.	£13 0s.	£4 0s.	£2 0s.
78 at 2s. 6d.	6 10s.	2 0s.	1 0s.

Subs.	1st	2nd	3rd	Start.
191 at £1.	£130	£30	£10	£1
191 at 10s.	60	15	5	10s.

191 at 2s. 6d.	15	3 10s.	1 5s.	2s. 6d.

The above Prizes will be paid the day after the Races, as the Judge places the Horses, without reference to age, pedigree, or qualification. Five per cent less to be drawn as soon as full notice of which will be given one week previous. Post Office Orders attended to.

T. PARISH, Treasurer.

## WORTHY OF NOTICE.

### A SUPERFINE BLACK DRESS COAT for TWO GUINEAS, at KISCH'S WEST END ECONOMICAL, CONTRACT, CLERICAL, and GENERAL OUTFITTING ESTABLISHMENT, 40, Cranbourn Street, Leicester Square.

Inventor of the Improved Style of PALETOT. A Book, containing list of prices and mode of self-measurement will be forwarded (on application) post free.

Observe the address, 40, Cranbourn Street, Leicester Square.

### STOVES. THOMAS WALKER'S PATENT SELF-FEEDING PHOENIX STOVES

THESE admirable Stoves require fuel but once a day, show a bright fire, are free from dust and unpleasant effluvia, have a great radiating surface, equally heated, produce uniform and perfect combustion, and have therefore no explosive gases; are durable, economical, ornamental, and take up little room; and are adapted for ascending or descending flues, free from danger or fire, and may be used as an open Stove, still requiring fuel but once a day.

302 Oxford Street, London, or at 56, Oxford Street, Birmingham.

where the Stove may be seen constantly in use, and where Prospectuses and respectable Testimonials may be had.

Prices—3, 4, 5, 6, 9, 14 and 16 guineas; the two last are for churches and other large buildings.

### BATHE'S SWEEPS Green Dragon, Fleet-street. PRENDERGAST STAKES.

Subs.	1st Prize	2nd Prize	3rd Prize.
21 at 10s.	£27 0s.	£13 10s.	£7
21 at 5s.	13 10s.	6 10s.	3 10s.

Prendergast Stakes drawn To-morrow, Monday and Thursday; a few vacancies. 5s. and 10s. Sweeps open for the Criterion Stakes. All money divided, less 5 per cent. Post office order attended to.

Just Published, the SIXTEENTH EDITION, illustrated with cases and Full-length Engravings, price 2s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 2s. 6d.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope,) 3s. 6d., a new and improved edition of

### THE SILENT FRIEND; a Medical

Work on the Infirmitates of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 63 Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

THE CORDIAL BALM OF SYRIACUM is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 38s., by which 11s. are saved. The Five-pound cases may be had as usual.

THE CONCENTRATED DETERGENT ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin. Secondary Symptoms.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c., without hindrance to business.

Consultation fee, (if by letter,) £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

## TO SPORTSMEN.

**SHOOTING, HUNTING, FISHING, and DEER STALKING KNIVES.** J. B. DURHAM, Manufacturing Cutler, respectfully invites the attention of Sportsmen to his Immense Stock, which includes all the Newest Patterns and latest improvements, and all warranted of the best quality. Knives of every description made to Order on the shortest notice. Old knives, &c. polished and repaired. 261, Regent-street, near the Polytechnic Institution.

### THE SECRET COMPANION. A MEDICAL WORK on NERVOUS DEBILITY and the concealed cause of the decline of PHYSICAL STRENGTH and the loss of MENTAL CAPACITY, with remarks on GONORRHOEA, SYPHILIS, SECONDARY SYMPTOMS, &c. and Mode of Treatment; followed by observations on MARRIAGE, with proper Directions for the removal of all Disqualifications. Illustrated with Engravings, showing the evils arising from the use of Mercury, and its influence on the body. By J. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell-square, near the British Museum London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges-street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges-street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

### THE CORDIAL BALM OF ZEPHANICA; OR NATURE'S GRAND RESTORATIVE.

is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c.

This Medicine should be taken previous to persons entering into the Matrimonial State.

Sold in Bottles, price 4s. 6d., and 11s. each, or the quantity of 4 in one Family Bottle for 38s., by which one 11s. Bottle is saved.

The 25 Cases may be had as usual.

### BRODIE'S PURIFYING VEGETABLE PILLS.

are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 1d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell-square, near the British Museum, London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. Brodie and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of Cases. The communication must be accompanied with the usual consultation fee of £1, and for all cases the most inviolable Secrecy may be relied on. Only one Personal Visit required to effect a Permanent Cure. Country Vendors can be supplied by all the wholesale houses in London.

Observe—27, Montague-street, Russell-square, near the British Museum.

### THE EARL OF ALDBOROUGH

CURED BY

### HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st. Feb., 1844.

A Wonderful Cure of Dropsy of Five Years' standing. Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.

Sir,—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c. &c.

(Signed) THOMAS TAYLOR

These truly invaluable Pills can be obtained at the Establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicines throughout the CIVILIZED WORLD, at the following prices—1s. 1d., 2s. 9d., 4s. 6d., 11s., 22s., and 38s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

LONDON.—Printed by WILLIAM SMITH, of White Hart Street, in the Parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell Street, Strand, by E. DUFFLE.—Thursday, October 4th, 1845.

[Stamped to send free by Post, Three-pence.]

## DON'T YOU WISH YOU MAY GET IT?

**S**URELY we need not write under the cunning customer that caps these columns his cognomen of "Charley"? We opine not: the ancient sign-painter, who inscribed beneath his ambiguous animal "this is a horse," lest some innocent passer-by should take it for a boar-pig or a starved buffalo, drew animals in some "other-guess fashion" to that of the artist who cut the living likeness of this voracious varmint. It needeth not surely much strength of the imagination to see that some gorgeous ground-feeding pheasant, or close-lying partridge, hath just winged his flight to upper air from before the sniffing nostrils of the sneaking slaughterer. Yes! you've missed your aim this time, rascally Reynard, as sure as Barney missed his mammy's blessing when they hung him ten minutes before the venerable lady's arrival. We will not here repeat your natural history as it is known to all; but we give unto you fair warning that, as the season advances, we'll tell the reader all sorts of things about your hunting—anecdotal, instructive, and amusing—and with this we proceed to *hoop up* this article with a *stave* or two.—

In the gorse-brake or covert his kennel is made,  
Those bleached bones of the rabbit discover his trade;  
But tighten your girths, and look well to your seat,  
We shall bolt him, anon, from his wily retreat.

"Tally-ho! Tally-ho!" 'tis the bold hunter's shout;  
The hit, 'tis a true one, he soon must break out;  
Hark to Daisy, and Damper, and Dauntless—'tis he;  
Now the de'il take the hindmost—it shall not be me.

Crash, crash,—out of covert! by Nimrod of old,  
Let he that would flinch be, aye, tied to a scold;  
Crash, crash,—there goes —! he's cleared it, I'll swear:  
But let others, less close to the saddle, beware!

Hold hard there, hold hard! let them settle, my boys,  
Ride not over the scent, make no fluster nor noise;  
Give the cocktails good room; they will soon recollect,  
Should this burst hold ten minutes, we must be select.

See, see, how they tail, not the pack, but the field;  
The hound will be staunch, when the hunter shall yield,  
Not a check, not a fault; what a head! this is fine;  
Is there aught, but dear woman, on earth so divine?

Take heed of that brook—they are in it: ne'er mind;  
There are those shall uplift them who struggle behind:  
The music's before us; the music so dear!  
And what, what should stop us, when death is so near?

That death—bark to "Juno!" she leads them—sweet lass—  
That death which gives life to the prime of our class;  
Hold onwards! there are but — and we;  
We left our last rival, dead beat, in the lea.

\* The reader is requested to fill these blanks with the names of the best riders of his acquaintance.—ED. SR. MAG.

She leads them, pet Juno, yet close on her stern,  
At full stretch, gallops Jessy, to strive for her turn;  
Whilst the falcon he follows, he yields—in a swoop,  
The pack are upon him—he dies—whoo-o-o-sop!

Is it over? all ended? No! ne'er be it said,  
That all must be over when Reynard is dead;  
'Tis true we have killed him on Waverley plain,  
What then? o'er our wine-cups we'll kill him again.

Then a glass for the breath of the "merry-ton'd" horn,  
A glass for the dark sky and southerly morn;  
And bumpers on bumpers—a burst—fore we go,  
To "Fox-hunting,"—"hark forward!"—"Yo-oicks!"—"tally-ho!"

## THE FISHER'S CREEL.

### THAMES ANGLING REGULATIONS.

**D**URING this "off season" we cannot perhaps make a better fill-up for this angler's corner than by printing the following abstract. Its careful perusal may prevent inconvenience to some suburban sportsmen, save the postage of others, and our own time in answering queries:—

#### RULES WHICH REGULATE FISHING IN THE THAMES.

The rules and ordinances for governing and regulating all persons who shall fish or dredge in the river of Thames, and also in the waters of the Medway within the jurisdiction of the Lord Mayor of the City of London, as conservator of the said river and waters, were framed and set down in writing by the consent of the mayor and aldermen of the city of London, on the 4th of October, 1785, and commenced and took place from the 1st day of November in that year, and are still in force. They are signed, Clark, mayor, and confirmed and approved by Mansfield, chancellor, and Loughborough, chief justice.

Many of these rules, &c., refer to nothing below the bridges, and are therefore not interesting to anglers. Consequently we shall only give those which bear either indirectly or directly on the business of anglers or affect their sport. The following are such:—

Rule 16. "That no net under the guise of three inches in the mesh shall be worked by any person at any time of the year above Richmond bridge, upon the river Thames; and that no person shall use any net in the work of fishing called *beating of the bush, flag, or reel*, which shall be of less size than three inches in the mesh, or shall use or lead their nets with any stones, lead, iron, bricks, or other things than the lead which is usually put upon the same to sink them, under the penalty to forfeit and pay five pounds for every such offence."

17. "That no net, engine, or device shall be wrought or drawn over the weeds, for catching of pike or other fish by any person, under the penalty to forfeit and pay five pounds for every such offence."

20. This is a most important regulation, and the strict enforcement of it by all water bailiffs will prevent an immensity of poaching. It is as follows:—"That no person shall fish or attempt to take fish with any sort of net in the night-time, or before sun-rising, or after sun-setting, at any time of the year in the said river of Thames, between Richmond Bridge, and the City of London's mark stone above Staines Bridge, under the penalty of forfeiting and paying five pounds for every such offence."

21. "That no person shall use any draw-net or draw any net, although of legal size or mesh, upon, or after any other net or nets; and that no person shall land or ship into any boat on shore any net in any part of the said river westward of Richmond Bridge, under the penalty of forfeiting and paying five pounds for every such offence."

23. This clause is the most important to anglers. "That the respective times and seasons for persons going forth to fish, and taking fish, in the said river of Thames, shall from time to time be observed by them, and be as follows, that is to say, trout shall only be taken from the 25th day of January to the 10th day of September yearly. Pike, jack, perch, roach, dace, chub, barbel and gudgeons shall only be taken between the 1st day of July and the 1st day of March in every year, except such as shall be taken in the month of June by angling. And any person who shall catch any fish within the jurisdiction aforesaid in any other season of the year, or in any other manner, shall forfeit and pay for every such offence the sum of five pounds."

24. An important regulation, broke through hourly. The rigid enforcement of it would be displeasing to many, but otherwise to the true and accomplished angler. It enacts, "That no fish, of any of the sorts or kinds hereinafter mentioned, shall be caught in the said river of Thames, or sold, or exposed to or for sale, if caught in the said river, of less weight or size than herein-after is specified, that is to say, no trout of less weight than one pound, no pike or jack under twelve inches long, from the eye to the end of the tail, no perch under eight inches long from the eye to the end of the tail, no roach under eight inches long from the eye to the end of the tail, no dace under six inches long from the eye to the end of the tail, no chub under nine inches long from the eye to the end of the tail,

no barbel under twelve inches long from the eye to the end of the tail, no gudgeon under five inches long from the eye to the end of the tail, under pain to forfeit and pay five pounds for every such offence." Were he to anglers if they were informed against every time they caught fish weighing less than stipulated above.

40. "That no person shall, by any device, ways, or means, wilfully take, destroy, or spoil, any spawn, fry, or brood of fish, under the penalty of forfeiting and paying five pounds for every such offence."

41. "That no person shall wilfully take or catch any fish out of season, or during the time or season of spawning, under pain to forfeit and pay five pounds for every such offence."

44. Is in favour of anglers, ordering "that no person shall fish with any sort of net, weel, night hook, or any other device, except by angling, in, or make use of any net, engine, or device, to drive the fish out of any place which shall be staked by order of the Lord Mayor of the said City of London for the time being, as conservator aforesaid, for the preservation of the fishery, and whereof notice shall be stuck up in some public place of the town or village next adjoining to the place or places so ordered to be staked; and that no person shall take up or remove any stake, burr, boat, or any other thing which shall have been driven down or sunk in any such place as aforesaid; upon pain to forfeit and pay, from time to time, the sum of five pounds for every such offence on breach of any part of this order."

56. "That after the said 1st day of November, 1785, no person shall follow the trade or business of a fisherman on the said river of Thames, within the jurisdiction aforesaid, and catch fish for sale, or to sell, unless he hath been or shall be brought up to the said business, or shall have served an apprenticeship to or with some person of the trade or business of a fisherman, upon pain to forfeit and pay from time to time the sum of £1. for every offence in breach of any part of this order."

The mayor of the city of London, or any justice of the peace, has the power of punishing according to the above rules, and can only remit half of the penalty, and in default of payment, and if the fine cannot be levied by distress and sale of the offender's goods he can be committed to prison as by the said act is directed. These rules and ordinances, of which we have only given an abstract, ought to be in the hands of every one interested in the preservation of the fisheries of the Thames. They are printed by Mr. Taylor, 20, Coleman-street, the city Printer.

### ANALYTICAL RESULTS OF THE DONCASTER MEETING.

The following analytical statement of the results of the late Doncaster meeting may prove not uninteresting to some of our readers. During the four days of the meeting twenty races (exclusive of private matches) were set down for decision, involving a gross total value of 12,050l. Of these twenty races, seven were run on Tuesday, and were of the value of 2,190l. Wednesday's list exhibited on paper five races, worth 4,260l. Thursday's four races were worth 2,190l.; and Friday wound up the meeting with four races, value 2,660l. Of the above races, however, one proved nil (not having filled), two were walked over, and five were reduced to matches. Lord G. Bentinck started six horses for as many races, and was successful in three, which were of the net value of 2,710l. The horses belonging to Dawson's stable carried off six prizes, equivalent in value to 1,485l. Peck's stable produced two winners, whose net gains amounted to 1,300l. Scott's stable won six races, value 4,996l. The stables of J. Forth and J. Day seemed deserted by their usual good fortune, not having been able to carry off a single prize. The total number of horses which contended during the week was 79, although, of course, many of these made more than one appearance during that period. In these races where animals of both sexes were engaged, the males proved the most fortunate, carrying off seven prizes, while the horses only obtained five. In the All-aged Stakes three were won by three year olds, four by four year olds, two by five year olds, and one aged. In eight cases the favourites at starting proved the winners, and in nine cases the non-favourites were successful. The most fortunate jockeys were F. Butler, who won three races (including the Lag-r), T. Lye three, Nat Flatman two, and Cartwright two.—The total number of passengers that reached the Sinton station for the races amounted to 3,379, being 800 more than last year. The receipts for their conveyance amounted to 1,100l., and the increase of passengers, on the whole line, for seven days, exceeded 2,000l.

INTERESTING TO LONDON ANGLERS.—The roach season being at its height in the Thames, the river in the vicinity of Richmond, Twickenham, and Teddington daily exhibits a scene of animation, by reason of the great numbers of bank and punt anglers constantly visiting those localities. Last Sunday, at Richmond alone, in the preserve, and on its banks, about 200 Waltonians were assembled, to say nothing of the numbers of anglers that were engaged higher up the river. Several piscatorial parties, after walking to Twickenham and Teddington, found all the punts and boats pre-engaged, and were obliged to turn to town without having their fill of sport. The "takes" of roach and other fish at the above named places have for some time past been very numerous, fine, and heavy.

EFFECT OF RAILWAYS ON HORSES.—Since 1839 the post horse duty has decreased from 224,347l. to 163,160l. The abominable tax should be altogether repealed.

## BRITISH BIRDS. NO. XVII.

THE SOLITARY SNIPES.

**OUR** first engraving of the Snipe Family is the one claiming precedence on the score of size, as the GREAT or SOLITARY SNIPES; its size as the scientific name of *Scolopax media* implies, is half-way between the woodcock (*Scolopax rusticula*) and the common snipe (*Scolopax gallinula*.) The habits, manners and breeding of the snipe with the peculiarities of snipe shooting will be fully treated of in our next number, under the common Snipe, accordingly we shall merely note the peculiarities of the subject in our engraving.

The GREAT SNIPES, is also distinguished by its bill being shorter and stronger than that of the former; its belly and vent dusky white, barred with black, that of the common snipe white; the plumage on the back is darker; the tail has more red in it; the legs are of a darker green not black, as described by Latham; and when sprung does not cry out. They are generally found in high stuff, such as reeds, flags, &c. They lie very close, and are not so quick on the wing as the other species. These birds abound in the Pontine Marshes, are frequently found in the swampy country of the south-west of France, near the shores of the Bay of Biscay, and breed in Sweden. The name by which they are known by in France is "*La double Becassine*." It is sometimes though rarely, found in the marshes near the metropolis, on the banks of the Thames, and in the county of Norfolk. In August, 1835, a couple of these birds were shot within a few miles of Norwich, the male being of the extraordinary weight of ten ounces, the female eight ounces.

## RECOLLECTIONS OF THE LATE MR. JOHN JACKSON.

"I go to the land where my father is gone,  
His ghost shall rejoice in the fame of his son."

HUNTER.

As a pendant to the pugilistic memoir which appeared in the second and third numbers of the SPORTSMAN'S MAGAZINE (in the History of Boxing now in progress in these pages) the following anecdotes of the late respected athlete will be found interesting.

John Jackson was an instance of the glorious truth which this country is continually evolving—that if a man be but true to himself he may defy the malice of millions. It is no matter in what grade of life a creature be thrown—it is no matter whether, from necessity or choice, he wingles with the learned or illiterate, the high or low—give him the attribute of genius, or, if that be denied, integrity and industry, he must distinguish himself. The choice of a profession is the puzzle of boyhood—be it so. A profession never yet degraded a man, if that man took care not to degrade his profession.

As there always have been and will be ruffians let loose upon society, who must be quelled by the only argument those brutish unfortunates can understand, and as

Heads, nineteen in twenty, 'tis confess'd,  
Can feel a crabstick quicker than a jest,

it is essential that boxing, as an art, should not wholly fall into desuetude; it empowers the little man to contend with the big one, and enables the weak man, to a certain extent, to defend himself against the strong one.

The present state of England requires little self-power in its inhabitants. Gas and the police have done much to keep ruffianism at a low tempera-

ture, but even now things do occasionally occur to call upon every man to at least be enabled to let his own hands defend his own head; or, what is of much more consequence, the heads of those near and dear to him. Such a power is a *corps de reserve* that though perhaps never called into action, it is pleasant to possess. So thought our grandfathers—so thought our grandfathers' fathers in the days of Fielding. Boxing amid the gentlemen of England was but a deteriorated knight errantry; it enabled a man to protect an insulted woman. "Ay!" exclaims the anti-pugilist, but what say you to the prize pugilist—the promoters of pugnacity? The reply is plain—they are but the exemplars of a practice. Had tilers no teachers? and could they teach without exemplifying?

This rambling exordium leads us to a review of the life of one who was at once the Napoleon and the Nestor of the ring. John Jackson was born in the vicinity of London, in 1768. His father was a builder, and, though not of wealthy lineage, the boy "Jack" had as ample means as most of those who figured in the by-gone days, when education and business-habits were not considered the primary affairs for a young man whose parents were "well to do." John Jackson loved sport for sport's sake. He was neither a libertine nor a drunkard, a gambler or a peep-of-da-boy; and if he was occasionally seen at the Royal Grove, the Dog and Duck, and Bagnigge Wells, it was not to sacrifice either to Bacchus or Venus. He was an agile dancer, a capital wrestler, and at single stick had few competitors. He was intended for his father's profession, and had progressed in the study of it, when an irresistible desire to distinguish himself made him suddenly enter the fistic arena. A father fond to excess of a son who in all other points was a model of propriety, and proud of a "boy" declared to be "the most perfect specimen of an English youth," was soon persuaded to yield to his earnest request, to "try his hand, if only for once." Novices as big as bullocks were proposed, but John Jackson wanted to walk to the head rung of the ladder at once, and desired to fight an accomplished boxer. Fewterell was at length selected by him. Now, Fewterell, a "canny Scot" by birth and temperament, was no common man; he was above six feet in height, and 14st. in weight, with great strength and greater activity; above all—a rarity in those days—he fought not at random, but at points; he was an intelligent and intellectual man, and one whose temper vicissitudes could not ruffle, consequently a very dangerous opponent to an impetuous youth not yet twenty. The battle came off on the 9th June, 1788, at Smitham Bottom, near Croydon, in the presence of almost all the young aristocracy of England, headed by his late revered Majesty George the Fourth, then Prince of Wales. After an hour's contest, Fewterell was taken away, and the "boy" declared a victor. It now became evident to the patrons of pugilism that a pancratian genius had arisen, who could administer the most severe punishment and yet remain scathless; but this would not do with the many, who thought Fewterell had made too light of his antagonist. Accordingly Jackson, who merely fought at first from the boy-pride of being "best at everything," was persuaded to enter the lists with George Ingleston (commonly called "The Brewer"), a pupil of Johnson, who defeated Perrins. Ingleston was six feet in height, a tremendous hitter, but possessed little science: his merit consisting in his great strength, and his utter inability to understand when he had had "enough." On the 19th of March, 1789, Jackson and he came on a stage at Ingatestone, Essex. Jackson took the lead and kept it; but in the fourth round he fell, dislocated his ankle, and broke the small bone of his leg. "Take him away!" "No!" said Jackson; "fasten us both down in chairs, and put us before one another, and we'll fight it out." This, however courageous the proposal, it was, of course, impossible to comply with. This fight, had he proved victorious, would have finished Jackson's career as a pugilist, but to leave off from a mere accident was impossible; still the persuasions of his real friends induced him to withdraw himself from a community, even then, fast falling into disrepute. He became an innkeeper and a thriving one. From this retirement he was routed by the vaunting of Daniel Mendoza, who, having beaten Martin, Humphries, Fitzgerald, and Warr, declared he could "polish off the conqueror of Fewterell." This was not to be borne, and accordingly a match came off on a stage at Hornchurch, in Essex, on the 15th of April, 1795. This was a severe fight. In the fifth round Jackson seized Mendoza by the hair of his head, and taking his purchase this way, administered punishment unsparingly with his other hand. The umpires being appealed to declared this to be fair. Since that period all pugilists have affected the tread-mill crop. Jackson beat the invincible Dan Mendoza in ten minutes and a half!

This was his last display as a public pugilist, although in 1801. Mendoza, exasperated by Jem Belcher, declared his readiness to fight Jackson again, "provided he (Jackson) would not take the unmanly and cowardly advantage of holding his hair." These were provoking words, because a barber and a pair of scissors would have ensured safety in that respect; but it must be remembered that Dan had reason to be sore, he was but five feet seven and a half, Jackson six feet good. Mendoza was also the older man. In reply to this challenge, Mr. Jackson wrote a very angry letter, and after mutual bickerings the matter ended. Poor Mendoza sank into poverty and died in Horsehoe Alley, Petticoat-lane, on the 3rd Sept., 1836, aged 73.

From 1785, therefore, Mr. Jackson ceased to be a public pugilist, having fought but three battles, winning two and not gaining (for it

cannot be called losing) the third by an accident. On what basis, then, rests his fame as a thoroughly tried boxer? On none whatever; the pedestal of his popularity was conduct, the keystone to fortune in every grade of life. There is a singular similarity in the career of John Jackson and John Gulliv: the latter fought but thrice, was beaten once, won the other two, and then retired to enjoy a better fortune in a higher sphere of society.

Ere quitting the more active sporting career of Mr. Jackson, it may be as well to state that as a runner his speed was extraordinary, but he could not last; he also excelled as a jumper until Ireland "took the shine out of all England."

The opening of "Jackson's Rooms, 13, Old Bond-street," was literally an era in the gymnastic education of the aristocracy. Not to have had lessons of Jackson was a reproach. To attempt a list of pupils would be to copy one-third of the peerage. Byron, who was a proud of being thought a pugilist, has in his correspondence spoken highly of his tutor; but the fact is, from lameness, the poet could neither hit nor stop effectively. When Jackson taught the author of "Childe Harold," he was 44, Byron about 23; the latter therefore, stood a boy before a veteran. In a note to the 11th Canto of "Don Juan," we find this:—"My friend and corporeal pastor and master, John Jackson, Esquire, professor of pugilism, who I trust still retains the strength and symmetry of his model and form, together with his good humour, and athletic as well as mental accomplishments."

"Jackson has been here; the boxing world much as usual, but the club increases (i. e. Pugilistic Club.) I shall dine at Cribb's to-morrow."

He records going to this dinner thus:—

"Just returned from dinner with Jackson (the Emperor of Pugilism), and another of the select, at Cribb's, the champion's."

The next extract shows the author of "Childe Harold" actually in training.

"I have been sparring with Jackson for exercise this morning, and mean to continue and renew my acquaintance with my snaffles. My chest, and arms, and wind are in very good plight, and I am not in seek. I used to be a hard hitter, and my arms are very long for my height (5 feet 9½ inches); at any rate exercise is good, and this the severest of all; fencing and the broad sword never fatigued me half so much."

This letter is dated 17th of March, 1814.

"Got up, if any thing, earlier than usual; sparred with Jackson *ad sudorem*, and have been much better in health than for many days."

Byron kept at his work, for we find him writing thus on the 9th of April, 1814:—

"I have been boxing for exercise with Jackson for the last month daily."

In returning to the younger days of the "finest formed man in Europe," it is necessary to take the liberty of borrowing a graphic colloquial sketch from the lips of a veteran:—"There were the Lades, the Hangers, the Bullocks, the Vernons, but give me Jack Jackson, as he stood, alone, amid the throng. I can see him now, as I saw him in '84, walking down Holborn-hill, towards Moorfields. He had on a scarlet coat, worked in gold at the button-holes, ruffles, and frill of fine lace, a small white stock, no collar (they were not then invented), a looped hat, with a broad black band, buff knee-breechers, and long silk strings, striped white silk stockings, pumps, and paste buckles: his waistcoat was pale blue satin, sprigged with white. It was impossible to look on his fine simple chest, his noble shoulders, his waist (if anything, too small), his large but not too large hips (the fulcrum of the human form, whether male or female), his limbs, his balustrade calf and beautifully turned but not over delicate ancle, his firm foot, and peculiarly small hand, without thinking that nature had sent him on earth as a model. On he went at a good five miles and a half an hour, the envy of all men, and the admiration of all women."

As regards his face nature had not been bountiful; his forehead was rather low, and the mode he wore his hair made it peculiarly so; his cheek bones were high, and his nose and mouth coarse; his ears projected too much from his head, but his eyes were eyes to look at rather than look with, they were full and piercing, and formed a great portion of his power as a pugilist—with them he riveted his men.

Anatomists of the first standing examined Jackson, and artists and sculptors without number have taken sketches and models of his arm; but it was the extraordinary proportion of the man that formed the wonder. It is to be regretted that there is not extant his exact admeasurement from head to heel.

After 1795 Mr. Jackson resolved to teach others the art in which he himself excelled. For an instructor he had that invaluable requisite, temper; he was never too fast with his pupils; this made his initiatory lessons tedious to young gentlemen who go ahead, and it may readily be conceived that amid the aristocracy of England he had plenty of ruffians to deal with; but he was always on his guard, there was no chance of rushing suddenly in and taking Jackson by surprise—he could not be flurried. Amid the other qualifications he had studied Lavater, and managed to reckon up his customers at first sight, and knew what he had to trust to. It has been said "he defied any man to hit him," this is the truth but not

the whole truth—he defied any man to hit him whilst he (Jackson), stood merely on the defensive; in a fight, of course, it is impossible to avoid being hit.

His sparring was elegant and easy. He was peculiarly light upon his feet, a good judge of distance, and when he indulged his friends with a taste of his real quality, the delivery of his blow was only observable in its effect; it literally came like lightning, and was felt before it was seen. Most big men are comparatively slow, but he was as rapid as Swift or Walker, and this, too, when upwards of fifty years of age.

Jackson not only told you what to do, but why you should do it; in this essential point many capital instructors are and have been deficient. The want of this power of explaining the purpose of an action made Young Dutch Sam and Richard Cartis bad instructors, though they were finished pagilists, and, which does not always follow, capital sparrers.

Jackson was not unmindful of the fact that art never ends. If there was anything new in the gymnastic, equestrian, or pedestrian way, there he assured was Jackson; not merely witnessing the exhibition, but examining the means by which the effects were produced; he was consequently often at Astley's, at the Surrey, when Ireland, the jumper, was there, and knew all the famous fencers, fummambulists, dancers, and riders of his day, and his day was a long one.

Of his private character what can be said more than that all his pupils became his friends. Save with Dan Mendoza, it is not known that he ever had a quarrel. He was a careful, not a mean man—saving, but not penurious. It is to be remembered, too, from his peculiar situation, continued calls were made upon his purse by the ruffianly and profligate, who claimed a brotherhood that he utterly and properly repudiated.

In 1811, as recorded in a former number, he procured a benefit at the Fives Court, in aid of the subscription for the suffering Portuguese; it realised 114*l*. Next year he did the same for the British prisoners in France; this benefit amounted to 132*l*. 6*s*. He also aided the benefit for the Lancashire weavers (1826).

One old boxer (but who was not of Jackson's day) pestered him incessantly for money. "No," said Jackson, "I'll give you no money; but you may go to the Horse and Groom, and you will find a clean bed, three meals, and a pot of beer a day; stay there until matters mend." The man was thankful in the extreme; but a week had not elapsed ere he was found in the taproom bartering his dinner for gin!

Of course a "lion" like Jackson could not avoid being made a "show" on particular occasions; accordingly, when the allied sovereigns were in England, his aid was required. On the 15th of June, 1814, at the house of Lord Lowther, in Pall Mall, a pugilistic fete came off in the presence of the Emperor of Russia, Platoff, Blucher, &c. The display so delighted those illustrious fighting men that it was resolved to carry the thing out on a grander scale, accordingly, the King of Prussia, the Prince Royal, Prince of Mecklenburgh, and others assembled. Jackson, Cribb, Belcher, Oliver, Painter, and Richmond were the principal performers. The foreign nobility now wanted a peep, and at Angelo's rooms some splendid displays took place. It was said that Jackson had inoculated them with a pugilistic fever, but it is believed he never obtained a single pupil from among them. If this be a fact it is an extraordinary one.

At the coronation of George the Fourth, Mr. Jackson was applied to to furnish an unarmed force "to preserve order." Cribb, Spring, Belcher, Carter, Richmond, Ben Burn, Harmer, Harry Lee, Tom Owen, Joshua Hudson, Tom Oliver, Harry Holt, Crawley, Curtis, Medley, Purcell Sampson, and Eales, with Jackson at their head, formed the corps, dressed as Royal Pages.

One gold coronation medal was given to the boxers—they raffled for it at a dinner, Tom Belcher won and wears it.

Mr. Jackson had for many years been stakeholder, frequently referee, was always ready to go round personally and solicit a subscription for the beaten man—and who could refuse John Jackson? A match was made in 1822, between Randall and Martin for 500 guineas a side, but Mr. Elliot, Martin's backer, "cried for his toy again," in fact, demanded his money back. Mr. Jackson declared he would never again be a stakeholder, and he kept his word. Thus virtually he retired from the ring, and from that moment the ring declined. Its progress downwards has been checked, now and then, by men of good conduct, and battles of great interest. Spring and Langan (1824) revived the hopes of many. Dutch Sam from 1827 to 1839, rallied a few of the right sort around him, so did Burn and Owen Swift. A sort of reaction took place when Broome fought Bugaree, and even the American Giant's palley hawley match awakened attention, but down, down, down, the ring seems doomed to go, unless some thorough reform in the *etiquette* of fights is introduced or some "Fair Play," or "Pugilistic Club," of respectability influence, and numbers can be formed to check its rapid descent. Sorry are we to say it, but those who should support it, and even those who have thriven by it, seem in too many instances to be giving a parting kick to the expiring lion of British Boxing. Let us hope to see it revive like "a giant refreshed" to the utter confounding of unmanly, cruel, and bloodthirsty foreign methods of resenting insults by retorting injuries.

John Jackson lived for many years at the house in which he died, No. 4, Lower Grosvenor street, West; Tattersall's may be said to

have divided his residence from that of another great artist, i.e., John Liston. It is with pleasing melancholy we remember the Yarmouths, the Combes, the Ashtons wending their way to the house of the one, and the Kembles, with, perhaps, Charles Matthews and Charles Taylor, Theodore Hook, and Young standing at the low-roofed house of the latter. Liston still survives to recall those days.

There is little more to say. Loved by many, respected by all, enjoying an unlimited circle of excellent society, he passed his days; affluent, but not rich—he wanted less than he had, and his income exceeded his expenditure. He was a cheerful companion, sang a good song, told his anecdotes with great tact, and never obtruded them. For the last year or two his health declined, but until then he had scarcely a day's illness. Peacefully and trustfully, with his hand in that of his niece (whom he loved as a daughter) John Jackson expired, on the 7th of October last. His death was as gentle as his life had been exemplary.

## NOTICE!

## THE SPORTSMAN'S ALMANAC,

will be ready for delivery with NUMBER TWENTY-SIX of the SPORTSMAN'S MAGAZINE; it will contain the whole of the Nominations for the Derby, Oaks, and Leger 1846; revised tables of the duties on horses, dogs, game certificates, &c. A list of principal Jockeys and the colours of their Masters; Public Trainers; Sporting Chronologies for 1846; a really SPORTING Calendar, (which no other Almanac has yet combined) besides a mass of general information equal to other Sheet-Almanacs, printed in a style for framing or suspending on a board in public or private rooms.—Price THREEHALF-PENCE to Subscribers—SIXPENCE to Non-Subscribers, after the expiry of the week of publication.

## CORRESPONDENTS.

**J. CHILL.**—We will pop in your means about the neighbourhood of Foot's Cray under FISHBY'S CURE in No. 22.

**Leaves.**—The *Tom Swann's LIFE* is however had a totally different proprietorship from that of the *SPORTSMAN'S WORLD*, and that also from the *SPORTSMAN'S MAGAZINE*. They are totally separate and distinct affairs, save and except that the Editor of the *SPORTING WORLD* is now the Editor of this publication. 2. The colour is not an infallible criterion of the true meerschaum; the best are generally (until permeated with the essential oil of tobacco) of a creamy white, and almost smooth to the look (though not to the touch), as ivory, which (partially discoloured) they much resemble. Meerschaum is a magnesium earth, found in many parts of Asia Minor, and particularly near the sea of Anaf. It is extensively moulded and manufactured in Germany and Holland, and there are innumerable cheap and worthless imitations of it on sale in every tobacco-shop. Meerschaum, in Dutch, as well as the French, means *smooth* or *smooth* (from *meers*, to which the unmeaning and offensive and trifling earth, in its unmanufactured state, is fancifully supposed to bear a resemblance. A true meerschaum will generally scratch with a soft yet earthy feel, while many of the imitations are confoundingly hard; it has also the property of being a non-conductor of heat in a remarkable degree.

**James BOWEN, Broomby.**—You are pretty near marshes where snipe and wild fowl are to be found. If you have a certificate no one can prevent you from shooting on waste or public land, and there is plenty of it in your Kentish or Essex marches. Permission must, of course, be obtained ere you go on to private or reserved land.

**G. E. H.**—Twenty-nine horses started in 1844 for the Derby, and thirty-one this year, which was the largest number ever known. 1841 and 1844 stood highest previously, the same number (29) having started in each year. There were, however, more subscribers in 1843, 3, and 4, than this year; 42 exhibited the largest list, namely, 182.

**L. B. C.**—Monitor and Weathered against Miss Sarah and Old England's a cancelled bet. You did not say "in their places," therefore, as neither of them was, the wager is, of course, void.

**M. R. Cheltenham.**—The cause of the nine diamonds being called "the cause of Scotland" is that the first announcement of the defeat of the Highlanders, at the battle of Culloden, was written, by William Duke of Cumberland, on the bank of the nine diamonds. Some historians call it the cause of Scotland, being five times nine.

**S. N. H.**—The stakeholder is bound to abide by the decision of the referee, or of the umpires if they agree. To strike a man down on both knees is foul, unless he attempts to strike his adversary. You will find your other questions answered in the Memoir of Tom Crisp, begun in this paper.

**A. BURY SUBSCRIBER.**—Is a postmaster authorized to make a charge on a newspaper from its merely having on the cover, besides the address, the month and day on which it was posted. The charge made was 3s. on a single paper, the distance sent sixty miles.—There must be no writing or mark upon any newspaper or cover, other than the name and address of the person to whom it is sent, and it is chargeable with treble the amount of postage which a letter of the same weight would have been liable to.

**H. HUNTLEY.**—The word has two meanings, if not more; your dispute hinges on a quibble, and you are both right and both wrong. It is therefore no bet. To your second question:—Spirit is a name given to ardent liquors obtained by distillation. Spirits of wine and alcohol, in common language, mean the same thing. Proof spirit consists of fifty-five parts of alcohol, and forty-five of distilled water. If one hundred parts contain more alcohol, the mixture is then said to be above proof; if more water, under-proof. Spirit of wine, when divested of nearly all its aqueous particles, is called alcohol. The process of effecting these changes is termed "rectifying."

**HARRY.**—Thanks for the lines. They shall find a niche. They are Thomas Hood's, and we remember (when editing the early numbers of the *NEW TOM SWANN'S LIFE* in LONDON), extracting them from one of the lamented deceased's volumes.

**COGGY.**—The Editor received your letter, although addressed to the Publisher. As we destroy each letter as we peruse or answer it, to prevent a confusion of *literary litter* we cannot refer to and compare manuscripts and signatures some weeks gone by; but in very probably, as you suppose. We have given answers to somebody under the cognomen of *Coggy*, seeing which, perchance "some cogging cozening knave" has taken a cogizance of, and popped a false cog into the circle of our cogitations.

**B. C. D.**—If the book would cost you 9d., very grudge 1d. for the articles of which you complain, when they form but a portion, and a very small one, of this miscellany? As to your nonsense about *Times*, *Bell's Life*, and *Era*, you would have to pay handsomely for the insertion of your rubbish, and then it would not go in without the damning prefix (ADVERTISEMENT) within brackets, at the head of it. Your incivility, and ignorance of good manners, and your threats, by implication, do not deserve any answer, save unmitigated pity and contempt. Do your worst; we should be sorry to reckon you among our friends.

**A. SUBSCRIBER, Aberdeen.**—The praise of the judicious is always doubly gratifying. The matter relative to Captain Barclay shall appear forthwith. Thanks for the content.

**Second.**—The numbers of the *SPORTSMAN'S WORLD* are scarce. They may be had by order from Mr. Diddle, 42, Holywell-street, our publisher, at the cost of 1s. 1d., complete. They contain the first nine chapters of the first period of the *HISTORY OF BOXING*.

**SINGLTON.**—There were only two horses placed by the judges for the St. Leger for some successive years (1836 to 1842 inclusive); three have been placed since that time. In the "good old days" they used to place from five to a dozen, or thereabouts; in 1839 (Champion's year, both for Derby and Leger), the judges placed five at Epsom and ten at Doncaster; in 1877 ten were placed; but in 1878 eleven started and they were all placed, perhaps the eleventh was Paddy's horse, Bother'em, and he insisted on being placed, but some inquisitive people should not know where he really was.

**R. E. Ipswich.**—We do not know, nor did we ever hear of "the celebrated Tom Bligh, the renowned pugilist." The Joneses have been numerous in the Ring, as well as out of it, and some of them celebrated; namely, Paington (Tom) Jones; Harry Jones, the Butler Boy; and Charley Jones of Manchester; if you mean neither of these, *Jonestown* might well not appear in our *HISTORY OF BOXING*. Write one for yourself, as you are so clever, and see if others think so well of you.

**A. JEON.**—Did you send us a pen and ink of *Snipe shooting* some twelve months since? Snipe-shooting is just now out of season; however, we'll have a touch at one of your drawings presently; there is a very peculiar style of pencilling required for engravers on wood.

**Mrs. E. BAKER, Nottingham.**—The Editor received your letter, but of course after some delay, occasioned by its not being addressed to the OFFICE. Our report in No. 15, which was the first published, as well as that in the *Morning Advertiser*, were candid, fair, and unbiased, to the best of our ability. We have not come, on every occasion, to declare by pen and tongue, that we considered *Bendigo* fairly and favourably, to the stakes, and shall feel happy to insert an advertisement of the house where subscriptions are received. We must, however, decline inserting attacks, or anything like the imputation of motives, and other gentlemen of the press.

## OUR WEEKLY CALENDAR.

SUNDAY, Oct. 26.—TWENTY-THIRD SUNDAY AFTER TRINITY.—Hogarth died, 1764.

MONDAY, 27th.—NEWBURY. *Newbury* was a famous town. Magpy from his postulation (1844) for barricading the City on the Queen's visit. For the entertainment of the Queen, he has the *Feast* brewed with *bars*, and stuffed with *Livermore*. A petition signed by 100,000 persons to parliament praying a *free range* over *Windsor* and other islands (1844); from this fact it is evident that there are two hundred thousand people in London and its vicinity who object to go the way they are told.

TUESDAY, 28th.—New Royal Exchange opened (1844) by Her Majesty in person. Thinks the time for brewing; and remember, as a chemical friend of ours was wont to say, *Alum si sit salum, non est malum, Becum si sit durum est durum.*

If you can't translate the complex, it's not our fault.

WEDNESDAY, 29th.—HARR HUNTING BEINGS.—George Mealand, the great animal painter, died, 1804. Horncastle Cattle Fair.

THURSDAY, 30th.—HUNTER. *CASPER* *COUSIN* *MISSISSIPPI*.—Woodcock, Wild Duck, and Snipe-shooting legitimately begin. Alder and blackberries, chestnuts and hys ripe, and water-cresses at their best.

FRIDAY, 31st.—*Albion* over. With the retirement of our side of the earth from the sun shorter days and colder mornings and evenings become our lot. The animal as well as the vegetable world display their sense of this change; and those delicate and most correct of all barometers and thermometers—the migratory members of the bird tribe—act upon this feeling with a regularity and accuracy which excite our highest wonder, and merit the most careful investigation. The swallows, from being so much on the wing, and so constantly before our eyes, are the most observed; and may be seen at the beginning of this month congregating in vast numbers, preparatory to their departure. The precise period of this departure is regulated by the mildness or severity of the weather, as in very warm autumns they linger till the end of the month, and a few may be seen in November. To compensate for their absence, the redwing and fieldfare, which left us in March, return.

SATURDAY, November 1st.—*Albion* over.

Famed for food, famed for fog. This is the month for horse or dog; The green plover whistles, the black cock comes in, Walnut leaves fall, and the corn's in bin; Snipe, venison, and partridges deck the board, And sausages dated from the boar, are stored."

—The Duke of Buckingham beheaded, 1483.—Off with his head! So much for Buckingham!—*Bevolet*: Borough councilors elected on the 1st. Mayors and aldermen chosen on the 9th. Attorneys and conveyancers licenses taken out on the 16th.

## The Sportsman's Magazine.

## GYMNASTICS. NO. III.

## FENCING.—SECTION I.

It is our intention to illustrate this most important, graceful and preservative exercise of skill more by the pencil than the pen—inasmuch as pictorial explanation, with brief verbal elucidations must prove more valuable than lengthened elaborate description, unaccompanied by speaking images of the motions and positions intended to be conveyed—we shall make no apology for the brevity of our text, compensating for it, as we trust to do, by the number of illustrative woodcuts. The art of fencing or use of the smallsword will be followed by the broad-

word cuts and guards, similarly illustrated; and we trust it will not be the fault of the writer, if the careful peruser of the text and examiner of the figures which accompany it, does not understand the theory (which is the first step to the scientific practice) of the foil.

To enlarge on the value of fencing as a general accomplishment would be absurd and superfluous. No man in active life, more especially if he quits the land of his birth, can tell how soon his safety may depend upon the use of stick, sword, or other defensive weapon; and he who is accustomed to handle them has an incalculable superiority over the unskilled. We here say little of the most important utility of fencing, as well as sparring—namely, that those who could otherwise take too little exercise have here both the stimulus and the excuse for a “breathing,” which will be found not less useful in guarding life than conducting to its lengthened span, by strengthening the stamina, improving the wind, and invigorating the system by wholesome muscular and manly exercise. Again, continental nations, though inferior on the average—and this we state from observation, experience, and conviction—in the thews, sinews, and open moral courage to the natives of this favoured isle, have oft by a scientific cultivation of the “damned cunning” of fence,” as Sir Andrew Aguecheek hath it, snatched an advantage from our slower and less skilled countrymen. This should not be. Though clever at a *coup*, Johnny Crapaud (save and except that his land producing more practitioners and professors there is a wider field) hath no patent right or precedent in the use of the sword, which places him one *iota* in advance of John Bull. The substitution some years since, of straight cut-and-thrust sword with a portion of our cavalry, and the mode (though still preserving its broadsword use) in which on the Peninsula and at Waterloo it foiled the efforts of the (supposed) superior swordsmanship of the French cavalry will be fully treated of when we come to the use of that more congenial weapon to the English idea. At present our task will be to treat the small sword as the *foil*—not murderously but gymnastically as a healthful, an useful, and an excellent exercise, and moreover as a gentlemanly and meritorious accomplishment.

In the next section we will explain briefly the various terms used in the fencing school, termed by those who affect “foreign slipalop” the *salle d'armes*; at present, as this paper is merely introductory, we will point out and illustrate by a brace of cuts which will give the uninitiated some idea of the two most natural, as well as usual modes of assault and defence to which our scientific Gallic neighbours across channel have affixed the terms of “the *Allonge in quarte*” and “the guard of *Quarte*.”

Of the first, the *Allonge in Quarte* it has been proved by Major Gordon and some continental writers, to be the most natural thrust; inasmuch as several peasants who were desired to make their attack, after some preliminary explanations concurred unconsciously—in thus assaulting their adversary; the guard of this is also given in the engraving beneath.

ALLONGE IN QUARTE.

GUARD IN QUARTE.

Your own feelings and judgment will best determine the length and distance of your *allonge* (or as we call it in English lunge); it should be such however, (and don't forget this,) as will enable you to recover to your second position—hereafter to be explained; and this you must do with the same celerity, as if you were in real action with the naked steel. How to do this will form the subject of minute direction when we come to treat of the scientific mode of making this lunge, and if foiled of avoiding its consequences.—Now for the other gentleman figured, who has thrown his foil into the defensive position. The man who assaults him is supposed to have his feet thirty-six inches asunder, he has stamed his right foot and thrown in his thrust. You execute the parade of the demi-circle, (hereafter explained) and by a rapid twirl of the hand with the point of your sword, describe the segment or arc of a circle; the point is depressed, and the hand raised as high as the left eyebrow, but remember in all these guards you bend and do not extend your right arm. In the second figure here given an improved method of cut and thrust in quarte is given. The assailant directs his

THRUST AND CUT IN QUARTE.

thrust, or cut, is the line, so as to infix his point in the cavity under his adversary's arm, instead of aiming at more easily foiled breast, as in figure 1. Remember in this assault you must effectuate your intent by a single motion, and with such celerity as to hit your adversary before your forward foot strikes the ground. Recover quickly, using the round parade of quarte, just now spoken of, as guard on all these occasions. In our succeeding sections we shall give the method of Major Gordon, reducing the science preliminarily to the simple denominations of two cuts and thrusts, namely quarte and tierce.

(To be continued in our next.)

**EFFECTS OF TRAINING.**—The state of health, or “condition,” as it is termed, into which a man may be brought by training, is often extraordinary. This training, it must be understood, consists in nothing more than regular exercise and living. The most salubrious and retired country places are usually chosen, and there the man, under the guidance of an experienced trainer, performs his systematic duties. He retires early to his bed, which is a mattress, with sufficient covering to ensure a suitable warmth, without encouraging unnecessary perspiration. He rises betimes in the morning, and after a general washing and rubbing, partakes of a slight repast, and commences his day's work by a quick walk of a few miles. He then returns home, and eats with what appetite he can. After a short rest he is again exercised until his next meal-time, and so on throughout the day. His diet is chiefly confined to the lean of underdone beef and mutton, fowl, and stale bread. He takes two or three glasses of sherry, with, perhaps, a little old ale, daily. The distance he is made to walk and run every day varies from ten to forty miles. He begins with what he's conveniently able to bear, and increases his exertions according to his increasing strength. By these means a man is shortly brought from a state of plethora and listless inactivity to one of liveliness, energy, and endurance. Body and mind are alike invigorated and improved; but the benefit is mainly referable to the air and exercise. No training, however skillfully conducted, would bring a man into good condition who had to breathe an impure atmosphere.—*Medical Times.*

**REMARKABLE HORSE.**—Mr. Carter, the celebrated Lion King, has just purchased one of the most astonishing animals we ever beheld. We were told that he was as “high as a house, and as long as a town,” and, therefore, had our doubts; they were removed by a personal visit last evening. The horse, entitled General Washington, is a black gelding, beautifully dappled on the near side of the neck. He is twenty hands high, big as an elephant, but compact as a cob, his hind feet are white, and there is a dash of the same colour on his off fore foot; his mane is flowing, and reaches nearly to the fore arm; his tail, which is exceedingly long, is well set on; he has fine open feet, and his legs—albeit he is of the cart breed—resemble those of a hunter. We have never before seen such an instance of enormous size with such perfect symmetry. He is rising six years, and must certainly be regarded as a phenomena even in this land of equine wonders. He is at present in a loose box at Mr. Sewell's, in the Strand.

**CUB HUNTING IN WARWICKSHIRE.**—The hunting campaign has commenced in this county. The Atherstone hounds, with an addition of many young hounds to the pack have turned out to cub-hunting at Combe Abbey. A prevalence of foxes are spoken of as an augury of good sport throughout the season. They first drew the Twelve o'clock Riddings, from whence part of the pack went away with an old customer through Binley to Brandon, where they crossed the railroad; Reynard sought refuge in the words of Wapperbury, but he was soon ousted, and made his way in a ring toward Ryton, in a stubble-field near which village the hounds were whipped off. The Warwickshire hounds, under the spirited direction of R. J. Barnard, Esq. (the protégé of Lord Willoughby de Broke), have also been sniffing the air for a similar purpose, near Leamington, during the past fortnight. The hounds generally are described as in good condition, and matters throughout the whole district look well for the ensuing season.

## GALLERY OF SPORTING CELEBRITIES.—No. II.

CAPTAIN BEECHER.

The first steeple-chase rider in England, and consequently in the world, MATTHEW WILLIAM BEECHER, the son of old Captain Beecher, well known in the sporting world, and who, during the existence of the Hippodrome, officiated as manager of that establishment, is here done to the life. He was born in Norfolk; and when we inform our readers that, at the tender age of four, he was in the habit of hunting three times a week with Mr. Dewe's harriers, on a small pony, they will not be surprised at the celebrity he afterwards obtained.

His first appearance in public life was at the first steeple-chase ever had at Melton, where he rode a horse called Bantam; and although the ground was very severe, and his horse only half prepared, still he succeeded in bringing him in fourth. His *debut* was a most successful one; and his seat, nerve, and the excellent knowledge of pace which he showed that he possessed, caused his services to be eagerly sought for; and there is hardly a steeple-chase upon record from that time to the present, that we do not find him engaged in with various success. The distance he sometimes travelled from place to place, in order to keep his engagements, was extraordinary, particularly after the fatigue of riding, and proved that he must possess an iron frame. We will give our readers one example of it. Some six years ago, before railroads were generally established, he left London on a Thursday, for Bath, where he was engaged to ride in two steeple-chases on the Friday and Saturday. He rode, in the first a horse called Fieschi, which gave him such a dreadful fall, that he was obliged to give up the race, and to be carried to an hotel, where persons were employed during the night to rub his thigh, which was very much bruised. The following morning he again, notwithstanding the injury he had received, mounted the same horse, and with him beat a large field. After partaking of some refreshment, he got on the back of an old hack called Bobadil, and rode to his house in town, which he reached about five in the morning. Remaining there only long enough to change his clothes, he left by the six o'clock train for Liverpool, and rode four races there, three of which he won with a horse called The Duke, and was beaten half a length in the fourth. He then started for Worcester, where he was engaged to ride his favourite, Vivian, the next day; and by means of travelling all night, he reached there in time, not only to ride, but to add another to the numerous list of victories which graced his brow. And now you would imagine, we suppose, gentle reader, that he deserved some repose; but no, his work was not yet done, having promised Mr. Elmore to ride Grimaldi for him, at St. Albans, the following day. Accordingly, without waiting to partake of any of the steeple-chase festivities, he was again on the wing, and again successful. Grimaldi, however, whom it has been urged by some that he killed by riding with undue severity, died as soon as he passed the winning post, on account of a severe strain which he received a fortnight before the race. At St. Albans also he won a hurdle race with a mare that had never seen a hurdle before. But it was with Captain Lamb's Vivian that he became so celebrated, having won with him no less than nineteen times, including two Aylesbury, and the Northampton and Leamington chases. An admirable likeness of him, mounted on this extraordinary horse, has been published by Moore, of St. Martin's-lane, which is to be met with in nearly every sportsman's parlour. His *nob* also figures in oil in the large picture by Henning, which is exhibited gratis in

Catherine-st Strand. The other steeple-chase horses with which he has been principally successful are Wing, Spicy, Norma, and Charming Kate. On the flat he has few equals; and in 1837 won forty-eight out of fifty-eight races he rode in. In the year 1839, he went over to France, and at St. Omer and Boulogne races astonished the natives, by winning every race in which he was engaged.

Capt. Beecher stands about 5ft. 8in. in height, is very broad across the shoulders, and looks made for riding. His face is of a bronzed hue, slightly marked with the small pox, and his whiskers extremely well curled. His general costume is a brown coat with gilt buttons, kersey-mere waistcoat, and grey trousers; and he usually wears a blue bird's-eye handkerchief round his neck. In private society he is very popular, on account of the excellent songs he sings, and his general convivial habits. He has for some time retired from his pigskin throne, and though he has left some worthy successor, has left no superior.

## WRINKLES FOR THE GROOM.—No. V.

## HOW TO REDUCE WEIGHT.

Although this is a matter which falls more particularly within the scope of the jockey's personal business, a knowledge of the subject will be a satisfactory addition to every man who may be employed in a first-rate stable.

For the purpose of complying with the present customs of the turf, which have appointed the weight to be carried by race-horses considerably below the average standard of the human species, the rider is frequently under the necessity of reducing his natural corporeality by a system of severe and unpleasant training.

Various constitutions require different treatment: some can scarcely bear any aperient medicine; others require a considerable quantity. Men who are good walkers are under the necessity of performing long and forced marches which others cannot endure. Those who are of a cold temperament, with a languid circulation, require a considerable quantity of flannels, vulgarly denominated sweaters; and others will obtain the necessary evaporation with very light ones. It is therefore impossible to lay down a precise rule, that every man is to take a certain quantity of medicine, walk a specific distance, and wear a given quantity of clothing; such things must be regulated by circumstances dependant upon the constitution and health of the individual, as also by the weather, the weight to be reduced, and the time that can be afforded to accomplish the task in. Many persons are of opinion, and amongst them some of the medical profession, that the course adopted by jockeys to reduce their weight is injurious to their health. Under proper restrictions, and judiciously carried on by a man enjoying good health, I have no hesitation in pronouncing it the most certain remedy that can be employed for the preservation of that blessing. To those who labour under consumptive diseases, or other internal complaints, it may be injurious; but there is no doubt that all classes, above the common labourer in this country, do not, generally speaking, take sufficient exercise, and eat too much animal food. Strong walking exercise, with a light diet, is the ordeal which a jockey observes to reduce himself; and, if not carried on to excess, although it is very hard work, it is certainly not injurious to health. In the course of these observations, I am presuming that time will permit of a course of wasting being adopted in the most regular and salutary manner, otherwise I would not advocate it; therefore, to propose a course of treatment at variance with an established opinion, would be either a positive contradiction of one's belief, or it would convey an impression of doubt as to the consequences. True it is men may often be tempted to reduce themselves very rapidly; but that is no evidence of the propriety of the act.

Previously to walking, two or three doses of mild aperient medicine should be taken, at intervals of about three days between each. From two to three of the following pills, taken at bedtime, will be found mild and effectual; and, if necessary, a small proportion of Epsom salts, with or without an infusion of senna, may be taken on the following morning, or the latter mixture without the aid of the pills—

Ext. Colocynth., comp.....	1 drachm and a half.
Hydrag. Submur. ....	vi grains.
Ol. Carui .....	vi drops.
Pulv. Scammonis.....	1 scruple.
	Ft. pillule xxiv.

When this course is commenced, a very light diet should be adopted; very little, if any, animal food should be indulged in, by which means the blood will gradually become prepared for the approaching exertion.

The quantity of clothing must be apportioned according to the weather and the constitution of the person making use of them. Three or four waistcoats, and two pair of drawers, made of the yellow flannel usually procured at Newmarket, are generally sufficient, although some persons will encase themselves in eight or nine waistcoats and four pair of drawers. Loose small clothes and gaiters are the most appropriate; with a great-coat over all, a shawl round the neck, and a pair of woollen gloves to complete the costume.

Some attention is requisite in having the waistcoats and drawers to fit accurately; and they should be in successive sizes, so that the uppermost be larger than those which are near the body; if they wrinkle they will

chafe the wearer, and become very unpleasant. In putting them on, two, or at most three, of the waistcoats are to go within the drawers, the remainder outside; if additional warmth is required for the arms, the legs of a pair of stockings, the feet being cut off, will be found as convenient an addition as any, because the elasticity will afford the wearer more comfort than too many thicknesses of flannel.

The usual time for walking is in the morning; but the period must frequently be regulated by the weather. The less indulgence in bed the better. Previously to starting, a cup of coffee, with a biscuit or a piece of dry toast, should be taken, and the addition of an egg may be occasionally indulged in. By taking a very moderate portion of light food an hour before the walk is commenced, the body will be in a state of vigour to encounter the fatigue, whilst there can be nothing to apprehend from an over-loaded stomach.

The first two or three miles should be performed at a moderate pace, just sufficient to produce strong perspiration. It must always be remembered, that if either man or horse goes too fast, so as to become blown or out of breath, the object of perspiring is defeated. In the first place, the perspiration will not flow so profusely and regularly, neither can the pace be continued at that rate necessary to maintain the increased circulation, if the respiratory organs become over-excited. A certain portion of vital air is requisite to give free action to the lungs, and thereby render the blood fit for circulation, which must be attended to in regulating the pace. The first walk should not exceed seven or eight miles—three and a half or four miles out, and back again. It is a custom with many persons to rest for a time, when the first half of the walk is performed; but I am very doubtful of the propriety of such plan; the circulation naturally abates, and a very few minutes of indulgence permit the clothes, which are so thoroughly impregnated with humid vapour, to become cold; and the body being chilled thereby, requires much labour to restore the same degree of perspiration as that which excited when the resting-place was sought for. Any liquid which is most agreeable may be taken, just to re-animate nature; but the less time there is lost, the better.

The walk home should be performed at a good strong pace, increasing the speed during the last mile: this is an effort which requires a considerable degree of pluck, and one in which many men fail in, unless excited by the presence of a companion. Warm water should be in readiness, to wash the mouth on entering the house. A cup of tea, a glass of hot negus, or cider, will then afford refreshment, and assist by its stimulating property in causing the perspiration to flow copiously.

A lounge on a sofa, or bed, with blankets thrown over the body or head, should precede the operation of undressing, which should be deferred till the perspiration has nearly subsided. A large foot-pan, with warm water, to immerse the feet, and a sponge to wash the body, will be very refreshing after the exertion. The dress to be put on should consist of flannel, next to the skin. The chilly state of the constitution when undergoing this preparation requires warmth; and indeed, unless the weather be exceedingly hot, immoderation will point out the necessity of being well clothed. The more exercise taken during the remainder of the day, the better; as it not only assists in the object of reducing the weight, but it averts much danger, which might attend an alteration in the circulation of the blood.

On race days, the walk should be completed early in the morning, so as to allow of plenty of time to become gradually cool before the racing-clothes are put on; at least an hour and a half should be calculated after returning from the walk, and which walk on the day of running will generally be found necessary if much reduction in weight is required. In the first place, a man is always a pound or two heavier the day after he has walked, even if he takes scarcely any food, than he is during the four or five hours immediately succeeding a walk: even if he be sufficiently light, a good walk on the morning, with a very light breakfast, will enable a man to ride with greater power and comfort to himself than if he were to pass two or three additional hours in bed, and abstain totally from food.

When a man has once reduced himself to the required weight, he may keep himself at that standard by walking three or four days in the week, and, by such a system, appease the calls of hunger more satisfactorily than is compatible with his decrease in the first instance. A careful attention all the year round would be much more conducive to health than the course usually adopted; which is, as soon as the racing season is over, to indulge, until the following spring reminds the jockey of the toll he must undergo.

#### II.—OVER-MARK.

[As the hunting season is now opening, we cannot do better, in reply to a correspondent, (A Lover of the Horse), than give the following observations on OVER-MARKING an animal.—ED. SP. MAG.]

Himrod, in one of his papers on the Condition of Hunters, and we believe the credit must be given to him as having first drawn the attention of the sporting world to the subject, says,—"When a horse is very much exhausted after a long run with hounds, a noise will sometimes be heard to proceed from his inside, which is often erroneously supposed to be the beating of his heart; whereas it proceeds from the excessive motion of the abdominal muscles. All horses, however, who die from exertions beyond the limits of vital power, die from suffocation; and on this

account, as soon as we perceive a horse to be much over-marked, he should have from three to four quarts of blood drawn from his neck immediately on his getting home, to relieve the pressure on his lungs; and one ounce of carbonate of ammonia (salt of hartshorn, a powerful stimulant) should be given him every four hours during that night, and part of the next day, in a ball. Although he should be put into the coolest stable that can be found—may, indeed, into an open shed, well littered down, if the symptoms are alarming—yet a strong determination of the blood to the surface should be kept up by friction of the legs, belly, and head, and by every warm clothing on the body. A good cordial ball, or a pint of mulled port wine well spiced, should also be given him, and his bowels should be relieved by a cylinder of warm gruel. If the action of the heart and arteries do not soon abate, he should be well blistered behind his elbows, and lose some more blood; and I think I may venture to say that if this treatment does not save his life there is too much reason to fear he is beyond the reach of man.

Many persons are apt to imagine that when horses are over-marked cordials are improper, and that the reducing or repellent system is alone to be pursued. This, however, is quite a mistaken notion; for, although bleeding is resorted to in order to relieve the pressure on the lungs, from the greatly-increased action of the heart and arteries, yet a stimulus is afterwards wanting to assist almost expiring nature.

Having mentioned the most effectual measures to be adopted when life appears in danger, proceed we now to detail the directing symptoms of this too frequent occurrence, and the best way of treating a horse after what may be termed a very hard day.

Long days with hounds—by which I mean severe running, with perhaps a brace of foxes, and upwards of twenty miles home afterwards—are most injurious to hunters, and call forth all the skill and judgment of their grooms to recover them from their effects. If mere fatigue be the consequence, rest, that *vis medicatrix nature*, will do all that is necessary; but if a horse is what is called over-marked his groom must be on the alert. There are two or three directing symptoms which cannot easily be mistaken. In the first place, his appetite fails him, and he is very greedy for his water. His respiration is not so smooth as it should be, and there is a considerable relaxation in the manes in the interstices of the hips. Notice should also be taken of his pulse; but if that is not understood by his groom, the inside of his eyelids should be examined, and if fever is denoted by them he should lose a gallon of blood, but not otherwise. A pectoral ball, and two ounces of nitre in his water, should be given him; and, instead of his corn, he should have what gruel he will drink, and a large bran mash, made rather thin, and nearly cold, which will be not only most grateful to him, but, by relaxing his bowels, will prevent fever, which is certain, more or less, to accompany him. Sometimes inflammation comes on very rapidly after a hard day, bidding defiance to all precautions, and, too often, if it does not destroy him, renders the horse unfit for a hunter, as it generally terminates in his feet. If he does not cast his hoofs entirely, they become what is termed "punnies," and take a long time to recover. Horses that have had fever in their feet generally go on their heels afterwards, and the inside of their feet becomes convex, instead of being concave.

THE RACECOURSE, YARMOUTH.—Before the race and regatta week of 1846 shall have arrived, a very extensive improvement will have been effected in our course, which will elevate the character of our annual races so as to enable them, it is hoped, to compete with any provincial town in the kingdom, and will make them a fitting precursor to the regatta, which will be on a scale superior even to that of last July. We stated last week that a party of ten gentlemen, influenced solely by a desire to further the interests of their town, had pledged themselves to raise 300*l.* if the council would but grant them a lease of the South Dunes and approaches thereto, with power to demand tolls.—*Yarmouth Chronicle.*

AN ANSWER FOR ANGLERS.—Some years ago an angler named Jacques was fishing near Clifton Hall, and late Sir Robert Clifton, brother to the present baronet, who now enjoys the estate, came up to him and said—"Who gave you liberty to fish?" "Nobody," replied Jacques. "Then what right have you here?" asked Sir Robert. "As much as you, and no more," said Jacques. "What! what do you say? you impudent rascal; do you know who I am?" "No," said Jacques. "You don't care." "I'm—I'm Sir Robert Clifton," said he, in a violent passion. Jacques said he looked at him and smiled, then said, "You Sir Robert! Nonsense! Poo! I know him well; have taken wine with him. You're not him; you may be his butler!" This was enough, he swore and tore, and away he ran to the hall for assistance, and Jacques immediately followed his example by taking himself away in another direction.

NBAND HAZARD.—A dandy black stepped into a provision warehouse, to buy some potatoes. Before purchasing the article, he gave the following truly eloquent description of its nature:—"De tater is inevitably bad or invariably good. Dere am no medioticity in the combination of de tater. De exterior may appear remarkably exemplary and humane, while de interior is totally negative; but, sir, if you wenda de article 'pon your own responsibility, knowing you to be a man of sagacity in all your translations, why, sir, widout further circumlocution, I take a bushel."

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1796—1830.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

## CHAPTER X.

TOM CRIBB, CHAMPION OF ENGLAND.

**ADVANCE**, brave Broughton!" exclaims Captain Godfrey, with manly enthusiasm; "these I pronounce Captain of the Boxers!" had the worthy and trustworthy writer of "the Characters" lived in the nineteenth century, he would have bestowed this compliment on "honest and brave Ould Tom." Since first the honour of champion was coveted and a distinguished prize for men of bold heart and iron sinew, for men of forbearing coolness and pain-defying fortitude, down to these evil-days of wrangle, chaffing, bullying, and shifting, a more straightforward, excellent, simple-hearted, generous, and brave man than Tom Cribb, never held the hard-won trophy.

Cribb was born July 8th, 1781, at Hanham, in the parish of Bitton, Gloucester, on the borders of Somerset, situate about five miles from Bristol, and it is rather a disputed point to which of the counties contiguous to Hanham this spot belongs.

Cribb left his native home at a very early period, and arrived in the Metropolis, when no more than thirteen years old, to follow the occupation of a bell-hanger, under the guidance of a relative; but the confined situation of hanging bells not exactly meeting his ideas, and being a strong youth, he preferred an out-door calling, and commenced porter at the wharfs, during which time he met with two accidents that had nearly deprived him of existence—in stepping from one coal barge to another, he fell between them, and got jammed in a dreadful manner; and in carrying a very heavy package of oranges, weighing nearly 500 lbs., he slipped upon his back, and the load fell upon his chest, which occasioned him to spit blood for several days afterwards. By the excellence of his constitution, he was soon enabled to recover his strength from those severe accidents; and aided by the invigorating air of the ocean, upon which, he had the honour of serving against the enemies of his country, his fine natural stamina was improved. The natural good temper and forbearance of this brave man has left his historian little to record in the way of skirmishes; and the important contests which it will become our duty and pleasing task to record, were all conducted on the principles of professional boxing—the very first elements of which are *moderation, forbearance, and fair play*. Though Cribb has been generally considered a slow fighter, he was as generally admired as a sure hitter; his wind was of the first quality, and his game never excelled.

With such sound pugilistic pretensions, it cannot appear surprising that he milled his way to fame and honour; and lest more in this place might prove ill-timed or superfluous, we will leave his actions to speak for themselves. His first public battle was with that veteran of fistic glory, George Maddox, on Wood Green, near Highgate, January 7th, 1805, for a subscription-purse of twenty-five guineas—twenty for the winner, and five for the loser. The disparity of years was considerable between the combatants; and Cribb, besides possessing the advantages of youth, was somewhat taller than Maddox, and, consequently, rather the favourite. Paddington Jones was the second of Maddox, and Black Sam attended Cribb in the same capacity. George fought like a hero, and performed prodigies of valour; and it was with great reluctance that he consented to give in. In the above contest it was glutton against glutton, and game against game;—Cribb contending for the honour of victory, with all the fire of a youth, and a stamina pure and untouched; while Maddox, with all the experience of a veteran pugilist, anxious to preserve his well-earned reputation, contested every inch of ground for two hours and ten minutes, with a perseverance and resolution almost superhuman. Maddox fell gloriously; and Cribb, by this conquest, acquired a pugilistic fame. In this contest, Cribb, being a stranger, and the ring surrounded by Maddox's friends, had to contend against much ill usage and unfair treatment.

On February 15th, 1805, Cribb entered the lists with Tom Blake, for a subscription purse of forty guineas, on Blackheath. Richmond and Joe Norton were seconds to the former, and the latter was attended by Diak Hall and Webb. Both the combatants trained for one month; betting was even, but Cribb rather the favourite. It proved a most excellent contest, and Blake was not conquered without difficulty. Hard milling was continued upwards of an hour. From the scientific display of Cribb in this battle, he began to claim attention from the amateurs.

Ikey Pig, a heavier and stronger man than Cribb, contended with him for a subscription-purse of forty guineas, on Blackheath, on May 21st, 1805. Paddington Jones seconded Cribb, and the Jew had for his attendant Bill Wood. Ikey made good use of his strength, and levelled his opponent several times; but Cribb's caution and science proved too much for the Jew, who gave in, much to the regret and loss of his admirers and backers, who could not believe that he was not invincible.

At Blackwater, for a subscription-purse of twenty-five guineas, July

20th, 1805, Cribb for the first time was defeated by Nichols. See the memoir of that boxer in the previous chapter.

Colour of country made no odds to Tom, and he now entered the ring with Richmond, for a match of twenty-five guineas, on October 8th, 1805, at Hailsham, in Sussex. The solidity of the deportment of the one, and the singular movements of the other, created much sport; in fact it could scarcely be called a fight, and was considered an unequal match. Nevertheless from the strange contrast of style an hour and a half elapsed before victory was declared in favour of Cribb, who was little, if any the worse for the contest.

Cribb was now getting fast into notice; and a pugilist of rare pretensions, together with the renowned Captain Barelay of Ury, who perceived those hitherto hidden qualities in him, took Tom into training, and matched him, for two hundred guineas, with Jem Belcher. This all important mill came off on April 8th, 1807, at Moulsey-Hurst, in a twenty-feet roped ring. Gully and Watson were seconds to Belcher; Cribb was attended by Bill Warr and Richmond. —Odd six to four on Belcher.

## THE FIGHT.

1—Considerable science was displayed by both the combatants; Belcher at length planted two hits right and left upon the head and body of his opponent, Cribb returned alight, rallied his man and closed, but was thrown by Belcher.

2—Belcher put in two severe blows upon Cribb's head and body, when the latter staggered but slipped down upon his hands in attempting to follow up his man. Cribb showed the first blood.

3—Severe exchanges; Cribb threw Belcher, who planted a heavy body blow while in the act of falling. [This round rather in favour of Cribb.]

4—Cribb displayed good science in warding off two blows of Belcher's, when they closed and fell.

5—Belcher, with his right, put in a dreadful blow on Cribb's left eye, and in closing hit his opponent twice in the body, and threw him. [Five to two on Belcher.]

6—Cribb began to show symptoms of weakness: Belcher put in a hit, warding off which caused Cribb to fall.

7—Belcher's punishment visible on the body of Cribb; the latter endeavoured to put in two blows, which were parried by Belcher; Jem returned both right and left with great dexterity, and rallied his man to the ropes; Cribb clung to them, and fell much fatigued; Belcher also went down on his knees, but seemed in good spirits. [Three to one on Jem.]

8—The blood flowed profusely from Cribb; hitting, retreating, and stopping nearly; when they closed, and both went down.

9—Belcher hit his adversary right and left, but the latter only told. Jem fell.

10—Belcher commenced this round with great spirit, and gave Cribb some severe blows, without letting him have a chance, so lowing and rally his opponent to the ropes; Cribb, quite fatigued, fell. [The odds now were four to one on Belcher.]

11—Belcher planted two hits, which Cribb skilfully warded off, but Belcher was so rapid in closing upon his antagonist, that they both went down.

12—A small change was now making its appearance between the combatants: Cribb seemed rather gaining his strength, while Belcher appeared distressed; Cribb rallied successfully, planted a hit under Belcher's perfect eye, closed, and threw him.

13—Belcher, in all his contests, never showed himself to greater advantage than in this round, his skill was of the finest order, and only equalled by his courage; in closing Belcher threw Cribb.

14—Both on the alert, and "eager for the fray." Belcher hit right and left, which were parried by Cribb, who returned two blows on the body; the men closed and fell. [Still four to one on Belcher.]

15—Belcher, full of gaiety, rallied Cribb to the extremity of the ring; a struggle put an end to the round.

16—Cribb now convinced the spectators that he possessed considerably more science than they were aware of; he stopped Belcher's blows with great skill. The knowing-ones were, at this period of the battle, rather at a stand-still with regard to sporting their money—Cribb certainly had received severe punishment but not enough to satisfy any thing like his gluttony, and Belcher's stamina had been considered on the decline previous to this contest, and it was apprehended that he could not last long.

17—Belcher, still confident, rallied his adversary, who fell from fatigue. [Two to one on Belcher.]

18—Belcher put in some dreadful blows in the body, and a terrible thrust in the throat of his opponent, and followed him up with such spirit and rapidity that Cribb fell violently, and quite exhausted, and to all appearance as if he would not be able to come again in time. [It was in this round that Belcher sprained his wrist, and was nearly deprived of the use of his right hand afterwards. Five to one on Belcher.]

19—Belcher slipped in making play.

20—The combatants closed and fell.

21—Cribb planted two blows on his opponent's head, who slipped in returning them. It was now perceived that Belcher proved incorrect in his distances, and that several of his blows were thrown away, from the bad state of his eye.

22—Belcher, full of gaiety, put in a good hit, and threw Cribb a cross-but-

tock.

24—Cribb the most conspicuous in the round, when they closed and fell.

25—Cribb put in a tremendous blow, and in attempting to follow it up Belcher shifted, and Cribb ran himself down;—a little disapprobation expressed, but the generality exclaimed, "Fair! fair!"

26—The constitution of Belcher was now giving way, his strength was not able to resist the heavy punishment of Cribb, who hit Jem from him, and gave him a leveller. Cribb upon this became the favourite.

27—A well-contested round, and, notwithstanding Belcher gave Cribb a cross buttock, it was considerably in favour of the latter.

28—Belcher made a hit, which was warded off by his opponent and returned: the men closed and fell.

29—Cribb closed without hesitation, and from his uncommon strength threw Belcher over the ropes.

30—Both exchanged a blow, when, with a very weak hit, Belcher went down. [Five to two on Cribb.]

31—A good round, without any particular advantage to either; though Cribb put in the most blows, Belcher gave his adversary a violent fall.

32—Both closed and fell.

33—Belcher quite game endeavoured to make the best of it, but Cribb rallied and threw him.

34, 35, and 36—In all these rounds Cribb maintained the superiority.

37—Belcher had scarcely strength left to stand, and his brave opponent was not in a much better state; and from this period to the 40th it was little better than mere hugging—blows they could not be called—from the exhausted state of both the combatants, and they fell in an irregular manner.

41 and last—Thirty-five minutes had now elapsed; Cribb, proving the strongest man, put in two blows, and was following them up, when Belcher, quite exhausted, fell upon the ropes, and gave up the contest.

Cribb now rose rapidly into fame—his real qualities hitherto unknown, he had been viewed principally as a glutton of the first class, with unimpeached game; his pretensions now unfolded themselves, and the amateurs were completely surprised at his display and improvement in the science. His distances were well judged, and he stopped with great dexterity and neatness: and had he proved a quicker hitter, the contest might have sooner been decided.

Cribb was now challenged by Horton (who had beaten the Champion's brother) for one hundred guineas. Horton had signalised himself in the vicinity of Bristol, and had improved considerably under tuition of the Game Chicken; but in this contest, which took place on May 10th, 1808, Tom Cribb very soon took the conceit out of him. Upon setting to the odds were five or four on the Champion.

Considerable interest had been excited in the Sporting World, on a comparison of the pugilistic qualities of Gregson and Cribb, when a match in consequence, was made between those celebrated heroes of the fist and decided at Moulsey Hurst, in a thirty-foot roped ring, on October 25, 1808. Gully and Bill Gibbons seconded Cribb; and Jem Belcher and Richmond attended upon Gregson [Five to four on the Champion.]

(To be continued.)

## CORRESPONDENCE.

### THE INVENTOR OF THE PERCUSSION GUN-LOCK.

SIR,—The Sporting World is now universally acquainted with the percussion lock—a piece of mechanism which has superseded all others in fire-arms for private use. Yet how little is known of the individual by whom, and the circumstances under which, it was invented. Like Somerville's safety-slide, and gunpowder itself (if the best accounts are to be credited), this invention was made by a clergyman—the Rev. Dr. A. Forsyth, minister of Belhelvie, near Aberdeen, who died in the year 1843. The *Aberdeen Herald*, five years since, gave the following account of the invention and the inventor, which I will take the liberty to transcribe, well assured that it will be acceptable to the readers of your valuable magazine:—

"The attention of Dr.—then Mr. Forsyth—was first attracted to fire-arms by what he heard in 1793 of the efforts which the French were obliged to make in order to procure a substitute for the ordinary gunpowder, which the want of saltpetre prevented them from making in sufficient quantity. Learning that a powder from the chloride of potash had been suggested to him, Mr. Forsyth, who was then engaged in chemical investigations, experimented upon that substance, and found, as the French did, that it was a failure.

"In the course of the investigation he produced a powder which not only was easily ignited by percussion, but also readily kindled common gunpowder. Here was the principle of percussion; and forthwith he went diligently to work to construct a lock in which the flint and steel should be dispensed with: this he accomplished most ingeniously in a variety of forms; and in the spring of 1806 he was able to carry to London a fowling-piece with a percussion lock, acting on fulminating mercury, which performed tolerably well and fully embodied the principle."

After detailing the account of the government negotiations with Mr. Forsyth, and the many broken acts of faith of government for the trouble and expense which he was put to in bringing the gun to perfection for government use, it says that, with some difficulty, Mr. Forsyth obtained payment of his expenses and returned home, where he continued to the day of his death.

I am, sir, yours, &c.

F. B. THOMPSON.

## PARTRIDGES ALIGHTING ON TREES.

SIR,—Observing in a former number an account of partridges occasionally alighting on trees, I beg to communicate one of a precisely similar nature, which happened to me some seasons since. I was shooting in the county of Meath with a sporting acquaintance, when he flushed a large covey of partridges in a stubble field, adjoining a larch and fir plantation. They flew across the wood, as we thought, and appeared to dip at the other side of it. With excellent dogs we beat all the fields in the direction of their flight, and failing to find them, we thoroughly hunted the plantation itself, and still without success. I had left it not a little dissatisfied, and my friend was following my example at the opposite side of the wood, when I heard him fire two shots. On joining him I perceived that he had killed a brace of partridges; and he assured me on his honour that the covey had flown from near the tops of the larch trees, which he pointed out to me, and that he saw them do so too distinctly to be mistaken. Though it was impossible they could have flown across the plantation from my side to his without my perceiving them, yet I must confess I was of opinion that my friend laboured under an optical delusion until I read, "The Singular Sporting Occurrence" in your paper, which induced me to take the liberty of communicating the above.

Yours, &c.,  
VERITAS.

Dublin, October 10, 1845.

## NETTING AT WALTHAM ABBEY.

[The following letter, in reply to a proposition for temporarily closing the River Lea, and preventing netting therein, was addressed to the Editor of *Bell's Life*; it deserves quotation, and we transfer it.—The "brethren of the angle are usually too quiescent and averse to 'agitate,' even against wrong."—ED. SP. MAG.]

SIR,—The idea of your correspondent in shutting up the fishery at Waltham Abbey for a stated time is in itself good, as an only means of restoring and saving what fish are left there; but at the same time, let me observe, as a sportsman, and as one who, in common with others, would miss going there for the period, that it would not be fair to make a partial exclusion of the public. Let all fish as now, or let none—and above all let a stop be put to net using and eel catching. It would be equally absurd to allow a net to be used to take a particular sort of game, and no other, as it is to suppose that a net permitted at all will be used to catch eels only.

Too true is the saying that "all are fish that come to the net." If it be said that eels are a valuable prerequisite to some one connected with the establishment—cut this off at once, and, if necessary, indemnify the loss. I for one would willingly come forward and pay my share for such an end, rather than the practice should be continued.

Further, to have one man only to be a sort of keeper as now, must leave the water open to abuse. Why not appoint four or five of the different workmen out of the many employed (for the workmen do not have half the labour to perform that is required upon any other establishment), to watch certain districts under one superintendent. They would then amply protect the water, and be a check upon one another, without causing the Ordnance department any further expense.

As to the officers themselves netting, if that be true, good bye fishermen to your angling. I hope this will not occur again.

Pardon my troubling you, but I do not like to see a good sporting ground wantonly destroyed, and can only say that if you think it worth while to give insertion to these lines, I shall feel much obliged, and remain,

Sir, your obedient servant,

AN ANGLER.

## DESTROYING MOLES.

SIR,—A correspondent of yours some weeks since put a query on this subject, which, as I have not seen answered, (although rather out of season), perhaps you will find a corner for the following. I will answer for its efficacy.

Take a quantity of fresh worms, put them in a wooden box, with a small quantity of carbonate of barytes in powder, and let them remain an hour or two; then find out the runs where the moles leave the fences for the land, lay in every run five or six worms, and continue doing so as long as the worms are taken away by the moles. I was infested with moles before I used this remedy, which was about fifteen years since, but have never been injured since, by giving a little attention to them in the spring. If you consider this worth a corner in your valuable miscellany in answer to J. S., it will oblige

A SUBSCRIBER.

THE NATIONAL DRAMA.—Some wicked wag last week wrote over the portico of Drury Lane, just under the statue of Shakspeare, "THIS IS THE ORIGINAL BUNN HOUSE."

A SEASONABLE COMPLIMENT.—Two friends walking together on the 1st of April last, one, thinking to have made a good hit, abruptly stopped, saying, "By the bye, Tom, I ought to remind you that this is April fool's day." "The compliments of the season to you!" quietly replied Tom.

## DOGS AND DOG-TRAINERS.

BY FREDERICK TOLLEARY,

*Author of "The Sportsman in France," and "The Sportsman in Canada."*

A SPORTSMAN without a dog may be compared to an Arab without his steed, a man without a wife, a house without a handle, or a fork without a handle; they should never be separated: one, in short, ought never to be seen without the other. It is not every sportsman, however, who has the good fortune to own a thoroughly good and perfect dog; neither does it always fall to the lot of setters and pointers to be in the kennel of a first-rate and finished sportsman.

Good sportsmen as well as good dogs are not to be met with every day: the one is almost as rare as the other. That man must have devoted much time, labour, study, and attention to the several branches of sporting ere he can have any claim to this honorable title; and that dog, to be worthy of such a master, must, in addition to sagacity, courage, and an unusual share of instinct, have taken a first class degree, and gained the highest canine honors in the school of an experienced professor or a medalist in the polite art of dog-breaking.

A highly-bred and at the same time a thoroughly-broken dog is as rare as ice within the Tropics, so that, like a good wife or a good racer, it should be cherished accordingly. Some forty years ago, or even so recently as a quarter of a century since, the breed of setters and pointers was not attended to or appreciated as it is in the present day. If proof were wanting to corroborate this assertion, it would be found in the very high price paid at the sales of celebrated kennels. The sums realized occasionally must appear extraordinary to the uninitiated; but at the same time the fact goes to prove the great estimation in which blood and symmetry are held in this country.

We well remember the sale of the late lamented Duke of Gordon's stud of dogs; we own to this day a descendant of His Grace's magnificent setter "Duke," and he is, taken altogether, the very best dog in heather or stubble we ever shot over. About two months since, Lord Dudley's splendid stock of setters and pointers was brought to the hammer at Tattersall's. A few other first-rate animals belonging to a private gentleman were disposed of at the same time, one or two of which we thought superior in point of shape, make, and style to those of his lordship. One brace of pointers in particular, "Shet" and "Spot," black tick'd with white, struck us as being superlatively handsome. One of them fetched fifty-four guineas, the other forty-eight—rather a stiffish price, and in no other country in the world would so large a sum be given. In England alone are true sportsmen to be found, consequently in England alone is the excellence of a sporting dog appreciated. A foreigner would look a long time at thirteen hundred francs (a year's income to some of them) ere he would invest so large an amount of capital in the purchase of a *chien de chasse*, and we for one should blame him for wasting his money, inasmuch as he might, for all the good a well-broken dog would be to him, just as well throw his five-franc piece out of a window, seeing that, when he became possessed of the animal, he would not know what to do with him or how to shoot to him. Charles X., who was a sportsman at heart, and who learned the elements of shooting during the period of his exile in this country, did, in 1829, the year before he was dethroned, send an Aide-de-Camp to my old and lamented friend Captain Phelps, with an offer of fifteen hundred francs (99*l.*) for a brace of splendid black and tan pointers he had brought from England with him. This occurred at Dieppe, or rather at Captain Phelps's country house at "Arques," about three miles from the town, but the *ci-devant* dragoon was too old a soldier and too good a judge to part with his Leicestershire nonpareils. A polite message was returned to His Most Christian Majesty by the Ambassador to the canine court, with a respectful refusal of the offer, so these dogs did not visit the royal kennels. They were, in truth, very beautiful animals and perfect in the field. They were sent back to the family nest, and I believe the breed has travelled into Cardiganshire.

Lord Chesterfield, Sir Massey Stanley, and Mr. C. C. Martyn have some celebrated breeds in their kennels; they are indebted for the blood which distinguishes them above the generality of studs in the kingdom to the superior crossing, breeding, and supervision of Mr. Brailsford, of Melton Mowbray. We have on more than one occasion alluded to the abilities and merits of this respectable individual: we shall not therefore on the present occasion direct attention to his unrivalled establishment further than to observe that he is immeasurably the best breeder as well as breaker of dogs in the kingdom. No man understands his business so well, and no one turns out such dogs. Mr. Brailsford is in short, a first class man in his useful vocation, and universally respected for his uncompromising integrity. There are but few establishments in London where a really well-bred and well-broken dog can be purchased; not that there is a lack of pointers and setters—at least, spotted dogs and shaggy dogs so called—but ninety-nine out of every hundred of these mis-named curs are worthless brutes, and would turn tail on hearing a gun fired.

(To be continued.)

## THE GAMEKEEPER'S RETURN AT NIGHT.

Through the long morning I have toiled  
O'er heath and lonely wood,  
And, 'cross the dark untrodden glen,  
The fearful game pursued  
But deeper now the gathering clouds  
Collect along the sky,  
And, faint and weary, warn my steps  
Their homeward course to lie.

And now the driving mist withdraws  
Her gray and vapoury veil,  
I mark again the sacred tower  
I pass'd in yonder dale.  
A little while and I shall gain  
Yon hill's laborious height,  
And then, perhaps, my humble cot  
Will cheer my grateful sight.

Ah! now I see the smoke ascend  
From forth the glimmering thatch;  
Now my heart beats at every step,  
And now I lift the latch:  
Now, starting from my blazing hearth,  
My little children bound,  
And, loud with shrill and clamorous joy,  
Their happy sire surround.

How sweet, when night first wraps the world  
Beneath her sable vest,  
To sit beside the crackling fire,  
With weary limbs at rest;  
And think on all the labours past  
That morn's bright hours employ'd,  
While all that toil and danger seem'd,  
Is now at home enjoy'd.

The wild and fearful distant scenes—  
Lone covert—whistling storm—  
Seem now, in memory's mellowing eye,  
To wear a softer form:  
And, while my wanderings I describe,  
As froths the nut-brown ale,  
My dame and little kithning tribe  
With wonder hear the tale.

Then soft enchanting slumbers calm  
My heavy eyelids close,  
And on my humble bed I sink  
To most profound repose;  
Save that by fits the scenes of day  
Come glancing on my sight,  
And, touch'd by Fancy's magic wand,  
Seem visions of delight.

**ABUNDANCE OF FOXES.**—We understand that in the immediate vicinity of Oxford foxes were never more plentiful than they are this season. A few days ago no less than nine cubs were seen to come out of a cover, near Bletchington, called "Bushy's Spinary;" the covers at Blisfield and Bagley Woods also abound with them, so that great sport may be anticipated with Lord Parker's, Mr. Drake's, and the Berkshire hounds.

**MALAY GAMBLING.**—The Malays are great gamblers, but their chief speculative sport is cock-fighting. A *mug* will back his whole substance upon the issue of a *tomasha* between a main of cocks; and when he may have lost his last pice, he will stake his siver tailman which is upon his arm on the chance of the turn of the sport in his favour. His very apparel is oftentimes sacrificed upon these barbarous occasions, and should he hold a confidential domestic office in a European family, the temptation to follow up his favourite diversion is so overpowering, that he will too frequently rather have recourse to furtive expediency, to fight a main of cocks, than retain his place and character.

**A GRATEFUL GANDER.**—A fine old bird, the patriarch of the flock in the farm yard of a much respected farmer in the neighbourhood of Clithdon, where his sway for many summers past has been marked by constant stacks and spitefulness on all around him, in his wanderings the other day chanced to get up a narrow drain, whence he could not back out again. A labourer in passing discovered the gander in his "fix," and mercifully drew him out; since which time, as if to evince his gratitude, Mister Gander follows his deliverer about like a dog, and suffers himself to be handled in any way this man's fancy chooses. This special mark of gratitude is alone extended to his deliverer—to all else the same spitefulness in as before continued.—*Exeter Flying Post.*

# ADVERTISEMENTS.

## CAUNT versus BENDIGO.

**A T A RESPECTABLE and NUMEROUS** meeting of gentlemen convened by circular, held at Mr. Cressy's, the Poultry Hotel, Nottingham, for the purpose of adopting the best means of defending Bendigo against the dishonourable attempts that are being made against his purse and character, the resolutions were unanimously agreed to—

1st. That the conduct pursued by a certain portion of the London newspaper press, towards William Thompson, relative to his late fight with Caunt has been unjust, and partial in the extreme, for not only has it, week after week, maligned him in the Editorial remarks, but has readily inserted letters from various parties to the same effect, while it refused a short space for his (Thompson) reply, and this meeting is of opinion that if conducted like this be allowed to pass without some mark of Public censure there is no knowing to what extent a portion of the press may in future cases proceed, and thus place the sporting world under the tyranny of interested capricious editors.

2nd. That an action having been commenced by Caunt to recover his share of the stakes in his late fight with Thompson, a committee of five be now appointed (with power to add to their number) for the purpose of raising subscriptions, and otherwise assisting these two gentlemen who signed the undertaking given to the shareholders, in defending the said action to the uttermost length the law will allow.

Subscriptions were then made, particulars of which, and of the houses where such will be received, will appear in future announcements.

E. BARKER, Secretary.

All communications to be addressed to the Poultry Hotel Nottingham.

## WATER is a REMEDY preferable to any

other for those who are subject to indigestion, costiveness, &c., being the most agreeable aperient in the world. But to ensure its application with ease and privacy, and produce its best effects in relieving the stomach and bowels, it must be applied with the new invention called the Aperitive Vase, which is sold (with suitable directions for its use) by W. FINE, 369, Strand, the third house from Exeter Hall. Also Sonifera, for restoring hearing to the deaf on an unfailing principle. Descriptions sent post free on receipt of two letter stamps.

## BILE! BILE! BILE!—WORBOY'S

**VEGETABLE PILLS** safely and speedily remove sick head-ache, heartburn, loss of appetite, fluttering of the stomach, flatulency, habitual costiveness, with other symptoms of indigestion and torpid liver. With each box is enclosed a concise essay on diet by an eminent London Physician. Sold in boxes, 1s. 1½d., and 2s. 9d., each, by W. S. Worboys, 76, New Cut, Lambeth; Barclay and Sons, Farringdon-street, and by all respectable medicine vendors.

N.B.—A dose sent gratuitously to persons enclosing a penny stamp, or a box for the amount in stamps.

Now Publishing, in Weekly Numbers, price 1d., and in Parts, price 6d.

## THE HISTORY OF THE CONSULATE

and EMPIRE OF FRANCE, under Napoleon, by M. Thiers, Author of the "History of the French Revolution," late president of the Council, and Member of the Chamber of Deputies.

CONDITIONS.—The work will be neatly printed in two columns, royal octavo, from a new and beautiful type, and on fine paper.

It will be uniform with "The People's Edition of Thiers' History of the French Revolution," forming, together, four handsome volumes.

On the completion of the Work, a general Preface, introductory to the History of Napoleon, with Titles, Index, &c., will be given, thus forming a complete standard classical book of general reference, and interesting perusal.

Of the vast interest connected with the important national events which took place during the consular and imperial rule of Napoleon there can be no question. In undertaking to record the events of this momentous period, M. Thiers, from his high position in the state, had the good fortune to obtain possession of a multiplicity of original and official documents which embrace the minutest details of all the instructions, orders, &c., dictated by Napoleon himself to his Ministers of State, Privy Counsellors, Prefects, Marshals, and others. Of the success of his undertaking, the rapid sale of the three first volumes which were issued at Paris on the 15th of March, amounting to 16,000 in one day, and the numerous editions which have been published at Brussels, Leipzig, and other places, afford the most splendid testimony.

London:—G. VICKERS, Holywell-street, Strand.

## IMPORTANT TO ALL VENDERS OF CHEAP PUBLICATIONS.

As all clean unsold Copies will be exchanged. With a very liberal allowance to the Trade. Lots of Fun for Every body.

Just Published, No 5, of

## BELL'S LIFE GALLERY OF COMIC

ALLIES, containing the greatest fund of Amusement, with Riddles, ever published at the price. Nos. 1 to 4 are now reprinted, and contain upwards of two hundred and fifty splendid engravings, by Corkscrew, Chaffield, Alken, the late Seymour, and other celebrated characters. ## MODERN BOXING,

Containing the History and Practice of Pugilism, Illustrated with numerous Engravings.

## SPORTING SONGS,

Containing upwards of 100 of the most approved Sporting Songs extant.

## THE EARL OF ALDBOROUGH

CURED BY

## HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb. 1845.

To Professor HOLLOWAY.—

SIR,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case of any of my family should ever require either.

Your most obliged and obedient servant,

(Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing.

Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.

SIR—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Aokham, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c. &c.

(Signed) THOMAS TAYLOR.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicine throughout the CIVILIZED WORLD, at the following prices:—1s. 1½d. 2s. 9d., 4s. 6d., 11s., 22s., and 35s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and improved edition of

## THE SILENT FRIEND; a Medical Work

on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and I. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 15, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

The CORDIAL BALM OF SYRIACUM is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s. or the quantity of four in one bottle for 35s., by which 11s. are saved. The Five-pound cases may be had as usual.

The CONCENTRATED DETERSIVE ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.

Consultation fee, (if by letter), £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 15, Berners Street, Oxford Street, London, from 9 to 11, and 3 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

Just Published, the SIXTEENTH EDITION, illustrated with cases and Full-length Engravings, price 2s. 6d. in a Sealed Envelope, and sent Free to any part of the Kingdom on the receipt of a Post Office order for 3s. 6d.

## THE SECRET COMPANION. A Medical

Work on Nervous Debility and the concealed causes of the decline of Physical Strength, and the loss of Mental Capacity, with remarks on the effects of Solitary Indulgence, neglected Gonorrhoea, Syphilis, Secondary Symptoms, &c. and Mode of Treatment; followed by observations on Marriage, with proper directions for the removal of all disqualifications. Illustrated with Engravings, showing the virus arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell-square, near the British Museum London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges-street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

[Stamped to send free by Post, Three-pence.]

THREE HALF-PENCE.

TOM CRIBB, CHAMPION OF ENGLAND, AGED 28.—[From a Sketch taken in April, 1809.]

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME— PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

### CHAPTER X.—continued.

TOM CRIBB, CHAMPION OF ENGLAND.

#### THE FIGHT.

1. After some trifling sparring, Gregson attempted to plant the first blow with his left hand, but proving too short, it was ineffectual, and Cribb hit over his adversary's shoulder; the men closed, and fell, Gregson the uppermost.
2. Cribb, full of activity, put in two body hits, right and left: when Gregson endeavoured to return the compliment; but Cribb dexterously avoided it by shifting, and put in a severe blow on the right side of Gregson's face with his left hand, which made the claret flow profusely. Gregson, full of impetuosity, made some desperate attacks on Cribb's neck, which, if they had not been stopped or avoided might have terminated the contest: Cribb hustled his man and threw him. [Two to one on the Champion.]
3. Gregson, full of spirit, rallied, and planted a most tremendous hit under the ear of Cribb, who retreated according to his favourite mode of fighting; Gregson, incautiously following him, suffered that severe punishment termed milling on the retreat, receiving a heavy blow on the right side of his face from every retreating step of his opponent; but still the game of Gregson kept following him up, till he fell quite stunned.
4. Cribb slipped down in making play.
5. Gregson showed himself in this round to some advantage; his distance

was well measured, and he put in such a terrific nobber on Cribb's temple that he was completely abroad. Had Gregson followed up this chance, the battle seemed his own; but instead of keeping to his man, he continued sparring, while his opponent retreating to the ropes put an end to the round, not, however, without a severe rally, which terminated by Cribb being knocked down.

6. Cribb's head seemed much out of repair, and Gregson's mug was anything but improved in symmetry of feature, nevertheless the men fought gaily, and after exchanging hits to a stand still, Cribb was thrown.

7. Gregson's distances were badly judged, and Cribb caught his opponent so severely on his damaged whistler, that he seemed to lose all self command, he ran at Cribb, closed, and gave him a cross-buttock. [Two to one on Cribb.]

8. Gregson appeared rather distressed, and Cribb milling away on the retreat with considerable success from Gregson's intemperate and injudicious mode of following him. Gregson received three such severe facers that he fell on his knees and was helped up. [Three to one on Cribb.]

9. Cribb kept the lead, and after a few hits, both men went on their knees, when a sort of hug took place, and both men went down exhausted.

10. The wind of both the combatants seemed scant; they closed and fell.

11. Greater courage was never displayed upon any occasion, Gregson attempted a dreadful blow, but distance was incorrect, and it fell short; how

ever, he rallied, and planted two severe hits on the head and body of his opponent; Cribb seemed puzzled, and Gregson threw him. [Seven to four on Cribb.]

12. Both men were severely punished, yet they stood to each other in the most determined manner; Gregson went down more from fatigue than the force of the blow.

13. Every exertion was made on both sides to gain the superiority—Cribb fast recovering his sound wind, while Gregson suffered his passion to get the better of him.

15. Cribb punished his opponent in first-rate style, Gregson fell from its severe effects.

16. Gregson put in a blow on Cribb's head, which brought him down instantly.

19. Both combatants seemed to have the steel out of them; their blows were mere attempts; Gregson down.

20. Game versus resolution—Cribb heroic, and Gregson no wise deficient in valour—emulous of victory, the combatants seemed to forget their state, went in furiously, and both fell.

22. On meeting, a rally took place, and strength favouring Gregson, he fairly bored Cribb down. The odds shifted so much, and such was the general feeling, that ten to one was offered Cribb could not come again.

23. Never were pugilists more near a tie, Cribb, on setting-to, had strength enough to put in two feeble hits and closed: in wrestling, Cribb had the good fortune to throw his antagonist, who fell with uncommon force. Gregson was raised and placed on his second's knee, but time had expired before he was able to come again, and Cribb was declared the victor. It was evidently an unexpected event, for, on hearing the news he fell into his second's arms.

Richmond, who, it appeared, had offended Cribb, was, immediately on his recovery, challenged for fifty guineas, to be decided instantly, but his friends would not suffer such a proceeding to take place.

Jem Belcher, whose conquests had been so truly distinguished, was so grievously hurt in his mind by the defeat he had experienced from Cribb, that he was determined to have another trial for the recovery of his hard-earned fame. This memorable conflict took place February 1st, 1809, on Epsom race-ground, in a thirty-feet roped ring; Belcher was seconded by Mendoza and Clark; and Cribb was attended by Joe Ward and Bill Gibbons. The current betting was two to one on Cribb.

#### THE FIGHT.

1. Some good manoeuvring was displayed on both sides; at length Belcher put in two hits, one of which was warded off by Cribb, but the other took effect on his body; he instantly returned, but Belcher stopped him, and, in closing, Belcher had a slight fall.

2. Cribb, on the alert, made play, and gave his adversary a body blow; Belcher rallied, and after an exchange of hits, was thrown.

3. Belcher full of gaiety, exhibited finished science; he popped in two lunging hits right and left, one of which took effect under the left ear of his opponent. A pause and some good exchanges, but no harm done. Cribb again threw his adversary.

4. Both the combatants displayed the perfection of the art of boxing—hitting and stepping was never seen to greater advantage. In a bustling rally Belcher fell somewhat distressed.

6. Belcher hit right and left, but his right hand appeared inefficient; Cribb rallied, and again threw Belcher.

6. Belcher, apparently distressed, retreated to the ropes to recruit his wind, where Cribb, improving the opportunity, followed him, and put in some severe blows. Belcher, aware of his opponent's uncommon strength, hit out, and gave at arm's length a severe blow under Cribb's ear with his lame hand, and unfortunately for the latter, upon the exact spot where Gregson had so wounded him; in closing Belcher gave Cribb a severe cross-buttock. Cribb's continuation was considered so good, that the odds were four to one on him.

7. The science and style of Belcher gave him the advantage in this round, but he had not stamina to support his skill, which operated as a check to betting in his favour. He hustled his man, and planted his blows successfully, and, in closing, Cribb went to the ground, but very slightly.

8. The exertions which Belcher had made appeared to have distressed his bellows, and he made towards the ropes to recruit it, which Cribb perceiving followed him, when Belcher made an uncommon effort to extricate himself from the superior strength of his antagonist by rallying, and planting a few hits; however they were too feeble to make much impression on the hardy frame of Cribb; in closing much hugging took place, and after some struggling to obtain the throw, both went over the ropes.

9. The men closed, but were separated by their seconds.

10. It was clearly seen, notwithstanding the courage and science displayed by Belcher, that his constitution was too weak for the competitor with whom he was engaged, and that the chance of winning was against him. Cribb had been acting principally on the defensive till this period of the battle; but now he changed the scene, went in and showed his superiority by hitting, stopping, and planting several successful blows, and finished the round by giving Belcher a severe fall. [All betters as to the event, but no takers.]

11. Cribb active and merry, made play and again threw his opponent. [Belcher was losing fast every round, both his hands had forsaken their office, and Cribb kept the lead to the end.]

19. When Belcher convinced the spectators in what part of him the deficiency rested; he positively fought against nature, and scientifically stopped almost every hit, till he could no longer resist the impetuosity of his opponent, who bored him completely down; yet Belcher, in spite of all his infirmities, continued the battle till the

31st. When it was piteous to view this once-renowned Champion of England standing up to be punished. For the last ten rounds there was not the smallest chance of success; his hands were completely disabled, and after a contest of

forty minutes, the heroic Jem Belcher resigned the palm of victory to Cribb, never more to enter the field of honour.

By the above conquest, Cribb acquired fame and eminence as a first-rate pugilist; and his friend Gully having resigned all pretensions to prize-milling, the envied title of Champion of England descended to him.

Much as the former contests of the champion had excited the sporting world, they were looked upon as trifling, when compared with his battle with Molineux: and even those who had hitherto passed over boxing in general as beneath their notice, now seemed to take a lively interest in the issue of a fight. It appeared almost an affair of national concern; all felt for the honour of their country, and were deeply interested in the fate of their champion, Tom Cribb. Molineux was viewed as a truly formidable rival: he was by no means deficient in strength, courage, or agility, and, though little known, his pedigree had been traced to be good: his father was never beaten; he was a twin-brother; and the whole family distinguished for pugilistic traits of excellence and bottom. In height Molineux was five feet nine, weighing fourteen stone two pounds; while his brave opponent stood five feet ten a half, weighing fourteen stone three pounds. It appears that Cribb expected to win with ease and style, and Molineux threatened to perform wonders: it was stated by the most experienced and best informed upon the subject, that the amount of betting on this occasion exceeded any thing before known. Considerable odds were betted that Molineux was disposed of in fifteen minutes, and it was considered a safe speculation to back Cribb proved the conqueror in half an hour. The day selected for this grand milling exhibition was December 10, 1810, at Cophthall Common, in the neighbourhood of East Grinstead, Sussex, within 30 miles of the Metropolis.

"Notwithstanding the rain came down in torrents, and the distance from London (hear this, ye railroad travellers of 1845!), the fancy were not to be deterred from witnessing the mill, and waded through a clayey road, nearly knee-deep for five miles, with alacrity and cheerfulness, so great was the curiosity and interest manifested upon this battle."

About twelve o'clock, the late Mr. Jackson, with his usual judgment, had the ring formed at the foot of a hill (twenty-four feet roped), surrounded by the numerous carriages which had conveyed the spectators thither. Immediately upon this being completed, Molineux came forward, bowed, threw up his hat in defiance, and retired to strip; Cribb quickly followed, and the men were soon brought forward by their seconds; Gully and Joe Ward for the champion, and Richmond and Jones for Molineux.

#### THE FIGHT.

1. The first appearance of the young Roscius excited not greater attention than the set-to; the eyes of the spectators were fixed in universal anxiety, waiting for the first blow; after a few seconds of scientific display, the African put in a left-handed hit, but did no execution. Cribb returned, but his distance was incorrect; however, he made a good stop; and planted a blow with his left hand under the eye of his opponent. A rally ensued; blows were exchanged, but of no import; the men closed, and Molineux was thrown.

2. The Moor popped in a left-hander, which did not tell, and Cribb retorted by a tremendous hit over his adversary's right eye-brow; it did not, however, knock him down; he only staggered a few paces followed up by the Champion. Desperation was now the order of the day, and the rally re-commenced with uncommon severity; Cribb showed most science, although he received a smashing blow on the mouth that made his teeth chatter again, and exhibited the first signs of claret. [Four to one on Cribb.]

3. After a short space, occupied in sparring, Molineux attempted a good blow at Cribb's nob, but the Champion stopped him, and returned a right-handed hit under Molineux's lower rib, whereon he instantly went down. [Still four to one.]

4. On setting-to Molineux forced the fighting, when the Champion stopped his career by a severe hit in the face, that levelled him, the ground being wet and slippery.

5. The amateurs were uncommonly interested in this round, it was a display of united skill and courage that claimed peculiar notice from both men's efforts. Molineux rallied with uncommon fortitude, but his blows were short. Cribb returned with spirit, but the African knocked them off, and succeeded in planting a tremendous hit on the left eye of the Champion. A rally, at half-arm's length, followed, which excited the utmost astonishment from the resoluteness of both the heroes, who hit each other away three times, and continued this desperate milling for half a minute, when Molineux fell from a feeble blow. The knowing ones were lost for the moment, and no bets were offered.

6. The Sable hero planted a blow upon the nob of the Champion, who fell from the bad state of the ground.

7. Cribb in a rally gave Molineux a hit on the side of his head, and went down.

8. Cribb showed off in good style, and dealt out his blows with considerable success and effect, but found, from the determined resolution of Molineux, that he was somewhat mistaken in his ideas of the Black's capabilities, for he rallied in prime twig, and notwithstanding the severe left-handed hits planted on his nob, and the terrible punishment he received on the body, from the fine skill and power of the Champion, still stood up undismayed, proving that his courage was of no ordinary stamp; he kept up the ball, hitting and exchanging, but certainly getting the lion's share of punishment until he fell almost in a state of stupor, from the milling his head had undergone. This round was equal to any that preceded it, and only different in point of duration.

(To be continued.)

## BRITISH BIRDS. NO. XVIII

THE JUDCOCK, OR JACK-SNIPE.

**T**HE second number of the snipe family whose portrait is here given is the jud, jid, or jetcock; for by all these names is he known in different provinces. In its figure and a portion of its plumage, it is closely allied to the common snipe; but is only about half its weight, seldom exceeding two ounces, or measuring more, from the tip of its beak to the end of its tail, than eight inches and a half: the bill is black at the tip, and light towards the base, and rather more than an inch and a half in length. A black streak divides the head lengthwise from the base of the bill to the nape of the neck, and another, of a yellowish colour, passes over each eye to the hinder part of the head: in the midst of this, above the eye, is a narrow black stripe running parallel with the top of the head from the crown to the nape. The neck is white, spotted with brown and pale red. The scapulars and tertials are very long and beautiful; on their exterior edges they are bordered with a stripe of yellow, and the inner webs are streaked and marked with bright rust colour on a deep brown, or a bronze ground, reflecting in different lights a shining purple or green. The quills are dusky. The rump is of a glossy violet or bluish purple; the belly and vent white.—The tail consists of twelve pointed feathers, of a dark brown, edged with rust colour; the legs are of a dirty or dull green.

The judcock is of nearly the same character as the snipe; it feeds on the same kinds of food, lives and breeds in the same swamps and marshes, and conceals itself from the sportsman with as great circumspection among the rushes or tufts of coarse grass.—It, however, differs in this particular, that it seldom rises from its lurking place until it is almost trampled upon, and, when flushed, does not fly to so great a distance. It is as much esteemed as the snipe, and is cooked in the same manner.

The eggs are not bigger than those of a lark; in other respects they are very like those of the snipe.

A word or two about shooting this peculiar little suction-feeder. He abounds in Ireland, and is there esteemed a most difficult shot, although he seldom on rising, makes any twistings, or twinings, and will alight or pitch again, after being fired at, within a couple of hundred yards. Every sportsman that has been much accustomed to snipe-shooting, will allow, that a jack-snipe will suffer himself to be fired at twenty times in the same field, and will pitch each time so close to the shooter, that he frequently conceives that he has wounded him. They lie so close, that a staunch pointer, might remain at his point until the moon changed, as this bird will not rise until forced to do so. A most curious circumstance which occurred respecting a jack-snipe that was sprung several times by a Mr. Molloy, formerly a quartermaster of the 64th regiment, while he was quartered at Geneva Barracks, Ireland, is well worth relating: he regularly, after his duty was done, or if he could possibly obtain leave for a day, used to equip himself for shooting, and always sprung this jack-snipe, at which he fired and followed, and the bird used to pitch so close to him at times, that he was confident he had shot it, and used to run to take it up, when, to his great surprise, it would rise and fly a little further; he actually acknowledged he fired, one day, eighteen times at this bird, and after shooting at it for the whole season, he happened to be crossing the bog it lay in, when he put it up, and exclaiming, "there's my old friend," threw his stick at it, and killed it on the spot. Whenever, after, any of his brother officers found a jack-snipe, they were always sure to say, "there goes Quartermaster Molloy."

In Ireland, in the bottoms of the county of Limerick, about Charleville, these birds are in the greatest abundance, as it is not uncommon to hear of a person shooting twenty brace of them in the morning. The late Sir George Dunbar, of the 14th regiment of Light Dragoons, when quartered at Charleville, won a considerable wager by shooting forty-three

brace between ten o'clock in the morning and four in the afternoon; and what appears still more extraordinary is, that although there are so many sportsmen about that place, who follow these birds, and others who net them, yet you find always enough of sport the day following; for there seem to be as many snipes, after two months' destruction, as they were at the beginning of the season. The compiler himself has shot twenty brace, frequently, in a day, in the county of Cork; and, in the county of Limerick, has fired so often, that he has been forced to wait for the barrel of the gun to cool, before he durst attempt to reload.

## MOOSE-HUNTING IN NOVA-SCOTIA, WITH SOME NOTES ON THE NATIVES.

(Concluded from page 385.)

At length we arrived at the frozen lake, where we put on snow-shoes adjusted our packs, and made short excursions on the lake to try our strength—like a flock of migratory birds which assemble and wheel about in the air ere they take their final departure to a distant land. After various trials and some laughable failures, and not without indulging in some mirth at each other's expense, we journeyed for six miles up a large chain of lakes, one of which is not less than nine miles in length. During this trip we crossed several portages,\* dragging after us a trebogan (a description of truck), the sharp edges of which, as the snow had not yet obtained a firm crust, continually broke through and over-set the baggage. In one of these contretemps a jar of rum was split which we had taken for the use of the men, by whom this precious liquor was dearly prized, and who, no doubt, severely deplored its loss; at least, if we may judge by the circumstance of their having taken up portions of the snow on which the rum had fallen, and positively eaten the discoloured mixture; though one man told me at the time it made him feel "mortal queer;" which confession I readily believed, though I was fain to interpret "mortal queer" into "mortal drunk," especially as he appeared to walk none the steadier after his potion.

By five o'clock we arrived at our first night's encampment. This camp was an old one which we had found in the woods, but so completely was it choked up with snow, that, before measures could be taken for lying down within, it became necessary to shovel out the contents with snow-shoes. Having removed this obstacle, we placed fir-boughs, to the thickness of nearly two feet, at the bottom of the camp; we then made a fire, and, like wandering gipsies, put on a kettle to boil. Those who meditate an excursion in the woods would act wisely to stock their knapsacks with tea; this they will find the most grateful, as well as the least hurtful beverage after a day's march. Wine and spirits too often excite thirst, and in many cases produce fever; whilst "the cup that cheers, but not inebriates," has a direct tendency to allay both dispositions. The refreshment over, we smoked, and then lay down to rest for the night. Persons who are accustomed nightly to sleep under the shelter of bricks and mortar, and to repose in the luxury of feather-bed and pillows, may possibly form but an indifferent opinion of a bed in the wild woods of Nova Scotia in extreme winter, and with three feet of snow beneath for a mattress. They may assure themselves, notwithstanding, that such a night's lodging is by no means as cold and comfortless as they might suppose; especially after a long day's ramble through the woods, which renders a man by no means scrupulous where he makes his bed, and when the instant he lies down he falls into a deep slumber. The great art seems to consist in making the fire on a rising ground, that it may be raised a little above you, and, by means of constantly supplying fuel to the fire, a regular heat is obtained, and the feet of those encamped are kept thoroughly warm. In the course of the night, having neglected this necessary precaution, and having unwittingly built our fire over a small gully, it gradually sunk so low that we lost all warmth, and we were suddenly roused by an exclamation from Joe Frizzle, of—"I'm blest, if we shan't be friz stiff as ring-bolts before morning if we let the fire go down at this rate!" At which intimation all hands rose up, and placing a good quantity of wood, and creating a fine blaze, we again betook ourselves to our blankets. Next morning we rose by day-light, breakfasted, and sallied forth in search of moose-tracks, leaving behind the greater part of our provisions, as we intended to convert that camp into headquarters. We traversed a vast extent of wood without success. It was then proposed to separate in order to take a wider sweep in various directions, and we agreed to meet at an appointed place of rendezvous.

Captain L., myself, and one man, pursued our course up a gully, which in summer is a wide channel of water, but it was so extremely circuitous that, to shorten our route, we were frequently obliged to cross it by leaping over. Now a leap in ordinary cases would not be worth the mention, but let the reader only make trial of a leap in snow-shoes, and he will cease to wonder that we found ourselves somewhat embarrassed. In the event of a trip, down goes the unfortunate traveller head foremost in the snow; and then, alas! how to regain his former erect position? My friend, Captain L., did not seem altogether to relish these constant leaps; and he took occasion to cross the gully by means of small portions of snow, which in places formed a sort of bridge. It was in vain that both

\* Portages: small strips of land that separate one lake from another.

the guide and myself advised him against this practice. Deaf to our remonstrances he continued as before, till, just as he imagined himself safely over, and was about to place his foot on the opposite bank, he was all at once lodged in the gully, and for a short interval of time we could see nothing but the bottom of his snow-shoes. We raised him, but he was sorely bruised by the fall. We reached the place of rendezvous by one o'clock. Our friends soon rejoined us; and, to our additional satisfaction, we recognised in their company our old acquaintance, the Indian Chief of the Mic Macs, Charles Glode. Our hearts warmed at the sight; and, shaking him warmly by the hand, we cordially invited him to partake of our coming meal. From this, however, he excused himself, under the plea of urgent business, which required his presence among his tribe; besides which, he said a number of his people awaited him not far off, and he must rejoin them without delay.

These people are shrewd in their dealings, and suspicious of the whites. A good story is told of a certain judge in Newfoundland, who was very particular in his observance of the third commandment. The practice of swearing had become so inveterate that the judge levied a fine upon each offender. It so happened that the person who came in next for this punishment was an Indian. The fine was demanded, and the Indian resisted; but, being obliged to accede, he addressed the judge, desiring him to give a receipt for having paid the money.

"Get about your business, brother," replied the man of morals; "receipts are never given in cases of this sort."

Still, however, the Indian persisted.—"For," said he, "when Indian die, angel say, 'Indian, you berry bad man; you swear—you speak bad word to judge.' Den I say, 'Yes, angel; but me pay fine to judge.' Angel not believe Indian speak true, cos he not get receipt to show angel; so he send Indian all de way into bad place to find judge!"

Resume we now the subject of moose-hunting. When Charles Glode departed our friends informed us they had been equally unsuccessful with ourselves. We next proceeded to encamp on the borders of a lake. Some of us were told off to commence making a camp, lighting a fire, cutting boughs for beds, and felling wood for the night. The rest departed in different directions to search for moose-tracks. By the time our labours had been nearly completed they returned with the happy news that they had not only succeeded in starting a moose, but they had also followed him several miles; but the snow-crust was so soft that the dogs had left off pursuit; and, darkness coming on, they were obliged to turn back to the camp.\* Such welcome intelligence cheered and sent us to bed with joyful hearts. We slept soundly, started with the light, and soon came upon the track of a moose, which gave evident proofs, from the masses of hair that lay strewn about, that the animal had been attacked and worried by the dogs. And also a little further on fully explained why they had discontinued the pursuit; for near a wind-fall which lay directly across the path of the moose, and about two feet distant from the ground, we discovered one of the moose-horns, that had been torn off by the force with which he came against a tree. This horn, upon examination, would have taken at least six weeks to drop off in the usual course of nature; and its violent and sudden disjunction must have been productive of extreme pain to the moose. It however seemed conclusive that the dogs had at once stopped, and quitted the chase upon scenting the bleeding horn, whilst the moose, finding himself again at liberty, set off at a gallop, taking a stride of nearly six feet each time. We followed as hard in pursuit as a snow of two feet deep would permit. Meanwhile, heated with our exertion, and wet through with the drifting, which descended upon us in showers from the trees, our forlorn appearance may be better imagined than described. At four o'clock, when we proposed resting for the night, we had gone a round of twenty miles, and were within four miles of our old camp and head quarters. It began raining heavily, and the moose still continuing his usual rate of going, we made for the lake, and proceeded to head quarters. One of the party here confessed himself overcome, and quite unequal to continue the chase for another day; he therefore proposed remaining at the camp to prepare tea for us on our arrival thither. After our meal we held a council on the state of the weather (the rain forcing itself through all parts of the camp)—considering also the course the moose had taken. We decided to retrace our steps, and proceed some miles further up the road, and finally to halt at Clay's, the publican, from thence to strike again into the woods in such a direction that, had the moose really taken the course we conjectured, we must either hear of him having crossed, or else, by bringing up our left shoulder, we should come again upon his old tracks.

Our route across the lakes was not unattended with danger, as the snow had now begun to melt so rapidly that we were immersed to our ankles in water, and it was impossible to attempt distinguishing the weak

parts of the ice. We reached Clay's after a laborious march, hungry, wet and exhausted: A little privation, however, only renders a man more sensible of the blessings he receives, and it was strikingly verified in my own case, for I do not remember to have slept sounder, or to have enjoyed myself more, than on that occasion. Upon inquiry, it was ascertained we had judged correctly respecting the moose; which had crossed the lake half a mile in rear of the house we then occupied, and on the very night in which we had started him.

The next day being a thaw, we stayed at the inn, but the succeeding morning saw us again in motion. We came up with the moose at one o'clock the same day; but the snow remaining still too soft, the general voice proclaimed it would be best to remain quietly, and suffer the moose to browse at his ease till the hardening of the snow should allow us to proceed. Unfortunately these plans were frustrated by one of the party, whose anxiety to determine the presence of the moose by ocular demonstration, nearly ruined our hopes; impelled, however, by these motives, he rushed forth alone, leaving his dogs behind: but, lo! before our friend had well made an end of his survey, an abominable little terrier contrived to slip his collar, and away he ran after his master. Alas! alas! too soon we heard his vile yelpings, and then, worse than all, the crashing of boughs broken by the moose, in forcing for himself a passage. A very transient view was afforded us of the animal as he flew before the wind. We followed, and kept up for three days, during this flight he crossed many lakes and rivers, in one of which he walked nearly two miles, breaking the ice as he went. And here let us remark upon a most powerful leap made by the moose. A tree had fallen in such a manner that it rested upon another, leaving the centre of the former tree raised five feet from the snow, which centre was filled up by small growing firs, the uppermost part only being covered to about a foot with snow—this height the moose cleared, merely touching the snow with his knees in passing over. Let it be remembered, also, that at that time snow was three feet deep on the ground, and the animal was going up hill.

Discouraging as appeared the present aspect of affairs, to give up the chase was impossible. We continued in pursuit, despite of cold, wet, and hunger, and we were now verging on absolute starvation, for our whole stock of eatables was reduced to six American crackers and two thin slices of pork, which remained to be divided between five persons and three dogs. Still, however, on we went, like Tam O'Shanter and the gnome-spirit. Nothing stopped our progress. Perhaps, also, the recollection of the food that awaited our success lent wings to our feet, and added another powerful inducement to continue the chase. It was now approaching towards the middle of the ninth day—we had eaten the last slice of pork that remained, and taken each a cup of tea, when we called a council, to decide the necessary measure that ought to be taken at this most alarming crisis. Captain L——, as chairman, mounted a fir bough, and, with a thin, pale face and immense gravity of countenance, he assured us that, as things could hardly be worse than they were, we had better go on. He then harangued us upon the delights we should all experience if we succeeded in our enterprise—dwelt upon the shame and mortification of a failure, and, above all, he expatiated with such heartfelt zeal, and unfeigned delight, upon the juicy pleasures of a hot tender moose-steak, all broiled to a turn, and the gravy oozing out—that, under the circumstances of famine in which we were placed, we all at once exclaimed, with raised hands and eyes, "Hold, hold, enough, and too much. Don't, for Heaven's sake, continue in that strain!" "Rouse, rouse, my lads," said Captain M——, "and let us after the animal again!" Whereupon we arose, and each taking our rifle, we pursued the moose with fresh energy. Our dogs, too, seemed almost to partake of the general zeal, and to understand the necessity for exertion, for they ran anxiously forward, and it was difficult to restrain them within bounds. The moose had now swept across a lake, the surface of which, from its extreme slipperiness, caused him many falls. On reaching the shore we found marks of blood on his tracks, at which we had all the barbarity simultaneously to raise a shout of delight; as we surmised, from such promising indications, the failing state of the animal, and concluded he could not, therefore, long escape us. The shout we raised caused the dogs to bark violently and break loose; they were soon in full chase, and, as we gained upon the moose, we discovered greater effusion of blood. Now then we heard the dogs clamorous; presently they held him at bay, and they rose in full cry. All this acted upon us like magic—we cast away every article that seemed likely to impede our progress, and rushing forward, it certainly was the "devil take the hindmost." At last we came up to the scene of action. There lay the stately moose, the object of nine days solicitude of hope and fear, his remaining horn brought low, his eye watching the dogs, defending himself to his very last moments, and every now and then attempting to strike with his long taper fore-leg. The poor animal bled profusely at the hocks, which he had wounded in his passage through the ice, and he had likewise received some wounds from crossing the lake. It was a sad sight, and I am far from ashamed of confessing I felt it so! Captain M—— was the first to recover himself and, slowly raising his rifle, he shot the moose through the head. The poor fellow gave one start, and then dropped dead. Ye gods, how we did feast that night!—we made ourselves ample amends for former starvation—dogs and all. And

\* "The camp."—Two poles, with forks at the top, are driven into the ground at a proper distance from one another. Another pole is then laid across the forked parts, and two others, also with forks, are planted in front, sloping towards the camp, to render the frame sufficiently strong to bear the weight of boughs or bark, as well as the weight of the poles that form the back of the side. A number of lighter poles are then laid in a sloping direction at the back of the camp, to form a slanting roof. Fir-boughs are placed over these, and the sides are fenced in the same manner. Boughs of fir are spread at the bottom of the camp.

how proudly we laid our trophy upon the trebagon, walking by the side, and eyeing the dead animal with exultation.

Next came the question of dividing our spoil. Of course our good Colonel was first to be considered; but each of us had more friends to oblige than there were parts to send of the animal. The mouth and nose (which is called the moofe) we voted should be offered to his Excellency the Governor; that part being esteemed the greatest delicacy for soup, and by many considered equal to turtle. The next day we reached Halifax, looking like so many Orasoes and Man Fridays; our beards had grown patriarchal from want of shaving, our skins were embrowned and discoloured from exposure to wet and cold; so that when a married man of our party presented his uncouth figure before his wife, the poor lady, who was intent upon the perusal of an Indian tale, with her imagination full of wild Indians and savages, gave a half shriek of terror, and was on the point of raising the servants, to save her from the scalping-knife of so formidable an enemy! We returned, after an absence of ten days, to our firesides, and those who were so fortunate to possess them, to their families,—more thankful for the blessings of home, and infinitely more sensible of the comforts with which Providence had surrounded us.

**EARLY ARRIVALS.**—During the past week several large flocks of those well-known winter visitants, the fieldfare and the redwing, have been seen in the neighbourhood of Woolwich, particularly in the marshes between Plumstead and Erith. These birds ordinarily visit us in November, and their early arrival this autumn proves that the winter must have already set in with considerable severity in Norway and Lapland, the birds never quitting their summer quarters till the frosts have deprived them of a supply of their ordinary food. Several flocks of golden plover, lapwings, and a few snipes, have also been seen, appearances which serve to remind us that winter is not far distant.

#### DONCASTER CUP WINNERS.

[We insert the following lists, though rather out of season, at the request of several correspondents.—Ed.]

1801	Mr. Wentworth	Chance	—
1802	Mr. Brandling	Alonzo	—
1803	Lord Strathmore	Remembrancer	—
1804	Lord Grey	Sir Oliver	—
1805	Lord Fitzwilliam	Caleb Quot'em.	—
1806	Mr. Garforth	Camillus	—
1807	Lord Monson	Scud	—
1808	Mr. Duncombe	Laurel Leaf	—
1809	Lord Milton	Whitenose	—
1810	Lord Darlington	Trophonius	—
1811	Mr. Duncombe	Grimalkin	—
1812	Mr. Glover	Slender Billy	—
1813	Sir W. Maxwell	Viscount	—
1814	Mr. Watt	Tramp	—
1815	Lord Scarborough	Calton	—
1816	Mr. Houldsworth	Filho da Puta	—
1817	Colonel King	Fulford	—
1818	Duke of Leeds	Rasping	—
1819	Mr. Garforth	Otho	—
1820	Mr. Powlett	The Juggler	—
1821	Mr. Lambton	Consul	—
1822	Mr. Dilly	Euphrates	Robinson
1823	Mr. Farquharson	Figaro	T. Lye
1824	Duke of Leeds	Mercutio	W. Scott
1825	Mr. Whittaker	Lottery	G. Nelson
1826	Sir M. W. Ridley	Fleur-de-lis	G. Nelson
1827	Lord Fitzwilliam	Mulatto	T. Lye
1828	Major Yarburgh	Laurel	T. Nicholson
1829	Lord Cleveland	Voltaire	T. Lye
1830	Lord Kelburne	Retriever	T. Lye
1831	Mr. Wagstaff	The Saddler	Chapple
1832	Mr. Riddell	Galopade	Johnson
1833	Mr. Watt	Rockingham	T. Nicholson
1834	Mr. Orde	Tomboy	R. Johnson
1835	M. of Westminster	Touchstone	W. Scott
1836	M. of Westminster	Touchstone	W. Scott
1837	Mr. Orde	Beeswing	Cartwright
1838	Lord Chesterfield	Don John	Nat
1839	Major Yarburgh	Charles XII.	T. Lye
1840	Mr. Orde	Beeswing	Cartwright
1841	Mr. Orde	Beeswing	Cartwright
1842	Mr. Orde	Beeswing	Cartwright
1843	Mr. H. Wormald	Alice Hawthorn	Hesseltine
1844	Mr. Salvin	Alice Hawthorn	Bumby
1845	Mr. Hill	Sweetmeat	Whitstone

#### GOODWOOD CUP WINNERS.

1812	Mr. Cope	Shoestrings	John Day
1813	Mr. Biggs	Camerton	W. Sawyer
1814	Mr. Blake	Banquo	F. Buckle
1816	Lord Egremont	Scarecrow	W. Arnall
1825	Lord Egremont	Cricketer	G. Edwards
1826	Lord Egremont	Stumps	G. Edwards
1827	Duke of Richmond	Link Boy	F. Boyce
1828	Duke of Richmond	Miss Craven	F. Boyce
1829	Mr. D. Radcliffe	Fleur-de-lis	Robinson
1830	Mr. D. Radcliffe	Fleur-de-lis	G. Nelson
1831	Lord Chesterfield	Priam	Connelly
1832	Lord Chesterfield	Priam	Connelly
1833	Mr. Kent	Rubini	Boyce
1834	Lord Jersey	Glencoe	Nat
1835	Mr. Theobald	Rockingham	Robinson
1836	Lord Chesterfield	Hermes	W. Scott
1837	Lord Chesterfield	Carew	Nat
1838	Mr. Ferguson	Harkaway	Wakefield
1839	Mr. Ferguson	Harkaway	Calloway
1840	Duke of Orleans	Beggarmen	Robinson
1841	Mr. A. Johnston	Charles XII.	Marson
1842	Mr. A. Johnston	Charles XII.	Robinson
1843	Mr. Lichtwald	Hyllus	Butler
1844	Mr. Salvin	Alice Hawthorn	Templeman
1845	Lord G. Bentinck	Miss Elis	Abdale

#### NOTICE!

### THE SPORTSMAN'S ALMANAC,

will be ready for delivery with NUMBER TWENTY-EIGHT of the SPORTSMAN'S MAGAZINE; it will contain the whole of the Nominations for the Derby, Oaks, and Leger 1846; revised tables of the duties on horses, dogs, game certificates, &c. A list of principal Jockeys and the colours of their Masters; Public Trainers; Sporting Chronologies for 1846; a really SPORTING Calendar, (which no other Almanac has yet contained) besides a mass of general information equal to other Sheet Almanacs, printed in a style for framing or suspending on a board in public or private rooms.—Price THREEHALFPENCE to Subscribers—SIXPENCE to Non-Subscribers, after the expiry of the week of publication. \* \* \* Observe! the whole of the Back Numbers, and the MONTHLY PARTS, are in Print, and may be had. Office, 42, Holywell-street, Strand.

#### TO CORRESPONDENTS.

**SOOTHSAYER.**—We should be happy to hear from you, as heretofore. The description of the Baron, whom we have never seen (except flying past at some distance off for the Oseer-witch), was taken from a paragraph in the *Sunday Times*; our engraving, from a drawing made by an artist who, not only professed to have seen the horse, but sent us a description accompanying his sketch. Our correspondent is a shrewd observer, he says, "in Ireland he was entered as a bay colt, in England as a chestnut colt," &c.; perhaps this very discrepancy contributed to the examination he underwent after the St. Leger, from which he emerged unscathed.

**HALES.**—You will find GOODWOOD CUP winners in the present November, as also those of the DONCASTER FLARE. See this page.

**T. W.**—The usual quantity of shot used in shooting pigeon matches is two ounces, unless an agreement to the contrary is made.

**S. R.**—In cutting cards for a wager, the ace is highest. We cannot, upon anonymous information, publish the atrocity described as having occurred at a large pigeon match, by "C. F. B."

**W. P. A.**—A, being a landlord, a party comes into his house and begins card-playing without the knowledge of A, or any other but their own party, bringing the cards with them; the constables come in and catch them. Is the landlord liable to the penalty or not? We think not.

**S. S. B.**—Blackfriars-road, wishes to know if any "brother trader" can inform him of good pike-fishing within twenty or thirty miles of London?

**A WELLWISHER.**—The INDEX we intend to give with the SPORTSMAN'S MAGAZINE will include the contents of the nine numbers of the SPORTING WORLD. There has been no print published. The proprietors of the SPORTING WORLD abandoned that publication, and sold it off at the sixth number.

**J. R.**—Tom Spring never refused to fight Jem Ward, neither did he resign the Championship to him. The champions will come in, all of them, in chronological order.

**J. BOWDEN, Northampton.**—Bendigo has fought seven times in the P.B. He was not quite twelve stone when he fought Caunt (see our September number, 18). Bendigo forfeited £70 to Tass Parker. His brother is said to have procured his arrest to prevent the fight. The GAMES AND WAGERS BILL contains a clause (the 18th), the which we take it puts Caunt (or rather the parties who prosecute the suit for him) out of court. We have not a particle of predilection for one or the other of the men; we never had a shilling risked on the event, and, if we know ourselves (a difficult knowledge it has been said), have not an atom of prejudice, favour, or affection for one more than the other.

**W. R.**—Jem Wharton (Young Molyneux) weighs hard on 11 stone, fighting weight. He has fought some very good men over his own weight. Hammer Lane, whom he beat June 9, 1840, for £100, in 53 rounds, occupying 72 minutes, was under his weight, but we cannot exactly say how many pounds. He beat Bill Fisher and Harry Panton, drew with Tommy Britton, and beat Rawick twice.

#### OUR WEEKLY CALENDAR.

**SUNDAY, NOV. 2.—TWENTY-FOURTH SUNDAY AFTER TRINITY.**—All Souls Day. Things to be remembered in November.—Borough councillors elected on the 1st. Mayors and aldermen chosen on the 9th. 11th, St. Martin's Day, or Martinmas, in the Church of England calendar. Popularly, this is one of the most remarkable days of the year, especially in Scotland, where Whitmaside and Martinmas are the two great terms for losses and engagement of servants, the latter being that at which the occupation of farms usually commences. Formerly it was a quarterly term day in England: a payment of corn at

Martimes occurs in the Doomsday Survey. Attorneys and conveyancers' licenses taken out on the 16th.

**MONDAY, 3rd.**—*Michaelmas Term begins.*—This day (1844) a tremendous fog visited Fleet Street. It was, however, confined to the city, being too thick to get through Temple Bar, although it was not then, as in this present year of grace, closed "by order of the lord mayor."—**THE QUEEN AND PRINCE ALBERT** subscribe £300, to PUBLIC WASH-HOUSES. A nice bit of "Windsor soap" for the people.

**TUESDAY, 4th.**—*DOMESTIC ECONOMY.*—*Coal Measure (in Lodging-houses.)*  
 1 Coalscuttle makes . . . . . 1 sack.  
 2 sacks . . . . . 1 ton.  
 10 tons . . . . . 50 fires.  
 50 fires . . . . . Firing for landlady all the year round.

The price is very difficult to estimate, as it varies from half-a-crown a scuttle to sixpence for three quarters of one, according to the floor and rent. The higher the rent the dearer the coal, and the higher up stairs the cheaper. In second and third floors it is supposed to be regulated by the "mean temperature," though what that means we don't mean to say.

**WEDNESDAY, 5th.**—*Guy Fawkes Day.*—*How to MAKE A GUY.*—Get a head of long hair turned up at the ends, and put on it a *Chapeau Français*; take a pair of mustachios, an imperial and eye glass; add to these a blue satin scarf, with a gold pin like a beadle's staff, braided coat, crimson waistcoat, ladies' boots, canary kids, a tremendous swagger, and a very small riding-whip. Put these together on a block; turn it into Regent-street about three o'clock, and you will have succeeded in making a perfect Guy.

**THURSDAY, 6th.**—*COOL IMPUDENCE.*—Yesterday an individual of dashing exterior presented a shilling to the toll-keeper of Waterloo Bridge, and sarcastically demanded change.

**FRIDAY, 7th.**—*POSTING-BILLS ILLEGALLY FIXED ON THE WELLINGTON STATUE.* Shame to stick an old soldier who never stuck at anything!

**SATURDAY, 8th.**—Clock 16m. 5sec. slow.—The Lord Mayor elect sworn into office.—Fox hunting in its prime. "A southerly wind and a cloudy sky proclaim a hunting moon."

## The Sportsman's Magazine.

### GYMNASTICS. NO. III.

#### FENCING.—SECTION II.

MAJOR GORDON'S METHOD.

**I**N the first section we generalised, in this we propose to detail. To enforce the authority of the common system it has been asserted that it was the results of experiments made from nature, as we stated in the previous section. Different peasants being ordered to make their assaults in succession concurred in making their first thrust in *prime*, directing the point high, to the left of their antagonist, with their hands in *pronation*—that is, with the knuckles of the fingers and palm of the hand downwards, and the convexity or back of the hand, or convex side upwards. This is the position of *Prime* marked in figure 3.

Fig. 3.—THE THRUSTS.

1. Tierce. 2. Prime. 3. Seconde. 4. Quinte.

From this certainly weak position the greater part of the cuts and thrusts of the cavalry sword-exercise are derived.

All the peasants beforementioned also concurred in delivering the second thrust *under* the arm, in *pronation* also, as marked *seconde* in figure 3.

Their third assault was over the adversary's arm, still without varying his mode of holding the sword; see tierce in same figure. Observe this neat excellent position for cutting vertically downwards.

On attempting a fourth delivery, they rotated their hands into *supination*, that is, the nails, knuckles, and palm were turned upwards, and they directed the thrust at the armpit of the opponent. This is the safest and strongest position, and is marked as *quarte* in figure 4.

Fig. 4.—THE THRUSTS.

1. Quarte over. 2. Quinte inside. 3. Octave.

The fifth thrust was attempted low, and under the opponent's arm, the hand in *pronation*, and in opposition to the adversary's right. From this position are derived the hanging guard, the inside and outside half-hangers, &c., of which we shall speak in another department of sword exercise. This thrust is termed *Quinte* in figure 3.

The sixth thrust bears the name of the *octave* (see figure 4): the hand is here also in *supination*, and opposed to your right in *quarte* it is opposed to your left. These six are the simple thrusts, and from them every cut and thrust is derived, in all their complex variations.

The six simple guards are named, like the thrusts, as the guards of *quarte*, the guards of *quinte*, and so on.

As the thrusts are either simple or complex, so are the various guards. All cuts, however, are complex motions or combinations of several simple motions. This is the French arrangement of the thrusts, yet, spite of this, it appears, from experience and the muscular construction of the human frame, that *quarte* should be placed first of all thrusts and parades, from the superior power of the hand in opposing the adversary and retaining the weapon in position. Tierce next ranks to *quarte* in this respect, as, in tierce, the hand is *over* the adversary and has the advantage of weight in striking downwards. The *seconde*, *quinte*, and even *prime*, evidently derive from tierce. But the three last-named thrusts, and all the guards and thrusts derived from them—such, we mean, as the hanging guard, the outside and inside half-hangers, the off-side and near-side protects—should be utterly discarded as dangerous complexities to the person who resorts to them. In like manner, all cuts should be rejected except *two*, and all complex thrusts whatsoever: nevertheless, there are a few complex parades (hereafter to be spoken of) which cannot be too sedulously practised.

### SECTION III.

METHOD OF MAJOR GORDON—continued.

*Advantage of the simple thrusts; and reduction of all cuts and thrusts to simple quarte and tierce.*

What is meant by a simple thrust is one direct impulsion made by a single movement with such swiftness as to be home in the least possible space of time. A complex thrust is a combination of two or more simple motions; all cuts, as said above, must necessarily be complex.

Simple thrusts are superior to complex, as appears upon comparison. Feints are usually single or double and, but rarely, treble. The single feint is the least complex of all compound thrusts; it threatens an attack on one point, while it lays open the adversary to a real impulse on another. The French mode, which we will figure in the next week's paper is, in our opinion, erroneous, and when we give the engraving we will explain the reason: for the present therefore we pass it by.

The four simple thrusts, *prime*, *seconde*, *tierce*, and *quinte* agree in being delivered with the hand in *pronation*; they are said to differ, because directed to different parts of the body. The tierce, or cut over and outside of the arm, from its superior direction, conspires with gravity in forcing an opening by the dexterous application of the fort; but in the *prime*, *seconde*, and *quinte*, there are no such advantages.

The last named position of the hand is the weakest species of *pronation*: the fingers opening downwards, are ready to be disarmed by the slightest vertical impulse. The weakness is still greater in the guards derived from these positions: therefore, these might be safely reduced to one class, called tierce.

The three thrusts, *quarte*, *quarte over* the arm, and the *octave*, are excellent, and agree in the circumstance of being impelled by the hand in the strong position of *supination*. The arm, wrist, and fingers, being turned upwards, the fingers open in that direction, and the impulse which it made upward against the gravity, will generally fail in effecting the disarm: these three differing only in their direction to different points of

the body, and in direction of the opposition of the hand, might therefore, be reduced to one class, denominated quarte.

It is clear, that an indefinite number of cuts and thrusts may be directed to the various parts of the body; but if all such were to have distinct names, no dictionary could contain them.

## SECTION IV.

## THE GUARDS OF QUARTE, TIERCE, ETC.

The science of defence is concentrated in the three following particulars:—

1st,—In the graceful command of the body and limbs, and in the acquisition of the particular means which are subservient to this end.

2dly,—In the possession of the proper line of direction, &c., and,

3rdly,—In the proper opposition of the hand, and in the application of the forte to the feeble.

For the purpose of obtaining the first of those essential points, the command of body, you are to be exercised in the three following positions. The first is well known, being the position of a soldier standing on parade, erect, with his heels close, upon a small base. This is a weak attitude, and unfit for defence &c.; therefore, he is to spring from this into the second position, which is martial, and well adapted to defence and attack. The knees are bent, and the more the better, as the force of elastic spring will be in proportion to the contraction of the muscles; the body is balanced on both legs, so that it may rest on both or upon one, and more particularly upon the hinder leg. By this flexibility and command of body, you may be within and out of measure (as it were) at the same moment. Instead of standing square to the front, as in the first position, and presenting the greater diameter of your person, you present your side only, which will be covered by your weapon, and your arm directed in a line before you. The sword is to be grasped by all the fingers, and the thumb extending along the gripe. As the knees are bent, so must the hand be contracted at the elbow.—see Fig. 5.

Fig. 5.—ON GUARD IN QUARTE. Fig. 6.—ALLONGE IN QUARTE.

This position is termed on guard. The sword must not be held paral-  
lelled to the horizon, as that position would subject your feeble to his  
fort; and much less should your point be depressed below the horizon,  
for the same reason; therefore, it should be raised thirty degrees above  
the horizon, and directed nearly in the line of his eye. In the second  
position you guard or perry quarte and tierce, and all cuts and thrusts, and  
advance and retire a few paces, facing your adversary.

Parry quarte by your fort in quarte, and tierce by your fort in tierce.  
You cannot be too much practised in advancing, retiring, and parrying  
simple thrusts and cuts in this attitude. Having fully obtained the com-  
mand of your person by this practice, and not before, you are to spring  
from it into your third position, which is that of the allonge.

In the second position you sink on your knees, and have all your powers  
restrained and ready to be exerted; the exertion of these powers will  
place you in the third position, with your feet about thirty-six inches  
asunder, at right angles. This attitude is termed the allonge, and is  
figured in No. 8.

The allonge is to be made with all possible rapidity: this will be better  
accomplished by impressing the ideas of it upon the mind one after  
another. Thus, first form your extension as figure 7; elevate your right  
hand in quarte, as high as the direction of your left eye-brow; lower  
your point in a line with the cavity under the arm of the adversary;  
extend your left hand and left knee; then project the thrust, rolling your  
hand still more in quarte, or supination; throw forward your right foot  
at the same instant, fifteen or sixteen inches, so that your feet may be at  
least thirty-six inches asunder, as in figure 8. The foot should resound  
in striking the ground. Repeat this practice until you can execute it in  
one rapid motion. Examine your attitude in this third position,  
and practise unremittingly in the air, until you acquire a graceful  
precision in the execution.

FIG. 7.—PROFILE OF THE EXTENSION. FIG. 8.—PROFILE OF ALLONGE IN QUARTE.

In the last number of the MAGAZINE we gave an engraving of the  
allonge and guard here spoken of, which renders their repetition in this  
place unnecessary. The same may be said of the thrust and cut in quarte;  
on which, though we may have a few words to say, the figure is also  
given.

(To be continued in our next.)

## DOGS AND DOG-TRAINERS.

BY FREDERICK TOLFREY,

Author of "The Sportsman France," and "The Sportsman in Canada."  
(Concluded from page 405.)

William Burnell, who has removed his stock of animals from Wo-  
burn Mews to more airy premises in Maiden Lane, near Battle Bridge,  
King's Cross, has a few first-rate dogs. He is an honest man, and can  
be depended on—a rare merit in one of his vocation; but we have good  
grounds for stating that he will never deceive a customer, and it is there-  
fore under this conviction that we confidently as well as conscientiously  
recommend our cockney friends who may not have the time to scour  
the country in search of a quadruped, and who may want a good dog on  
a short notice, to visit Burnell's establishment. The very hot weather  
in the early part of last month must have tried the stamina and  
bottom of some of the setters; they must have felt severely the want  
of water: and for this reason, although for general purposes we prefer  
the setter, we give the preference to the pointer for September shooting;  
not that his powers of endurance are greater than those of the setter,  
but simply because the pointer can work better and for a longer period  
without craving for moisture and slaking his thirst. The Russian setter,  
however, may be taken as an exception to this rule. Strange to say,  
though sprung of a race indigenous to the coldest climate, he stands  
the heat better than our more delicate breed; and is, taken altogether, the  
best dog a sportsman can possess. The nose of the Russian setter is  
beyond comparison superior to that of English origin, and he will de-  
cidedly stand more work. Dog-breakers too have far less difficulty and  
trouble with the *Rossians*, as they call them; for an erudite game-  
keeper told us in confidence not very long ago that they are "quicker at  
larning" than our highly-bred dogs, more tractable, and endowed with  
greater sagacity. Mr. Lang, of the Haymarket, has some of the best  
Russian setters in her Majesty's dominions, and they are worth any  
money. We have seen some splendid dogs from a cross between the  
English and Russian setter, and we look forward to the day when we  
shall have established in this country an invaluable breed. A thorough-  
bred Russian setter will do the work of four dogs: no gorse, furze, or  
hedge-row is too thick for him, and he will invariably retrieve his game.  
We hope to see this description of dog in more general use, for a little  
Russian blood will materially improve our English kennels. We do not  
mean to infer that we have no good blood of our own: on the contrary,  
we have too much of it: what we would urge is, that it requires  
intermingling. We are too fond of breeding in and in, and sticking to  
one family; and the animals so begotten from generation to generation  
dwindle down into little, puny, fine-drawn specimens, which can never  
live out a long day. We speak from experience, having paid consider-  
able attention and bestowed no little time and trouble on breeding and  
crossing setters. Our labour has not been thrown away, for we can  
boast of possessing as good dogs as ever went into a field, and to their  
surpassing excellence do we attribute the admixture of a little Russian  
blood.

Some four years ago, on our return from France, we pitched our tent  
in the South-eastern corner of Devonshire, on the confines of its neigh-  
bouring county, Dorsetshire. It came to pass that being in want of an  
useful dog for the marshes, and one that would retrieve snipe and wild-  
fowl, we wrote to an old friend in the neighbourhood of Dorchester on  
the subject, and he most kindly sent us over from his beautiful seat  
"Came," near that town, a Russian setter worth his weight in gold.  
We have seen and owned some few dogs in our day, but never did we  
shoot over so extraordinary an animal as "Don." For nose, speed, cou-

rage, and sagacity we never beheld his equal: he would do the work of a whole kennel: no day was too long for him; his powers of scent were absolutely astonishing, and wo to the winged bird if it once touched *terra firma*: Don cared not for distance or impediments; have it he would, and have it he did; for, with every qualification a dog should be master of, he combined the art of retrieving his game. In short Don was a paragon of perfection. We shot to him a whole season, and before we returned him to Colonel D— D— we put him (not the Colonel, but Don) to a very handsome, clever setter-bitch, the property of a neighbouring country Squire, and the produce turned out, as we expected, superlatively good puppies. We sent one to our old and talented friend, Mr. Archer Croft, of Greenham Lodge, near Newbury, and Don junior is not only the handsomest but the best dog the Berkshire Squire has in his kennel, and a hundred guineas would not buy him. From this cross we have established an undeniably good stock to breed from. The whole of the litter turned out well: at six months old they stood, backed, and retrieved without any further tutoring than tying a wounded bird to a stake on the lawn, and teaching the young ones to fetch and carry a ball. Gamekeepers, strange to say, set their faces against this cross of the Russian with the English setter, why we are at a loss to imagine: but then every one knows that gamekeepers are the most bigoted and self-opinioned race of functionaries we have: they have a fixed standard of excellence in their own conceited minds, from which it is difficult, if not altogether impossible, to make them depart.

One of their grounds of objection is that the produce from this cross are self-willed, and can never be kept from chase. We cannot admit that there is the slightest foundation for this assertion; at least we have tried the experiment ourselves, and known others who have followed our example, and we have never known the half-Russian half-English progeny pig-headed or untractable during their noviciate. We all know that some dogs give more trouble than others, for high breeding and high courage go together, to say nothing of tempers which vary in the canine race as well as with us bipeds of the *genus homo*. The Irish setter is, after the fashion of the Sons of Erin, a rather unruly animal, and it will sometimes take as much time to bring him to a proper degree of subjection as it would to tame the great "Dan" himself. As far as our experience enables us to give an opinion on the subject, we should say the admixture of Russian blood with that of our own breed of setters is not attended with the disagreeable consequences alleged by these grumbling gamekeepers. They one and all acknowledge that the Russian setter *per se* is the most tractable as well as most efficient ally they have in the field: then the question naturally arises, on which side is the fault? and to which animal are we to lay the charge of perverseness and self-will? We rather think the "contrariness," as they term it emanates from the old English blood, in spite of the dog-ged opinion entertained to the contrary. Mr. Lang can enlighten our readers on the subject, if they will take the trouble to ask him a few questions on his return from the moors.

With very few exceptions gamekeepers are not good dog-breakers: they have neither the talent nor the temper for the undertaking. They know what a dog ought to be, and can work him *secundum artem* in the field; but nine times out of ten these very knowing gentlemen are utterly ignorant of the *ars docendi*, and not by any means qualified to instruct a puppy, and convey, with the necessary exercise of patience, the first rudiments of its education.

For example: a first-rate classical scholar—Sir Robert Peel we will say—must make but an indifferent schoolmaster, and be incompetent to instruct a posse of little urchins. We all understand Latin and Greek, although we may not have the knack of imparting our knowledge through the medium of birch-rod into the brains of striplings. A man may know a great deal, but still be unequal to the task of instilling that knowledge into the minds of others. This is a business, a calling of itself, and we therefore, under this conviction, earnestly advise all those possessed of juvenile pointers and setters to send them to a professed dog-breaker for the completion of their field duties. A proficient in this difficult art will complete a puppy's education (as many a pedagogue has done before him) in half the time, and much more effectually than the best amateur sportsman though he be, that ever pulled a trigger. Mr. Brailsford, as we have already said, is by far the best dog-breaker of the present day. With great experience and a thorough knowledge of his business, he combines extraordinary patience and coolness of temper, to which he adds an almost intuitive judgment of the extent of an animal's mental capabilities.—*Sporting Magazine for October.*

#### THE SPORTING BARONET v. THE PUGILISTIC JARVEY.

The following anecdote, well authenticated, shows that some members of the aristocracy in England are not only fond of true courage, but of supporting it in their own persons. A turn up took place at the Italian Opera house door, between the late Sir Godfrey Webster, and Wood, under the following circumstances. Wood was a first-rate coachman in the hackney line, and could drive to an inch, and gave great offence as it is termed, by cutting in to the regular line of carriages to put down his company. The footman and coachman of Sir Godfrey struck Wood

in order to prevent him from hindering the baronet's coach gaining the door. Sir Godfrey was rather an irritable man, when he jumped out of his carriage, and told Wood that he ought to be thrashed for his improper conduct. Wood laughed at him, and used language not of the most decent description, and asked sneeringly, "who was to do it?" "I will," said the baronet; "leave your box, and I'll thrash you to your heart's content."

"You shan't wait for a customer long," replied Wood, leaving his box, and putting himself in a pugilistic attitude.

Sir Godfrey, *sans ceremonie*, gave Wood a tremendous blow in the face, when the latter returned hit for hit as quick as lightning; and a round or two took place before they parted. Sir Godfrey was compelled against his will, to give up the Opera for that night, and drove home to repair his face, and also his dress, the claret running down his cheeks; he had been sadly knocked about. "He must have been a prize boxer," was the soliloquy of Sir Godfrey, "by the style he used his fists," the baronet being rather an adept with the gloves. The number of the hackney coach led to the discovery that Bill Wood, the boxer, was the driver of it.

Sir Godfrey was most anxious to see the man who had thus knocked him about so severely. He sent for Mr. Jackson, and said, "I wish you would call on Wood, the coachman, and tell him I wish to see him at my house in St. James's square." The request of the baronet was complied with, but Wood was frightened, on the first intimation, that a warrant was issued out against him for an assault; being assured of his safety by Mr. Jackson, he went, hat in hand, and appeared quite as humble and sanctified as if butter would not melt in his mouth, stroking his hair over his forehead, and appeared quite chop-fallen. Sir Godfrey was lying on a sofa, in a terrible bruised state, and could scarcely move. "Sit down, coachee," said he; "you had the whip hand of me the other night, and I am satisfied, perfectly satisfied—nay, more than satisfied,—that you can hit very hard, and are also a brave man."

"Upon my soul, sir," replied Wood, "if I had have knowed who you was—you a baronet, and such a heavy swell—so help me G—, I would not have hit you at all; I would have taken twenty, and gave no return."

"That would have been wrong," answered Sir Godfrey; "a real Englishman will never put up with a blow: I do not find fault with you in that respect. I struck the first blow."

"But, sir, there's a vast difference between a hackney coachman and a baronet; and I should not have been long in finding that ere out if you had pulled me up before the beaks; however, you have made me remember the row and feel the effects of it too. My jaws have been so sore ever since, that I have not been able scarcely to eat anything. I hope Sir Godfrey, you will forgive me; if I had knowed"—

"Never mind, coachee, I know that you are a brave fellow, Wood; and there's a guinea for you to drink my health; also go down into the kitchen, and tell the cook to let you have some refreshment, and the butler a glass of grog before you go. I suppose next time I feel inclined to go to the Opera House, I shall be able to get in without having a fight for it. Ha! ha! ha!"

"If any fellow, or ten ruffians, should attempt to stop your carriage, and I am on the spot, I'll floor them, you may depend upon it," replied Wood. Bill then made his bow to the baronet, when the latter gave him his hand; and Wood did not forget to pay a visit to the kitchen. Whether the butler was afraid of him or not, he helped Bill to some of the richest things in the larder, and filled his glass several times, without being asked to do so, till Wood was on the reeling system before he left Sir Godfrey's mansion.

"This has been a glorious turn-up for me," observed Wood to one of his pals, whom he met with shortly afterwards; "a goldfinch (a guinea) and plenty of bab and grab; but, nevertheless, the baronet was a troublesome customer to me, from his being well-fed, and plenty of black-strap in him. I hate to go to that b— Uppear,—there's always some row; for if you don't quarrel with the nob, the knights of the rainbow (foot-men), those lick-plates are so d—d impudent and insolent that I can hardly sit on my box with anything like patience; but I have, in my time, whopped a few of them and charged them nuthen for it—a parcel of warmint do-nothing chaps—much better fed than taught, I know."

Sir Godfrey, over his wine, used to laugh heartily at the above adventure, as he related it to his sporting visitors, observing, "there is nothing like Old England for its spirit of independence amongst all classes of society."

[This sort of casual skirmishes frequently occurred in the gay days (at Vauxhall and Ranelagh) of the late Major Topham, the celebrated author of the "Memoirs of Elwes the Miser," and also the proprietor of the fashionable newspaper, *The World*, Lords Barrymore, Bate, Dudley, &c., who were anxious to exhibit their superior knowledge of the science, over what was then designated yokel ruffianism.]

A NICE POINT.—The Bishop of Exeter has given it as his opinion that a clergyman speculating in railways comes under the statute against "dealing for gain or profit." As the statute only says dealing—and railway speculation involves rather shuffling than dealing—some of the reverend Stags maintain that they do not violate the act of Parliament.—*Punch.*

## THE GAMECOCK.

(Continued from page 390)

## SECTION VIII.

## GENERAL REMARKS.

THE close of the last section we quoted from Mr. Sketchley his observations on the evil effects of inferior crosses, and the great care required to cross with advantage; we resume this important subject, for we see notwithstanding every excellence, if there is not that uniformity and corresponding character in the hens, or cock, it is more than high odds if the produce is equal to either originals. If they, like many others, had been properly kept to themselves, like the Cheshire Piles, they might and would have fought their way into admiration. Adverting to the stately vivacity of these birds, it has frequently occurred to me, in a variety of instances, what a wonderful difference there is in brothers in respect to that outward and pleasing liveliness, from those that have been at hand-fed walks, and those from well-furnished walks: the former become stationary to the spot, without action, motion, or employment: he appears oppressed and heavy, and his nourishment brings on a contracted aversion to action: nature, as it were, preys upon itself. How necessary, indeed, is action and exercise to the body, may be judged by the difference we find between those cocks who labour in plenty, and those who are in the predicament alluded to. And how much superior is the complexion and constitution which labour creates, in comparison with that habit of body we see consequent to an indulgent state of indigence and rest. Several of my cocks that are hand-fed, which are at proper distances from contiguous annoyance are never fed by those who walk them, but invariably have their corn given them twice a day at a distance from the house, spread upon chaff; at other times upon short straw, that they may labour to obtain it. By this method they are generally upon the alert, are seldom or never near the house, and are no way inferior to the others.

If a breeder has the convenience I would recommend the mode adopted by Mr. Sketchley in the following extract. "The places should be equidistant, not more than three to four hundred yards, some two or three inclosures intersecting each place: two of these are fixed under a high covert hedge in the form of a dog-kennel, and are well secured; the hen has a small apartment divided from the part they roost in, to lay and hatch. At each of these places I have only one hen or pullet with a cock; these are selected from sisters whose shapes, feather, &c., pre-eminently distinguish them from the rest. Each of these situations is only a small distance from running springs: they have well-sheltered edges, and a fine dry carpet. It is not the situation only which contributes to this promising mode, but a chance of deriving a greater probability of success, by having no other hen to interfere—they are the choice of your whole stud; and if any failure should follow, there will be no difficulty in ascertaining from which it originates, as a fair trial of the cock would determine: for, if satisfied with him, it must rest with the hen. When several sisters are breeding from, the greater difficulty you have in finding from which the failure proceeds—but from this mode you have a short reference. At a sufficient early period the produce was about one hundred chickens. This trial consists of two stags which are brothers, with each a two year-old hen, which are sisters—they have not a deviating character, consistent with the most approved choice for crossing; the other two cocks are two years old, and also brothers to the stags, with each a pullet, sisters to the two-year old hens, which were with the stags. By this arrangement you are breeding a great number of brothers in blood; and I never yet saw a produce so regular in feather, and every appertaining quality as they are from this systematic mode of selection; and I have a pleasure of anticipating a fortunate result. A greater number may be produced than from such an allotted few if you have the command of a sufficient number of blood hens—to sit in due season, which may be done by taking the eggs, as they are laid and the nest egg when inclined to sit."

It may be said that from four sisters and one cock may be had as many birds as devoting four cocks and stags to four hens and pullets. Admitted—but you have the advantage of four cocks to one in the mode recommended; for, notwithstanding every due attention is had to select a single cock, free from every apparent fault, yet we have frequently found ourselves disappointed either from a change in constitution, or some other cause. On the other hand, you have the best calculated chance to succeed. I have before observed, under the head of breeding, that sisters may so essentially differ in health, &c. and the difficulty of attending the prevention of laying to each other is scarcely to be accomplished, of course you cannot distinguish each from the other, and if any defect takes place, you are at a loss from which of the sisters it originated. It has many other claims to preference, which the cock and the hen must be benefitted by thus pairing, and the reference in case of failure much easier detected, that I flatter myself that whoever makes the trial will find the advantages so materially in favour of this mode, that he will in future adopt it with facility.

It has been a matter of astonishment to me since I have resided in

Nottinghamshire, that so few good cocks are to be met with. Amongst a number of breeders to whom I have a friendly access, few are sufficiently cautious in the crosses, so essentially necessary to produce a regular set of good cocks; but there is a prevailing partiality amongst cockers which is not easily to be done away, and probably must be the work of time. We are frequently disappointed in our best endeavours, and even at a time when our hopes and expectations have run high, grounded upon the idea that our selection comprised every rare qualification to warrant success:—for I may yet venture to add, without partiality, that if they possessed every essential character that could possibly constitute a proper cross, still some heterogeneous mixture might lurk inherent to disappoint all the practical attention and wary caution, to render the cross complete, and to establish a regular set of cocks. Is it, then, to be wondered at, the failure of those who breed without any of those nice regards, either to similarity of feather, &c. and those congenial attributes to form a complete whole?

Still I flatter myself, that the professed amateurs of this noble bird are more alive to the improvement, from the well-known superiority of cocks bred by those eminently distinguished for their abilities in every sporting department of the leading pre-eminent character they have supported must awaken the efforts of those who would profit from such enlightened precedents. The colts of the late Lord Derby may be quoted as proofs of my assertions: their successful prowess marked the nice discriminating care ever attendant upon whatever his lordship pursued in the sporting line. His cocks were more regular and undeviating than most cocks within my knowledge, a certain criterion of that well-regulated system his lordship so long and successfully pursued; and I will hazard an opinion, that, were breeders to adhere to the mode recommended, few occurrences out of the ordinary course of breeding would be less rare, and would tend to establish a race of cocks infinitely superior to the present. It is astonishing to see how wedded some amateurs are, so every way dissonant to the true principles of breeding—and my endeavours to remove such obsolete practice has ever been an Herculean task. It avails not your setting forth the impropriety of crossing contrary feathers, &c.—they are satisfied with the idea that they were both undeniable of the sort. If they are not equal to the originals, they are totally at a loss how to account for their deviation, reconciling themselves by advancing some pretext totally incompatible with the true cause—and they will even venture upon the same fowls another year. Still involved in error, they seek out for such as in their estimation will bid defiance to any possible disappointment—breed on without regard to what constitutes any congruent principle, and they become tired by their own infatuation. There are others who have enjoyed a more extensive opportunity, by mixing with their superiors, through feeders introducing their cocks approved by them;—thus benefitted by repeated intercourse, have bred with considerable success. Sant, well known to the gentlemen of the sod, and one of the busiest patrons of the ring in its palmy days, who resided in Derbyshire, was in the habit of breeding as good cocks as most men in the kingdom; he adhered closely to every requisite for judicious crossing, and keeping them properly together, and for many years no man fought with greater success; and I know of no cocks that were more generally sought after—a convincing proof of his attention. He had the advantage, too, of residing amongst a numerous set of men who have long been in the habit of breeding; and in the interval of his rapid success no country was in such general esteem, and any number could be procured. He was a ruling satellite over those hardy set of colliers who are invariably cockers wherever they reside; they are unwearied in their endeavours to procure such as are first in estimation; and whatever he judged superior, they were always at his command—and Sant reciprocally assisted them from his more numerous produce. He was deservedly high in Beastall's favour; who, during Sant's celebrity, was generally esteemed in his profession. Beastall had great privileges from his employers, and whatever cocks he thought would promote or add improvement to those of Sant, he was never sparing, and they were duly appreciated by him. Under these singular advantages we need not wonder that Sant should, for so many years, enjoy the well-earned encomiums of the amateurs of the sod. Beastall bought and fed many of his cocks, and several fought in mains in which I was engaged. They were a very dark black-red, striped, uncommonly black upon the neck, black beak, black legs, very lofty, and fought high weights; they were favourites with Beastall, and in his hands became favourites with the public.

The high estimation these cocks were held in, caused such repeated applications to breed from, that Sant found no difficulty in obtaining sometimes very exorbitant considerations for those he chose to part with; but the difficulty of getting any hens from him, from which you could derive the most essential advantages, were next to a prohibition amongst the parties concerned in these birds. Mr. Sketchley says, "I bred from several of the cocks, and the first of my trials was with some very favourite hens from Leicester, bred by a Mr. Needham there, but they proved only second rates: the hens were as well descended as the cocks, but the produce varied as much from the originals as possible. They were the choice of Beastall, who was well and long acquainted with both sorts—and such was their strong affinity, and selected by a man so every way qualified to judge of their proper essential characters, to mingle those similarities, so as to form and stamp their like—that I had high expectations from every

cross I made." But I repeat such is the difficulty of crossing to advantage, that an amateur should be possessed of some persevering degree of patience to sustain the frequent disappointments which extensive practice will ever make him heir to. All feeders are not breeders: and one ability is perhaps coequal with the other, where all do not excel. Cocking, like all other sporting pursuits, has its ups and downs, with all their attendant disappointments—and whatever is most predominant in our pursuits, is more or less followed with avidity and with various success. I am aware, too, that no scope of practice, however great, will make some professors go beyond the line of mediocrity. The advantages sometimes derived from those callings must arise with those who were initiated with men of known abilities, and if fortunately aided by other requisites, they are frequently known to tread close upon the heel of their employers. Thompson's abilities as a feeder and a setter ranked him one of the first of his country; and as far as my judgment could decide, few men exhibited a cock upon the pit in higher style. Whether he fought a 'cock of high or low weights, they were conspicuously alive to that degree of perfection Thompson was capable of giving. His mode of reducing great weights was singularly effective; equally fortunate was he in lifting them up to their proper standard with every vigour and fire. It is much to be regretted that men of rare abilities in their profession should have some reigning foible to throw a cloud over their otherwise meritorious actions. If any modern feeder or setter is in possession of the mode above alluded to, all the other routine of practice could not escape him. I have been well informed that Thompson enjoyed this secret for several years, without its being known to any other feeder; and Harry, who was his valuable assistant, was perhaps not quite without it.

(To be continued.)

### THE FISHER'S CREEL.

DEAR SIR.—I some little time ago promised you an article on a day's fishing at "Foot's Cray" here it is.—Those who do not know this place may be aware that it is in Kent, in the neighbourhood of Bexley, Orpington, Chislehurst &c. about 12 miles from London and is to be reached by coach, particulars of which they can learn on enquiry at one of the Inns in the Boro'. If they wish for good sport they should sleep at the village overnight so as to have a day before them, and they should take care to be there before 9 o'clock or they will stand a poor chance of sleeping in a bed that night. The Fishery belongs to the "Seven Stars" and those only who put up at that house are entitled to fish. But at this place they make you pay for what you have.—The best time for fishing is in the months of May or July, but not later than August after which time the fish are let out by opening the gates of a water mill where they are preserved till next season. The baits are worms and minnows, which latter are an excellent bait and can be procured out of the river about half a mile up with little trouble. Flies may be used with great success when all other means fail, (which is seldom the case). The lines should be leaded so as to keep them from being carried away by the current. With a little cunning the angler may secure his dozen brace of trout weighing from  $\frac{3}{4}$  lbs. to 2 lbs. Let me advise those who go to go in the season and at an early time.

J. CULL.

[Our correspondent has annexed a small drawing of a leaded line which however we have not thought of sufficient importance to engrave.—ED.]

### A FEW WORDS ON ANGLING.

As a recreation for those who are condemned to toil, and who seek in some such pursuit a renewal of existence, or as a recourse for those, who lacking an occupation make pleasure their business, nothing can be compared to it. It is equally enjoyed by the chubby urchin, when

"Wi' hazel rod, a bit of thread  
And crooked pin for hook  
Shunning each noisy wrangler  
He fish'd the murmuring brook,"

as by the regal prince in a gilded and canopied shallop with all the costly and elegant appointments that art can supply.

"I in these flowery meads would be;  
The crystal streams should solace me  
By whose harmonious bubbling noise,  
I with my angle would rejoice,"

sung honest old Isaac, and so thinks every lover of the art, who, having been long kept from his favourite amusement, at last gets freed and wends his way to "the old spot" to hold converse with Nature and admire Nature's works, and listening to hear

"The murmuring brooklet tell its tale,  
Like a sweet under-song,"

or pondering within his mind the havoc he is to make amongst the

finny tribe. The most sparkling visions of success, however, often end in bitter disappointment, and the angler has frequently to experience a tolerable share of vexation: now watching the gaily painted float as it rides gently upon the rippling surface of the water obedient to all its influences, without having the satisfaction of seeing it disappear for an instant; now observing risings in all parts of the stream but where the bait holds out its delusive temptation; now being warmed through by the sun, and anon as comfortably cooled by a smart shower of rain, he waits—a complete personification of patience, until his hours of relaxation have almost waned away; yet even this accumulated load of petty miseries disappears when a throw proves successful, and the pleasure attending it wonderfully enhances the beautiful shape and silvery colours of the prize.

In Angling the "Contemplative Man" finds his "Recreation"; and the philosopher disdains not

"To lure with gaudy bait the glittering brood."

### CAPTAIN BARCLAY.

This gentleman, in preventing the "Old English Sports" from running to decay, must be considered as the most distinguished fancier in the sporting world; as a thorough-bred sportsman, he stands pre-eminently high. Whether he be viewed in partaking of the diversions of the chase, or paying attention to improve the system of agriculture; or in displaying his extraordinary feats of pedestrianism; or exercising his judgment in training men to succeed in foot races and pugilistic combats, Captain Barclay decidedly takes the lead. His knowledge of the capabilities of the human frame is complete, and his researches and practical experiments to ascertain the physical powers of man would have reflected credit on our most enlightened and persevering anatomists. The sporting pursuits of Captain Barclay are completely scientific, and his plans so well matured, that his judgment generally proves successful.

Robert Barclay Allardice, Esq. of Ury, succeeded his father in the eighteenth year of his age. He was born in August 1779; and, at eight years of age, was sent to England to receive his education. He remained four years at Richmond school, and three years at Brixton Causeway. His academical studies were completed at Cambridge.

The Captain's favourite pursuits have ever been the art of agriculture as the serious business of his life, and the manly sports as his amusement. The improvement of his estates has occupied much of his attention, and, by pursuing the plan adopted by his immediate predecessor, the value of his property has been greatly augmented. His love of athletic exercises may proceed from the strong conformation of his body, and great muscular strength. His usual rate of travelling on foot is six miles an hour, and to walk from twenty to thirty miles before breakfast is a favourite amusement. His style of walking is to bend forward the body and throw its weight on the knees. His step is short, and his feet are raised only a few inches from the ground. Any person trying this plan will find his pace quickened, that he will walk with more ease to himself, and be better able to endure the fatigue of a long journey than by walking perfectly erect, which throws too much of the weight of the body on the ankle-joints. He always uses thick-soled shoes and lambs' wool stockings, which preserve the feet from injury. In his arms, the Captain possesses uncommon strength. In April 1806, while in Suffolk with the 23d regiment, he offered a bet of one thousand guineas that he would lift from the ground the weight of half a ton. He tried the experiment, and lifted twenty-one half hundred weights. He afterwards, with a straight arm, threw a half-hundred weight the distance of eight yards, and over his head the same weight a distance of five yards.

The following list contains the most prominent public and private pedestrian exploits performed by Captain Barclay.

The Captain, when only seventeen years of age, entered into a match with a gentleman in London, in the month of August, 1796, to walk six miles within an hour, fair toe and heel for 100 guineas, which he accomplished on the Croydon road.

In 1798, he performed the distance of 70 miles in 14 hours beating Furgusson, the celebrated walking clerk, by several miles.

In December 1799, he accomplished 150 miles in two days, having walked from Fenchurch-street, in London, to Birmingham round by Cambridge.

The captain walked 64 miles in 12 hours, including the time for refreshment, in November 1800, as a sort of preparatory trial to a match of walking 90 miles in 21 $\frac{1}{2}$  hours, for a bet of 500 guineas with Mr Fletcher of Ballingshoe. In training, the Captain caught cold, and gave up the bet. In 1801, he renewed the above match for 2000 guineas. He accomplished 67 miles in 13 hours, but having drank some brandy, he became instantly sick, and unable to proceed. He consequently gave up the bet, and the umpire retired: but, after two hours' rest, he was so far recovered, that he had time enough left to have performed his task.

Captain Barclay felt so confident that he could walk 90 miles in 21 $\frac{1}{2}$  hours, that he again matched himself for 5000 guineas. In his training to perform this feat, he went one hundred and ten miles in nineteen hours, notwithstanding it rained nearly the whole of the time. This performance may be deemed the greatest on record, being at the rate of upwards of 135 miles in 24 hours.

On the 10th November, 1801 he started to perform the above match, between York and Hull. The space of ground was a measured mile; and on each side of the road a number of lamps were placed. The Captain was dressed in a flannel shirt, flannel trousers, and 'night cap, lambs' wool stockings, and thick-soled leather shoes. He proceeded till he had gone 70 miles, scarcely varying in regularly performing each round of two miles in 25½ minutes, taking refreshment at different periods. The Captain commenced at 12 o'clock at night, and performed the whole distance by 22 minutes 4 seconds past eight o'clock on Tuesday evening, being one hour, seven minutes, and fifty-six seconds within the specified time. He could have continued for several hours longer, if necessary.

In December, the Captain did 100 miles in 19 hours, over the worst road in the kingdom. Exclusive of stoppages, the distance was performed in 17 hours and a half, or at the rate of about five miles and three quarters each hour on the average.

As an additional instance of the Captain's strength, he performed a most laborious undertaking, merely for his amusement, in August 1808. Having gone to Colonel Murray Farquharson's house in Aberdeenshire, he went out at five in the morning to enjoy the sport of grouse shooting, where he travelled at least 30 miles. He returned to the Colonel's house by five in the afternoon, and after dinner set off for Ury, a distance of 60 miles, which he walked in 11 hours, without stopping once to refresh. He attended to his ordinary business at home, and in the afternoon walked to Laurencekirk, 16 miles, where he danced at a ball during the night, and returned to Ury by seven in the morning. He did not yet return to bed, but occupied the day in partridge shooting. He had thus travelled not less than 130 miles, supposing him to have gone only eight miles in the course of the day's shooting at home, and also danced at Laurencekirk, without sleeping, or having been in a bed for two nights and nearly three days.

In October 1808, Captain Barclay made a match with Mr. Webster, a gentleman of great celebrity in the sporting world; by which Captain Barclay engaged himself to go, on foot, a thousand miles in a thousand successive hours, at the rate of a mile in each and every hour, for a bet of one thousand guineas, to be performed at Newmarket-heath, and to start on the following first of June. In the intermediate time, the Captain was in training by Mr. Smith, of Owston, in Yorkshire. To enter into a detail of his matchless performance would be tiresome to our readers; suffice to say, he started at twelve o'clock at night on Thursday, the 1st of June, in good health and high spirits. His dress from the commencement varied with the weather. Sometimes he wore a flannel jacket, sometimes a loose great coat, with strong shoes, and two pair of coarse stockings, the outer pair boot-sockings, without feet, to keep his legs dry. He walked in a sort of lounging gait, without any apparent extraordinary exertion, scarcely raising his feet two inches above the ground. During a great part of the time the weather was very rainy, but he felt no inconvenience from it; indeed, wet weather was favourable to his exertions; as, during dry weather, he found it necessary to have a water-cart, to go over the ground to keep it cool, and prevent it becoming too hard. Towards the conclusion of the performance, it was said, the Captain suffered much from the spasmodic affection of his legs, so that he could not walk a mile in less than twenty minutes; he, however, ate and drank well, and bets were two to one and five to two on his completing his journey within the time prescribed. About eight days before he finished, the sinews of his right leg became much better, and he continued to pursue his task in high spirits, and consequently bets were ten to one in his favour, in London, at Tattersall's, and other sporting circles.

On Wednesday, July the 12th, Captain Barclay completed his arduous undertaking. He had till four P. M. to finish his task, but he performed the last mile by a quarter of an hour after three in perfect ease and great spirit, amidst an immense crowd of spectators. The influx of company had so much increased on Sunday, it was recommended that the ground should be roped in. To this, however, Captain Barclay objected, saying he did not like such parade. The crowd, however, became so great on Monday, and he had experienced so much interruption, that he was prevailed upon to allow this precaution to be taken. For the last two days he appeared in higher spirits, and performed his last mile with apparently more ease, and in a shorter time than he had done for some days past.

With the change of weather he had thrown off his loose great coat, which he wore during the rainy period, and walked in a flannel jacket. He also put on shoes thicker than any which he had used in any previous part of his performance. When asked how he meant to act after he had finished his feat, he said he should that night take a good sound sleep, but that he must have himself awaked twice or thrice in the night to avoid the danger of a too sudden transition from almost constant exertion to a state of long repose. One hundred guineas to one, and, indeed, any odds whatever, were offered on Wednesday morning; but so strong was the confidence in his success, that no bets could be obtained. The multitude who resorted to the scene of action, in the course of the concluding days, was unprecedented. Not a bed could be procured on Tuesday night at Newmarket, Cambridge, Bury, or any of the towns or villages in the vicinity, and every horse and vehicle were engaged. Among the nobility and gentry who witnessed the conclusion of this extraordinary performance, were the Dukes of Argyle and St. Alban's;

Earls Grosvenor, Beesborough, and Jersey; Lords Foley and Somerville; Sir John Lade, Sir F. Standish, &c. &c. The aggregate of the bets is supposed to have amount to 100,000*l*. Upon the whole, Captain Barclay must be viewed as a most extraordinary man, and shows the extent of vigour that the human frame derives from exercise.—*Pierre Egan*.

[Notwithstanding the severity of the above feats, the Captain is still enjoying a green old age at his seat at Ury, near Stonehaven in the county of Kincardine, respected as much for his kind and gentlemanly demeanour in private, as he is celebrated for his sporting exploits in public.—Ed. S. M.]

**THE HERO OF A HUNDRED RAZZIAS.**—There is a report that Bugaud is to leave Africa. His successor, whoever he may be, will have a difficult task in wielding the torch and sabre after him. Only think of the Marshal's noble achievements! On the smallest computation he has conquered 3000 camels, put to the sword 10,000 cocks and hens, captured at least a million sheep, and taken Abd-el-Kader prisoner no less than 272 times. What more can his successor do? unless, perchance, he has the good fortune to kill Abd-el-Kader twice as often. We look forward with the strongest interest to his first bulletin.

**THE EX-LORD MAYOR "DON'T DANCE."**—At the last entertainment at the Mansion House, Gibbs was asked to take part in a quadrille. His Lordship declined, remarking he had forgotten his steps, and was by no means perfect in his figures.

**CURIOSITIES OF NEWSPAPER LITERATURE.**—Among the advertisements of the last week, we find the following remarkable announcements of facts, which fairly come under the head of phenomena. We are told in one place that there may be had "An airy bed-room for a gentleman twenty-two feet long by fourteen feet wide." The bed-room ought, indeed, to be airy to accommodate a gentleman of these dimensions. Again, we read of "A house for a family in good repair," which is advertised to be let with immediate possession. A family in good repair, means, no doubt, one in which none of the members are at all cracked. The last oddity to which we shall call attention, is an announcement of there being now vacant "A delightful gentleman's residence." The "delightful gentleman" must be rather proud of his delightful qualities, to allow himself to be thus strangely advertised.

**BLACK COCK NEAR ESTHWAYTE LAKE.**—We stated a few weeks ago that some birds of this species had been killed here, and that four more were still left. We hear now that seven of these birds have lately been seen. The hilly and woody district around Esthwaite is well suited to the habits of the black cock, and, as every means are being taken for the preservation of those still left, hopes are entertained that the black cock may not only be a permanent resident, but that it may spread in other districts of the lakes.—*Carlisle Journal*.

**EARLY APPEARANCE OF WOODCOCKS.**—A remarkably fine woodcock was shot by the Earl of Stamford, on the 9th Oct. in the preserves of Dunham Massey, Cheshire.

**A GIANT AT LAST.**—The *Madison Banner* states, on the most reliable authority, that a person in Franklin country, Tennessee, while digging a well a few weeks since, found a human skeleton, at the depth of fifty feet, which measures eighteen feet in length! The immense frame was entire, with an unimportant exception in one of the extremities. It has been visited by several of the principal members of the medical faculty in Nashville, and pronounced unequivocally by all, the skeleton of a huge man. The bone of the thigh measured five feet; and it was computed that the height of the living man, making the proper allowances for muscles, must have been at least twenty feet. The finder had been offered eight thousand dollars for it, but had determined not to sell it at any price until first exhibiting it for twelve months. He is now having the different parts wired together for that purpose. These unwritten records of the men and animals of other ages, that are from time to time dug out of the bowels of the earth, put conjecture to confusion, and almost surpass imagination itself. Seeing is believing.

**GOLDEN PLOVER.**—Within the last four days the downs in the vicinity of Andover have been visited by several strong flocks of that highly esteemed bird, the golden plover. Whenever these migratory visitors make their appearance on our sheep-walks, we may be certain that the October frosts are close at hand. In the company of these wanderers have been noticed a sprinkling of dotterel, a very rare bird in these parts, which is greatly prized by the sportsman. We shall figure the dotterel in an early number of our series of BRITISH BIRDS. The GREY PLOVER and GOLDEN PLOVER will be found in Nos. 19 and 20 of the SPORTSMAN'S MAGAZINE.

**DON'T HE ANSWER THE DESCRIPTION?**—A gentleman advertised for a clerk, who could "bear confinement," and who "had been some years in his last place." He was answered by a person who had spent five years at the hulks.

**IT SHOULDN'T BE WASTED.**—Two female villagers met together the other day, in the south of England, one of them carrying a sickly child in her arms. "Have you given it anything?" said her friend. "O, yes," replied the mother; "I have given it plenty of physic; it has had more than half of the bottles its grandfather left when he died."

# ADVERTISEMENTS.

## CAUNT versus BENDIGO.

**A T a RESPECTABLE and NUMEROUS** meeting of gentlemen convened by circular, held at Mr. Cressy's, the Poultry Hotel, Nottingham, for the purpose of adopting the best means of defending Bendigo against the dishonourable attempts that are being made against his person and character, the following resolutions were unanimously agreed to:

1st. That the conduct pursued by a certain portion of the London newspaper press, towards William Thompson, relative to his late fight with Caunt has been unjust, and partial in the extreme, for not only has it, week after week, maligned him in the Editorial remarks, but has readily inserted letters from various parties to the same effect, while it refused a short space for his (Thompson's) reply, and this meeting is of opinion that if conduct like this be allowed to pass without some mark of Public censure there is no knowing to what extent a portion of the press may in future cases proceed, and thus place the sporting world under the tyranny of interested capricious editors.

2nd. That an action having been commenced by Caunt to recover his share of the stakes in his late fight with Thompson, a committee of five be now appointed (with power to add to their number) for the purpose of raising subscriptions, and otherwise assisting these two gentlemen who signed the undertaking given to the shareholders, in defending the said action to the uttermost length the law will allow.

Subscriptions were then made, particulars of which, and of the houses where such will be received, will appear in future announcements.

E. BARKER, Secretary.

All communications to be addressed to the Poultry Hotel Nottingham.

**WATER is a REMEDY** preferable to any other for those who are subject to indigestion, costiveness, &c., being the most agreeable aperient in the world. But to ensure its application with ease and privacy, and produce its best effects in relieving the stomach and bowels, it must be applied with the new invention called the **Aperitive Vase**, which is sold (with suitable directions for its use) by W. FINE, 369, Strand, the third house from Exeter Hall. Also Sonifera, for restoring hearing to the deaf on an unfailing principle. Descriptions sent post free on receipt of two letter stamps.

**BILE! BILE! BILE! -- WORBOYS' VEGETABLE PILLS** safely and speedily remove sick head-ache, heartburn, loss of appetite, fluttering of the stomach, flatulency, habitual costiveness, with other symptoms of indigestion and torpid liver. With each box is enclosed a concise essay on diet by an eminent London Physician. Sold in boxes, 1s. 1½d., and 2s. 9d., each, by W. S. Worboys, 76, New Cut, Lambeth; Barclay and Sons, Farringdon-street, and by all respectable medicine vendors.

N.B.—A dose sent gratuitously to persons enclosing a penny stamp, or a box for the amount in stamps.

## UNDER ROYAL PATRONAGE.

**DR. LOCOCK'S PULMONIC WAFERS.**—The truly wonderful Cures of Asthma, Consumptions, Coughs, Colds, &c., which are everywhere performed by this Invaluable Medicine, have now established it as the most certain and perfect remedy in existence for all disorders of the breath and lungs.

IMPORTANT TO ALL WHO SING.—Read the following letter, just received from S. PEARSELL, Esq., of Her Majesty's Concerts, and Vicar Choral of Lichfield Cathedral.

Dated Lichfield, July 10, 1845.

Gentlemen,—A lady of distinction having pointed out to me the qualities of DR. LOCOCK'S PULMONIC WAFERS, I was induced to make trial of a box, and I find that by allowing a few of the wafers (taken in the course of the day) to dissolve, my voice becomes bright and clear, and the tone full and distinct. They are decidedly the most efficacious of any I have ever used.

SAMUEL PEARSELL.

Cure of Ruptured Blood Vessels of the lungs. From H. Huntley, Esq., 15, Albion-terrace, Old Tiverton-road, Exeter. March 20, 1845.

"Sir—I ruptured a blood vessel of the lungs, about three months since, which, being partially recovered from, a most troublesome cough succeeded. I tried everything that my surgeon, friends, and self could think of, but without alleviation. It was at length suggested that your wafers might be useful. I tried them, and very soon their good effects were apparent; a single wafer taken when the fit of coughing was about to commence, never once failed of giving it a complete and instantaneous check."

A lady also, a friend of mine, and who, by the bye, is in her 86th year, is, or rather was, troubled with a hard distressing cough. The good effects I derived from the wafers recommended them to her; she has used them, and wonderful was the relief she experienced.

"HENRY HUNTLEY."

The particulars of many hundred Cures may be had from every agent throughout the Kingdom and on the Continent. DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1½d., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bridge-street, Fleet-street, London.

CAUTION.—To protect the public from spurious Imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words DR. LOCOCK'S WAFERS in white letters on a red ground.

If purchasers will attend to this caution, they will be sure to get the genuine article. Sold by all Medicine Vendors.

## T. PARISH'S SWEEPS NOW OPEN.

5s. and 2s. 6d. Sweeps for the Newport Pagnell Steeple Chase drawn Monday, Nov. 10th. The 2s. 6d. Derby is fast filling, drawn as soon as full. All Money divided, less Five per cent. Post-office orders to Mr. JOHN BATHE punctually attended to.

## TO SPORTSMEN.

**SHOOTING, HUNTING, FISHING, and** Deer-stalking Knives. J. B. DURHAM, Manufacturing Cutler, respectfully invites the attention of Sportsmen to his Immense Stock, which includes all the Newest Patterns and latest improvements, and all warranted of the best quality. Knives of every description made to order on the shortest notice. Old knives, &c., polished and repaired. 201, Regent-street, near the Polytechnic Institution.

## PRICE AND GOSNELL'S PERFUMERY.

NOTICE.—Executors of the late John Gosnell v. Rees Price, Perfumer, 28, Lombard-street, trading under the firm of Price and Co., and previously under the assumed name of "Napoleon Price and Co." The Judges in the Court of Exchequer in this day decided in favour of the plaintiff in this case. The defendant, Rees Price, had disposed of his interest in the Perfumery and other trades carried on by the late firm of Price and Gosnell, to the late Mr. John Gosnell (father of the parties now carrying on business under the firm of John Gosnell and Co., 12, Three King-court, Lombard-street), and bound himself, under forfeiture of £5,000, not to commence business within the Cities of London or Westminster, or within the distance of 600 miles from the same, and notwithstanding this, had carried on business. This action was brought to recover liquidated damages for such breach of contract.—12, Three King-court, Lombard-street, Jan. 27, 1845.

## THE EARL OF ALDBOROUGH CURED BY HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb. 1845.

To Professor HOLLOWAY.—Sir,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case of any of my family should ever require either.

Your most obliged and obedient servant, (Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing. Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.—Sir—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c. &c. (Signed) THOMAS TAYLOR.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Vendors of Medicines THROUGHOUT THE CIVILISED WORLD, at the following prices:—1s. 1½d., 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and improved edition of

## THE SILENT FRIEND; a Medical Work

on the Infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The baneful effects of solitary Indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symptoms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and T. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay and Co., 63 Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

The CORDIAL BALM OF SYRIACUM is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

The CONCENTRATED DETERGENT ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c., without hindrance to business.

Consultation fee, (if by letter), £1. A minute detail of cases is necessary.

Messrs. PERRY are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure. Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

Just Published, the SIXTEENTH EDITION, illustrated with cases and Full-length Engravings, price 2s. 6d. in a Sealed Envelope, and sent Free to any part of the Kingdom on the receipt of a Post Office order for 3s. 6d.

## THE SECRET COMPANION. A Medical

Work on Nervous Debility and the concealed causes of the decline of Physical Strength and the loss of Mental Capacity, with remarks on the effects of Solitary Indulgence, neglected Gonorrhoea, Syphilis, Secondary Symptoms, &c., and Mode of Treatment; followed by observations on Marriage, with proper directions for the removal of all disqualifications. Illustrated with Engravings, showing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell-square, near the British Museum London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges-street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

## THE CORDIAL BALM OF ZEYLANICA; OR NATURE'S GRAND RESTORATIVE.

is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c.

This Medicine should be taken previous to persons entering into the Matrimonial State.

Sold in Bottles, price 4s. 6d. and 11s. each, or the quantity of 4 in one Family Bottle or 33s., by which one 11s. Bottle is saved.

The 5s. Cases may be had as usual.

BRODIE'S PURIFYING VEGETABLE PILLS. are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures, Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 1½d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., Consulting Surgeons 27, Montague-street, Russell-square, near the British Museum, London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. Brodie and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays, from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of cases. The communication must be accompanied with the usual consultation fee of £1. and for all cases the most inviolable secrecy may be relied on. Only one personal visit required to effect a Permanent Cure. Country Vendors can be supplied by all the wholesale houses in London.

Observe—27, Montague-street, Russell-square, near the British Museum.

LONDON.—Printed by JOHN WORTHAM, of 313, Strand, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DIPPLE.—Thursday, Oct. 16th, 1845.

[Stamped to send free by Post, Three-pence.]

LIFE IN LONDON

## SPORTING DOGS.—NO. IV.—THE FOXHOUND.

AS an exemplar of the true form of the Foxhound, albeit Sportsmen of the modern time do breed something lighter, faster, and more of the harrier form, we are sure we cannot do better than "try back" to the portrait of the celebrated bitch "Merkin," from the graver of the unrivalled Scott.

"There are necessary points," says Beckford, his hunting textbook, "in the shape of a hound, which should never be lost sight of by a Sportsman; for if he be not of a perfect symmetry, he will neither run fast nor far; he has much to undergo, and should have strength proportioned to it. Let his legs be straight as arrows; his feet round, and not too large; his shoulders back; his breast rather wide than narrow; his chest deep; his back broad; his head small; his neck thin; his tail thick and bushy; if he carry it well, so much the better. This last point, however trifling it may appear to you, gave raise to a very odd question: A gentleman, (not much acquainted with hounds) as we were hunting together the other day, said, "I observe, Sir, that some of your dogs' tails stand up, and some hang down; pray which do you reckon the best hounds?"—Such young hounds as are out at the elbows, and such as are weak from the knee to the foot, should never taken into the pack.

"I find that I have mentioned a small head, as one of the necessary requisites of a hound; but you will understand it as relative to beauty only; for as to goodness, I believe large-headed hounds are in no wise inferior. Somerville, in his description of a perfect hound, makes no mention of the head, leaving the size of it to Phidias to determine; he therefore must have thought it of little consequence. I send you his words.—

— — — "See there with countenance blithe,  
And with a courtly grin, the fawning hound  
Salutes thee cowering, his wide-op'ning nose  
Upwards he curls, and his large sloe-black eyes  
Melt in soft blandishments, and humble joy;  
His glossy skin or yellow-pied, or blue,  
In lights or shades by nature's pencil drawn,  
Reflects the various tints; his ears and legs  
Fleckt here and there in gay enamel'd pride,  
Rival the speckled pard; his rush-grown tail  
O'er his broad back bends in ample arch;  
On shoulders clean, upright and firm he stands;  
His round cat foot, straight arms, and wide-spread thighs,  
And his low dropping chest, confess his speed,  
His strength, his wind, or on the steepy hill,  
Or far extended plain; in every part  
So well proportion'd that the nicer skill  
Of Phidias himself can't blame thy choice.  
Of such compose thy pack.—

"The colour, I think of little moment; and am of opinion, with our friend Foote, respecting his negro friend, that a good dog, like a good candidate, cannot be of a bad colour."

"Men are too apt to be prejudiced by the sort of hounds they themselves have been most accustomed to. Those who have been used to the sharp-nosed fox-hound, will hardly allow a large-headed hound to be a fox-hound; yet they both equally are. Speed and beauty are the chief excellencies

of the one; whilst stoutness and tenderness of nose in hunting, are characteristic of the other. I could tell you, that I have seen very good sport with very unsuitable packs, consisting of hounds of various sizes, differing from one another as much in shape and look, as in their colour; nor could there be traced the least sign of consanguinity amongst them: considered separately, the hounds were good; as a pack of hounds they were not to be commended; nor would you be satisfied with any thing that looks so very incomplete.—You will find nothing so essential to your sport, as that your hounds should run well together; nor can this end be better attained, than by confining yourself, as near as you can, to those of the same sort, size, and shape.

"A great excellence in a pack of hounds is the head they carry; and that pack may be said to go the fastest, that can run ten miles the soonest; notwithstanding the hounds, separately, may not run so fast as many others. A pack of hounds, considered in a collective body, go fast in proportion to the excellence of their noses, and the head they carry; as that traveller generally gets soonest to his journey's end, who stops least upon the road.—Some hounds that I have hunted with, would creep all through the same hole, though they might have leapt the hedge, and would follow one another in a string, as true as a team of cart-horses.—I had rather see them, like the horses of the sun, all abreast."

Thus far the Father of all hunting scribes on the qualities of the fox-hound. To his admirable text we will add a few collected performances of these valuable specimens of the canine race, and among them the exploits of the bitch, whose portrait forms the heading of this article.

In choosing these animals modern breeders prefer such as stand high, and appear light in their make. The particulars of the celebrated trial at Newmarket between Mr. Meynell and the Hon. Smith Barry, to determine the relative speed of their respective kennels, with the method adopted of training and feeding the two victorious hounds, by William Crane, who had the management of them, is so interesting, that we give the account at length:—

"Bluecap was four, and Wanton three years old; they belonged to Mr. Barry. Crane wished for young hounds, who would with more certainty be taught to run a drag; however, the hounds were sent to Rivenhall in Essex, and, as Crane had suggested, at the first trials, they took no notice; at length, by dragging a fox along the ground, and then crossing the hounds upon the scent, taking care to let them kill, they became more handy, and took their exercise regularly three times a week, on Tiptree Heath; the ground chosen was turf, and the distance was from eight to ten miles. The training commenced August 1, 1763, and continued to Sept. 28; Sept. 30, the match was run. Their food consisted of oatmeal and milk, and sheep's trotters. The drag was drawn (on account of running up the wind, which was brisk) from the rubbing-house at Newmarket town end to the rubbing-house at the starting post of the Beacon Course: the four hounds were then laid on the scent. Mr. Barry's Bluecap came in first; Wanton very close to Bluecap, second; Mr. Meynell's Richmond was beaten by upwards of one hundred yards, and the bitch did not run in. The ground was crossed in a few seconds more than eight minutes. Sixty horsemen started with the hounds. Cooper, Mr. Barry's huntsman, was the first up, but the mare that carried him was rode quite blind.—There were only twelve horses up out of the three score, and Will Crane, who rode a horse called Rib, was in the twelfth. The odds before starting were seven to four in favour of Mr. Meynell, whose hounds, it is said, were fed, during the period of training, entirely with legs of mutton. The match was for 500 guineas.

"The speed of MERKIN, a bitch belonging to Col. Thornton, was still superior: she was challenged to run any bound of her year five miles over Newmarket, giving 220 yards, for 10,000 gs., or to give Madcap 100 yards, and run the same distance for 5,000 gs. Merkin had run a trail of four miles, and performed it in seven minutes and half a second. This bitch was sold in 1798 for four hogheads of claret, and the seller to have two couple of her whelps.

"Madcap at two years old, challenged all England for 500 guineas. Lounger, brother to Madcap, did the same at four years old; the challenge was accepted, and a bet made for 200 gs. to run Mr. Meynell's Pillager: the parties were also allowed by Colonel Thornton to start any other hound of Mr. Meynell's, and Lounger was to beat both; but upon Lounger being shown at Tattersall's, his bone and form were pronounced so capital by the first sportsmen, that it was deemed prudent to pay forfeit, which was done, by giving Colonel Thornton a pair of gold couples."

To these authorities, facts, and records, we shall take the liberty of adding our own ideas on the shape and colour of a good fox-hound.

The muzzle of the foxhound should be rather long, and his head small in proportion to his body: his ears long and pendulous, though not so much as those of the blood-hound or stag-hound. His legs should be very straight, his feet round and not too large, his chest deep, and breast wide, his back broad, his neck thin, his shoulders lie well back, his tail thick and bushy, and carried high when in the chase. His colour generally white, variously patched with black in different parts of the body.

Most sportsmen have their prejudices as to the colour of their dogs. In an old distich it is said,

"So many men, so many minds,  
So many hounds, so many kinds."

and the choice of hounds in former times, as to colour and other points, is no bad commentary upon it; for we are gravely told, that white coloured dogs, especially those that were pupped without any spot upon them, although not generally good for all sorts of game, were excellent for the stag; that people from experience valued them, because of their natural instinct, being curious hunters, with admirable noses, and very good at stratagems; and, moreover, that they were less subject to diseases, by reason of a predominancy of phlegm which gave them a good temperament of body!

Black hounds were not to be rejected, especially when marked with white and not red spots, the whiteness proceeding from the phlegmatic constitution, which was supposed to ensure memory. They were at the same time more obedient, and were said to be good hunters, and not frightened at water and so hardy as seldom to require the doctor.

Grey coloured hounds (supposing all suspicion of mongrelism to be removed) were to be coveted, on account of their cunning, never faltering, nor being discouraged in their quest. It is allowed that their noses were not the best, but being indefatigable, they pushed themselves forward; and it is presumed, from the above failing, that nine times out of ten they did more harm than good.

Yellow hounds, which are defined to be those having red hair, inclining to brown, "possess too much choler to be much prized;" were too giddy and irresolute to hunt any animals that turned too much in their chase; were with difficulty taught, and not easily corrected; and, from their impatient temper, which hurried them beyond their strength, were very liable to diseases.

No country in Europe can boast of fox-hounds equal in swiftness, strength and agility, to those of Britain, where the utmost attention is paid to their breeding, education, and food. The climate also seems congenial to their nature; for when taken to France or Spain, and other southern countries of Europe, they quickly degenerate, and lose the admirable qualities they possess in this country.

In these alone, fair land of liberty,  
Is bred the perfect hound in scent and speed  
As yet unrivalled, while in other climes  
Their virtue falls,—a weak degenerate race.

SOMERVILLE.

It is a trait in our national character to be fond of hunting. It was the occupation of our forefathers from the remotest posterity, and seems to have descended, with increased ardour, down to the present day. Certainly there is no country that can boast of such expensive and convenient receptacles for the maintenance of fox-hounds as Great Britain. The kennel of the Duke of Richmond, at Goodwood, cost 19,000*l.*, and Mr. Noel's pack of hounds was sold to Sir William Lowther, Bart., for the large sum of 1,000 guineas.

The chief excellence in a pack of fox-hounds is the head they carry, taken collectively; and on this and the fineness of their noses depend their speed. Mr. Beckford says, "that hounds should go, like the horses of the sun, all abreast." Five and twenty couple are a sufficient force at any time to be taken into the field; they are a match for any fox, supposing them steady, and their speed nearly equal: too heavy dogs always do more mischief than service. Hounds that are meant to run well together should never have too many old ones amongst them. Five or six seasons are sufficiently to destroy the speed of most dogs, although this depends much on constitution. We are informed of a spayed bitch, called Lilly, which ran at the head of Mr. Paxton's harriers at Newmarket, for five seasons: a singular instance of undiminished speed.

NEWS FOR ANGLERS.—Considerable dismay prevails amongst anglers, and especially, we understand, amongst the Waltonians in the north, in consequence of statements having been put forth that an act had passed during the last session making it unlawful to angle for fresh-water fish after the 13th of November, and subjecting parties to a penalty for having in their possession at any time trout under seven inches in length. No such act passed during last session; in fact, we believe no act at all respecting fishing in English rivers. The only fisheries acts passed were, first, "An act for the amendment of an act of the sixth year of her present Majesty, for regulating the Irish fisheries;" and, secondly, "An act to prevent fishing for trout or other fresh-water fish by nets in the rivers and waters in Scotland." The statute rendering the use of nets illegal was, we believe, so far as regards England, in previous operation.

PARTRIDGE SHOOTING.—Now, since the corn crops are tolerably well cleared off in Cumberland and Westmoreland, sportsmen have lately been busily engaged in partridge shooting, many of whom have enjoyed fine sport, and pretty good success, considering that the covies have so long been sheltered in the corn, and are now fine strong wild birds, which give the sportsmen long and severe breathings are they make a good day's work. A few days ago H. Lowther, Esq., of the Guards, in the vicinity of Melkintorpe, Westmoreland, brought down 16½ brace within five hours.

THINGS TO BE DOUBTED.—Don't believe that hot whisky punch cures a cold—that editors are ever rich—that wine cures the gout—that love ever killed a man—that an old bachelor is happy—that widows dislike a second marriage—or that a lady means "yes" when she says "no."

## BRITISH BIRDS. NO. XI

THE COMMON SNIBE.

**I**N the list of the snipe family we place the common snipe, intending here to say a little about shooting this by no means rare little tit-bit. But first to begin with the beginning we'll describe him and his habits. With respect to the JACKSNIBE, figured in our last, and the SOLITARY or GREAT SNIBE, a few suggestions will be found in the letter of a correspondent printed in this present number.

The common snipe when seen on the ground, from the mode in which it carries its head, presents a handsome appearance; though its long bill, compared with its size, seems out of proportion. In some parts of Ireland they are found in great abundance; in fact, snipes are met with in nearly all parts of the world. The snipe weighs about four ounces; on the approach of November, they become fat, have a rich flavour, and, like the woodcock, are cooked with the entrails.

Of all their enemies, perhaps the snipe has none more destructive than the blue hawk, which, says Mr. Daniel, "beat over a marsh or bog with great exactness, until they find the snipe, who through fear crouches as close to the ground as possible, and which they instantly seize." A young rabbit, or a rabbit's skin stuffed, placed on the bridge of a trap, and the trap carefully covered with moss if set in a bog, or with grass if in a marsh, will generally prove successful, especially as, whichever way they fly in a morning, they are sure to return by the same course in the afternoon; and, if not disturbed, will continue the same beat for four or five successive days. This will sufficiently intimate where to place the trap so as most probably to engage their attention.

During winter, snipes usually inhabit marshy and wet grounds, where they shelter themselves among the rushes. In frosty, and more particularly in snowy weather, they resort in great numbers to warm springs where the rills continue open. In summer, they are found in the midst of the highest mountains as well as on the meors; their nests are formed of dry grass; they lay four eggs of a dirty olive colour, marked with dusky spots. Notwithstanding that the snipe is a migratory bird, it may be doubted whether they ever entirely quit our shores. When disturbed, particularly in the breeding season, they soar to a great height, making a peculiar bleating noise; and when they descend, dart down with vast rapidity. Although the snipe resembles the woodcock in appearance, and their food is the same, yet their habits are very dissimilar.

Having made the reader pretty familiar with the look and behaviour of the snipe we will next turn our attention to securing him, for he is somewhat difficult to knock down, for certain reasons, which we now proceed to show.

SNIBE SHOOTING requires much practice and discrimination. The object is so small, that, unless a very correct aim be taken, the bird is almost certain to escape. The zig-zag flight peculiar to these birds operates very much against success in bringing them down; independent of which, there is a very great diversity in the manner in which different birds will fly; indeed, I have noticed that the same bird will fly very differently on one occasion from what he does on another: this is readily proved in cases where a snipe, having been missed and marked down, upon being raised again an attentive observer will detect the deviation. It is no doubt to be accounted for in various ways; for instance, the increased alarm of the bird on the second occasion is very likely to operate forcibly on his movements, and cause him to resort to manoeuvres with which all living creatures are by instinct gifted when their lives are in danger. The position of the wind, if it be at all violent, is another

cause by which this change of tactics may be influenced. If flying down wind, the bird having risen to a certain height begins as it were to waver in his progress; if up wind, he appears to flutter against it, and with a side wind assumes a zig-zag course, when he becomes very difficult to kill.

For snipe-shooting I have no hesitation in giving the preference to a steady old setter. In the first place, he will encounter the water better than the pointer; and as it is frequently the case that brushwood is found in the haunts of the snipe, he will be more *au fait* in finding his birds in such situations. Some persons consider a dog unnecessary for this pursuit; but to that I cannot consent. Much ground must be uselessly travelled over if they are to be walked up, and they are very capricious in their manner: at times they are very wild; on other occasions they will lie as dead as stones. When in the former mood it matters little what course is adopted, for as soon as one rises nearly all the others will follow the example, and the only chance is to mark them down, and then walk up to the spot with the dog at heel. This usually happens when these birds have taken to some spot not commonly frequented by them. When they are found in the rushes and long grass of the marshes, which are their usual places of shelter, they for the most part lie close, and as they do not run, require a fine-nosed dog to find them in such situations. The immediate spots will in most cases be influenced by the rise and fall of the water.

It is a general rule not to beat down wind for snipes, and an equally general assertion that when sprung down wind they will go some distance with great rapidity before they turn. This I do not believe to be correct, especially if the wind be high, as the snipe does not like it to be in his tail. A side-wind is decidedly the most desirable, as it is generally the means of the bird presenting himself for a cross-shot; but the importance of these observations principally depends upon the force with which the wind blows. On a calm day I believe it is of very little consequence what direction you beat in.

Marking snipe usually devolves upon the shooter himself, and is a duty which he can perform in general without an assistant, unless great numbers rise at once, when to mark them all would be impossible; but as their haunts are on bogs and marshes, which are generally open tracts, the operation is in general not a difficult one.

We here take leave of this little family of longbills, with the observation that we shall feel happy to receive—and, if of sufficient interest to insert—communications containing the thoughts, experiences, suggestions, and observations of sportsmen generally, on any subject within the scope of THE NATURAL HISTORY OF SPORTING.

## THE FISHER'S CREEL.

## FISHING EXTRAORDINARY.

"Trout fishing is trout fishing," all the world over,—as my friend Linsey Woolsey said of the portraits of Cotherstone, Coronation, Corunna, and Co., in the pictorial papers. "They may be like them," said he, "for a horse is a horse, all the world over,"—and therefore, I shall not describe it, but proceed to give you an anecdote or two growing out of that 'philosophical sport.' And let me secure the good opinion of yourself and readers, and by that means, your ready belief of what I am going to relate, by suggesting that my informant was, is, and will continue to be, a trout-fisher "of the first water," and of course a gentleman, and therefore a man of truth. He had been quite successful in hooking trout, one fine day a few years since, and had placed a tub or bucket under a small stream of water that issued from a bored log; in this tub he put his trout as he caught them, with the intention of keeping them alive and fresh. The log conducted water from a small dam built across the little stream a short distance above, and the end from which the water issued was three or four feet above the tub, so that the jet resembled the pouring from the spout of a tea-kettle, except in size—the jet or stream being an inch or more in diameter. Well, now for the story. After he had caught and placed several fine trout in the tub, and returned from a short range down the run, he went to look at them, but they were gone! He at once concluded that some poacher had been there and taken them, and, much chagrined, went to work again and soon caught several even finer ones than the first, and placed them also in the tub—taking care to keep one eye upon the tub, while the other was attending to the fly, to make sure this time of his game. Having succeeded in taking as many as he thought would do for one mess, he unhung his tackle, went to the tub, and found his fish were gone again. "Well," says he, "what can this mean—no person has been here this time, and yet my trout have disappeared. They could not get through the bottom nor the sides of the tub, nor have they wings to fly out of it from the top—how have they got out?" He resolved to catch at least one more, and keep his eye upon him; so in a few minutes he had another trout in the tub. This fish played about the sides of the tub for a few minutes; examined the cracks and crevices, and kicked up his heels in delight at having escaped the hook; now playing near the surface of the water, now nosing the bottom. Presently, he descended to the bottom and ceased to move, but turned a sidling glance towards

the surface where the jet of water was pouring into the tub. In a moment he moved gently round, placing himself in front of the jet, elevated his head, and thus placed his body in a line with the curve of the jet, his head pointing directly into the end of it as it entered the water, and in the twinkling of an eye, he passed through the jet into the log, and thence into the stream—his native country. This explained the loss of all the former fish, and the gentleman soon removed the tub from the jet of water, caught another mess of fine trout, saved them, ate them for his supper the same evening, and yet lives to tell the tale and laugh at the trick the trout served him. I will not pretend to philosophise on this story. How the trout could pass up so small and so rapid a stream—I only tell the story as it was told to me, and let others give, if they can, the why and because.

I am particularly fond of angling when the fish will bite freely, but detest the dull sport that only furnishes you with a nibble an hour, and that only that of a gudgeon. Don't tell me of the philosophy of him that can stand such sport. It is neither philosophy nor patience, but downright indolence. Expressing these opinions one day to an old friend in Accomac county, Virginia, on the Eastern Shore, he suggested that I might go a fishing without hook or line, or seine, but with gun, powder and shot! "Go a fishing with a shot gun," says I, "how—where, pray?" "Follow me," says he. So out we went, well accoutred with long duck guns, shot bags, and powder flask, to an old field near the sea shore, wherein were a number of very tall trees that had been killed by girdling. "Now," says he, "get behind this tree, load your gun, and watch those fish-hawks yonder. You will presently see one rise from the water with a fish in his claws under him like the car of a balloon. If you observe the hawk has a fine large one, crack away at him, and he will either give you the fish to let him off or come down with it; but don't disturb him if the fish is not worth the shot." I followed his instructions, and in a short time I observed a hawk rising from the water with a fish as long as himself in his claws. I allowed him to approach as near as I could with patience, when I sent him an invitation in the form of an ounce of duck shot, to let me have the fish—which he very politely did, excusing himself, however, from holding any further talk with me. For several hours I amused myself in this way, and got half a dozen very fine good sized fish, wounding and killing several of the hawks—which I regretted, but could not afford to forego the pleasure of this new kind of fishing to avoid. They say on the Eastern Shore, that these fish-hawks catch fish for the eagles; but I rather guess they catch them for themselves, and only yield them to the eagles for force.—*American Turf Register.*

## NOTICE!

## THE SPORTSMAN'S ALMANAC,

will be ready for delivery with NUMBER TWENTY-EIGHT of the SPORTSMAN'S MAGAZINE; it will contain the whole of the Nominations for the Derby, Oaks, and Leger 1846; revised tables of the duties on horses, dogs, game certificates, &c. A list of principal Jockeys and the colours of their Masters; Public Trainers; Sporting Chronologies for 1846; a really SPORTING Calendar, (which no other Almanac has yet contained) besides a mass of general information equal to other Sheet Almanacs, printed in a style for framing or suspending on a board in public or private rooms.—Price THREE-HALF-PENCE to Subscribers—SIX-PENCE to Non-Subscribers, after the expiry of the week of publication. \*\*\* Observe! the whole of the Back Numbers, and the MONTHLY PARTS, are in Print, and may be had. Office, 42, Holywell-street, Strand.

## TO CORRESPONDENTS.

- A. Z.—We shall complete volume one of the SPORTSMAN'S MAGAZINE with its fifty-second number, and give a TITLE and INDEX; the reason of this is, that one thick volume will be more cheaply bound and look better than two thin ones. We shall feel obliged by your recommendation as you have so favourable an opinion of the work.
- S. R., Wandsworth.—Having some shares allotted to me in a line of railroad, I wish to know if I sell the scrip and the party who buys it cannot or will not pay the call made afterwards, whether the shares are forfeited to me and become my property, if I pay them all. Also, can any shares be legally transferred before the passing of the act?—If you sign the deed you are responsible; if the shares are legally transferred you are not. The legal transfer is after the passing of the act. If you do not sign, but sell the *letter*, you are not responsible; you are then "a stag."
- A. WELLISHER.—The Almanac will be a **SECRET ALMANAC**, the same size as the "Stationers' Almanac." It will contain the Nominations for the Derby, Oaks, and Leger, 1846. The fight of Norley and Gill is postponed to the 24th of November. We shall report it in the Stamped Edition of the SPORTSMAN'S MAGAZINE.
- R. E., Liverpool.—The paper is procurable. Send us the name of the news-vendor who says it is not, and we will print it and also tell him what we think of his veracity. We have ALWAYS PUBLISHED before Saturday; for some months past we have been out on THURSDAYS. He is a humbug and the truth is not in him. Cannon beat Josh. Hudson twice. You will hear of Johnny Hannan, at Jem Burn's, the Queen's Head, Windmill-street; he gives lessons.
- R. WATSON.—Three months ago I had a house dog for a few weeks only, I have paid six months' duty, being the time I have occupied the house, and the collector tells me I shall have to pay eighteen months' more duty on the same dog. Am I bound to pay the eighteen months' duty?—You are bound to pay a twelvemonth's tax.

A. SUBSCRIBER.—We wish you would adopt another signature, (we have just counted five with no other distinctive mark received on the 26th and 27th of October). A horse that does not start cannot possibly be "placed." The placing merely signifies the judge's decision on the position the animal held at the time the first horse passed the winning-post. It is not usual for the judge to place more than three, though the newspaper reporters often give the places of almost all the starters in their descriptions of the race. B. unquestionably wins. The number is not given by the judge, it is previously assigned to each horse; thus 13, 17, or 26, may be up at the telegraph as No. 1, or first horse. The 1, 2, 3 in the papers merely denote the order of their coming in.

J. FLAMBEAU.—Wagon horses in many stables have sometimes an itchiness in the heels and legs which makes them injure themselves in endeavouring to rub or scratch the part with their own feet. It is called "*trécula*." Try the following:—White hellebore, powdered, one ounce; flowers of sulphur, one pound; oil of tar, half a pound; to be well mixed together, and thoroughly rubbed into the part affected, which the following day should be washed with soap and water, and the application repeated as before. This method to be pursued until this troublesome and infectious disease is eradicated. Boiled turnips mashed up in their own water, that is the water not pressed off, and mixed with linseed meal or oatmeal, make an excellent emollient poultice in case of grease. *Leses* or *vices* is a swelling of the parotid gland, situated just under the ear.

A. CONSTANT READER (Bristol postmark).—You are a "Constant Reader," and no mistake. Firstly, how often are we to say this signature is no distinction; and secondly, our very last number answers your questions as to *when, how, where*, and for *what sum* Captain Barclay walked his 1000 miles in 1000 hours. Another "Constant Reader," wishes to know "whether John Gully, the pugilist, is the race-horse proprietor?" Heaven preserve us from such constancy!

EDWARD B.—There is no doubt of it in our own mind. We shall feel obliged if you will carry out your declared intention at the earliest opportunity, and so will many readers.

A. SUBSCRIBER, Hammersmith.—We are sorry to say that we know of no work specially devoted to SEA ANGLING. There were, however, a number of papers in the *Sporting Review*, about two years since, under the title of "Observations on the Wrasse Tribe," by PISCATOR, which we remember reading, and which contained much information on the subject. Next week, under FISHER'S CREEK, we will give you a scrap of information as to the fish most commonly caught, and the mode of taking them.

THE ANGLER IN WALES.—Barker, in his "Art of Angling," so long ago as 1651, speaks of salmon-roe as a bait for a trout. The following we believe to be the Scottish method of preparing it; if we are incorrect in any trifling detail, doubtless some Scottish correspondent will set us right. Boil the spawn (September or October are the months), about a quarter of an hour, wash away all blood, and pick out the pieces of membrane; put about one ounce of salt, and a quarter of an ounce of saltpetre to each pound of roe, and mix all together in a mortar; place it in a small jar, or wide-mouthed glass vessels, carefully covered, and it will keep for months. Another recipe recommends its preservation by pouring over it mutton-suet melted, and covering the jar with a bladder. Mr. Chatham says, simply "wash the spawn carefully, laying a little wool at the bottom of the jar, then sprinkle it carefully with salt, then another layer of wool, another of spawn, and another of salt, alternately till the little pot is filled."

R. DOBBIE, Wakefield.—Caunt's fight with Brassy of Bradford was not a fight for the Championship of England, inasmuch as Brassy had no claim to the distinction. 2. You must observe that we wish to give *authentic* portraits of the pugilists, accordingly we copy from contemporary *pictures* or *authentic engravings* known to be likenesses. *Inventing* whole length figures would save us a great deal of trouble, but then they would not be *portraits of the men*. When we get down to more modern times, we will give some whole lengths—where such have been published—and are admitted resemblances. It has cost us some cash and trouble to get authentic pictures to copy from. The stamped edition will be sent regularly by our publisher, from the office, upon receipt of an order from the shop at Wakefield. All back numbers are to be had—see advertisement in last page. We will cast our eyes at the "Fisheries Act," but fear it is of unwieldy length, like most Acts of Parliament.

H. C. Woodside.—"WRINKLES FOR THE GROOM" are a series of desultory fragments and extracts from the notebook of a writer on Horses, the Turf, and the veterinary art. Hence the slight discrepancy; they have suffered tremendous "cutting-down" at our hands, for there are enough of them for a thick volume. We will give you, under FEEDING, the information you desire. The following is the English of the Latin in the prescription in No. 24.—*Est. Colocynthis*. (Extract of Colocynthis, colocynth, or bitter apple); *Hydrag. Submur.* (Submuriate of mercury); *Ol. Carui* (Oil of Caraway); *Pulv. Scammonia* (Powdered Scammony).

## OUR WEEKLY CALENDAR.

- SUNDAY, Nov. 9th.—TWENTY-FIFTH SUNDAY AFTER TRINITY.—Prince of Wales born 1841.
- MONDAY, 10th.—Captain Barclay walked 90 miles in 20 hours, 1861; he subsequently did 100 miles in 19 hours.—Yesterday was Lord Mayor's day, but as it was Sun-day, and the civic anniversary always held in fog, it was properly postponed in honour of a more watery planet.  
Fog will have sway, and weave a dingy yoke,  
And chokes and blinds us, sure tis time we broke it:  
Alas! we can't—the atmosphere is smoke,  
And our joke nothing, reader, till you smoke it!
- TUESDAY, 11th.—The Earl of Egremont died, 1837.—Mehemet Ali announces his attention of restoring the Turkish fleet, on hearing of the taking of Acre by Sir Charles Napier, 1840.
- WEDNESDAY, 12th.—Cambridge term div. midnight.—ST. MARTIN; supposed to be related to Betty of the same name; his admirers addressing him with "oh mâté beate Martine!" which some heretic was tortured into "Oh my eye, Betty Martin!"
- THURSDAY, 13th.—A vein of pure oil discovered in Kentucky while boring for water (1846); Tippy Cooke says he has often heard of that same happening in W(h)aleys, Caedion to *Tradescantia*.—Never excoite orders for men with mustachios, unless accompanied by the tip.—It was declared (1837) that there were not sufficient assets to pay one shilling in the pound of the Duke of York's debts: whereon a wag observed that the creditors having, during life, administered to the Duke's will, were now cut off with a shilling.
- FRIDAY, 14th.—Stamford bull-running; suppressed in 1842, by a strong body of police from London.—Clock slow, 15m. 25sec.—The Law clerks and writers lay their case before the public (1844) by advertisement, and appeal for sympathy in their efforts for shorter hours; they deserve it, for there are few of them who have not at one time or other done their best to "*serve*" a fellow creature in distress.
- SATURDAY, 15th.—Day breaks at 5h. 20m., says the Stationers' Almanac. Look out for him in next Tuesday's Gazette: dye think he'll pay a dividend. He's running short daily.—Alderman Harner resigned the civic gown, 1840.—300 duns calculated to have been fought during the reign of George III.—One fool makes many.—*Alchemist's* certificates expire: what a pity the whole race of holders don't follow the example!—All the Almanacs put "*Saint Macthew*" opposite this day: *Saint May-shoot-us!* what sort of a shot was he? we object to the operation by saint or sinner.

# The Sportsman's Magazine.

CAUNT AND BENDIGO.—MORE LAST WORDS.—LORD DRUMLANRIG'S LETTER.

**H**AVING, since the very week when this much-wrangled subject first set men's tongues wagging in parlour, coffee, and tap-room, ceased to bestow on it more than a hasty scratch of the pen, in answer to some inquisitive correspondent, we opined that we might as well let the matter die a natural death; but a letter addressed to the Editor of *Bell's Life in London*, which we subjoin, seems to us so right-thinking, so straightforward, and (with the exception of one point) so commendable, that we cannot resist breaking our self-imposed silence.

The reader will see that the noble writer has had no opportunity, owing to his absence from England *audire alteram partem*. What, then, would be his feelings had he had the opportunity—had he heard the unprecedented observations, the wriggings, the shiftings, the misrepresentations, the broad assertions, the narrowminded slanders, maintained, propagated, ventured on, and cast at, all who fairly, honestly, unprejudicedly, and impartially declared or wrote their candid opinions of the fight and its sequences?

The good, easy public takes these things on trust. A vast deal of trash was first poured forth about "Nottingham roughs" and "intimidation;" from this it was an easy step to declare that the referee was intimidated, "and if intimidated," quoth the logical impugnors of his decision, "his judgment should be reversed," by which they meant reversed. Their premises were bad, and hence their conclusions nought. There might have been "Nottingham roughs" on the ground; but if there were, dare any, even the hardest opponent of the referee's decision, say, (and some of them seem to have a forty-bail-power of asseveration) that they or any one interfered with the combatants by act or deed from the commencement of the contest to its close? No! Beaten from this point they proceed to the "intimidation" consequent on a knowledge of their formidable presence. This the referee, a gentleman of advanced years and of true sporting spirit, emphatically denies. *Hinc illa lachrymæ*, the referee is firm; he is neither to be cajoled or bullied, and he coolly crushes the attempt of a letter-writer, to fix upon him even an inconsistency. What impartial man can hesitate between Squire Osbaldeston and that individual? Yet is the falsehood of the Squire's denial assumed by a leading journal, which returns to the charge by saying, "Coupling this with the Squire's declaration at Wolverhampton," &c. Why he has repudiated it *in toto*, and it rests on the unsupported testimony of Mr. Saunders. We will now add that the writer of this heard the Squire himself, in commenting on the conclusion of the battle, make use of these words—words he could not have uttered had the 93rd round been unseen by him, "I never saw a big man sit down more curiously." Words said in haste are not infrequently ill-chosen; for none but the prejudiced can suspect Caunt of the white feather. What the Squire meant was clearly that it was an unmistakable and palpable get down.

Then comes another Protean plea, that "Caunt considered the round finished, as Bendigo was down." Bendigo was not down; and the whole affair resolves itself into this: Caunt, after two hours' hard fighting, had all the worst of the punishment; his adversary, weak in the middle of the fight, was getting better; the severity of the body blow in the 92nd round induced him to desire to close the round; he sat down under a false impression, "his wish being father to the thought;" and thus was the battle lost. But your shifty impugnors and non-payers of bets have yet another plea—Bendigo struck Caunt foul in round 92. This cannot be argued: 1, because the umpires made no appeal; 2, because the men's coming up again cured all errors in previous proceedings; while we may add, what sort of seconds had Caunt in the wily and experienced Jem Turner and Wharton, that they did not claim the fight! Will any body pretend, that if convinced of the fact—which we, who looked on with all our eyes, (as well as the referee, and a noblethane, a backer of Caunt, who stood by us), could not perceive—that Wharton and Turner would not have emphatically claimed the victory? Verily the shifts of this party are multitudinous as

"The leaves which strew the glades in Vallombrosa,"

and their very variety is to us a proof of their worthlessness. As a *dernier ressource* they pretend that the umpires did not differ, and therefore the referee's functions had not commenced. To this we reply—We heard, and can be confirmed by half-a-dozen persons, including the gentleman addressed, that both Turner and Hannan declared to the referee (for the umpires were mysteriously distant, being half the diameter of the ring off) that the umpires were at variance—and then only did the Squire give his decision. The last squeak seems to be the threatened action at law; but this too lacks the truth of vitality, as the following clause from the "GAMES AND WAGERS BILL," passed in the last session of parliament, will sufficiently show:—

SECTION 18.—And be it enacted that all contracts or agreements, whether by

parole or in writing, by way of gaming or wagering, shall be null and void; and that no suit shall be brought or maintained in any court of law or equity for recovering any sum of money or valuable thing alleged to be won upon any wager, or which shall have been deposited in the hands of any person to abide the event on which any wager shall have been made: provided always that this enactment shall not be deemed to apply to any subscription or contribution, or agreement to subscribe or contribute, for or toward any plate, prize, or sum of money to be awarded to the winner or winners of any lawful game, sport, pastime, or exercise.

This exhibits, we should say, the absurdity of supposing any court would entertain the suit, should Caunt or his abettors proceed therein. His lordship's observations on the subject of this mode of settling the contests of the Ring are too much to the purpose to reader further comment necessary. We give the letter entire:—

To the Editor of *Bell's Life in London*.

SIR,—On my return here from the East a few days ago I found four or five *Bell's Lifes* awaiting me, giving a full and detailed account of the late fight between, and the subsequent correspondence concerning Bendigo and Caunt, the whole of which I have read through with equal interest and disappointment. I regret much that so exciting an event should have ended in so unsatisfactory a manner. As a sincere friend to the principle of the ring, and as one who a short while ago was often liable to be placed in the same situation as has been the lot of the "Ould Squire" lately, viz., as referee, I cannot resist writing you a few lines on the subject. I have not seen or read a word concerning the fight except from the columns of *Bell's Life*, not having even seen the *Era*. I will, therefore, argue entirely from what I find in your paper, and will admit that everything took place, word for word, as there described. I will also state that I know Caunt, and have always found him a civil, well-behaved person. I saw him fight once with Nick Ward. I certainly did not admire his style of fighting then; indeed, it seemed to me that he had no knowledge of the art at all. Bendigo I have seen but twice: of his flaccid accomplishments I cannot speak, never having seen him strip. Out of the ring he appeared to me a noisy, amusing, well-made fellow. My whole acquaintance and interest in the two, men I have here stated; it can hardly amount on either side to any sufficient cause for either partiality or the reverse to either party. Had I on the 9th of September been present, and had I been asked—as I have often been before asked—to be the referee, I should not have hesitated about accepting the office. I will, therefore, suppose myself in the "Ould Squire's" place, and will proceed to say that, after having read the whole account of the fight, as detailed in your paper, and admitting that it was there detailed word for word as it all took place, I beg leave to say that I should have acted exactly in the same way, and have given exactly the same decision, and have adhered exactly to my decision, as Mr. O., the referee, has already done. If the Nottingham "roughs" were numerous and disagreeable, and acted in a concerted plan, why did not the London men do the same, and so mar their plot? Your paper complains that Bendigo did not fight fair, and got down in a curish manner. This the referee denies. But, even suppose Bendigo's fighting to be actually unfair, for the sake of argument we will admit it to have been so, I maintain that, from every line describing the fight, Caunt's manner of fighting is proved to have been as unfair and as un-English as it was possible to be. Perhaps from sheer inability to do better; but that does not alter the case. He seems to forget that hugging, squeezing, and pulling alone must necessarily disgust every unbiased spectator or reader. He complains that Bendigo was always getting down. Why, if he objected to his (Bendigo's) way of getting down, why did he not, during the whole two hours he stood before him, once send him down in a different manner? When Broome and Hannan were fighting, Jem Burn asked the latter, somewhat anxiously, how he felt? "Very hill," was the reply; "I see two on them." "Well, d—n their eyes," said Burn, "knock one on them down, can't you?" So might it be said to Caunt, it seems. "He is always getting down, Spring." "Well, d—n thine eyes, knock him down next time, can't you?" But, says your paper, over and over again, did Bendigo, after delivering the most smashing hits, drop to avoid a return? My answer is, that if a man standing 6ft 2in. cannot hit with, or counter, a man of 5ft 10in, he must be a muf; and, whatever else he be fit for, he is quite unfit for a fighting man. I suspect that Bendigo did not drop to avoid the return—a proceeding he seems clever enough to be able to turn to good account—but that he dropped because Caunt, instead of fighting, attempted only to close, and so by his superior brute weight to the out and crush his opponent. Spring says, "I say, that Caunt must have won because he was still fresh, and that Bendigo, on the contrary, was becoming very weak." If this was the case, why, in this memorable last round, did Caunt, a fresh man, 6ft 3in, 14st, sit down before Bendigo, a weak and beaten man, 5ft 10in, not 12st? Why was Caunt, the strong winning man, so anxious that the round should be at an end (allowing it might fairly have been so), and Bendigo, the beaten man, the one anxious to prolong it. Either Spring has made some mistake, or Caunt must be a cur, which I should not have suspected him to have been. It is strange that Spring, so good a judge in general of the qualities of fighting men, should so often make mistakes about big ones. In this instance he seems to have stumbled on a second edition of Brown of Bridgnorth. Where so much money and so much party spirit is pending, there will be conflicting and numerous opinions enough, some of them, I fear, not quite disinterested. But, as one who has always stood up for the spirit and principle of the Prize Ring, and who at a distance still takes an interest in its proceedings, I ask you to insert this letter in your paper; I do so because I wish to show what is the opinion of the merits and demerits of the two men from one who could have at first had no bias or predilection for either party; whose subsequent opinion and bias have entirely arisen from the actual account recorded in your paper, and because I think your observations in a later paper very unjust on Bendigo who appears to me to have fought his way honourably up to the top of the tree, and because I think that his fractured knee and his being 83 years old, are, under existing circumstances, rather a feather in his cap.

I have just seen *Bell's Life* of the 12th inst, in which there is inserted a fresh challenge from Caunt to Bendigo, as also a letter from Spring; if Bendigo

means to retain the belt and the title of Champion, of course he must accept Caunt's challenge, but also, of course, the referee's late decision must be respected as final and decisive, or else Bendigo's fighting again would be but absurd—a case of "heads I lose, tails I don't win."

With respect to Spring's letter, I cannot say how surprised I am at its contents; that he, of all men in the world, should give such advice, and tell his friends to appeal against the decision of the referee, appears to me monstrous. If his and Caunt's intentions on this are carried out, the whole thing is at an end for ever; all confidence is at an end, and the Prize Ring may be considered as not a dying, but a dead body. I have been a very strenuous and disinterested friend to the Ring and its members, winners or losers, old or young, but if such proceedings as this are attempted I can assure you I should strain every nerve to put an end at once to any possibility of such a thing being ever again attempted. I shall be in England again very soon, and if Caunt, Spring, or others connected with the Ring, go to law for the purpose of recovering their money after Mr. O.'s decision (the referee they all fixed upon), I give full notice that if ever either Caunt, or any man from his house, or from Spring's house, or from any other fighting-man's house, whoever he may be, who acts in this way, be backed to fight again, I will go immediately to the first magistrate of the district and personally request that Caunt, or whoever it may be, be bound over to keep the peace. I give free notice that I will make a regular system of this week after week, and that I will spare no trouble or pains to put an entire ending to all fighting, which, if the referee's decision is not to be respected, I care not under what circumstances, must be nothing else than a downright robbery. To show you that I am in earnest I give you my name and address in full.

Florence, October 23.

DRUMLANRIG.

The perusal of this manly, straightforward, and right-thinking epistle, as well as that penned some weeks since by the veteran referee, are sources of hearty congratulation to ourselves. They justify to the titlle the integrity of our reports, the correctness of our views, and the impartiality of our conclusions. And here, in taking leave of this much-vexed question, we have only to observe, that in all future affairs our aim shall be to adopt "that policy," which the proverb has declared "the best." The public may rely, under all circumstances, on a candid and truthful report; and that in all sporting affairs, while we "nothing extenuate, nor ought set down in malice," we will never lend ourselves to trickery and special-pleading, but expose all shufflers; and finally, taking the plain common sense view of "things as they are," give our readers without the colouring of partiality, or the distortion of prejudice a fair account of "facts," which, as Robbie Burns has it,—

"Are things which wunna ding,  
And munna be disputed."

### GYMNASTICS. NO. III.

#### FENCING.—SECTION IV.

##### THE CUTS AND ASSAULTS.

HERE are only two good cuts, and these have been scarcely noticed by the French, and their admirers and followers. The first is the cut made vertically downwards in quarte, the second is thrown vertically downwards in tierce.

The vertical cut in quarte is thus made: raise your point vertically, and oppose your identical forte (that is that point of your sword which is in contact with the shell) to the very extremity of the adversary's sword; contract your arm; and having thus secured his foible (see fig. top of col. 2, page 400), strike in this vertical cut on the quarte, or inside of your adversary; terminate this cut in a thrust, and recover, using the round parade of quarte with all celerity.

In cutting, the hand is to be in the most natural position, that is, neither entirely in supination or in pronation; but it is to be turned into complete supination when you end your cut in a thrust. The best mode of parrying this cut is by the point volante; that is, by contracting the arm, and opposing the forte of the weapon, which must be raised perpendicularly to extricate the foible. By this parade (see figures 8 and 9) he opposes his forte to your foible.

It must be borne in mind that the terms fort and foible are relative, and intended merely to mark the different powers of impulsion or resistance possessed by different parts of the weapon. That part of the weapon held by the hand is the fort; and the powers of its other parts vary in the following proportions: that is, the power of any point of the weapon decreases as its distance from the fort increases, and *vice versa*. The extreme point of the weapon is weaker laterally or perpendicularly in resistance than any point between the extremity and the forte; the forte of the instrument is, however, the foible in regard to the power of the elbow. In the application of the fort, and the command of the body, is concentrated the art of self-defence.

The guard, cut and thrust of tierce, are formed by turning the forearm, wrist, and hand into pronation. As in the guard of quarte the hand is to be less in pronation than when delivering the thrust. Besides this pronation, the hand is to describe an arc of about eight inches, from the guard of quarte to that of tierce, from the left to the right.

The delivery of the thrust and cut in tierce, is similar in principle to that of quarte, in justly applying your fort. The formation of the extension and the allonge are the same in all thrusts; but your opposition

Fig. 8: POINT VOLANTE IN TIERCE. Fig. 9: POINT VOLANTE IN QUARTE. In tierce, and in quarte over the arm, is to your right.—The annexed figures, 10 and 11, will explain the text.

Fig. 10: ALLONGE IN TIERCE. Fig. 11: GUARD OF TIERCE BY THE FORT.

Feel your adversary's blade constantly, but do not press it, as you will be exposed to his time-thrust by your relinquishing the point of contact; therefore, in disengaging from quarte to tierce, move your point closely, within a hair's breadth of his blade, so quickly, that your change shall be imperceptible, your hand being in supination, as it was before, for if you roll your hand into pronation as you change your point, your motion will be wide. Roll your hand into pronation as you project the thrust along his blade, in the point indented in it, as it were in a nick, to direct your course. Oppose your hand high, and over his blade, to your right. Direct your point into the cavity under his arm. His effort to parry this thrust (if you have seized his foible), by his parade in tierce, will materially serve you, as it will be a fulcrum assisting your thrust, unless your sword hips or bends.

In the next number we will give a figure of the tierce planted home, after the fashion here described, but the non-arrival of the block from the engraver, prevents its present insertion, and compulsorily brings this section to a close.

(To be continued.)

HOW TO SELL GAME WITHOUT A LICENSE.—It is stated in the London, and some of the local papers, that the Duke of Buckingham has given to his tenants on the Avington estate, near this city, the right to kill game on their respective farms. Our cotemporaries, when heralding forth his grace's excessive liberality, should not forget to mention that an increased rent is charged for the game boon. However much the tenants may gain by the permission to kill the game they feed, his grace can be no loser. Suppose that his estate at Avington and Easton consists of two thousand acres of land, which is let to four farmers—and that every farmer pays an additional rent of 20*l.* each for the permission to shoot over his farm. His grace would thus receive 80*l.* per annum for his game on these four farms, a sum much more than he could have obtained under the old system of keeping hired keepers, and supplying licensed dealers in game—to say nothing of the expense of keepers and the occasional prosecution of a poacher. The Duke of Buckingham has made a good bargain, and sells his game to much greater advantage than heretofore.—*Hampshire Independent.*

## GALLERY OF SPORTING CELEBRITIES—NO. IV.

THE RIGHT HON. GEORGE AUGUSTUS FREDERICK STANHOPE, EARL OF CHESTERFIELD.

**I**LMROD in one of his immortal articles on the chase has said of the spirited English nobleman whose living likeness caps this column, "as a fox-hunter, the noble earl is an out-and-outer, when he likes his horse; it must indeed be a good man that can beat him; and who has been better horsed than Lord Chesterfield?" His lordship although a "Chesterfield" is a right trueborn Englishman; he thinks nothing of riding sixty or seventy miles between breakfast and dinner; and recently, by way of setting an example even "to the high Roman fashion," carried a pack of fox-hounds to Italy, where to the great scandal of His Holiness and the astonishment of the degenerate Italians he made the Campagna of old Rome echo to the inspiring sounds of "Hark forward! yoicks! tally-ho!"

The noble earl was born on the 23rd of May, 1805, and was educated

at Eton, where he was placed under the charge of a private tutor and an old family servant. This faithful domestic we have often seen driving the youthful lord to his studies, and going round to the various pastrycooks in the college, threatening them with the vengeance of the trustees of his young master, should they indulge too freely his appetite for sweets. From Eton to Christchurch his transition was natural, but we do not know whether he took a degree there for his acquirements in mathematics and classical literature. When at Oxford too his lordship earned high fame in the hunting field as a constant attendant on Sir Thomas Mostyn's and the Duke of Beaufort's packs; subsequently to which he put the finishing touch to his accomplishments as a member of the equestrian order, by several seasons' hard practice with the hounds in Leicestershire.

The Earl of Chesterfield entered at an early age upon his sporting career, and, as he was of an ardent, generous, and unsuspecting disposition, he quickly attracted the attention of those cool, calculating escamoteurs, with whom sporting is a matter of business, who live with systematic temperance in order to keep their heads clear, and who make their calculations so deliberately, and watch their opportunities so warily, that the man of warm impulses, who bets or plays with mere love of excitement, is certain to lose when opposed to them, at any game of chance. Of late years, his lordship has been more fortunate, and has partially retrieved, by maturer skill, the severe losses he sustained in the early portion of his life.

His handsome lordship—for that he is a handsome man, although somewhat inclined, in these later days, to *embonpoint*, few will be disposed to dispute—is here represented rather as a Turfite than a Foxhunter. We have him, in his usual careless easy attitude, standing before the clubroom at Newmarket, inquiring "the odds about the favourite."

His lordship's "first appearance" on the turf, where he has been more successful than on "the board of green cloth," was in 1836, when, with a cocktail called Raven, (no croaker of ill-omen), he won the Witherley Stakes at the Anson Hurst Meeting, on the Lichfield Course: soon after, we find the following good, bad, and indifferent nags figuring off under his colours—red jacket with blue sleeves—Jerry, Teasdale, Heathen, Negro, Zingabee (winner of the Cup at Ascot, in 1829), Carthusian, Splendour, Sarsenet, Rufus, Massaroni, Titania, Olga, Squirrel, Kittums, Non Compos, Weeper, Dirce, Whiskey, Uncle Bob, Blanche of Devon, Elvaston, Brother to Nessus, Golden Egg, Felix, Amphitrite, Theban, Fanny Gray, Tourist, La Bayadère, and the immortal Priam, winner of the Riddlesworth, the Column Stakes, the Derby, the 100 sovs. Sweepstakes at Ascot, the walk over for the Gascoigne, and receiver of no end of forfeits, in 1830; the winner of the Port, the vanquisher of Lucetta, the winner of the Goodwood cup, the receiver of another filled with guineas at Heaton-park, and vanquisher of Augustus, after giving him 16lb., in 1831; the winner of the King's Plate in the first spring meeting, of the Eclipse Foot at Ascot, and the Cup at Goodwood, in 1832; a horse, in fact, the possession of which is sufficient to confer immortality on any man that ever lived.

Since that period, with the appliance of an ample fortune and an excellent trainer—almost all the "good things," as Buckle, used to term them, have fallen to his lot. In 1836, he won the fastest St. Leger ever run, with Don John, and the Oaks with Industry. His nomination for the Derby, the following year, Bloomsbury, also, it will be remembered, won in a snow-storm. The sideboards of Chesterfield-house and at Bretby, groan beneath the weight of turf trophies. Among them may be mentioned no less than five Goodwood gold cups.

Of the chase, his lordship has ever been a most constant patron; and, certainly, when he was Master of the Royal Stag Hounds, he imparted a life and impetus to the whole thing, such as had never been shown before by any of his predecessors. Breakfast was laid out every hunting morning, at Chesterfield-house, for fourteen; and the party driven to cover in the drag by his lordship, and probably nearly all mounted by him also. On these occasions, the Duke of Beaufort generally worked the team back. On his retirement, he presented Mr. Davis, the huntsman, with a magnificent piece of plate. He afterwards took the Pytchley country, which he hunted in a style of princely magnificence, such as will long be remembered. His stud of hunters then amounted to seventy, all of which were in splendid condition; and he frequently had six servants in the field, in addition to the whips. Northampton and its neighbourhood have deeply benefited by him.

He also gratified, a winter or two since, the inhabitants of the Eternal City with some splendid runs, with a pack of hounds he had sent out to hunt for their amusement, and his name will long be remembered by all classes of society.

Lord Chesterfield has displayed his partiality for the road, by being the chief proprietor of the celebrated Tagliani, which was driven from London to Windsor, a distance of twenty-two miles, in two hours to a minute. His lordship is a first-rate coachman, and president of the Richmond Driving Club.

In the green-room his lordship is well known. He has a box at almost every theatre, and is a constant attendant at them. The Earl of Chesterfield married, in 1830, the Hon. Anne Elizabeth, eldest daughter of the late Lord Forester, by whom he has two children, who, from such a cross, cannot fail to be of the right sort. Her ladyship is as passion-

stately fond of the turf as her husband, attends, regularly, every meeting at Newmarket, and, whatever may be the severity of the weather, is always visible on the Heath. It has long been a source of wonder to his friends, how Lord Chesterfield has managed to maintain his position in society, after the vast inroads which have been made upon his patrimony; but when we tell them that the late Mr. Arkwright was his sincere friend, and assisted him with his purse, their astonishment will cease.

Among his private circle of friends Lord Chesterfield is much liked, on account of his kindness of heart, liberal hospitality, and generous disposition.

## WRINKLES FOR THE GROOM—NO. VI.

### UNSOUNDNESS.

**I**N these desultory papers of facts, thoughts, hints, and wrinkles our object is rather matter than method; and perhaps we cannot devote a column to a less understood hint than that of unsoundness. In doing this we shall resort to the authority of Nimrod's work "The Horse and the Hound," under the supposition that many who purchase this low-priced miscellany have not the means to procure, or the leisure to read expensive, and comparatively extensive works.—We will now proceed to the important consideration on what constitutes a sound, and what an unsound horse. Mr. Stewart, Veterinary Surgeon, and Professor of Veterinary Surgery in the Andersonian University, Glasgow, says ('Advice to Purchasers of Horses,' p. 16), 'At first view, it seems easy enough to define a sound horse. It may be said a horse is sound when every part of him is in perfect health; but, upon further consideration, it will appear that such a definition would be of little or no practical utility, for scarcely a seven-years-old in the kingdom could be fairly said to answer to it. The most trifling splent, or even a wart, no matter how small, or where placed, are deviations from health, and would make a horse unfit to be warranted, if such a definition of the term 'sound' were to be adopted. It must, therefore, be qualified in order to be useful, and that buyer and seller may be placed upon something like an equal footing. This, however, is not so easily done, for a horse is liable to several trifling diseases, which do not in the least incapacitate him; and yet it is difficult, I think I may almost say impossible to define soundness in such a way as to admit those, without, at the same time, admitting others of greater consequence; and, on the other hand, it is as difficult to define unsoundness, so as to embrace all those diseases or faults which deteriorate the animal, without likewise including many that do not. Under such circumstances, a middle course is the most advisable; and though there must be some outstanding points, yet they are so seldom met with, that they may be left to the decision of the lawyer or the veterinary surgeon, according to circumstances. It is evident, however, that natural defects in the conformation, temper, or action of the animal, must not be considered as unsoundness. There is difference of opinion and strife enough in horse-dealing already; and to introduce the doctrine that a natural defect is an unsoundness, would not diminish it. Nothing but the existence of disease of one kind or another can in justice be so considered. I think the definition most likely to be generally useful, and most impartial to buyer and seller, is this:—A horse is sound when there is no disease about any part of him that renders, or is likely, in future, to render, him less useful than he would be without it; and, of course, a horse must be unsound when he has any disease about him that renders, or is likely, in future, to render, him less useful than he would be without it.'

"On the question, What do you consider constitutes a sound horse? being put to Mr. Mavor, of New Bend Street, London, veterinary surgeon of great practical experience (see 'Horseman's Manual,' p. 9), his answer was, 'I consider a horse to be sound which is perfect in structure, and perfect in function.'

"I also consider a horse to be sound, though with alteration in the structure, provided he has never been either lame or incapacitated (and is not likely to become lame and incapacitated) from performing the ordinary duties to which he may be subjected in consequence of such alteration, and can perform them with equal facility as if there had been no such alteration of structure."

Unsoundness is a term, the exact limits of which are not very clearly defined. For example, crib-biting, in its incipient state, has been held to be no unsoundness; but when inveterate, and interfering with the health of the animal, which it does by impairing his digestion, it then has been held to fall within the meaning of the term. But how many thousand first-rate hunters and race-horses have been and are crib-biters; and, with the common precaution of the neck-strap, not in the least the worse for it. Thus it appears that the doctrine laid down by Lord Ellenborough is right—namely, 'that any infirmity which renders a horse less fit for present use or convenience, is an unsoundness;' to which we may add, in the spirit of controversy, that any infirmity which does not render a horse less fit for present use or convenience, is not an unsoundness. Nevertheless, we think it is not justifiable in a person to sell a horse which is a

crib-biter, how good soever he may be, without previously mentioning the fact to the buyer, although the act is generally self-evident, from the mark made on the neck by the preventive strap.

How many thousand first-rate hunters (and it was frequently the case with race-horses when they were kept in training for any considerable time beyond the period of their usefulness) are subject to chronic cough! Now, chronic cough does not render a horse 'less fit for present use and convenience;' and yet, in the case of *Shilline v. Claridge*, it was held by Lord Ellenborough to be unsoundness, although the buyer was told that the horse in question had a cough, and there was no evidence of any mismanagement by the buyer. 'If it had a cough,' said his Lordship, 'and it was of a permanent nature, I have always held that it was a breach of warranty; and such has, I believe, been the understanding both in the profession and among veterinary surgeons. On that understanding I have always acted, and think it quite right. Knowledge makes no difference. There was a case before Mr. J. Lawrence, in which it was held, and it was there said, that the plaintiff might rely upon the warranty only, and not choose to trust to his own knowledge. I have always understood that a cough is an unsoundness. The horse was then unsound when he was bought; and there is no proof of any discontinuance of that unsoundness, or that he would have got well if he had not been hunted.' Now as it is held that 'no length of time elapsed after the sale will alter the nature of a contract originally false,' it would appear that a person purchasing a hunter's with chronic cough, warranted sound, may have his season's hunting out of him, and then return him as unsound.

It appears to be going great lengths in warranting the temper and abilities of any animal; nevertheless, the warranty of 'free from vice' in a horse we know nothing of, is by no means an unnecessary precaution; for we know that, in the London Repositories, horses are sold over and over again (which is called, amongst the fraternity of low horse-dealers, 'going round the mill'), which will neither draw nor carry, and are consequently perfectly unserviceable.

Although anatomical knowledge would be wanting to discover the various causes of diseases in the following various parts of a horse, still the following directions for examining the seat of them, as given by Professor Stewart, may be very useful to a purchaser:—

"*The head.* For the eyes; for cataract, glass-eyes, and specks. The nostrils for glanders, tumours, and cold. The glands between the brooches of the lower jaw, for enlargement. The throat; for mark of crib-biting strap, and the tenderness which accompanies cold. The teeth; for the age, and marks of crib-biting. The veins of the neck; to see that both are sound.

"*The fore-leg and shoulder.* The seat of the collar; for tumours. The point of the elbow; for tumours. The knee; for blemishes and stiffness of that joint. The shank; for speedy-cut, splent, and strain. The fetlock-joint; for enlargement, windgalls, unnerving and marks of cutting. The pastern; for ring-bone.

"*The foot;* for side-bones, sandcrack, contraction, thrush, corns, and flatsoles. The shoe; for signs of cutting.

"*The trunk quarters.* Each side of the chest; for marks of blisters and rowels. The space between the fore-legs; for the same. The stifle; for enlargement. The groin; for rupture.

"*The hock;* for capped hock, curb, thorough-pin bone spavin, and bog spavin (no blood spavin). Then the horse should be mounted, and ridden a few hundred yards at a gallop, in order to quicken his breathing, and thereby display the presence or absence of roaring, thick-wind, or broken-wind.

"This brief summary will assist the memory, bringing, as it does, the seat and causes of unsoundness into one point of view. It includes, however, some objectionables, which, properly speaking, do not constitute unsoundness; such as windgalls, thorough-pin, capped hock, and string halt. The first two are objectionable, indicating, that the horse has been severely exerted, and may be otherwise more seriously injured. The two last are sore-eyes, and only to be avoided as such."

"We will remark on a few of the points here specified, which relate to fraud and warranty. The eye is a point difficult to decide upon, and often a subject for fraud, particularly amongst the lower order of dealers, who used formerly to have very bright white walls, against which they showed their horses, when the reflection concealed cataracts, which are in themselves white. But this important organ is difficult to judge of even in its healthy state, by reason, of the varieties in its organization; and still more so to detect the extent of disease which may have, at some time or another, attached to it. Even the best judges of horseflesh have purchased horses without having detected deeply-seated cataracts, which shows the necessity of caution; and the best security is the inspection of a professional man, who is alone equal to form a correct opinion on the subject, which will be at once apparent on perusal of Mr. Perovsk's sixty-first lecture 'on the eye.' Part III., p. 131.

"The foot is now so generally understood, that it may be needless to say more than to remind the buyer of the proverb—'No foot, no horse.' 'The hock' is the most complicated, therefore most difficult joint for the uninitiated to form a judgment upon. It is not in every person's power to detect the absolute presence of disease in this part, still more so to foretell the probability of it in future; but there is a certain conformation

of this joint which almost ensures disease, and consequently it should be most minutely examined as to its shape, substance, &c.

"Broken wind is easily discoverable; and it is only amongst the most disreputable of the fraternity that it is ever attempted to be concealed, which can be done for a few hours, by administering a certain quantity of lead, which, by its pressure, checks the violent action of the abdominal muscles, or what is called heaving of the flanks. But 'roaring,' 'wheezing,' and 'thick wind,' are by no means always discoverable in a common trial of a horse, such as a dealer is disposed to give, on a good sound road. Nothing but a gallop over soft ground, or against a hill, can be depended upon in certain stages and degrees of either of these complaints.

## CORRESPONDENCE.

### SPORTING IMITATORS.

SIR,—My Lord Bacon has the following sentence:—"Many men have a manner (after other great men) of shaking their heads. Sir Lionel Cranfield would say 'it was as men shake a bottle, to see if there were anything in it.'" The bribe-taking Chancellor was right; there are many men who strive to ape (for it at the best is only *apeing*) the manners of a class in which they have no valid claim to rank. Their emptiness, however soon, exhibits itself, for it is a mere momentary effervescence, and when the false spirit escapes they are left totally at the mercy of circumstances. Among these, the most ridiculous pretenders, when found out, are the sporting imitators, and for this reason, that mortification accompanies the galling *exposé*. Sporting has in it as many exploits as either soldiering or sailing, and it would be utterly ridiculous for any man to exclaim before a company who knew it to be otherwise "I am a soldier, and I have performed many brave things in the Peninsular campaign," or "I am a sailor, and did multitudes of brave actions on board the *Victory* at Trafalgar."

In such a case the man would be at once set down as a liar, or a fool. And so it is with mock sportsmen (we mean those that *buy* their spoils, and set them down as the result of their prowess) while we would bet a thousand to one, that if a gun were presented to the pretender he would be quite abroad as to whether he should place the butt against his right or left shoulder, his breast, or his eye.

A very amusing series of papers were published a few years since in *Chambers's Edinburgh Journal*, on the detection of imposters, in which in the case of a mock sailor an appeal to his geography was the test; and a very good appeal it was, for the sailor answered that in sailing from Galway, in Ireland, to Plymouth, they went into Calais, and touched at the Cape of Good Hope! The same would result from an appeal to the topographical knowledge of these sportsmen. And if this were invariably done, the company which these pretenders annoy would have the satisfaction of getting rid of an *infliction* for the evening, or the day as the case may be; besides having a well-earned laugh at the vain pretensions of these would-be poachers on the legitimate sportsman's ground.

Yours,  
E. B.—N.

### SNIPES AND SNIPER SHOOTING.

SIR,—Your papers on the Snipe induce me to take up the pen to ask what some may think a simple question: namely, where does the Jack-snipe breed? Bewick says in the same places as the common or larger snipe; but upon inquiries, and from concurrent circumstances, it is somewhat doubtful whether he is correct. Last season a sporting friend, who is in possession of a bog where the snipes propagate, made it a particular point to inquire, having a man constantly employed on his moor. This man knows the snipe and its habits well, and has a natural attachment to them; and he informed me that he never saw a Jack-snipe during the breeding season in those swamps. When I was sporting over them in the middle of last November, and killed several Jacks among other snipes, he said they were the first he had seen that season. This was in Surrey: in Essex I had previously killed several Jacks as early as the 1st or 2nd of October. The season before I killed one on the 26th of September. This I consider early, but in the same place I have shot the whole snipe as early as the 22nd of July. They do not breed here, neither is the Jack-snipe often found after the middle of April.

As few birds, if any, give the shooter more sport than the snipe, the Jack-snipe certainly affords his share; for no bird, if missed, elicits again so near the sportsman, with gambols challenging him to another trial of his skill; and as there appears to be a doubt as to where these comical pretty Jack-snipes bring forth their young, some of your Shooting Correspondents, who live near moors and swamps, may give some interesting results of their search and inquiries. The error of one naturalist has frequently been followed by others, until opinion has become general, and that opinion fallacious. A case in point—a few weeks ago a friend visited one of our National Institutions, and there saw the Jack-snipe labelled as the male of the common snipe!

Again:—is not the Solitary Snipe an hybrid between the woodcock and common snipe? What I have seen of them have much more the

appearance of the woodcock than snipe, but not so elegant as the latter, and are generally killed about and seldom later than September. They are sometimes found two together, but this is a rare occurrence. May not a wounded woodcock of either sex, not capable of fitting at the general migration from this country, join one of the nearest affinity to its species, and produce this rare bird? The time of year, the appearance of the bird, the few that are met with (for snipes are a numerous race), strengthen the opinion I entertain. I have shot a great number of snipes, but never yet saw a Solitary Snipe on the wing. I once killed one of the common sort that weighed six and a half ounces, which is the largest I ever shot: this bird was loaded with fat, which occasioned this extra weight, and not from the general form; he flew heavy, and not at all like what a snipe usually does, quick and zig-zag.—Yours, &c.,

October 28, 1845.

LONGBILL.

### Reminiscences of Racing and Racers, in 1845.

BY SOOTHSAYER.

(For the Sportsman's Magazine.)

It is with infinite satisfaction I am able to avoid speaking of "dull November"—a season more delightful in appearance and happy in effect than the present it has not been the lot of most of us to have enjoyed for many years past. Time, however, jogs on, and must soon bring us to that portion of the year when rain, fogs, and wind, render the parlour a lodging place, and deprive us of the pleasures of out-door exercise. It is wise to be prepared to meet this change so depressing to our feelings, and to draw, as near as we can, around us those pleasurable scenes which the "mind's eye" can rescue from the past. To those who enter on them with these feelings it is hoped that these reminiscences of racers, in their modest but original mention "how fields were won," will not prove unacceptable.

The season of 1845, it has been remarked, and justly too, was one of the most brilliant for the turf of any for many years, and unquestionably the sport at Ascot and Goodwood were unequalled. From the Chester Cup engrossing the faculties of the turf-men in so great a degree, there is not much interest in detailing any earlier event; but there are several very good meetings in the months of March and April, and they are worth recording.

At Liverpool (March 5) Jenny Wren ran a very pretty race, beating Master Stapey and three others easily. At the Northampton and Pytchley Hunt Meeting (March 25) Cherokee beat a host of two-year olds, including Malt and Toronto. For the Great Northamptonshire Stakes Discord was placed first, by three lengths, over a field of fifteen, including Queen Mab, Yardley, Napier, Lord Falconer, and Bastion. Down to this time the severity of the weather from the November previous had rendered training a difficult matter; in fact, for weeks together, it had, under ordinary circumstances, been found impossible. The two trainers who defied even the elements were Kent, who trained for Lord George Bentinck and the Duke of Richmond—and at whose disposal was placed a mile of tanned ground for exercise, which enabled him to take his horses out in the hardest and coldest weather—and Wadlow, whose grounds in Shropshire are situated in a most healthy and congenial spot. These two trainers were consequently in great force, and as a friend of mine remarked "Lord George's horses looked as fresh as in June" while others not so fortunate could only afford 'a sorry show,' which the snatches of mild weather had just enabled them to accomplish. Discord and Cherokee are both Lord George's. John o' Gaunt won the Plate, beating Sorella, Coranna, and two others.

The Catterick Bridge (March 26) afforded some good sport. Lord Harry, by Recovery, won a good race with three other two year olds, cleverly. As a specimen of what weight will do, Porto Bello (7st 2lb) beat Trueboy easily (8st 5lb). Trueboy (9st 12lb) beat Porto Bello (8st 10lb), shewing that it is not relative weight only which bears upon a race; but, also, that over a certain weight is a damper. In the last race, Trueboy won by a head, I believe the only victory accorded to him this year, but I shall have occasion to remark upon him hereafter, he has been bought out a great many times and of course is none the better for it. The Croxton Park (April 2) was quite a purse for Lord George, who took away the Granby Handicap of 20 sovs each, and the Gold Cup added to a Handicap of 20 sovs each, with Discord (Captain Pettat). Here the Bat (so called from being totally blind) ran and won. At a Meeting at Abergavenny, (or rather Abergavenny Races,) Tariff, a horse of good provincial character, won the Monmouthshire Cup. At the Warwick Spring, April 7, a horse called Sweetmeat, made his appearance for the first time in this year, he had also run well at a two-year-old. Sweetmeat is a brown horse, compact, and of a good temper and blood; so small as to be called the pony. He was got by Gladiator, out of Lollypop, and thence suppose his name. As a foal, so little was thought of him that he was put among a draft for sale, and fetched as a yearling 25l. He was not nominated either for the Derby or St. Leger, but has run races, which place him, as the victor in them, as one of the best horses in the country. At this meeting he won the Trial Stakes, beating Rodney, Roebuck, and the Attorney, he was trained by Wadlow, and is the property of Mr. A. W. Hill.

(To be continued.)

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

## CHAPTER X.—continued.

9. The battle had arrived at that doubtful state, and victory seemed not so easy an achievement as was anticipated; and the betters were rather puzzled to know how to proceed. Molineux gave such proofs of gluttony, that four to one now made many tremble who had sported it; still there was strong hope remaining, from the puzzled state in which the Black appeared at the conclusion of the last round. Both the combatants were severely punished; Cribb's head was much swelled on the left side, and Molineux's nob was badly out of repair. Cribb displayed some weakness, the flash side were full of palpitation; Molineux rallied with unexpected spirit, bored in upon Cribb, and by a strong blow, which he planted in the face, through the Champion's guard, brought him down. It would be futile here to attempt to portray the countenances of the interested part of the spectators; they appeared, as it were, panic-struck, and those who were not thoroughly acquainted with the game of the Champion, began hastily to hedge off; others, better informed, still placed their confidence in Cribb, from what they had seen him take in former contests.

10. Molineux now showed symptoms of weakness; yet he fought with and bored his opponent to various parts of the ring. Cribb kept pinning him about the nob, but he seemed to disregard it, and kept close to his man till they both went down. The Champion now perceived what sort of a customer he had to deal with, and that to win, judgment and caution must be called in; he therefore adopted his favourite and successful system of milling on the retreat.

11. The sable hero, still partial to rallying, planted several blows, but they appeared feeble and ineffective; he nevertheless gave Cribb a heavy fall.

12. Molineux, immediately on setting to, commenced another rally, when the Champion put in a severe body blow, but Molineux, treated it with indifference, and in return not only milled his head, but in closing threw him.

13. Molineux, in boring upon his adversary, received a severe facer; but Cribb went down from the force of his own blow. [To show the fluctuation of the betting, we may state, that the odds had changed six to four on the Black, to the no small chagrin of those who had sported their money, that Molineux would not become the favourite any time during the fight.]

14. The Black went furiously in, and ran down Cribb without striking a blow, or without the latter being able to return one; however, on disengaging, the Champion was certainly down.

15. Cribb, on setting to, planted a blow over the guard of the Negro, which occasioned a most determined rally, and those persons who were fond of viewing milling witnessed in perfection; no shifting, but giving and taking were displayed on both sides, till Molineux was knocked down from a severe hit in the throat.

16. Bustling fighting and rattling milling still prominent; Molineux went down through fatigue; Cribb appearing to advantage and the odds changed till they became even, and finally a trifle on that the Champion would win.

17. Both the combatants, determined to do their best, entered most spiritedly into another sharp encounter; they closed, and Molineux not only gave Cribb a desperate fall, but fell upon him. [Betting very shy, if any, it appearing to be anybody's battle.]

18. The Champion made play, and planted with his right a severe body blow; Molineux returned by a hit on the Champion's head, but the latter hit the African clean off his legs by a straight blow in the forehead, falling from the force of his own blow. [Both men piping.]

19. To distinguish the combatants by their features would have been utterly impossible, but their difference of colour supplied this defect. It was really astonishing to view the determined manner in which these heroes met—Cribb acting upon the defensive, and retreating from the blows of his antagonist, though endeavouring to put in a hit, was got by Molineux against the ropes, which were in height about five feet, and in three rows. Molineux with both his hands caught hold of the ropes, and held Cribb in such a singular way, that he could neither make a hit or fall down; and while the seconds were discussing the propriety of separating the combatants, (which the umpires thought could not be done till one of the men fell down,) about two hundred persons rushed from the outer to the interior ring, and it is asserted, that if one of Molineux's fingers was not broken, it was much injured by some of them at tempting to remove his hand from the ropes: all this time Molineux was gaining his wind by laying his head on Cribb's breast, and refusing to release his victim; the Champion, by a desperate effort to extricate himself from the rude grasp of the Black was at length run down to one corner of the ring, where Molineux, having got his head under his arm, fibbed away most unmercifully, but his strength not seconding his intention Cribb got down. [The bets that Molineux did not fight half an hour were decided; that time having expired during this round.]

20. Molineux made the most of his advantage, and brought his opponent down by boring and hitting.

21. Cribb planted two blows upon the head and body of his opponent, which Molineux returned by a desperate blow in Cribb's face; they closed, and the Champion was thrown. [The well-known bottom of Cribb induced his friends to back him six to four.]

22. Of no importance.

23. The wind of both combatants appearing somewhat impaired, they sparred some time to recruit it, when Cribb put in a blow on the left eye of Molineux, which hitherto had escaped milling. The Black ran in, gave Cribb a severe hit on the body, and threw him heavily.

24. Molineux began this round with considerable spirit, and some hits were exchanged; Cribb was thrown. [The betting tolerably even.]

25. The effects of the last fall operated in some degree upon the feelings of

Cribb; yet the Champion endavoured to remove this impression by making play, and striving (as in the former round) to put in a hit on Molineux's left eye; but the Nigger, aware of the intent, warded it off, and in return knocked Cribb down.

26. Both the combatants trying to recruit their wind and strength by manoeuvring and sparring. The Champion now endavoured to hit Molineux over the right eye, the left having been darkened for some time; but the African stopped Cribb's blows with agility and neatness, although he went down from a trifling hit.

27. Weakness evident on both sides; after some pulling and hauling, both fell.

28. Cribb received a leveller in consequence of his distance being incorrect.

29. Molineux was running in with spirit, but the Champion stopped his career by planting a hit upon his right eye, which materially damaged his peeper, and, from its severe effects, he went down. The fate of the battle might be said to be decided by this round.

30. If any thing could reflect credit upon the skill and game of Cribb, it was never more manifest than in this contest, when we reflect what a resolute and determined hero he had to vanquish. Molineux, in spite of every disadvantage, with unequalled courage and determination, superior to punishment, he hustled his adversary with as much resolution as at the commencement of the fight, his nob defying all milling; hitting appeared to have no decisive effect upon it, and he contended nobly with Cribb right and left, knocking him away by his hits, and gallantly concluded the round by closing and throwing the Champion. [The African champion seemed convinced that, if he did win, he must do it off hand, as his sight was much impaired.]

31. The exertion of the last round operated strongly upon Molineux, and he appeared much distressed on quitting his second; he was soon floored by a blow in the throat, which Cribb put in very neatly.

32. It was almost who should—strength was fast leaving both the combatants—they staggered against each other, and fell without anything like an effective blow.

33. To the astonishment of every spectator, Molineux rallied with strength enough to bore his man down; but these hits were of more show than effect.

34. This was the last round that might be termed fighting, and Molineux had materially the worst of it; but the battle was continued to the 39th, when Cribb evidently appeared the best man, and, at the conclusion, Molineux for the first time declared that "he could fight no more!" but his seconds, who viewed the nicety of the point, persuaded him to try the chance of another round, to which request he acquiesced, when he fell from weakness, reflecting additional credit on the manhood of his brave conqueror, Tom Cribb.

## REMARKS.

Great events are generally judged of by comparison; and, however severe the conflict might have been between Johnson and Big Ben, this battle betwixt Cribb and Molineux was not only more formidable in its nature, but more determined and sanguinary. Fifty-five minutes of unprecedented milling, before the African champion thought he had had enough!

If anything had been wanting to establish the fame of Cribb, the above contest completely decided his just pretensions to the Championship of England. With a coolness and confidence almost his own, and with skill and judgment so truly rare, that he beat his men with more certainty than any of the professors of the gymnastic art, he was called upon to protect the honour of his country, and the reputation of English Boxing. And let it be remembered also, that, however partial to his favourite system of milling on the retreat, he never resorted to its scientific effects till the necessity of the moment compelled him not to throw away the chance; and that, for the first ten rounds of this contest, he was the offensive pugilist, and, notwithstanding his game had always been well known, his courage in this instance astonished all the spectators, who expressed their admiration at his being ever ready at the mark, fighting his man.

It is but candid to admit, from the excellent qualities exhibited by Molineux in his contest with the Champion, he was considered deserving of another trial. The plea, moreover, on which he grounded his fresh challenge, "the weather being so unfavourable," and the hope that "being of a different colour would not operate to his prejudice," was a strong appeal to the liberality of Englishmen, and could not be passed over with indifference by Cribb, who, although he had publicly declined fighting, accepted the challenge.

Thiselton Gap, in the county of Rutland, a few miles from Grantham, and contiguous to three counties, was the spot, and Saturday, the 28th of September, 1811, the day selected for this ever-memorable combat. Never was the sporting world so much interested; for twenty miles round the rendezvous not a bed could be obtained on the preceding night; and by six o'clock the next morning, hundreds were in motion to get a good place near the stage, which even at that early period proved a difficult task. It is supposed that nearly 20,000 persons witnessed this tremendous mill, and that one fourth of them were of the higher ranks, including some of the principal Corinthians of the State. Victory hung so long doubtful in the former combat, that the man of colour was by no means an unworthy rival even in the eyes of the Champion's friends.

It was rather remarkable that neither man weighed so much as in the

last fight by a stone; and Captain Barclay, whose knowledge of the capability of the human frame may be judged by an article which we inserted in the last number of this miscellany, took the Champion under his immediate eye, and trained him upon a system peculiar to himself, reducing Cribb from upwards of fifteen stone to about thirteen stone six pounds with improved stamina. From such patronage and protection the bets were three to one on the Champion, and six to four that he gave the first knock-down blow.

A few minutes after twelve o'clock they mounted the stage, which was 25 feet in diameter: Cribb springing upon it with great confidence and bowing to the spectators: his appearance was the signal for deafening applause. The sable champion followed, jumping over the railing with considerable spirit, and was greeted with tokens of approbation, though not of so general a nature. Both men seemed in high condition, and Molineux, for a man of colour, might be termed good-looking. Cribb appeared to have the longest arms. The Negro seemed disturbed, and walked the stage with hasty steps. As the men stood up stripped, the anxiety of the multitude was indescribable. The combatants were soon brought to the scratch by their seconds, Gully and Joe Ward for Cribb, and Richardson and Bill Gibbons for Molineux.

#### THE FIGHT.

1. A minute elapsed in sparring, when the Champion made play right and left, and popped his right-handed blow on the body of the Negro, who returned a short hit on his opponent's nob. A rally now commenced, in which a few blows were exchanged, and Molineux received a hit in his throat, which sent him to the ground, though not considered a knock-down.

2. The claret was perceived to issue first from the mouth of Cribb, on commencing this round. A terrible rally took place by mutual consent, when the Champion planted with his right hand a severe body hit, which was returned on the head by Molineux with his left flush. They both fought at half-arm's-length for superiority, and, in a trial of strength, Cribb was thrown. [Five to two on the Champion.]

3. In the last rally, the right eye of Cribb was almost darkened; and another equally fierce now commenced; the men broke away, after sparring to obtain wind, in which it was perceived the African was defective, the Champion put in a most tremendous doubler in the body of Molineux; but the latter, notwithstanding he was hit away, to the astonishment of every one, renewed the rally in so determined a manner, as to create considerable agitation amongst those persons who had betted the odds. [There was a marked difference in their method of fighting; Cribb hit right and left: as the head and body, while Molineux aimed at the nob alone, and with much judgment planted several dexterous flush hits, which impaired the eye-sight of Cribb, and his mouth bled considerably.] This rally continued a minute and a half, and the Champion received a heavy fall in closing. The superiority of the Negro's strength was evinced by his grasping the body of Cribb with one hand, and supporting himself by the other resting on the stage, and in this situation threw Cribb completely over upon the stage, by the force of a cross-buttock. [To those not flash, the appearance of things was in favour of the man of colour; but the fortitude of the Champion stayed his friends, although the betting got down to seven to four.]

4. Molineux's wind could not be depended upon. The head of Cribb was much disfigured, but although he was bleeding freely, he smiled with confidence, and rallied in manly style. A number of good blows were exchanged, Cribb milling away at the body, Molineux punishing the head. Cribb went down from a trifling blow, and betrayed symptoms of weakness. [No variation in the betting.]

5. Molineux forced the fighting; the punishment was dreadful on both sides; but the Black had the best of it; the Champion fell from a hit, and received another in the act of falling, which occasioned some difference of opinion; but the umpires decided it to be correct, as the hands of Cribb were at liberty.

(To be continued.)

#### THE FIRST OF NOVEMBER.

The first Monday in November is understood as the commencement of the hunting season generally throughout the kingdom, for fox hounds; harriers are taken out as soon as the crops are cut, and it not unfrequently happens that fox hounds take the field, in what may be called a regular manner, towards the close of October, though the fixtures are seldom announced for an earlier period than that mentioned above.—When Lord Southampton had the management of the Quorndon establishment (the year before his lordship removed it to Leicester) I met these hounds at Ragdale a few days before the expiration of October; the fixture was in a most beautiful part of the Leicestershire country (situated between Loughborough and Milton), and the weather was equally propitious: "A southerly wind and a cloudy sky proclaims a hunting morning." A large field was not to be expected; yet above a score appeared at the place of meeting, including Sir Harry Goodricke and Mr. William Cradock, two keen sportsmen, though differing very much indeed in their manner of crossing a country: the former, it is well known, was "a first rate workman;" or, in the words of the poet

"A more able sportsman ne'er buckled on spurs,  
To rule a rash horse, or to make a screw stir."

Mr. Cradock cherished no fancy for jumping; yet, possessing a thorough knowledge of the country, and also of the running of the foxes, he contrived to make his way in a manner consonant to his feelings, and was seldom thrown completely out; Mr. Cradock did not stand alone in this respect; Sir R. Puleston, who kept a pack of fox hounds for many

years and hunted them himself, always avoided jumping—many other similar instances might be mentioned. Sir H. Goodricke and Mr. Cradock alas have been some years numbered with the dead.

The month of November may be regarded as the zenith of the season for the sports of the field; or at least for those diversions which come under the demonstration of the chase: all kinds of game may now be pursued; it is true, grouse are no longer approachable (by those means at least to which the genuine sportsman would resort) while partridges will be warily on the watch, and will lie only in strong turnips or where driven into cover: however, the more sluggish pheasant will await the approach of the dog, and, if the pointer or setter be used, will continue to lie under the very noise of the dog—requiring at times to be pushed out, or roused from its hiding place, by the sportsman's toe.

November constitutes the cream of the woodcock season, particularly from the early part of the middle of the month. Battue shooting now commences, when the pheasants, woodcocks, hares, rabbits, &c. are driven, pell-mell, from the cover, and have to run the gauntlet before a host of shooters. Much noise and rattle attends this wholesale mode of pursuing game, and it therefore imparts or produces a considerable degree of animation; yet the writer, though he has many times made one of a party of battue shooters, could scarcely reconcile himself to this un-English manner of slaughter: it has none of that nationality which characterises ranging the mountains for red grouse or the noble black cock—it sinks into insignificance, in fact, compared with the pursuit of the partridge, to say nothing of cover-shooting with spaniels.

As this is the period for the battue, it must necessarily be that also for cover-shooting with spaniels—a charming amusement. The best spaniels the writer ever possessed or which ever fell under his observation, were chocolate-colored, with short legs, strong and hardy: a good team of such animals enliven the plantation or cover with their busy working, their cheering whimper, their animating open as the game rises before them!—NIMROD.

#### A FEW HINTS TO SHOOTERS.

The following sporting precepts may be serviceable to inexperienced shooters:—

1. If you or your dog should, at any time, get a severe blow, let the wounded part be instantly fomented with water, as hot as can be borne, for at least half an hour, and you will thereby reduce your suffering, or impediment from sport, to at least half its duration.

2. If you burn yourself in shooting, or otherwise, wrap the part affected immediately in cotton, the application of which, it has been proved, acts like magic on a burn.

3. If you should take cold, bathe your feet in hot water; if a little salt or bran is, or both are, added, so much the better. Get into a bed warmed, with a little brown sugar sprinkled on the coals, and take some whey, or whatever you can get to promote perspiration.

4. Never fast too long, and avoid, whenever you can, fagging too hard.

5. Never go out with quite an empty stomach, to wait for wild fowls particularly in the morning. Should you wish to start before any one is up, you might always have left for you over night, a crust of bread, or a biscuit, with a glass of milk, which, with a little sugar, nutmeg, ginger, and the yolk of an egg, may be good in a moment, and this is better than what is called a "doctor" (rum and milk), because you then dispense with taking spirit in a morning, the very bad habit of which should always be avoided, except in a country where the chances of ague might justify your taking a little purg.

6. Never sit down with wet feet, or with wet clothes on any part of your body; but if a change is not at hand, keep in motion, or go to bed, till one can be procured. Or, if you want to start again, when refreshed, first wet your feet with spirits or essence of mustard, and then be as quick as possible in taking your refreshment. Many people prefer applying the spirit to the inside instead. This is not so well, because spirit alone always flies to the head, while strong beer, on the contrary, would warm the body. I shall here conclude, under this head, with the *multum in parvo* advice of the great Dr. Boerhaave; keep the body open, the head cool, and the feet warm.

A POSER.—When the Prince Bishop of Liege was riding to battle at the head of a fine body of troops, he was asked by a spectator, how he, a minister of religion, could engage in the iniquities of war? "I wage war," replied the prelate, "in my character of prince, not of archbishop." "And pray," continued the interrogator, "when the devil carries off the prince, what will become of the archbishop?"

PREPARATION FOR WAR.—A foot-race lately came off at Hounslow, between the Blues and 2nd Life Guards, in reference to which a newspaper paragraph states, that, "for some time a great spirit of rivalry has existed between those distinguished regiments, as to which of them could produce the fleetest runner." To run, has not, hitherto, been the ambition of the British soldier; and we hope this kind of emulation between the Life Guards and the Blues has not arisen in anticipation of war.—Punch.

# NOTICE TO COUNTRY DEALERS AND THE PUBLIC

IT having come to the knowledge of the Proprietors of the SPORTSMAN'S MAGAZINE that many of our Subscribers and the Country Dealers have not only experienced considerable difficulty in procuring the Back Numbers of this paper, but on many occasions have been disappointed in receiving the CURRENT WEEKLY NUMBERS; this is to give notice that all back numbers and parts are in print, and that the current number is published every Thursday at the OFFICE, 42, HOLYWELL-STREET, STRAND.

The Stamped Editions of Nos. 18 and 22, containing the reports of THE FIGHT FOR THE CHAMPIONSHIP, and that of PHELPS and BARNABY, are still on sale.

N.B. In No. 29 will be contained a full report of the Important Fight between GILL of Coventry, and NORLEY of Manchester.

Observe, this will be published on Thursday, Nov. 27th, two days after the battle.

GIVE YOUR ORDERS EARLY.

SPORTSMAN'S MAGAZINE OFFICE, 42, HOLYWELL-STREET, STRAND.

**BILE! BILE! BILE! -- WORBOY'S**  
VEGETABLE PILLS safely and speedily remove sick head-ache, heartburn, loss of appetite, fluttering of the stomach, flatulency, habitual costiveness, with other symptoms of indigestion and torpid liver. With each box is enclosed a concise essay on diet by an eminent London Physician. Sold in boxes, 1s. 14d., and 2s. 19d., each, by W. S. Worboys, 76, New Cut, Lambeth; Barclay and Sons, Farringdon-street, and by all respectable medicine vendors.

N.B.—A dose sent gratuitously to persons enclosing a penny stamp, or a box for the amount in stamps.

**WATER** is a REMEDY preferable to any other for those who are subject to indigestion, costiveness, &c., being the most agreeable aperient in the world. But to ensure its application with ease and privacy, and produce its best effects in relieving the stomach and bowels, it must be applied with the new invention called the Aperitive Vase, which is sold (with suitable directions for its use) by W. PINE, 369, Strand, the third house from Exeter Hall. Also Sonifiers, for restoring hearing to the deaf on an unfailing principle. Descriptions sent post free on receipt of two letter stamps.

**NO MEDICINE for the CURE of ASTHMA** and Consumption, Coughs, &c., was ever attended by speedy and unfailing success as DR. LOCOCK'S PULMONIC WAFERS. In every newspaper and publication throughout the kingdom may be seen testimonials of their wonderful powers.

Read the following recent cures in Manchester. From Messrs. Lynch and Butterworth, Cheetham Hill, dated Sept. 9th, 1846.

Gentlemen.—The increasing demand for your wafers speaks greatly in favour of their being a most excellent medicine, and the enclosed is one of the many convincing proofs we have had of their efficacy.

(Signed) LYNCH and BUTTERWORTH, Chemists. CURE OF FIFTEEN YEARS ASTHMA.

Communicated to the proprietor by Messrs Lynch and Butterworth, dated Cheetham Hill, September 6th, 1845.

Gentlemen.—I beg to acknowledge the great benefit my wife has received from the use of Dr. Locock's Wafers. For the last fifteen years she has been afflicted with severe asthma, and during that time has never been able to obtain more than temporary and partial relief. Since she has taken two boxes of the Wafers, her cough has quite left her, and her breathing is now as free as she could wish. In fact, such is the inestimable benefit she has derived from them, that she is anxious to make her testimonial as public as possible, in order that others similarly affected may participate in the comfort and relief she now enjoys.

I remain gentlemen, yours, &c. JAMES HEYWOOD.

The particulars of many hundred Cures may be had from every agent throughout the Kingdom and on the Continent. DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 14d., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bridge-street, Fleet-street, London.

**CAUTION.**—To protect the public from spurious Imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words DR. LOCOCK'S WAFERS in white letters on a red ground.

If purchasers will attend to this caution, they will be sure to get the genuine article. Sold by all Medicine Vendors.

**T. PARISH'S SWEEPS NOW OPEN.**

TO SPORTSMEN.

**SHOOTING, HUNTING, FISHING, and**  
Deer-stalking Knives. J. B. DURHAM, Manufacturing Cutler, respectfully invites the attention of Sportsmen to his Immense Stock, which includes all the Newest Patterns and latest improvements, and all warranted of the best quality. Knives of every description made to order on the shortest notice. Old knives, &c., polished and repaired. 261, Regent-street, near the Polytechnic Institution.

**PRICE AND GOSNELL'S**  
PERFUMERY.—NOTICE.—Executors of the late John Gosnell v. Rees Price, Perfumer, 28, Lombard-street, trading under the firm of Price and Co., and previously under the assumed name of "Napoleon Price and Co." The Judges in the Court of Exchequer in this day decided in favour of the plaintiff in this case. The defendant, Rees Price, had disposed of his interest in the Perfumery and other trades carried on by the late firm of Price and Gosnell, to the late Mr. John Gosnell (father of the parties now carrying on business under the firm of John Gosnell and Co., 12, Three King-court, Lombard-street), and bound himself, under forfeiture of £5,000, not to commence business within the Cities of London or Westminster, or within the distance of 600 miles from the same, and notwithstanding this, had carried on business. This action was brought to recover liquidated damages for such breach of contract.—12, Three King-court, Lombard-street, Jan. 27, 1845.

**THE EARL OF ALDBOROUGH**  
CURED BY  
**HOLLOWAY'S PILLS.**  
The Earl of Aldborough cured of a Liver and Stomach Complaint.  
Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb. 1845.  
To Professor HOLLOWAY.—  
SIR,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your pills as you did. I now take this opportunity of sending an order for the amount, and at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case of any of my family should ever require either.  
Your most obliged and obedient servant,  
(Signed) ALDBOROUGH.  
A Wonderful Cure of Dropsy of Five Years' standing. Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.  
To Professor HOLLOWAY.—  
SIR—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.  
I am, Sir, yours, &c. &c.  
(Signed) THOMAS TAYLOR.

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and at most respectable Venders of Medicines throughout the CIVILISED WORLD, at the following prices:—1s. 14d., 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and improved edition of

**THE SILENT FRIEND; a Medical Work**  
on the infirmities of the Generative System in both sexes; and on the loss of reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Strictures, Secondary Symp-toms, &c., are fully pointed out. Illustrated by engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and J. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their residence, 19, BERNERS STREET, OXFORD STREET.  
Sold by Strange, Paternoster-row; Hannay and Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton street, Soho, and all Booksellers.

The CORDIAL BALM OF SYRIACUM is exclusively directed to the cure of nervous and sexual debility; obstinate gleet, irregularity, weakness, impotency, barrenness loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s. or the quantity of four in one bottle for 33s., by which 11s. are saved. The Five-pound cases may be had as usual.

The CONCENTRATED DETERSIVE ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d., and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammations, Irritation of the Bladder, &c. without hindrance to business.

Consultation fee, (if by letter,) £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 9 to 11, and 5 till 8. On Sundays, from 10 to 12. One personal visit only is necessary to effect a permanent cure. Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings.

Just Published, the SIXTEENTH EDITION, illustrated with cases and Full-length Engravings, price 2s. 6d. in a Sealed Envelope, and sent Free to any part of the Kingdom on the receipt of a Post Office order for 3s. 6d.

**THE SECRET COMPANION. A Medical**  
Work on Nervous Debility and the concealed causes of the decline of Physical Strength and the loss of Mental Capacity, with remarks on the effects of Solitary Indulgence, neglected Gonorrhoea, Syphilis, Secondary Symptoms, &c. and Mode of Treatment; followed by observations on Marriage, with proper directions for the removal of all dis-qualifications. Illustrated with Engravings, showing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell-square, near the British Museum London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Brydges-street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

**THE CORDIAL BALM OF ZEYLANICA; OR NATURE'S GRAND RESTORATIVE.**

is exclusively directed to the Cure of Nervous and Sexual Debility, Syphilis, obstinate Gleet, Irregularity, Weakness, Impotency, Barrenness, Loss of Appetite, Indigestion, Consumptive habits, and Debilities arising from Venereal excesses, &c.

This Medicine should be taken previous to persons entering into the Matrimonial State.

Sold in Bottles, price 4s. 6d. and 11s. each, or the quantity of 4 in one Family Bottle or 33s., by which one 11s. Bottle is saved.

The £5. Cases may be had as usual.

**BRODIE'S PURIFYING VEGETABLE PILLS.**  
are universally acknowledged to be the best and surest remedy for the cure of the Venereal Disease in both sexes, including Gonorrhoea, Gleet, Secondary Symptoms, Strictures Seminal Weakness, Deficiency, and all Diseases of the Urinary Passages, without loss of time, confinement, or hindrance from business.

Price 1s. 14d., 2s. 9d., 4s. 6d., and 11s. per Box. Observe the Signature of R. J. BRODIE and Co., Consulting Surgeons 27, Montague-street, Russell-square, near the British Museum, London, impressed on a Seal in Red Wax, affixed to each Bottle and Box, as none else are Genuine.

Messrs. Brodie and Co., Surgeons, may be consulted daily from Eleven o'clock in the Morning, till Eight in the Evening, and on Sundays, from Eleven o'clock till Two.

Country Patients are requested to be as minute as possible in the detail of cases. The communication must be accompanied with the usual consultation fee of £1. and for all cases the most inviolable secrecy may be relied on. Only one personal visit required to effect a Permanent Cure. Country Vendors can be supplied by all the wholesale houses in London.

Observe—27, Montague-street, Russell-square, near the British Museum.

LONDON:—Printed by JOHN WORTHAM, of 313, Strand, in the parish of St. Mary-le-Strand; and Published at the Office, 42, Holywell-street, by E. DIPPLE.—Thursday, Oct 16th, 1845.

# THE Sportsman's Magazine

No. 27. FOR THE WEEK ENDING NOVEMBER 22, 1845. THREE HALF-PENCE.

[Stamped to send free by Post, Three-pence.]

LIFE IN LONDON

THE WOUNDED PHEASANT.

THE 21st number of the Sportsman's Magazine, contained a picture of a gorgeous variety of the "Colchic Bird," strutting in pride of plumage on his free domain; "basking in the open" where, but for detracting from the distinct boldness of his single and spirited figure, the artist would have drawn the more soberly clad dames of his seraglio. We here present a picture of another kind, the truthfulness of which will be best appreciated by those who best understand the look and attitude of the living subject. The brilliant bird has been winged by a shot, and exerts his failing energies to escape from the eager spaniel whose instinctive ardour, in cruel mercy, must soon cut short his pain. It is as a faithful copy that we claim merit on the score of this engraving; in another place we shall say a few words on the philosophy of Field sports; for the present we turn to the subject of Covert Shooting generally.

Half the interest attendant upon covert shooting is certainly dependent upon the good behaviour of the dogs. What can exceed the satisfaction when the favourite spaniel, the constant companion of his master, his associate in the house, nay, perhaps the pet of his wife, mother, or sisters, throws his tongue on the quest of a woodcock, or raises the gaudy-plumaged pheasant from his resting-place? It produces enthusiasm and delight as he eagerly rushes to the spot from whence the welcome sound proceeds; nor does it end there. How gladly are the properties of the sagacious little animal resounded in the evening, when the indulgence of the easy chair or couch afford a preliminary repose prior to the more substantial rest which is sought for in the nocturnal dormitory! Can the exploits of those who, on the battue system, have had all the work performed by men and boys produce funds for such narrations? Most

certainly not: the utmost they admit of is the boast of so many heads of game having been slaughtered, and perhaps a few jokes passed on the unfortunate or unskilful shots made by some of the party.

Covert-shooting evidently calls forth more quickness and alacrity than that which is followed in the open; all kinds of game have opportunities of momentarily escaping from view, and perhaps not afterwards presenting themselves in a position to allow of their being shot at. Hares and rabbits, in crossing rides, are soon out of sight; when, entering the thickest part of the brushwood, which they usually do, they are seen no more. The manner in which a pheasant rises likewise creates a source of difficulty to many who are excellent shots at other things, taking a nearly perpendicular flight till high enough to clear the trees. It is a very usual circumstance to shoot under them, as can be clearly seen by their flying off with their legs broken: this is an unfortunate accident, because it so frequently happens that they cannot be recovered; and the miserable bird, unable to move about in search of food, dies a wretched death from absolute starvation. The most certain way of bringing them down is by waiting till they have attained the height at which they will strike off from, and then just taking them at the instant they are about to make a horizontal movement. This may be calculated upon by observing the position of the trees among which they are flying. Similar circumstances usually attend the springing of woodcocks; but their quiet, steady flight is very different to the bustle created by the whirring pheasant: as if conscious of his beauty, he seems disposed to attract attention; whereas the gliding, unassuming progress of the long-bill not unfrequently permits him to escape unseen, or at all events, till he has made sufficient progress to be out of reach; but as the are delicate birds, a slight blow will bring

them down, and a man is justified in shooting at them at a great distance, the more so because it does not appear to have any effect in increasing the distance of their flight; and if they are marked down, a second shot may as reasonably be calculated upon as if they were not shot at in the first instance.

Some difference of opinion exists whether a man, having acquired great proficiency in shooting in covert, is equally expert at partridges or other game in the open: this arises from the impression that the former causes him to shoot hastily. I am not quite inclined to subscribe to this, because a person in good practice will very naturally make the distinction; and I think it is less likely to be correct than that a very superior partridge shot shall be equally good in covert. Each requires practice; and to be really good in both departments, it is essential that both be resorted to. Man is so much influenced by habit, that, when constantly shooting at partridges, he may at first be somewhat bothered when hampered by the entanglements and obstacles of a thick and briery wood; but I am inclined to the opinion that when he has had experience in such situations, he will not be much at a loss in turnips and stubble fields.

A good marker is a very essential acquisition in the field, but it is an accomplishment not very readily attained. It is not every clod-hopping clown who may be gifted with a long vision that is of any use for such a purpose: indeed, nine cases out of ten he will direct you wrong, until instruction and habit have given him some idea of his business. Nevertheless it is not an uncommon custom to employ any idle vagabond, who would rather be so engaged than stick to his work. Defend me from such an attendant! I would rather be without any, than be so misled—an event that would often happen. In performing this office at partridges, if obstacles preclude the possibility of the eye following the cover to where it drops the only guide that remains is the inclination taken when last in sight: whichever way the birds turn, that is doubtless the direction to make for; but under such circumstances their exact position is very uncertain; that however, cannot be controlled. But it is a very common thing for birds to bear off at a right angle just before they drop; and if they are not in sight at the moment, it is very difficult to determine where they have gone to. They will likewise very frequently skim along the ground a very considerable distance, and an inexperienced marker will imagine that they have dropped long before they have done so. This may be taken for a general rule, that before they alight they drop their legs. This is very readily distinguished if they are within sight, as they assume a most peculiar appearance by throwing their bodies up, as it were, in a different position to what they previously presented. A person should never deceive himself by supposing he has marked birds down till he has distinctly noticed this action; and even after this, it is no uncommon movement for birds to run or to rise again, especially as the season advances, and they have been frequently disturbed. They will sometimes take a turn from the direction which they at first appeared bent upon, and fly off to a field which has been a favourite resort. It is close attention, when in sight, to their various manoeuvres that will enable a man to become useful in this occupation. Pheasants are yet more difficult to mark than partridges; they very frequently fly further than they appear to do, and very commonly run after they have dropped: they will also skim along by the side of a hedge, so that they can only be seen at intervals; this creates a great impediment to marking them accurately. I am not inclined to think it is a good plan to go up to the place immediately although the bird may be marked down to a yard, as in nine cases out of ten he is sure to set off to run when he hears your approach. It is far better to give him time to settle: he will not be so much on the *qui vive*, and if he should have run, a scent will be left to enable your dog to draw upon him, providing too great a space of time be not lost; besides which, he will not run near so far as he would do if he found you were in immediate pursuit of him.

**THE OMNIBUS DRIVER'S HAND-BOOK TO LONDON.**—We have heard that a little work with the above title will shortly be published, to obviate the difficulty in which the omnibus drivers are placed by the tearing up of the pavement all over the metropolis. The way from Fleet-street to the Strand, instead of being a straight line as heretofore, almost requires the assistance of a cicerone, and I believe that guides are now stationed at the foot of Chancery-lane, like the ticket-porters who stand at the entrance of the desert, to show travellers over it. As a general rule, it may be as well to bear in mind that, instead of going through Temple-bar straight into the Strand, you must take the first to the right, the second to the left, the fifth on the left again, the third on the right, the second to the left, then the sixth to the left, then straight on, then sharp round, then short off, then the fourth to the right, and finally to the left, when you will come into the Strand, in a direct line with the place you started from. A few days ago the distance from Bond-street to the White Horse Cellar, instead of being ten yards, was exactly a mile and three quarters, including the ups and downs of Hay Hill, the ins and outs of Berkeley-square, and other distant localities. We don't know at the present time any better illustration of "link'd sweetness long drawn out" than a six-penny ride in an omnibus.—*Punch*.

## THE FISHER'S CREEL.

### SEA ANGLING.

**S**N pursuance of a promise made in our "Notices to Correspondents" of last week, we insert a few hints and observations on this subject; perhaps some kind contributor will supply the deficiencies of this slight sketch, of which accuracy is the only merit. The angler who has only an opportunity of exercising his art in salt water, may make sure of sport, if he can only discover the haunts of fish, as the sea fish are by no means so timid and shy as those in fresh water.

Near to the mouths of rivers, when the tide is flowing up, several sorts of fish may be taken, such as WHITING, BASS, COAL-FISH, the fry of COD, and HADDOCK, flat fish, EELS, and other sorts.

From piers, or a little way out at sea, may be taken larger WHITING, small COD-FISH, HADDOCK, SMALL TURBOT, large PLAICE, and others, having a long strong rod and line, the line well leaded, a large hook, and a large cork float. Bait for the former with scoured red worms, shrimps, and gentles; for the latter with one or two large well-scoured worms, a raw muscle, the inside of a small raw crab, whipped round the hook, with a little white wool, a bit of whiting or other fish, fishing near or on the bottom, where the water is not too deep; at other times a little more than mid-water, according to the kind of bait that you use.

MACKAREL may be taken from rocks, or other places near the sea, when the tide is in, in parts where they frequent, by baiting with a bit of new scarlet broadcloth, or a small piece of one of their own species, swimming about mid-water, or lower if you can plumb the depth, with a good large cork float. The rocks of Dunleary in Ireland, which are eight or ten miles in length, and the nearest part about five miles eastward of Dublin, are remarkable for this way of fishing.

When you fish for HADDOCK, your line must be deep in the water, and your hook baited with two or three leb-worms, or muscles taken from the shell. Your tackle must be strong, for they struggle, especially if they have arrived to a tolerable growth.

In sea-fishing, when a ship is under sail, your line ought to be sixty fathoms in length, having a large hook affixed to it, and a piece of lead sufficient to keep it as deep under water as possible. Your line must be made of hemp, and fastened to the gunwale of the ship. Cod and large haddocks are the fish usually taken in this way, and sometimes ling; the bait for them is a piece of raw beef, and it is scarcely possible to feel either of them bite, even though you hold the line in your hand, by reason of the continual motion of the ship.

Angling for whittings from a boat affords good sport, and if you have not an experienced fisherman to show you the fishing-banks, you may know where to cast anchor from the gulls, and other sea-birds crowding to the place. At Portsmouth the tradesmen use smelts as baits for this sort of fishing, but muscles or worms are equally good. A paternoster line, without any rod, with half a dozen hooks, at half a yard distance from each other, may be fastened to the inside of the boat, and by holding this in the hand, it will be easy to feel when the fish bite. I have seen them bite so freely at Largs, in the Frith of Clyde, as to take two or three at a haul as fast as I could pull them up.

The whiting POLLACK, is often caught in rock-fishing, and from his struggling hard he affords good sport. The best baits are smelts, shrimps, muscles, cockles, or worms. The line from the boat may be sixty yards long, with three or four hooks at some distance apart, and about half a pound of lead above the highest. The line ought to be coiled up in the hand, and then the lead thrown to a distance into the sea, as is done in night-line-fishing for trouts in rivers.

**GREAT FLIGHT OF BIRDS.**—The Mary, Captain Small, from Rotten-dam, which arrived at Leith a few days ago, encountered a severe gale off the land on her passage home; and during its continuance, an immense number of small birds boarded the vessel, covering the rigging and uttering wild cries, as evidently glad of the shelter from the great wind which had driven them so far to sea. Safe from one disaster, they soon were overtaken by another in the shape of a large hawk, that pounced upon the timid songsters, and killed several of them before he could be secured. A number have been brought home, dead and alive, consisting of nearly all the variety of our European songsters. The hawk is perfectly tame, and a great favourite with the crew of the Mary.—*Edinburgh Journal*.

**A NOVEL HUNT.**—A few days ago, a hare that was hard pressed bent its course into Carnarvon, with hounds and huntsman at its heels, and speeding its way through streets, lanes, and alleys, made to the quay, where, finding a hound close upon her, she jumped into the river, and was boldly and successfully making for the opposite bank, when a dog that was hung in after her seized poor puss to the deep regret of the spectators, who thought that the poor thing after such a gallant run might have been allowed to escape with her life.

**RATHER FAST.**—"Miss Brown, I have been to learn how to tell fortunes," said a young fellow to a brisk brunette. "Just let me have your hand, if you please." "La! Mr. White, how sudden you are! Well—go and ask my father." Amiable simplicity!

## BRITISH BIRDS. NO. XX.

THE FIELDFARE.

**I**F the thrush species, the Fieldfare forms the connecting link between the ouzels or blackbirds, and the missel thrush and redwing. In some districts it is called the chestnut-backed thrush; slight variations, however, occur in the markings of different individuals. In the collection of Mr. Stevenson, of Edinburgh, is a cream-coloured fieldfare with pale red markings on its under parts. The ordinary bird has the head, cheeks, and hinder part of its neck ash-grey, the forehead slightly tinged with brown, and most of the feathers of the upper part of the head with a central dusky streak. The upper half of the back and wing-coverts are chestnut-brown, hence its local name, the posterior half shaded into ash-grey. The tail feathers are black, with the lateral feathers greyish towards the end. The breast is a light, yellowish, red, with triangular brown-black spots. The middle of the breast and belly grey-white, tinged with red, the under side of the tail white and dusky on each side. The lower wing-coverts and pin-feathers are pure white underneath, and easily observed when the bird is on the wing. This minute description of the plumage of the fieldfare will, we trust, prevent its being confounded with many of its nearly allied congeners. The bird arrives in this country in its full plumage, and departs before any particular variation has taken place, except the wearing of the tips of the feathers.

The Fieldfare appears in Britain about the end of October, sometimes in the beginning of November, in the northern and eastern parts of Britain, where some of them remain all the winter and spring, while others disperse over the country. In the wooded parts they seem to rest at night on tall trees, at least I have seen them so roosted after sunset; but Montagu affirms that they repose on the ground, which may be the case, and certainly they must sleep there or on rocks in the Hebrides, where they are met with during the cold season. You see them at early dawn flying off to the fields in a loose body, or meet them there even in the dim twilight; but it seems improbable that they remain at night in the open fields, as they are never observed to crouch in the manner of the larks, pipits, and other birds that repose on the ground. Their flight, which is easy and rather slow, is performed with little undulation, by quickly repeated flaps of the wings, the bird spreading out those organs, making about twelve short flaps, and as it were intermitting one or more. In this manner they proceed, uttering a kind of chuckling chirp, until they arrive over a field on which they have a mind to settle, when they perform several circling evolutions, and at length alight. After settling, each is seen to stand still with its wings close, but a little drooping, its tail slightly declined, and its head elevated. It then hops rapidly a few steps forward, stops, picks up a seed, an insect, or other article of food, and again proceeds. They generally move in the same direction, always facing the wind if it be high, and those in the rear, especially if left far behind, fly up to the front. When alarmed, they all stand still for a short time, some utter a low scream, and presently all fly off to a distance, or alight on the tall trees in the neighbourhood. There they sit gracefully on the twigs, with their tails declined, and generally with their heads all directed one way, unless they have settled for the purpose of resting or amusing themselves after procuring a sufficiency of food. In fine weather they often enact a concert of long duration, which, although their song is neither loud nor very melodious is very pleasant. When they are upon trees their attitudes resemble those of the Blackbird; but they do not frequent bushy places, woods, or gardens, for the purpose of picking up snails, worms, or larvae, but repair to the open fields and meadows, where it is amusing to see them in calm weather hopping about in all directions, stopping now and then

to pick up their food, or to look around them. In this respect they resemble the Song Thrush, as well as the Redwing and Missel Thrush, with the two latter of which they often temporarily associate. They are very shy, seldom allowing a person to approach within a hundred yards in an open field, although when on trees they are somewhat less suspicious. In the former situation they keep at a distance from the hedges or walls, and fly off in a body; but in the latter several individuals frequently remain behind the main body, and may sometimes be shot. Of the three species the Redwing seems to be the least shy, and the Missel Thrush the most so, but all are very easily alarmed. The Song Thrush is the tamest of the genus, and next to it the Blackbird, but these species are not gregarious, even in severe weather. When the ground is covered with snow the Fieldfares betake themselves to marshy meadows, where they are often shot in great numbers; for, although repeatedly annoyed, they return at short intervals, and persons stationed here and there along the hedges are sure of obtaining many chances. The irrigated meadows to the west of Edinburgh are a favourite place of resort to all Thrushes in frosty weather. On the 19th January, 1835, I there shot ten Fieldfares, five Redwings, four Song Thrushes, and four Blackbirds. Should the pools and brooks be frozen, they repair to the woods and hedges, where they obtain a supply of hawthorn, holly, and other berries.

The food of the fieldfare during winter and spring consists of berries of various kinds, worms, larvae, pupae, and insects, as well as seeds of cereal and other plants. I have never seen it in corn yards, however, even in the most severe weather, but it frequently enters gardens in time of snow to eat the holly berries. It employs a small quantity of fragments of quartz and other hard substances to aid the trituration of its food.

If the weather be fine, they generally disappear about the middle of April; but I have several times met with flocks in May. Thus, on Friday, the 6th May, 1836, I saw a flock of about twenty fieldfares in East Lothian, about half way between Salton and Tranent. Mr. Edward Lambert, in the *Linnean Transactions*, Vol. III, p. 12, states that the latest fieldfare he "ever saw was on the 1st of May in Dorsetshire, and the earliest on the 29th of December." The Rev. Messrs. Sheppard and Whitear, in the fifteenth volume of the same work, have the following note on the same subject, "In backward seasons the fieldfare is late before it leaves this country: it has been killed in the neighbourhood of Cromar the first week of June. On the 5th of May, 1812, we saw fieldfares in prodigious numbers, flying very high, and steering due north. They were probably migrating at that time, as none were afterwards seen. We observed a very large flock of those birds on the 3rd of May, 1820; they were extremely tame, and suffered us to approach within a few yards. They were observed again on the following day in the morning, but were all gone in the afternoon." According to various writers, they retire in summer to the northern parts of the continent of Europe, where they breed, forming their nests on the pine trees.

[The fieldfare has been celebrated as an article of food, or rather as a luxury, and it has not been undeservingly praised in this respect. The flesh is tender and rapid, and there is generally a great accumulation of fat in the cavity of the abdomen and under the skin. It is this species that is supposed to have been the "Turdus," so highly esteemed by the Romans, and which was fattened with a paste composed of figs and flour. Great numbers are sold in the London markets, and in those of other cities, but beyond the metropolis, the species seems to be little regarded; and in Edinburgh, redwings and blackbirds are as often seen in the market as fieldfares, these and other small land birds going under the general name of thrushes and larks, while small marsh birds are called snipes.]

Several instances of the fieldfare's breeding in this country have been mentioned, and it is not improbable that they may yet become more numerous, as has certainly been the case with the missel thrush. Perhaps it may in some cases have been mistaken for it, as happened to a person who two years ago brought me the eggs of the missel thrush for those of the fieldfare.

## WRINKLES FOR THE GROOM—NO. VI.

## THE PHYSICAL DISPOSITION AND CAPABILITIES OF HORSES FOR LABOUR.

**O** decide by the outward appearance of a horse, on the latent qualities he may possess, and what he will prove in continual exercise, is a perfection of judgment scarcely in experience to confer; appearances are so deceitful, that those most skilful in the subject will find themselves occasionally mistaken, and even after the best advice, much must be left to the operation of chance.

I take the above lines for my text; they are the commencing observations of an introduction to a very clever and amusing pamphlet, published in India by Lieut. J. P. Piggot, of the Honourable East India Company's Service. I was fortunate in obtaining one of them, previous to my leaving that country; and although my veterinary professional duties were but short, being compelled to resign from ill health, it was sufficient to enable me to confirm his remarks. In it he gives the

peculiarities of fourteen different casts of horses, with other instructive, and, to the horseman, highly entertaining information; the book is small, consisting only of thirty-seven pages; and, with your permission, I should be happy occasionally to furnish you with extracts from it.

The willingness of a horse for labour, with the physical capability of doing that which his energetic mind suggests, must be allowed to be the two great essentials to make a good horse,—and these two states must exist in all horses that have performed extraordinary feats,—and all horses must be very indifferent animals that do not possess these requisites, namely, the will and the power!

There is an observation, common even among horsemen, that it is all nonsense about the make and shape of horses; for, say they, the best horse I ever possessed was the worst shaped horse; but, on inquiry, you will find that he possessed in a great degree the will and the power—they must accompany each other—the one is of little use without the other. What avails it if he is willing without the power, or if he has the power, and is not willing?

How often do we see in the field a horse of fifteen hands, with thirteen or fourteen stone on his back, at the close of a long day fresh and in a condition for continued labour; while the horse of sixteen hands, and of twice his bulk, with ten or twelve stone on his back, is beaten before the day is half over. How essential, then, is this capability for labour. It exists, technically speaking, just in proportion to the degree of nervous excitability of that part of the brain and nervous system which influences the muscles of locomotion; and in all cases when this peculiar nervous excitability exists in a great degree, there will be found accompanying it a peculiar formation. The peculiarity is not easily described, but must be learnt by attentive practical observation. In such a horse, however, the muscular and tendinous structure will be beautifully developed; in horseman's language, he is called a wiry horse, the term is a good one; and in every case accompanying this formation, in a greater or less degree, you have a choleric disposition or temper, or, in horseman's language, he is a horse of high courage. Opposed to this, you have the horse of the dull phlegmatic temperament, whose external formation has totally contrary character; his muscular and tendinous structure will be found ill defined; he puts on a soft, faulty, pulpy appearance, like a horse-skin stuffed with wool. From such a description of horses no one should expect extraordinary doings,—his muscular powers are exceedingly limited,—his temper is inactive,—and he tires on slight exertion.

Some persons, though accustomed to horses all their lives, and anxious to become judges, never can select from appearances; while these differently gifted can swear to a good one, to a considerable extent, the instant they behold him. And the questions that suggest themselves to a judge on purchasing the first description of horse, are,—if he can ride him? if he will not prove too much for him? if he will be sufficiently under his control with bounds? if his energetic disposition will suffer the trammels of harness?

How essential a consideration is this subject to the breeder; that he should not be wholly taken up with the make and shape of either his stallion or mare, but should direct, in a great degree, his best attention on both sides to the bottom, or in other words, to the state of nervous excitability of that part of the brain and nervous system which influences the muscles of locomotion,—for 'tis this power that moves the machinery!

If it were possible to mould a horse in perfectly symmetrical form, in every way formed for speed,—still, without that great essential, that peculiar nervous excitability, he would at best prove but an indifferent animal.

Reflect on the extraordinary powers and beautiful form of Eclips; but if he had been deficient in this point, he could not possibly have obtained such high renown.

Could the best judge, on looking at Eclips, have foretold his capabilities? Certainly not; all he could say was, that his blood and appearance were in his favour.

Does any one suppose, that the reason why we have not had his equal in speed is owing to not having had his equal in shape and make? If they do, they are undoubtedly in error,—for, doubtless, we have had many horses whose animal-machinery indicated speed as well as that of Eclips—but if they were equal in form, they wanted that great essential.

A gentleman of great mechanical genius, and who has devoted considerable attention to the construction of locomotive carriages, once said, while conversing on horse matters, to a friend versed in the subject, "Oh, I can always select the fastest horse, for I knew that a fast horse must have great length of muscle, with long levers!" He was properly answered,—"Then go to the next St. Leger, and return with immense wealth." To a certain degree he was right, as far as the mechanism of the horse was concerned; but he never thought of the hidden propelling power,—How the steam stood.

#### FEEDING.—QUANTITY OF HAY, OATS, &c.

Many diseases of the stomach of the Horse are brought on by over-feeding with hay. When young horses are kept much in a stable, with a rack full of hay before them, they eat merely for employment, and thus gradually stretch their stomachs, and acquire a proportionate increase of

appetite, which after a time becomes craving or voracious, and in that case it always loses its natural delicacy, and becomes more or less depraved; such an appetite is always accompanied with thirst. I have known such a horse drink from a barrel of pig's wash after being kept without water for a few hours; and a collier's horse was once brought to me with his mouth very sore and inflamed from drinking some whitewash that had been just prepared from slaked lime. Horses require a relish for human urine, even when stale and offensive; I know a farmer who is in the constant practice, and has been so for many years, of giving his horses all the urine of the family with their corn; and I was informed by a person whose veracity I have no reason to doubt, that he saw a horse drink stale urine with avidity, which was served for the purpose in a cask, when it was so offensive upon being stirred, that he could not bear to come within several yards of it. The trash a horse eats when the appetite is vitiated not only disorders the stomach and breeds worms in the bowels, but injures the wind also, and debilitates the whole muscular and nervous system. Hence arise a great variety of symptoms, so numerous and so diversified that it is difficult perhaps impossible, to arrange them under distinct heads or denominations; and the best way of considering them is as disorders depending on a morbid condition of the digestive organs or digestive system, that is to say, of the stomach, bowels, and liver,—probably the spleen and pancreas should be included also,—brought on by improper feeding. This view of the subject leads us both to the cure and the means of prevention.

I have seen horses kept in the best condition, and fit for any work, upon eight pounds of hay in the day and night. I have known others that have eaten from twenty to thirty pounds in that time, and have been scarcely fit for any work, being generally more or less asthmatic, sluggish, and weak. A horse's appetite is too often considered a sufficient criterion for determining the quantity as well as the quality of the hay that is most fit for him; but it should always be recollected that many horses will eat three times more than will do them good, without any regard to the quality, and if kept short of hay will eat the filthiest litter. Young horses should not be suffered to acquire this morbid appetite; they should be kept at graz, and worked accordingly, till they are five years old. When kept in a stable they should have regular employment. Idleness is the ruin of young horses in every way; it makes them mischievous, and unwilling to work when wanted. If left much in a stable without having something to eat, by way of employment, they will get a habit of playing with the rack and manger, and at length become crib-biters; so that the only way of keeping them from bad habits, and from injuring their stomachs, is to work them regularly, and in a degree suitable to their age and strength, or to keep them at grass.

#### Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 427.)

The only other feature of importance, (to resume my subject from No. 26), at the Warwick Spring Meeting, April 7, was the debut of Salopian, also the property of Mr. A. W. Hill, and his Derby nag, who won the Warwickshire Handicap, beating Veluti and some others; but, it cannot be termed anything of a performance. Of the Hampton Spring, April 8, I cannot say much; Lord Glamis mounted his Belshazzar, and won the Barrack Stakes. The Free Handicap Hurdle Stakes of 10 sov., 20 added, were carried off by Whalebone, rode by Mr. Simmonds. There was a dispute as to Mr. Simmonds being a member of any club or hunt. At the Burton Constable Races, April 9, very little happened of interest. A novelty was introduced as a prize, being a silver tea-pot the gift of E. H. Reynard, Esq., to be run for; it was won by Mr. Baxter's mare Legacy. Montgomerie started for the Drawing Room Stakes, but was beaten, and by those who watched events, put out of the betting for the Derby; his running there, which I shall speak of in its turn, justified their judgment. There was nothing at the Bibury Spring Meeting of any consequence, excepting that Naworth beat New Forest Deer. The Newmarket Craven Meeting, April 14, presented the racing world with an infinity of puzzling results, and unquestionably rendered the betting on the Derby a matter requiring much sagacity. To digress for a minute, it is always with a thrilling interest you tread the turf at Newmarket. The nucleus of all that is pure in blood and distinguished. Aristocratic in every sense of the word, Newmarket bears the highest character in the sporting world. Epson is more popular. Goodwood is not wanting in sylvan scenery, and in associations in some respects more pleasing if not superior. Ascot can boast of Royalty, now deserted, but until lately accorded to Newmarket; yet no place in the world can claim such lordly gatherings, such magnificent arrivals, such scenes as Newmarket can. High in her station, she has preserved that character now for 200 years, and long may she continue to do so! On Newmarket Heath the greatest trials, and the heaviest matches have been decided, and taking the year through, more money is spent there in racing than any other two meetings in the kingdom. To resume; for the Renewal Stakes, Lady Wildair was

placed one, Tunick two, and a match following, our old friend the Ugly Buck was beaten by Minotaur; he carried 6lb more, and gave Minotaur a year. The match was for 300 sovs. a side. The Riddlesworth was won by Winchilsea having as a competitor Ratafia only, and he won easily. Kedger, walked over for the Belgrave Square Stakes, without however finding many admirers. April 15, brought out some colts and fillies for the 100 sov. Sweepstakes in which Fickle Wild Rose, beating Scaramento, that colt lost his friends for the Derby. A splendid race for the Newmarket Handicap resulted in favour of Vol-au-Vent, (6st. 6lb.) "well in" as they say, beating I-am-not-aware, (7st. 8lb.) Knight of the Whistle, Ma Mie, and some ten others all pretty well weighted. Croton Oil was fourth. Winchilsea contended for the Tuesday's Riddlesworth with the Cobweb Colt, and beat him, and so over went Cobby for the Derby. In a match Oakley beat Discord by a neck. Nat rode Discord, Robinson, the other. Idas, 'the observed of all observers' next came out to walk over for the 100 sov. Sweepstakes, but the other, Sister to Ma Mie, withdrawing the stake, nothing was done. The Duke of Bedford's Captain Phœbus won a sweepstakes, beating three others; April 16, Khorassan, then Mr. Howe's, but formerly Sir Gilbert's, won the Subscription Plate, beating a good field, All-round-my-hat, Carolina, Celia, and Delapre. Winchilsea won the Column, beating Hersey, Adrianople, Javelin, and Duc an Durras, and again the field lost. I shall resume the subject of these reminiscences with the sport on Thursday, April 17, when Idas first made a figure in the world.

(To be continued.)

## NOTICE!

## THE SPORTSMAN'S ALMANAC,

will be ready for delivery with NUMBER TWENTY-EIGHT of the SPORTSMAN'S MAGAZINE; it will contain the whole of the Nominations for the Derby, Oaks, and Leger 1846; revised tables of the duties on horses, dogs, game certificates, &c. A list of principal Jockeys and the colours of their Masters; Public Trainers; Sporting Chronologies for 1846; a really SPORTING Calendar, (which no other Almanac has yet contained) besides a mass of general information equal to other Sheet Almanacs, printed in a style for framing or suspending on a board in public or private rooms.—Price THREE-HALFPENCE to Subscribers—SIXPENCE to Non-Subscribers, after the expiry of the week of publication. \* \* \* Observe! the whole of the Back Numbers, and the MONTHLY PARTS, are in Print, and may be had. Office, 42, Holywell-street, Strand.

## TO CORRESPONDENTS.

J. CARTER.—The matter would be entirely unsuited to a Sporting miscellany. A country paper, or one of the pictorial broadsheets, would be the proper place for "Necks and Corners." Bendigo cannot remain Champion of England, if he refuses to fight Caunt, as the very title implies a readiness to meet all comers. The bet on Caunt ought to have been paid long ago by the loser.

J. SANDERSON.—Your letter is a tissue of absurdities. You proceed upon the hypothesis that the umpire, at the fight of Caunt and Bendigo, did not disagree; you are building a pretty structure on the sands, after the fashion of a correspondent of *Bell's Life*, of Sunday last, who, under the signature of "A Barrister," delivers a *chaîm* of pompous truisms, all of which are not worth a rush, because the first link which should attach them to the rock of truth is wanting. The umpires disagreed, (we will vouch for that, so far as the assertions of both Hamman and Wharton, addressed to the referee himself, in our hearing were concerned); the Squire asked if the umpires disagreed; he was vociferously answered they did, he then said, "Caunt has lost the fight," and Jem Ward elbowed his way off to Bendigo's corner, whether Hamman (being inside the ropes and obstructed) ran more quickly. It may be very amusing to twist a rope of sand, but it will never serve to bind together a bundle of silly and incoherent assertions. The fact is, those who were on the spot, and saw and heard the doings and sayings of the actors and spectators in the scene, are alone capable of giving evidence; and in the absence of evidence, the special pleading and theorizing, the axioms and dogmas, the "laying down the law," and the equivocating of the crowd of individuals, to whose fitch for scribbling our contemporaries so freely lend their columns, is merely "five blue beans in a bladder, rattle, rattle, rattle!"

ESTELLA.—We do not know: address your question to the *Legal Observer*.

ROS ROY.—Ned Stockman. There are sixteen battles attributed to Ned Stockman in *FANTANA* (the best authority you can have); he certainly drew two, one with Cavemash and one with Bill Fisher; perhaps R. C. relies on this when he bets "there are not *Afene fights*" against his name. R. C. loses; they were *fights*, the men fought, though victory does not alter the fact of the men having fought.

D. J.—Another Caunt and Bendigo correspondent! "A thousand words will not fill a bushel," friend D. J. The truth would open sores, and revive or give birth to unpleasant feelings. The stakes have been given up—bets go with the battle—money—and honourable men will pay them. Bendigo won the fight; "good men and true" may be misled when they rely on information at second hand. There is much "virtuous indignation" wasted on the "roughs," &c. They never influenced either umpires or referees, nor did they interfere with the progress or result of the battle. With the exception of one well-known and respected public character, (and that one a friend and backer of Caunt), no living soul entered the ring from the moment the men were in attitude until the declaration of the result, save the combatants and their seconds. What then becomes of your theory "that the men had not fair play from the pressure of the roughs!" It is on a par with the gratuitous assumption of "The Barrister" already commented on.

Newman Notes, Manchester.—

"What, will the line stretch out the crack o' doom?  
I'll see no more!"

Your question is answered above. To the second; there was no appeal at all in the 32nd round; there was one in the 33rd, and it was adjudicated upon. Had the blow in 33 been "as palpable a hit" as Hamlet's, as the "play went on," there could be no re-opening of the question.

MIGRATION.—Under this signature an intelligent correspondent requests some information on the game of Canada and of the East Indies; one or both.

R. H., Nottingham.—The number (13) is not out of print. Give us the name of the agent or newsdealer at Nottingham, or send us three postage stamps, and the post-free edition shall be forwarded to your own address.

C. R. and J. B. are playing at cribbage; the former has in crib two deuces, a four, and a seven; he counts six for these cards, J. B. says he can only count four. Which is right? J. B. is right?

ENDERBY.—We cannot immediately lay our hands on the particulars of the race. Hambletonian was bred by Mr. Hutchinson, of Skipton, near York, foaled in 1792. Sir King Fergus, dam by Highflyer. He then became Sir C. Turner's property, subsequently Sir Harry Tempest Vane's. His race with Diamond (immortalized in song) was over the Beacon Course at Newmarket, the Monday in the Craven Meeting, 1799, for 3000 guineas. Mr. Cookson, the owner of Diamond, challenged another trial, which was declined. Hambletonian won by three quarters of a length only.

S. ROBSON.—A hand is four inches; it is so called from the supposed breadth of the human hand. Three hands are consequently equal to a foot. In "give and take plates" the horses are measured by a standard.

TO A NORTH COUNTRYMAN, we answer "Aye!"

E. N. J.—Captain Clegg's Book on Gymnastics, will be found to contain what you require to know respecting the exercises; it contains figures and plates of the poles, platforms, ladders, and other apparatus.

BENJAMIN BOLUS.—Look to our "WRINKLES FOR THE GROOM."

AN EDINBURGH CORRESPONDENT'S intentions and good wishes are fully appreciated. Can he forward us some of the information he promises at once? We should like to use it at the present season. His Ornithological papers we shall be glad, from time to time, to press into our service.

E. S., Maldstone.—Burns is praising whiskey (not ale) when he says—

"When neebors anger at a plea,  
An' just as wud as wud can be,  
How easy can the barley bres  
Cement the quarrel!"

"P." of Swaffham, is heartily thanked—the earlier he lays us under another obligation the better.

E. B. WATSON.—It will be tried at Westminster, if tried at all; but, as yet it is not on the cause-paper, and most likely never will be; the 18th clause of the GAMES & WAGERS BILL, passed last session, will settle the question we should say. See our leader of last week.

CAR, Manchester.—The disease of the penis is more common with dogs than generally supposed. It is rather a case for surgery than medicine; we fancy we could cure it, if under our own care and eye, but that is impossible. Try the following wash as a lotion, used with a small bit of sponge:—

Sulphate of Copper (blue vitriol) ..... 1 oz.

Water ..... 8 oz.

and give the animal a mild mercurial purgative every other day for six days, then intermit, and resume the dose after four or five days, unless progressive cure is very evident.

## OUR WEEKLY CALENDAR.

SUNDAY, Nov. 16th.—TWENTY-SIXTH SUNDAY AFTER TRINITY.—Westminster Bridge opened, 1750.—A "Rough Rider's" Hints to Young Postmen.—There are three points to be observed in riding to hounds; the first a quick eye—the next a light hand—and the next a good seat. A quick eye will always have the hounds in view, and whenever the fox shows the tip of his nose in the open, he's sure to be seen; and as you are going across a country at best pace, a quick eye will always avoid blind fences, sand-pits, stone-quiries, and bogs, all of which are more or less dangerous to man and horse. A light hand is another quality in a good rider, that can't be done without. Always feel your horse's mouth as he goes along, but don't check him, and in taking a leap, just hold him tight enough to keep his head straight; but if, at this particular time, you begin to turn, and twichia, and twistin, you and the animal will soon be together at loggerheads and all-four. A good seat is a blessing to the horse. Some men ride like sacks of wool, bump, bump, bump, upon the animal's back, as if they'd got no legs or feet. Why, the stirrup is the place to catch your weight, and if you throw it into the stirrup, instead of the back part of your middle, your horse will have the benefit of dividing twelve stone between four legs instead of two.

MONDAY, 17th.—WORKINGTON COURSE MEETING (Two days).—Lotteries abolished by Act of Parliament, 1833.—Distinction of Heads.—Rum, when in hog's-heads, is capable of doing but little mischief, but when it gets into men's-heads, then look out.

TUESDAY, 18th.—ASHDOWN PARK COURSE MEETING.—Cardington Course Meeting, 18, 19, and 20.—Smith's distillery found to have illicit pipes under-ground, 1844; the excise officers "call spirits from the vasty deep," and they come.

WEDNESDAY, 19th.—BEGGAR COURSE MEETING.—Leam Steeplechases (19th and 20th).—A great hurricane, 1824; it raged with such fury in London, that it actually blew a son of Calcutta back to his native country.—Blackfriars Bridge opened, 1760.—Battle of Navarino, 1827.—"Go it Ned!"

THURSDAY, 20th.—Newport Pagnet Steeplechases (two); Aristocratic and another.—Hornby Park Course Meeting.—Return of General Fane, 1816; he had been driven out of Europe for many years.—Fleet Market opened, 1836; very likely to be turned into a Railway Terminus, by 1844.

FRIDAY, 21st.—Newport Pagnet Steeplechases (two); Annual, and All Horses.—Ribblesdale (Yorkshire) Course Meeting, 20 and 21.—Princess Royal born, 1840.—

The happy schoolboy, whom the swollen streams,  
Perilous to wight so small, give holiday,  
Forth roaming, now wild berries pull, now paints,  
Artless, his rosy cheek with purple hue;  
Now wonders that the nest, hung in leafless thorn,  
So full in view, escap'd erewhile his search;  
On tiptoe rais'd,—ah, disappointment dire!  
His eager hand finds nought but wither'd leaves.

SATURDAY, 22nd.—A cargo of American candles imported. When will Pennsylvania send her composition—and how much to the pound?

## GYMNASTICS. NO. III.

### FENCING.—SECTION IV.

THE CUTS AND ASSAULTS—continued.

**F**ORCED to apologise owing to an absent wood-block, we resume on its arrival the thread of our discourse, touching the method of planting the tierce; preferring, as we have already said, the figure which addresses itself to the eye to the mere verbal description, which, without that illustration, is seldom easily understood by the tyro.

The following outline (fig. 12) represents

FIG. 12.—TIERCE PLANTED HOME.

We resume our concise instructions. If, engaged in quarte, you find a direct thrust or cut difficult or impracticable, but not otherwise, raise the point of your weapon vertically; then apply your forte to his point in tierce, and cut down vertically and forcibly, merging the last portion of your cut into a thrust. Now for the best mode of foiling or guarding against this thrust. Give the point volante in tierce. And here let us correct an awful and serious error made by our printer by misplacing two direction lines under the engravings in the last number. It is this: the two figures at top of column page 424, are respectively—the left hand one, the ALLONGE IN TIERCE; the right, the GUARD OF TIERCE BY THE FORT: while the two lower ones are—the left one, POINT VOLANTE IN TIERCE; the right, POINT VOLANTE IN QUARTE. The error, though rendering our description apparently absurd, will be easily rectified, and as easily accounted for by those who are conversant with the mechanical details of printing—the blunder consisting in the transposition of the two lines in the process of making up. This explained, we proceed. Give point volante in tierce, and thus extricate your foible by raising your point vertically keeping your hand in tierce. By this mode, your will find, if you perform it slowly with a fellow pupil, his foible must come to your forte.

The seconde differs from the tierce in its direction (see p. 412) which is under the arm. It is ordinarily returned after you have parried the quarte over, or the tierce.

The thrust of prime may be returned after the parade in prime.

Fig. 13.—PRIME.

The guard of prime is unquestionably the weakest, if we except the modern guards derived from it, such as the right and left protects, and

only. Namely, when guarding off a forcible quarte over the arm; for, observe, if he has succeeded in seizing your foible by pushing your quarte over, you cannot parry his thrust by the parade of tierce: so far from it, your resistance in tierce will serve him as a fulcrum, and his sword will be [a powerful lever. His sword, which was a lever of the third, or weakest and worst, kind, before he had pushed it into its present situation under your arm, now becomes a lever of the first, or best, kind. In this position, therefore, instead of fruitless resistance, yield point, and contract your hand in prime, as represented in fig. 13. As a general rule, however, we would recommend, as the better mode of parrying, the point volante in tierce. See p. 424, figure 8 (erroneously numbered figure 10).

The quinte, or hanging guard, so mightily boasted by backsword and other complexities which serve to perplex both the reader and the practitioner. It is, however, useful in one case, and in our opinion in that cudgel players, is unworthy of the fencer's notice. As it is, however, much talked of, and figures in all fencing systems, we give a figure of it.

Fig. 14.—QUINTE, OR HANGING GUARD.

The quinte over the arm is executed by disengaging your pointe closely. Spring your forte to his point, and throw your thrust into the cavity under his arm, turning your hand into complete supination. Your opposition is to your right, as in tierce. The octave is a good return.

The octave is a good return, directed under his arm, after you have parried quarte over, or tierce. After you parry quarte over, or tierce, return tierce; if you see no opening for tierce, return the octave, that is, quarte under his arm instead of the seconde; you may, however, slide in tierce, and instantly dart in seconde, which is tierce directed under his arm; recover quickly, upon all occasions using your round parade of quarte. (See figure 15.)

### SECTION VI.

#### OF THE COMPOUND THRUSTS, CUTS, PARADES, &c.

An idea of the simple thrusts, and the project of compressing them, having been previously submitted; in this section will be offered a sketch of the complex thrusts, &c.

The weakness of the prime, seconde, and quinte, has been already remarked: if these are radically bad in their simple state, all modifications and combinations of them, in feints, glissades, circles, and round parades, are still worse, and therefore should be rejected.

The seconde should not be parried by the half-circle, but by a little impulse of your forte in quarte, which will probably disarm him. If you throw in the octave at the instant he pushes seconde, you will both parry and hit him at the same moment, as his foible will come against your forte, but your round parade of quarte will break all such returns. Parry his quarte over with your round parade of quarte, and return quarte, or quarte over, or a vertical cut, which, if he parries, dart in quarte under his arm as you are in the act of recovering.

The glissade, or glizard, is a sliding movement along his blade, intended to draw him from the line, and to expose him to a thrust or cut. The glissade is dangerous, as he may hit you on the first movement by his simple thrust, having two to one in his favour. The glissades in simple quarte and tierce are dangerous; but the glissades of seconde, prime, and quinte, are still more useless.

The flaconnade is a thrust directed to the lateral part of the belly: make use of it as a return from your round parade of quarte, by pressing down his point with your forte; the resistance of his point will assist the direction of your flaconnade. If he submit his point to your force, and comes to the second position in quarte, your foible will come to his forte; that is, he will parry, and perhaps hit you, in quarte. The mode of executing these little thrusts, &c. will be better illustrated by the example and living voice of a master, than by this detail.

Notwithstanding the danger generally resulting from the use of all cuts and compound thrusts, and more particularly from any combinations of the guards of prime, seconde, &c., yet the complex guards, termed the

round parades of quarte, of tierce, and of the half circle, cannot be sufficiently practised. These guards counteract and confound the projects of the adversary. The round parade of quarte circled twice round with celerity, and combined with the half circle annexed; or the rapid rotation, twice, or thrice, of the half circle, with the round parade immediately annexed, or any combination of the round parade of quarte with the round parade of tierce, terminated by simple quarte and tierce, form a shield sufficient to guard off all cuts and thrusts whatever.

The round parade in quarte to which allusion has so often been made, is thus executed. With the point of your sword describe the circle in the direction of the arrow (which circle is the base of the conical surface

Fig. 15: ROUND PARADE IN QUARTE.

described by your weapon); feel his blade, by adhering to the point of contact as you circle; protrude his blade with dexterity, so as to bring it round to your former position of quarte; finish your parade with a degree of energy. If he circles twice, or oftener, repeat this parade, immediately annexing the half circle, whereby you will cross his sword, and perhaps disarm him; or you may annex to this parade your round parade of tierce, which will either disarm or drive him from the line. Dexterity, in the combination of these parades, will enable you, although blindfolded, to parry all superior cuts and thrusts.

Fig. 16: ROUND PARADE IN TIERCE.

The round parade of tierce is thus formed. With the point describe a circle in the direction of the arrow, from your right towards your left; adhere closely, as if the swords were tied in the point of contact; finish this circle with a degree of force, in or near to the point of its commencement. If he circles, repeat this parade, and unite to it the round parade of quarte, or simple quarte and tierce. The tierce, the quarte over, the quarte under the arm, and the vertical cut, hurled down along his blade, are all excellent returns immediately after this parade.

The half circle (fig. 17,) is formed thus. By a rapid twirl of your

1st POSITION OF QUARTE.

2nd Position: PARADE OF THE DEMICIRCLE.

hand, with your point describe the segment or arc of the circle in the direction of the arrow. The point is depressed, and the hand raised as high as your left eyebrow. Take care that in all parades whatever, you bend, and do not extend, your right arm.

The repetition of this parade forms circles; it combines all thrusts and low cuts; and when combined with the octave, it is a complete shield for defence; if he feint, parry with the half circle, unless you choose to time him, or to break all his projects with your round parade of quarte. If he deceive your half circle, only extend your hand in octave, and he must fall on your point, &c.

(To be continued.)

**SINGULAR CURE FOR HEADACHE.**—I had a violent headache, which the captain undertook to cure; and he certainly succeeded. He made me sit down, seized hold of my caput, and, placing a thumb on each of my temporal arteries, pressed them in such a way as almost to stop the whole circulation of my blood. He then directed me to heave as long a sigh as I could, and I walked into dinner completely cured. I have seen ladies in this country, whilst suffering under such malady, appear with a wafer stuck on each temple, which, I presume, was rather a milder way than my friend the captain employed of driving off this tormentor.—COL. MAXWELL.

A person said to his friend, who was learning to take snuff, that it was wrong to teach one's nose a bad habit, as a man generally followed his nose.

## CORRESPONDENCE

### A FEW WORDS ON STUD FARMS, BREEDING, &c.

SIR,—The extent to which the breeding of race horses has arrived in this country—the immense capital which is devoted to the purpose, its importance in a commercial point of view, and its wonderful influence, in connexion with the turf, the field, and the road, on our national character, are subjects which afford interesting speculation as well to the political economist as to the sportsman. The amusements of hunting and racing appear to have formed part of our national pastimes from a very early period of our history. The title at the head of this letter (which has not often been referred to by writers on sporting subjects), affords me an opportunity of throwing in a few observations and recollections which may not be “out of season,” at the present moment. Although great attention was paid to the breeding of the race horse, particularly in the selection of the blood, and also, though in a less degree, in bringing up young stock, in the days of O’Kelly, Lords Grosvenor and Clermont, Sir C. Bunbury, &c., yet as the progress of time, in a country like this, must extend our stock of knowledge, and from the immense increase in the value of the stakes to be contended for, and the great demand for blood horses both at home and abroad, it must be allowed that of late years rapid strides have been made to the perfection of the art. In fact, there is little left to desire but a greater attention to stout blood, and the soundness of the mares intended to breed from, and the total extermination of two-year old racing. It seems indeed a nice question whether the discontinuance of three and even four mile racing counterbalances the evils of two-year old training. The great advantages which have attended the system, strongly sanctioned by the example of some of our most successful and experienced supporters of the turf, of not bringing out their two-year olds, has been so frequently and forcibly exemplified, that if it were not for the sake of the valuable prizes which they contend for, it would appear extraordinary that it is not more generally adopted. The circumstance of several of the fastest and best races for the Derby having been won by horses which were not brought out until they were three years old, affords strong proof of the advantage of the practice. Another great advantage which attends the present mode of management of the young stock, is in the excellent keep of yearlings, foals, &c., and particularly as regards the adoption of the plan recommended in the late Nimrod’s admirable “Letters on Condition.” Indeed, the breeders of first-rate hunters, calculated for our fast countries have now begun to pay some attention to the condition of their young horses, and there is every probability of its paying them as well or better than any other sort of stock. The risks and drawbacks are certainly considerable, and therefore I cannot speak of the speculation in such energetic terms as Nimrod, yet I doubt not that with good management a well bred mare, say with three crosses of blood, and good bone, would leave good profits either to a spirited farmer or an amateur. It may be said, that in this cross there would be too much blood, but if the mare bred them with good strength, he must be a bad judge indeed who would find fault with the excess of blood. It is desirable to have the mares particularly well bred, not only because otherwise it would be impossible to have hunters for our best countries, but because this sort of stock is now in considerable demand by foreigners, as also for many of the hunt meetings, which are now bidding fair to become popular. The numerous pieces of rascality which have been at different times practised on the public in half-bred stakes, have caused them to be viewed with great suspicion by many honourable sportsmen, whose prejudice against them is so violent, that in their opinions there cannot be races for half-bred stakes without roguery. It is to be hoped, that from the circumstance of many of these races, particularly those recently established, being conducted by highly respectable clubs, composed entirely of gentlemen, that nothing inconsistent with a sense of what is due to that character, will be tolerated. Those who attempt it at the present day, will be sure to be overwhelmed with perpetual disgrace.

After all, however, the breeding of race-horses, in the proper sense of the word, from the prices that are to be obtained for them at all ages, and the prizes that are established at the different meetings, will always be a grand inducement in these times, nearly as much to the speculator as to the sportsman. The well known adage that “like begets like,” was never more strongly exemplified than in the breeding of racers, the produce of a race horse inheriting the virtues and bad qualities of his sire, in a most remarkable degree. If we look through the Racing Calendar, from the commencement to the present time, we shall hardly find an example of a horse who had not in some degree distinguished himself on the turf getting race horses. Although this does not apply so much to hunters and half-bred stock, it is always desirable (*ceteris paribus*) to put a half-bred mare to a horse who has shown stoutness on the turf, one for instance who has carried off a few of the old fashioned four mile King’s plates, rather than to a horse of mediocre performances, or who, in common parlance, could not (or did not) win a saddle. It is astonishing the difference in gameness, to use a significant term, which even a common hack pony, got by some good old horse, will exhibit over another whose sire came under the denomination of “Crabs.” Many examples of this kind will doubtless present themselves to your readers.

One great point to be attended to in breeding, particularly as respects the mares, is in the selection of their blood. It is really astonishing what blood will do! How many shabby-looking mares, with hardly one good point about them except their pedigree, have bred race-horses,—as well in shape and appearance, as in speed and performance,—pre-eminently distinguished on the turf? The late Mr. Orde's Ardrossan mare, the dam of so many good runners, of which it may be sufficient to enumerate Emancipation, Tomboy, and Beeswing, was only a long hollow-backed plain looking mare.

Another most important point, the advantage of which I have before adverted to, and which is so clearly established in Nimrod's interesting Letters on Condition, is in paying great attention to the keep of brood mares, foals, yearlings, &c., until they go into training. The effects of good keep, like those of good blood, oftentimes work miracles in the race horse; and if the owner of a good sized colt, would keep it well until five years old, without training, or in fact doing anything but the most gentle work, it would always get strength and size enough to carry 12st. in the hunting field, unquestionably better every way than any half bred one of the same age.

This would pay better than "training on" many of the poor things we see on the turf, which some people blindly persist in doing. The word "good keep," I do not use in the same meaning as some breeders, who calculate it according to the goodness or badness of the pasture or grass in which their young stock is kept; observing such a colt is fat, it would be money thrown away to give him corn, not reflecting that when a horse comes to severe work, either on the training ground or hunting field, the grass will be found merely to have swelled him out with so much dirt, and not to have put any sound, firm, good flesh, and consequently strength and substance on him. How often do we see a rubbishy thorough-bred two year old (not able to race) sent to the stud farm, turn out as powerful and fine a mare, at four or five years old, as it is possible to see. In fact, it is a good speculation to purchase a two year old thorough-bred filly, with two or three crosses of blood (trying for the Stamford or Orville blood, either in the dam or grandam), which may often be done for 20l. or so, and keep it well till three years old, in a loose box in winter, with three good feeds, and perhaps let out for two hours a day, and to put her to some celebrated stallion in the ensuing spring. If the stock turned out well, it would probably be thought advisable to keep it on for breeding; if otherwise, the mare at five years old might be used as a hack or perhaps as a hunter, and no man who has once ridden blood horses either in the hunting field, or on the road (if at all up to his weight), would wish to return back to half bred ones. They are greatly superior to any other sort of horse in two important particulars, one is in being so much more game and lasting, never "giving in" however hard pressed; the other in being, generally speaking, so much more quiet and temperate on the road, and in the field. Another plan, which has been adopted with great success by several very celebrated sportsmen in Leicestershire, Sir F. H. Goodricke for one, and which might be followed with profit, in the present remarkable scarcity of hunters, is that of purchasing a good sized strength colt (too heavy to run) at three years old, which might probably be done for somewhere about 50l. run him off at grass (with two or three feeds a day of good oats) till he is six years old, and with previous gentle work to hounds, so as to give him an insight into the business, when he would always fetch a good price. One thing is certain, that from the immense number of horses of almost every description which have been taken out of this country, for the last few years, breeding, whether for the turf or field, will afford good profits to the speculator, and if encouraged and persevered with, this branch of our commerce, for so it may correctly be termed, which has given us so much celebrity, and which, as I before observed, is so intimately connected with our national character, will thus be continued, for at least some years to come, with undiminished energy. To our aristocracy, when pursued, as it ought to be, for the real interests of the turf, it is a source of commendable gratification; to our farmers, one of the most profitable modes of laying out their capital; and in its results, whether as applied to the race-course, the hunting field, or the road (in spite of all the railways which speculators can invent) it has gained us (may it continue to do so!) an imperishable renown in every civilized nation in the world.

Pieskin.

#### A SPANISH BULL FIGHT IN 1845.

(From a Correspondent of the Morning Herald.)

[The following excellent sketch of the refined recreations of one of "the continental nations, where the brutality of British boxing is unknown" (we quote the words of the Editor of the *Sporting Review*.) will interest the reader; and when he rises from its perusal, we would ask him whether that man is not a humping of the first water, who, after the "German deerstaying" exhibited at a recent royal gathering, and this specimen of the popular recreations of "chivalric Spain," can talk of the "brutality of a fair stand-up fight, as 'unknown among the more polished people of the continent of Europe?'"—ED. S. MAG.]

The plaza de Toros is to the left of the fine gate of Alcala. It is an enormous amphitheatre, of a circular form, presenting no remarkable architectural feature. The interior walls are plainly whitewashed, and the upper tier alone consists of boxes, as in our theatres. Underneath are seats, marked and numbered; and as each person is obliged to

purchase his ticket beforehand, which contains on it the number and side of the house, there is no confusion on entering or taking places. Every one at Madrid enters without difficulty, and each person takes his seat according to his number. Around the arena, which is of Roman extent and magnitude, there is a circular barrier, six feet high, ledged round, at two feet from the ground, with a frame of timber work, which serves as a means to enable the chulos and bandilleros to bound over the barrier when hotly pressed by the bull. Beyond this is a second barrier of greater height and extent, and it is above this that the seats of the spectators rise, as in the amphitheatres of Ancient Rome. Above all are raised the boxes, which run round the amphitheatre to the number of 110. Each of these boxes is capable of containing twenty persons, and are generally filled by the *elite* of the city, including the members of the diplomatic corps. The box of the Queen is placed in the middle of the amphitheatre, and is as large as four of the ordinary boxes. It projects out three feet beyond the bend of the building, is encased by glass windows, and richly decorated with silk and curtains. By the side of this box is the box of the *Ayuntamiento*. The circus would contain 15,000 spectators at a push, but 12,000 or 13,000 may be seated with perfect ease and convenience. There were more than 13,000 spectators present on Monday, and such as could not on that occasion procure places in the shade, chose their position in the burning sun rather than not witness the spectacle. On entering to take my place, about a quarter past three, I found the amphitheatre nearly filled. The burning blaze of a vertical sun fell on the mass that sat opposite to me, whilst from my early precaution of procuring a place *a la sombra*, I enjoyed the broad blue light of a cloudless sky. No one who has not sat in an amphitheatre, with heaven for a canopy, can fancy the whole effect of a full flood of light and a free current of air. This is a luxury denied to the inhabitant of a northern climate, and reserved for the sojourner under a summer sky, and more genial temperature. Thousands of fans, of all colours and sizes, now fluttered before me, and the light, the air, the costume, the vivacity of gesture, attitude and look, gave the scene an unlooked for interest. At half-past-three, to a moment, a trumpet sounded, and a picquet of guards on horseback, preceded by two alguazils, in costume, with hats and feathers *a la Henri Quatre*, cleared the arena of all idle idlers. This done, the alguazils called for the picadores, chulos, bandilleros, &c. The picadores soon vaulted into the albardones, or saddles, raised about a foot before and behind, in a triangular shape. The stirrups were, in every sense, remarkable. They may be described as iron boxes, affording a purchase to the whole length of the foot. The costume of the picadore is most picturesque. It is composed of gaudy colours, embroidered in gold and silver; of leathern doublets, fantastically made; and of boots, not unlike those worn by the old postillions of France. The head is covered by an enormous hat, ornamented with gay ribbons, and the picadore is armed with a lance long and heavy, with a three-cornered point of steel, three inches in length. This serves to prick and irritate the bull, and to turn him off from man and horse, but is not calculated to do him any material injury. The horses of the picadores are wretched go-cart beasts, only fit for the knackers, bought for a few dollars, part of which is recovered when the skin is sold. The horsemen, when mounted, make their bow to the president, when the key of the *toril*, or bull-house, is delivered to them. The bugles now sounded, and, amidst a storm of applause, the first bull rushed into the amphitheatre. This was a white and red-coloured bull of the Duke de Veriguas, lively and agile enough, but his flesh did not appear firm. He ran first at the picadore Romero, who pierced him twice in the nape of the neck without drawing blood. He next attacked Gallardo, who pierced him four times; but on the last occasion the bull, maddened by the stroke, regained fresh fury, and plunged his horn into the bowels of the horse, whose entrails were soon seen trailing along the ground. In vain did the picadore spur the wounded and jaded beast, for, before his rider could again come to the attack, the animal fell dead on the floor. The picadore Trigo had advanced but in the twinkling of an eye the horn of the bull had pierced the breast of the animal he rode, and the poor horse fell weltering in his blood, before the rider could disengage himself. The sight was horrible as the poor animal raised his dying head, as it were to reproach his rider. The dead carcass was removed by three mules, gaily caparisoned; and now the bandilleros, Pando and Gallego, advanced and struck their bandilleros or darts into the neck of the animal. They were followed by Guillér and Lucháres, two most celebrated bandilleros, and lastly by the pride and glory of Madrid, the Obidiasero, who put an end to the sufferings of the bull by a single stroke.

The carcass of the animal being removed by three mules, the second bull entered. This was a small, strong, black bull, belonging to Don Francisco Javier de Andrade. Romero wounded him six times, but in essaying a seventh he was unhorsed, and his beast killed. Gallardo now took the place of Romero, and after pricking the bull six times he, too, was unhorsed, and wounded. Trigo now came to the rescue of his companions, but in a few moments the belly of his horse was ripped open, and not merely the entrails but the liver of the animal was exposed to public view. Loud applause followed this scene, and as the horse staggered, with his eyes glaring and his tongue protruding, I thought the vociferation would have rent the building in twain. The poor beast still kept on his legs, and as the stable boys found he could not be quickly enough moved off, they lashed and struck him with redoubled

fury in order to quicken his paces. Cuchares now essayed to vanquish this bull, but in vain; and at length Bero and Capo were successful in transfixing him with bandilleros, and he was ultimately dispatched at one stroke by the Childanero. The third was a black and white bull, with enormous horns, and of equal agility and strength. He had not been in the amphitheatre two seconds before he hotly pursued the chulos who trailed the scarf before him, and, bounding over the barrier with the agility of a cat, followed his tormentors into the corridor. A thousand sticks now assailed him; and the door being opened, he was again driven into the arena. Here the best picadores of Madrid attacked him in turn. The combat lasted for fifty-five minutes, and at the end of that time the bull had killed or desperately wounded six horses and injured two of the riders without receiving himself any material injury. The women were furious in their applause of this bull; and one paralytic man, when he saw the maddened animal had done, cried "Bravo, bravo!" "bueno bueno!" The arena was now strewn with entrails, blood, and dying and dead horses. The very air smelt of carrion and butchery yet the women kept their places and smiled applause in the faces of the men who accompanied them—nay, from the palcos and aristocratic balconies there waved forth, held by tapering fingers, embroidered and perfumed handkerchiefs! This was the crack bull of the day, and as it took some time to remove the dying and dead horses the multitude became impatient, as there was only one team of mules. The stable boys now resorted to manual force, and while the limbs of the tortured horses were yet quivering, caused them to move towards the door by the application of bit, whip, spur, and spear. This was rewarded with applause, and the stage was cleared; the bandilleros entered, and the bull was soon killed by Cuchares. The fourth was a white bull, which was soon dispatched. The fifth was a black and heavy bull, sulky and cowardly. In vain did the picadores prick him. He would not come to the scratch, and the eager and ferocious multitude now called for dogs—"perros, perros!" Three couple of dogs were now let loose, but the bull made minced meat of them, tossing them in the air repeatedly. One he wounded desperately, and though the tossings in the air were received with applause, yet the some of enthusiasm was reserved for the wounding of the dog. The cowardly bull being still the conqueror, three other couple of dogs were called for, and set on him, with the five still able to attack him. But one, however, of the dogs was game. He fastened on the throat of the bull, and held on like an English bull-dog. Meanwhile the other dogs followed the same suit, and soon the cowardly bull was on the point of choking, when the executioner put an end to him by dividing the spine. The sixth, seventh, and eighth bulls presented nothing remarkable. When the eighth bull entered the arena it was half-past five o'clock, and the day was beginning to wane, yet such was the intense anxiety of the women to see everything, that they set fire to their paper fans, and, by the aid of these domestic and self-prepared torches, witnessed the last struggle of the expiring animal. At six o'clock all was over, and the 13,000 or 14,000 persons who were present, among whom were at least 4,000 beauties of Madrid, retired to their homes, repeating to their fathers, brothers, husbands, and lovers each episode of this drama. The crowd was composed of persons of all classes and of all parties—of Absolutists, Moderados, and Progressives; and each one of these thought infinitely more of the spectacle for days and days before, than of the tariff, the Trapani marriage, the new system of taxation, the municipal elections, or the meeting of the Cortes.

Madrid, Nov. 2, 1845.

### SHOOTING WRINKLES.—NO. I.

You have started, your dog precedes you, a bird gets up unawares: do not fire; you will miss it; and a repetition of such events will disgust your dog, who may possibly leave you.

One of my friends, inexperienced as he was, begged me one day to lend him a dog. Now you should lend neither your wife, your horse, nor your dog; but I, who am blessed with a greatness of soul quite uncommon, exhibited my magnanimity to the extent of entrusting Medora to his care; the illustrious Medora, the best of dogs.

Quo non prestantior alter,

to range, point, and bring fur or feather. My friend started; an hour elapsed, when Medora returned alone to his kennel. Soon afterwards my Sportsman arrived. "Your dog left me."—"I am aware of it; he told me you missed five or six shots running."—"It is true."—"By heaven I was certain of it. A dog hunts for his pleasure far more so than for yours. Amuse him then, if you desire he should return the compliment."

I have not forgotten that as yet you have never shot either hares or partridges: wait till your dog stands; it will not be long first. Let him alone; do not talk to him; follow him in silence—he knows more than you do. He is here, there, sinks, then raises his nose to seize the scent which the wind conveys: he stops, his position becomes serious; your game is not far off. The dog reflects, calculates, advances with precaution; he chooses the spot, so as to place his feet without noise, extends himself, and points.

When you have had some experience, you will ascertain from the position of your dog the species of game to which he stands. For a hare, the tail of the dog is generally very stiff and slightly curved towards the end; inclined and straight for a rabbit; a slight degree elevated and straight

for a quail; lastly, when very stiff, very straight, parallel with the horizon, it is a partridge. For birds found in the marshes, such as snipes and rails, the tail of the dog makes slight to left, movements from right which may be said to infer uncertainty.

Your heart beats with violence; your breast heaves; you breathe with pain; do not choke, be calm; the weather is hot; the game will hold to the point; you have plenty of time; assure yourself in this manner: "The game is very near me: in order that my shot may be effectual, I should fire at thirty paces; I have then time to prepare and to take good aim." Recollect, if you fire at fifteen paces, you have less chance than at twenty-five or thirty, it is only at such a distance your shot can have good effect: nearer it will be too much balled. If you kill, you destroy your bird, and moreover you must take much better aim to touch it; whereas at thirty paces, should you fire below or even on the side, the bird will probably fall.

All this thought over, reasoned on, calculated on, place yourself in such a position as to prevent the sun shining in your eyes; when this precaution is not taken, two disagreeable results are sure to follow: the one, you invariably miss, or you hit by chance; added to which your eyes become so dazzled it requires some time to recover yourself. All appears red or blue, and the trees seem to dance before you. A partridge takes the colours of a parrot, and, without doubting your aim, you fire three paces from it.

Good! Now you have turned your back on the sun, advanced a foot, then two, the game rises. Be prepared, place your gun firm to the shoulder, take a steady aim, and touch not your trigger till the bird is in a straight line with your eye and the sight. But, above all, do not be in a hurry; you have far more time than is required: rather let it fly ten paces further than fire by chance; you have missed your first shot; increase your hope of the second by a better aim.

Nothing falls; the game is off, unharmed save by fear: your dog looks at you and recommences his work. You missed both shots because you were in too great a hurry: your gun was not sufficiently firm to the shoulder, which causes two serious inconveniences; it vibrates, and causes an uncertain shot, sent by chance through the air; added to which, the recoil gives you an unpleasant blow. I perceive also that your right cheek is a little red, which, is disagreeable; but it does not dishonour you.

Recollect, in order to be well prepared, you should elevate your right arm as much as possible without inconvenience, the elbow being more elevated than the shoulder; the result is that the hollow or the but of the gun rests there, finding a better support than were the elbow lower. For one shot which you miss from having fired too late, they are twenty so missed from firing too soon. Shots are also often missed from a desire to see too much of your game; that is to say, you obtain too good a sight, and fire above it. You should aim at the centre of your, and never see more than half of it when you pull the trigger.

Walk on: commence again; recollect your lesson, and if you follow it only once, a fine partridge will repay you.

I did not deceive myself: down goes one; you are all alive; your dog runs for it. "Bring," ought to be your only call, your only word. He well knows that his business is to bring it; but in order that he should not forget his duty remind him always. At the same time mark down the rest of the covey; we must look for them.

### THE EXILED LONDONER.

I roam beneath a foreign sky,  
That sky is cloudless, warm and clear;  
And ev'ry thing is glad but I;—  
But ha! my heart is far from here.

They bid me look on forests green,  
And boundless prairies stretching far;  
But I rejoice not in their sheen,  
And longing turn to Temple Bar.

They bid me list the torrent's roar,  
In all its foaming, bounding pride;  
But I, I only think the more  
On living torrents in Chesapeake!

They bid me mark the mighty stream,  
Which Mississippi rolls to sea;  
But then I sink in pensive dream,  
And turn my thoughts, dear Thames, to thee!

They bid me note the mountains high,  
Whose snow-capp'd peaks my prospect end;  
I only have a secret sigh—  
To Ludgate Hill my wishes tend.

They taunt me with our dancer air,  
And fogs so thick you scarce can see;  
Then, yellow fog, I will declare,  
Though strange to say, I long for thee.

And everything in this bright clime  
But serves to turn my thoughts to thee!  
Thou, London, of an earlier time,  
Oh! when shall I return to thee?

# THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

CHAPTER X.—*continued.*

6. Molineux, from want of wind, lunged right and left, but gained nothing by it, and stopped the right hand of the Champion with neatness. Cribb gave Molineux so severe a blow in the body with his right hand, that it appeared to roll him up, as if it had completely knocked the wind out of him; he was literally gasping for breath. On renewing the rally, he seemed frantic with pain and passion. Fearful of his opponent's punishment, he capered about, in an extravagant manner, hit short and was quite abroad. The Champion pursued him round the stage with great success, and concluded the round by a full length hit, which laid him prostrate. [Five to one on Cribb.]

7. Molineux ran furiously in, forced an intemperate rally, and gained a trifling advantage; but Cribb punished him severely about the neck and jugular: after the expiration of a minute, Molineux fell from weakness.

8. Molineux, still desperate, rallied, but his blows were too short; Cribb nobbed him in fine style, and fished him dreadfully till he fell, the Champion having got his head under his arm. [All betters.]

9. It was now fully evident which way the battle would now terminate, Molineux, running in furiously, received a tremendous left-handed blow flush in the mouth, which is said to have broken his jaw; its force was such that Molineux fell as if shot, and did not come to his time by full half a minute, but Cribb wished that the spectators should fully witness his superiority by giving away this chance, dancing about the stage when he ought to have been proclaimed the conqueror: and went in again, knocking him nearly down, and then up again, and levelled him.

10. It was with the utmost difficulty that Molineux could be brought from his second's knee, and then it was only to add to the severe mulling he had received; the sable hero, however, still game, made a desperate though unsuccessful effort, and fell greatly distressed.

11. Cribb had given another chance away respecting time, but Molineux was in a state of stupor, his senses having been completely milled out of him; and upon receiving a floorer, he was unable to get up. Victory was announced in a sort of a Scotch reel by Gully and Cribb, elated with success, followed by tumultuous applause.

—Such a noise arose,  
As the shrouds make at sea in a stiff tempest  
As loud, and to as many tunes. Hats, cloaks,  
Doublets, I think, flew up; and had their faces  
Been loose, this day they had been lost. Such joy  
I never saw before.

It appeared in this second battle, that the Negro had acquired science equal to the Champion, and was deemed as good an in-fighter. Remarkably quick and weighty with his left hand, he returned on his opponent's head, whenever he received in the body: but no question now remains concerning the equality of the combatants. Cribb having won a main, and beat the Negro in nineteen minutes and ten seconds, when the former battle continued thrice as long. This may be accounted for by the fact that Cribb was too full of flesh, and not in good condition; and though Molineux had improved in science, he had deteriorated in stamina. The hardest frame could not resist the blows of the Champion; and it is astonishing the Negro stood them so long. He was taken out of the ring senseless, and could not articulate; "it was thought upon the first examination that his jaw-bone and two of his ribs were fractured," says a contemporary reporter. On the contrary Cribb scarcely, received a body blow, though his head was much out of shape.

All the towns upon the North road gained considerably by this contest, particularly those of Grantham and Stamford. No interruption was offered to the mill; and it is said, that the Corporations of some of the principal towns in the North solicited that the battle might be fought on their own domains, as did several of the nobility in residing that part of the country. Among the company who witnessed the battle, were the Marquis of Queensberry, Sir Henry Smith, Lord Yarmouth, the Hon. Berkeley Craven, Major Mellish, Captain Barclay, General Grosvenor, Lord Pomfret, Sir Francis Bayntun, Sir Charles Alton, Thomas Goddard, Esq., Mr. Gore, &c., &c., and most of the sporting amateurs and professors in the kingdom.

So much interest was felt in London concerning the issue of this contest, that we cannot pass it over without notice. On Saturday night an immense crowd assembled in the front of Richmond's house, the Prad and Swimmer, St. Martin's-street, Leicester-square, to inquire the particulars, and so completely blocked up the street, that the house was shut up at an early hour. The next morning they re-assembled and gained access, and although some additional rooms were opened, half the people could not be accommodated; Bob's chop-house, the Castle, in Holborn, was so crowded on the Sunday evening, that several peace-officers were obliged to attend to preserve order.

On the Champion's return home in a barouche and four horses, decorated with blue ribbons, on the Monday following, accompanied by an amateur of distinction and Joe Ward, he was cheered through all the towns he passed, after the manner of an officer bearing despatches of a victory. And upon approaching his house in White-lion-street, Seven Dials, the crowd had assembled in such numbers as to render it impos-

able; the multitude greeting Cribb with loud and animating plaudits, worthy of the Champion of England.

It was reported that Cribb gained 400*l.* by this set-to, and his patron, Captain Barclay, 10,000*l.*; and that a baker in the Borough sported all his blunt, personal property, together with the lease of his house, &c., amounting to 1700*l.*, upon the Champion. A curious bet was also made between two sporting characters, the winner to get a complete suit of clothes, shirt, &c., &c., with a walking-stick, gloves, and a guinea in his pocket. Through the kind interference of Mr. Jackson, a collection of near 50*l.* was made for Molineux.

It should seem that Cribb was peculiarly indebted to Capt. Barclay for his excellent condition: having spent three months previously to the battle, at his country-seat in Scotland, living entirely by rules laid down by the Captain, and adhering to the strictest regimen and discipline. Cribb, it appears, would most willingly at times have relaxed from this mode of life, had not his patron pointed out the great advantages resulting from such training. Nothing is more obvious than this or a comparison of the trained man with one who cannot feel or submit to the utility of it; the flesh of the former does not so soon turn black, or become inflamed with the effect of blows; while, on the contrary, the untrained would become blind from hits which the pugilist in good condition would not even show the marks of. Notwithstanding, it is said of Cribb, that he declared he would sooner fight Molineux any time, than undergo another such training!

In consequence of the hard-earned victories of the Champion, a splendid dinner was given at Gregson's by a large party of amateurs: but more especially in honour of his second triumph over Molineux, Cribb was placed in the chair. His conduct, as president, was unassuming and pleasant, receiving the approbation of the patrons of distinction by whom he was surrounded. Harmony prevailed, and several excellent songs written for the occasion, full of point, were most rapturously received, particularly one of Bob Gregson's, which was applauded to the echo, and loudly encored. The company did not depart till they unanimously voted the Champion—

## A SILVER CUP, valued Fifty Guineas,

as a memorial of the high opinion which the *Sporting World*, in particular, held of his uniform courage in his pugilistic combats; also for his having voluntarily entered the ring (after positively declining pugilism in general) on the score of nationality, his own individual fame, and to prevent a foreigner from triumphing over the heroes of England.

The subscriptions for this purpose proving ample, the sum was increased, and a silver cup of eighty guineas value was presented to the Champion, at the Castle Tavern, Holborn, on Monday, the 2nd of December, 1811, at a dinner appointed for that purpose, Tom Cribb in the chair, supported by one of the most numerous and respectable assemblages of the fancy ever witnessed. After the cloth was removed, and the usual loyal toasts given, Mr. Emery (of the Theatre Royal Covent Garden), who had at a previous meeting been unanimously voted to present the Plate, was now called upon to fulfil the wishes of the company. The cup was produced, the son of Thespis rose, and after drinking to

## "CRIBB—the Champion of England!"

addressed the chairman to the following effect:

"Thomas Cribb, I have the honour this day of being the representative of a numerous and most respectable body of your friends; and though I am by no means qualified to attempt the undertaking which has devolved on me by a vote of the subscribers, yet the cause will, I am confident, prove a sufficient excuse for my want of ability. You are requested to accept this cup, as a tribute of respect, for the uniform valour and integrity you have shewn in your several combats, but most particularly for the additional proofs of native skill and manly intrepidity displayed by your last memorable battle, when the cause rested not merely upon individual fame, but for the pugilistic reputation of your country, in contending with a formidable foreign antagonist. In that combat you gave proof that the hand of a foreigner, when lifted against a son of Britannia, must not only be aided by the strength of a lion, but the heart also.

"The fame you have so well earned has been by manly and upright conduct; and such conduct, I have no doubt, will ever mark your very creditable retirement from the ring, or stage of pugilism. However intoxicated the cup or its contents may at any future period make you, I am sufficiently persuaded the gentlemen present, and the sons of John Bull in general, will never consider you have a cup to much."

The cup, filled with wine, having gone round, the Champion thus briefly addressed his patrons, "Gentlemen, for the honour you have done me in presenting this cup, I most respectfully beg of you to accept my warmest thanks."

Harmony reigned throughout, and the Champion, impressed with

gratitude to his leading patrons, Sir Henry Smyth, Bart., Capt. Barclay, Shirlwall Harrison, Esq., &c., &c., drank their healths with marked animation and respect; and the cup, in being put round, upon its arrival into the hands of Mr. Jackson, Gully, Grogson, and the veteran Joe Ward (who acted as Vice), the company, as a mark of esteem for their past services, loudly cheered those celebrated heroes of the fist.

Cribb now underwent the usual metamorphosis from a pugilist to a publican, and opened a house at the Golden Lion in the Borough, but finding his position too far eastward for his numerous aristocratic patrons, "honest Tom" moved his quarters to the King's Arms, the corner of Duke-street and King-street, St. James's, and subsequently to the Union Arms, at the corner of Pantom-street, Haymarket.

Our sketch of the Champion would be imperfect, were we not to observe, that in disposition he is placid, condescending, and obliging, possessing a forbearance of temper that cannot be more strikingly illustrated than by the following circumstance, which took place a few days after the last fight. Cribb, in passing through Fore-street, Cripplegate, was most grossly insulted by a Jew of the name of Simmonds, who, valuing himself upon his manhood, and not knowing whom he was in contact with, endeavoured to give our hero a facer. The Champion, with the utmost composure, seized hold of this mere apology, (in his hands,) yet disdained to inflict that sort of punishment which, had he given way to passion, from his well-known strength and science, must in all probability nearly annihilated this presuming Israelite. Instead of which, however, Tom instantly compelled Mordecai to go before the Lord Mayor to answer for the assault. His Lordship, on hearing the case, was struck with the magnanimity displayed by Cribb on this occasion, and highly praised him for his manliness of temper,—at the same time reprimanding the Jew severely for his improper behaviour. The Jew was, however, discharged on paying the costs, upon the Champion good naturedly interposing to prevent a fine.

(To be concluded in our next.)

#### RACING IN HINDOSTAN.

A large quantity of Arabian and other foreign horses are annually imported into Hindostan. About the month of July and August, merchants march across the peninsula of India from Bombay, at which place they arrive by sea, with strings or batches, as they are sometimes called, of Arabs, and from these the Anglo-Indian officers make their selection. It is amusing to remark the sensation occasioned at a station by the arrival of Shaick Ibrim, or Ibn Hassan, with a batch of horses. No time is lost, whatever the weather may be, but vehicles, hacks, and tass, are indiscriminately put in requisition to visit and examine the new arrivals. Now it is that the knowing ones look high; steal visits at unusual hours, in order that they may pursue their search unmolested; and, when questioned, restrict their replies as much as possible to monosyllable answers. What can be more natural? They feel that they are at a premium, and therefore indulge in their self-complacency at the expense of the uninitiated. At first enormous sums are demanded by the dealer, to which, of course no one thinks of listening. Indeed, the merchant himself never means himself to make his price an ultimatum; like the first parallel in a siege, it is an approach merely. Arab horse-dealers never bargain in the presence of a third person; and they require to be humoured and petted for days, in order to bring down the price to a consistent sum. A first-rate Arab, fit for the turf, cannot be purchased for less than 1,500 rupees, (150*l*.) and rarely at so low a price as that. The nag enters upon his walking exercise some time in September, and from this time, takes daily exercise; the paces being increased as the period of the race draws near, until the arrival of the portentous day itself. Then what flurry and hurry-scurry prevail over the whole station! Young ladies go out with their mammas at peep of dawn, shewing, by their early arrival on the ground, how little sleep they had enjoyed during the previous night; their bright eyes glisten with animation as the racing men, decked out in sporting habiliments, which afford a novel contrast to the usual military garb, dash up and pay their devoirs of compliment and adulation. In another direction, big with the importance of their office, the stewards may be seen bustling and authoritative; each clad in shorts, jockey-boots, a bird's eye oravat, black hat, and slashed coat. The hope of reward sweetens labour; and it is fortunate that the worthies last-mentioned—namely, the stewards—possess the ladies' smiles and the approbation of their own consciences to reward them; for all posts of honour, next to being the manager of a mess, the most thankless is that of a steward of a race-course. Disputes are certain to occur; and, as sure as a decision is arrived at it gives offence to the disappointed party. The most agreeable office, after the amusements are at an end, is that of dispatching gloves and perfumery to the ladies, who are expected to pay their losses in the most *recherché* manner that the station can afford; the value of their contributions being enhanced by the elegant billets which usually accompany them.—

A COURTSHIP.—Uncle Sam's correspondent, Solomon Piper, thus describes a courtship Down East: It seems from that, that arter the

old folks was gone he didn't say nothin', but jest got a spin' and growin' as if he was in great distress, enough to brake the heart of a sun, and Miss Oselia took pity on his sufferings and asked him woddent he take sum peppermint drops, thinkin' he had the kawlic, or may be sumthin' wus. And down he went on his marro' bones and told her it wassent the stummick ake but the heart ake he had, and nobody but she could cure him. And then he swore a dreadful oath that he'd do something desperate if she woddent have him. Wall, what do you think the gal dun?—blushed all manner of kullers and sed she'd konsider on't? or told him she'd no idea of changing her sivation? No such thing. She looks him rite in the fais, and axes him, sez she, "Master Grubb, does your mother know you're out?"

#### A HUNTING SONG.

Come, fill up a bumper! a full one, to grace  
The toast of all toasts, boys—the joys of the Chase!  
We've the ev'ning before us, the praises to sound,  
Of all that delights us, of horse and of hound:  
Dull care comes not near us to mar the delight  
That the sport of the day should secure for the night.  
So as life is uncertain, we send round the bowl,  
And be reason our guide 'mid the flow of the soul.  
To the bard 'twere no difficult matter to trace  
A resemblance betwixt human life and the chase.  
In youth "we throw off," as we "draw" up the "wind,"  
Love or hope will "break cover" and furnish the "find."  
If love meet with crosses, or hope with a wreck,  
Life's chase, like the fox-chase, but meets with a "check;"  
And as nought that is perfect exists 'neath the sun,  
And a check may occur in the very best run.  
Some old comrade, perchance, when my spirit has fled,  
Will give the "who whoop!" for the hunter in red;  
The oak of the forest its branches shall wave,  
And teh breeze sigh a requiem over my grave:—  
For let us be "no where" or let us be first,  
Grim Death will be found at the end of the burst.  
And the truth 'tis, if tardy or quick be the pace,  
That death gives a zest to the joys of the chase!

JONATHAN OUTRIVALLED.—The inhabitants of the eastern part of the Isle of Wight have long been celebrated for their sagacity, and the natives of St. Helen's have recently discovered a successful method of catching rabbits in the night, which certainly by no means diminishes their previously acquired celebrity. It appears that, having secured a number of the crustacean species, which are vulgarly denominated in the island "King Crabs," they affix about an inch of candle to their backs, and send them crawling into the rabbits' burrows; the animals being alarmed at the appearance of their enlightened visitors, make a speedy exit, and are immediately captured by the invaders. The plan is far preferable to the old method which is practised on the southern coast. The Nitton gentlemen scatter a quantity of snuff at the mouth of their holes, covering it with green parsley, of which the game is remarkably fond. On partaking of the delicious herbage, they are seized with such a fit of sneezing, that they invariably beat their brains out against the rocks, but are by these violent means rendered unfit for market.—*Hampshire Telegraph*.

AN AUTUMNAL APPEARANCE.—(From a Hampshire correspondent.)—Within the last few days our coast has been visited by several flights of widgeon, which wears an autumnal appearance. These birds generally precede the arrival of the brent goose about a week; the latter, in the dead months, quite darken our waters, and when they are on the wing, sailing over the Solent, their sonorous noise, at a long distance off, resembles a pack of hounds in full cry. Colonel Hawker annually visits Keyhaven, which is about a mile from Hurst-castle, and his gunnery punts are so classically constructed in form and size, that six of them, of different sizes, fit into each other, and the last, which is the smallest, contains all the necessary apparatus for prosecuting the sport of wild-fowl shooting. The punts, thus arranged, are sustained on axles and wheels, similar to a van, and, the same being drawn by two horses, can be conveyed from one dart of the country to another with the greatest facility.

OH, THIS LOVE.—The editor of the *Buffalonian* says he would as soon try to go to sea on a shingle, make a ladder of fog, chase a stream of lightning through a crab-apple orchard, swim the rapids of Niagara, or set Lake Erie on fire with lucifer matches, as to think of stopping two young people from getting married when they take it in their heads to do so.

"If," asks a Yankee editor, "a man gets too lazy to draw his last breath can he die?"

Which is the longest letter in the alphabet?—An ell.

LETTING 'EM OUT.—An Irish tailor, making a gentleman's coat (and vest too small, was ordered to take them home and let them out. Some days after, the gentleman enquiring for his garments, was told by the ninth part of an Irishman that the clothes happening to fit a country-man of his, he had let them out at a shilling per week.

# ADVERTISEMENTS.

## NOTICE TO COUNTRY DEALERS AND THE PUBLIC

I, having come to the knowledge of the Proprietors of the SPORTSMAN'S MAGAZINE that many of our Subscribers and the Country Dealers have not only experienced considerable difficulty in procuring the Back Numbers of this paper, but on many occasions have been disappointed in receiving the CURRENT WEEKLY NUMBERS; this is to give notice that all back numbers and parts are in print, and that the current number is published every Thursday at the OFFICE, 42, HOLYWELL-STREET, STRAND.

The Stamped Editions of Nos. 18 and 22, containing the reports of THE FIGHT FOR THE CHAMPIONSHIP, and that of PERKINS and BARNARD are still on sale.

With No. 28 will be presented "THE SPORTSMAN'S ALMANACK, for 1846."

Price of the Paper and Almanack THREEPENCE.

N.B. In No. 29 will be contained a full report of the Important Fight between GILL of Coventry, and NORLEY of Manchester.

Observe, this will be published on Thursday, Nov. 27th, two days after the battle.

GIVE YOUR ORDERS EARLY.

SPORTSMAN'S MAGAZINE OFFICE, 42, HOLYWELL-STREET, STRAND.

### TO SPORTSMEN.

**SHOOTING, HUNTING, FISHING, and Deer-stalking Knives.** J. B. DURHAM, Manufacturer, respectfully invites the attention of Sportsmen to his Immense Stock, which includes all the Newest Patterns and latest improvements, and all warranted of the best quality. Knives of every description made to order on the shortest notice. Old knives, &c., polished and repaired. 261, Regent-street, near the Polytechnic Institution.

### NO MEDICINE for the CURE of ASTHMA

and Consumption, Coughs, &c., was ever attended by speedy and unfailing success as DR. LOCOCK'S PULMONIC WAFERS. In every newspaper and publication throughout the kingdom may be seen testimonials of their wonderful powers.

MORE CURES OF ASTHMA, CONSUMPTION, COUGHS, &c., IN CHESTER.

Read the following from Messrs. Platt and Son, 13, Forgeate street, Chester.

Sir,—Your invaluable Wafers continue to perform wonders here; since our last we could send you dozens of cases of the most astonishing cures.

One gentleman, who has had a bad cough for years, bought one box, and was cured before using the whole of it; he gave the rest away, and they were equally beneficial.

A medical gentleman here is so convinced of their value, that besides readily recommending them to his patients, he had some a few days since for one of his children, for the whooping-cough. One of our clergymen also, who laboured under an asthma many years, has received such extraordinary benefit himself, that he now gives many boxes away every week among the poor.

Persons who have laboured under asthma, asthmatic coughs, consumption, &c., call upon us almost daily, to thank us for having recommended them this "instant cure, &c."

M. PLATT and SON.  
DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds, and all disorders of the breath and lungs.

TO SINGERS and PUBLIC SPEAKERS they are invaluable as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1d., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & Co., 1, Bridge-street, Fleet-street, London.

CAUTION.—To protect the public from spurious Imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words DR. LOCOCK'S WAFERS in white letters on a red ground.

If purchasers will attend to this caution, they will be sure to get the genuine article. Sold by all Medicine Vendors.

QUEEN'S HEAD, QUEEN'S HEAD COURT, WIND-MILL-STREET, HAYMARKET.

**JEM BURN** Respectfully Announces to the patrons of the Good Old English Art of Self-defence, that he has re-opened his great room, where the illustration, exhibition, and practice of Sparring will take place every Monday evening during the winter-months. Master of the Ceremonies, and Gentleman-usher of the Bunch-of-fives, Uncle Ben. Johnny Hannan, and several topswayers, will put on the muffers, and "teach the young idea how to shoot."

The snugger affords an admirable retreat for the Cerinthians, the club-room is commodious for the commonalty, the champagne celestial, the port potent, the brandy without any admixture of B.B., and the malt of all sorts miraculous.

God Save the Queen! (and sustainer HEAD.)

### BATHE'S DERBY SWEEPS,

Green Dragon, Fleet Street, City.

5s. and 2s. 6d. Sweeps for the Newport Pagnell Steeple Chase drawn Monday, Nov. 17th. The 2s. 6d. Derby is fast filling, drawn as soon as full. All Money divided, less Five per cent. Post-office orders to Mr. JOHN BATHS punctually attended to.

### PRICE AND GOSNELL'S

PERFUMERY.—NOTICE.—Executors of the late John Gosnell v. Rees Price, Perfumer, 28, Lombard-street, trading under the firm of Price and Co., and previously under the assumed name of "Napoleon Price and Co." The Judges in the Court of Exchequer in this day decided in favour of the plaintiff in this case. The defendant, Rees Price, had disposed of his interest in the Perfumery and other trades carried on by the late firm of Price and Gosnell, to the late Mr. John Gosnell (father of the parties now carrying on business under the firm of John Gosnell and Co., 12, Three King-court, Lombard-street), and bound himself, under forfeiture of £5,000, not to commence business within the Cities of London or Westminster, or within the distance of 800 miles from the same, and notwithstanding this, had carried on business. This action was brought to recover liquidated damages for such breach of contract.—12, Three King-court, Lombard-street, Jan. 27, 1845.

### DERBY SWEEPS for 1846, at WM. TURPIN'S, Old Essex Serpent, King-street, Covent-garden.

Sub.	1st.	2nd.	3rd.	Start.
186 at 42s. 0d.	£230.	£70.	£50.	£30.
186 at 25s. 0d.	130.	40.	30.	24.
186 at 12s. 6d.	65.	20.	15.	12.
186 at 5s. 6d.	30.	10.	5.	4.
186 at 3s. 0d.	16.	5.	3.	3.

\* These sweeps may be paid by weekly instalments of not less than 2s. 6d. The secretary will be in attendance every evening from 8 to 10 to receive payments.

The following Sweeps (two horses each) will be Drawn Weekly:—

93 at 12s. 6d.	32.	10.	8.	6.
93 at 5s. 6d.	15.	5.	2.	2.
93 at 3s. 0d.	8.	2.	1.	1.

All dead and disqualified horses will be omitted in the draws, and the chances less than 100 deducted. The above sums paid less 5 per cent. WM. WRIGHT, Secretary.

A 5s. 6d. Derby Sweep will be drawn on Thursday next.—21s, 12s. 6d., 5s. 6d., and 3s. Sweeps open for the Newport Pagnell Steeple Chase.

Post Office orders, payable at Charing-cross, punctually attended to.

### CAUTION TO THE TRADE.

EVERETT'S PREMIER BLACKING.

WH EREAS an Injunction has been this day granted by the Vice-Chancellor of England, to restrain Samuel Allin and others from selling or disposing of any Blacking or Composition under the name of, or as, or for, or described as, or purporting to be the same Blacking as was made and sold by William Everett in his lifetime, and which is now manufactured solely by us, and sold under the name of EVERETT'S PREMIER BLACKING; all Parties are hereby cautioned against purchasing, selling, or exposing for sale any blacking having affixed thereto, labels in any way similar to those used by us, or any other labels or cards, so contrived or expressed as, by colourable imitations or otherwise, to represent the Blacking to be the same as that manufactured and sold by the late William Everett, and now manufactured only by us, as legal proceedings will be immediately taken against any person who, after this notice, shall in any way infringe on the terms of the said Injunction.

EVERETT and Co.,

August 19th, 1845. 51, Fetter-lane, London

\* Vide Times and Herald, 20th August, 1845.

### BILE! BILE! BILE! — WORBOY'S

LIFE IN LONDON

THREE HALF-PENCE.

THE MAMMOTH HORSE. GENERAL WASHINGTON.—[THE PROPERTY OF MR. CARTER, THE LION KING.]

**W**HETHER this gigantic specimen of Northamptonshire breeding is aptly named we will not take upon ourselves to say. Certes the Liberator of America was a great man and this equine prodigy is a great horse, and so far there is congruity in the matter. America, however, though it may produce great men certainly does not produce great horses. We need not tell the reader that the New World, previous to the introduction of the horse and cow by the Spaniard, possessed neither of those useful quadrupeds; but and the wild races of the Pampas, though hardy, swift, and enduring are of small dimensions. But it is not with the horses of the Southern States, we have to do. The North from imported blood of Europe has racers, and other horses, equal in build, bone and symmetry to the countries of the Old Continent; nevertheless the average stature and bulk of the American horse, is far below that of the cross of the Old Cleveland and the Flanders, which we take the animal before us to be descended from. The reader has perhaps seen a lithograph of the animal, and a copy thereof in one of the pictorial papers; if so he will doubtless at once see a marked difference between the animal our artist has depicted, and that engraving. A remark or two will set this right: the animal in the lithograph is not so nearly allied to the heavy German war-horse of the middle ages, the slow but large-

bone *destrier*, as it is to "Elephant, a dray-horse, the property of Messrs. Meux and Co.," which we remember to have seen (with different markings it is true) depicted in the days of our boyhood. This is not the fault of the horse but the artist: the animal, so far from being clumsy, is, considering his enormous weight (25 cwt, or a *ton and a quarter*) a grand, a graceful, and an noble beast. His height is twenty hands (or six feet eight inches, from the toe to the point of the withers); what he measures from the setting on of the tail to between the ears we know not, but he certainly, as the spectator stands behind him on a chair and looks down on his back, seems as long as a ship's barge, and proportionate breath. In our drawing he appears somewhat foreshortened, and in the act (a very customary one with him) of pawing playfully with the forefoot; hence the muscular breadth of his mighty and expansive chest is partially shown. To those curious in living cats' meat, we would say—if you do not embrace the opportunity of dropping in at the Egyptian Hall, and scanning the proportions of this splendid specimen of a stupendous steed, during the period of his "seeing company," you will lose an interesting treat to the admirer of natural wonders, the connoisseur in animal beauty, and the curious in horsemanship.—We shall have a word or two to say on the crossings of breeds which produce this sort (not size, for he is a freak of nature) of animal in our proposed series of illustrated articles on the Horse

## HINTS FOR THE PRESERVATION OF GAME, AND TRAPPING VERMIN.

There are few objects in these eventful times more worthy of attention than those pursuits which tend to induce landed proprietors to reside on their estates, or which entice the wealthy citizen to spend a part of his time and riches in the country. The expenditure of a gentleman's family and establishment during six or seven months residence in the country, and the consequent interchange of good feeling and respect which is produced by it amongst the tenantry and poorer classes, are matters I conceive of no small national importance. And as hunting, shooting, fishing, and planting are the chief inducements for relinquishing the pleasures of a town life, or the seductions of a foreign kingdom, how much does it behove those who have it so easily in their power, to exert every means to increase these attractions, rather than heedlessly permit them to be destroyed or curtailed,—with what ease might not the farmer and his labourers add to these inducements, if they would but show a little attention in protecting the plantations and preserving the game of their landlords? They would find the benefit not only in having a readier market and getting a higher price for their hay, oats, and other produce, but in obtaining their farms on more advantageous terms than they could possibly expect to do from the agents of an absentee landlord. The industrious cottager too would come in for his share of the advantages. He would have the repairs of his cottage done, when necessary, his children sent to the Sunday school, and his wife assisted and attended to in times of illness and distress, and often a son or a daughter taken into the service and family of the landlord. Other benefits might be pointed out, but need more be said to show the beneficial effects arising from a landlord residing on his estate, by which alone can be produced that feeling which ever ought to exist between him and his dependants.—a feeling conducive to the best interests of each, and which while it attracts the rich from the excitements of a town life, to enjoy in lieu of them the spirit-stirring, healthy, and innocent recreations of the country, gives to the poorer classes a habit of respect and deference towards their superiors in rank, and makes them anxious to obtain their good opinion, sure of deriving a suitable reward in return.

The pole-cat or fitchet is a voracious animal, killing much more than it can consume, for the sake of the blood. It is also bold, cunning, and powerful, and not easily caught except by a good trapper who knows its haunts and habits. The weasle and stoat are familiar to every resident in the country, and well known for their activity and destructive propensities. I have frequently seen hares and rabbits perfectly paralyzed at the sight of them, and so horror-struck as not to be able to escape or move, long before their enemy was near enough to seize them. The common rat is also another deadly enemy to the eggs and young of all kinds of game. The hedgehog, as I have observed in a preceding number of this work, cannot be fairly classed amongst destroyers of game, neither the badger, excepting perhaps occasionally.

I will now proceed to give a few short directions for catching the four-footed vermin already mentioned,—cats, polecats, weasles, stoats and rats. The cheapest and most easily set trap for those kinds of vermin is the common Norfolk rabbit trap, which is only a rather larger and better made rat trap, and costs some fourteen shillings a dozen. Where to set these depends upon the nature of the animal to be caught, but as good a guide as can be, is to watch their tracks, and then set a trap fast pegged down, and slightly covered over with whatever is most similar to the adjoining surface of the ground. If the trap is to be baited, let it be still covered over, and the bait tied on it;—but a much better plan is to suspend the bait from an overhanging twig, or a stick stuck up for the purpose, so as to let the bait dangle about six inches above the centre of the trap. A stoat, or any other kind of vermin, in trying to reach the bait will drop its hind feet into the middle of the trap, and the trap will then strike the stoat just above the hind quarters and kill it at once. The bait should be of the young of anything which is then coming into season a young rabbit or wood-pigeon, though any small bird so hung up, or even a rat, is a very good bait. In setting a steel trap remember never to set it in a mouse, or near one, for it is not unlikely that some kind of game may come through first, and then you are destroying your own sport,—or perhaps a travelling fox may be caught, in which case, in the opinion of every fox-hunter, it were far better that you yourself were in the middle of the strongest trap that ever was set. It is this inconsiderate plan of setting traps in mouse-traps that causes so many pheasants, partridges, and hares to be found maimed, and it is a practice that cannot be too severely reprimanded either in a keeper or a farmer. The common cat and polecat are best caught in hutch or live traps, unbaited, taking care that they are made long enough;—set them with each end wide open, so that the light may fully appear through the trap, and put them at the mouth of a drain, under a gateway, or at the bottom of a dry ditch, or elsewhere, exactly in the track of the vermin sought to be taken, but placed so that they cannot pass by it. This is easily prevented by placing a little furze, a few bushes, or some clods, on each side of the trap, so as to make it the only way through which the animal can proceed in that direction. The proper hutch or live trap costs about eight to ten shillings, and will last a long time. It should be made with

a spring, so that when once closed it may not be opened till the spring is touched, which few persons know how to do, though perfectly simple in itself. Oak and elm are the best woods for making this kind of trap, which should be painted over, but quite free from the smell of paint before being used. When set, if the trapper will trail a rabbit or any other game about the place and through the trap, he will find it of great effect.

For hawks, owls, and winged vermin, the steel trap is the best. If a hawk is seen passing near a cover, or over any particular field, at the close of evening, rest assured if alive it will come the same way the next, and every subsequent evening, as regularly as possible as to time and place. Set your steel trap on the top of a gate-post, or on the stump of a tree, or other exposed and elevated place, cover it over carefully with moss or any thing which does not seem unlike the place it is fixed on, and tie a young rabbit, or a pigeon, or rat upon it, first plucking some fur or feathers off, and strewing it about the spot; in one or two evenings you will be sure to find the hawk is caught. Owls may be taken in the same way, but it is generally thought the common white owl does but little harm, though the brown owl is very destructive. For crows, magpies and jays, the best plan, though they are often caught like hawks, is to find out a splash of water after rain, or at the margin of a shallow pool, and there raise a little mound in the water on which to place the trap, about two inches under water and covered over with light turf or mud or whatever is around. The wide part of the trap should be furthest in the water, resting on the top of the mound, with a little path just broad enough for the crow, &c. to walk along, so as to be able to get to the end of the mound farthest in the water. The bait may be an egg, or egg shell (a hen's or a pigeon's, being white, is best), not placed on the trap as before described, but fixed on a stick about three or four inches from the extremity of the trap in the water. This is a very destructive trap for old as well as young crows, magpies, &c. I am not here attempting to describe all the plans for destroying vermin, or the different kinds of traps, but merely pointing out a few of the most simple and least expensive methods, and such as are within every farmer's power to command and adopt. I also avoid saying anything as to snaring rabbits, except that it never should be allowed to be done but by a keeper or a proper warrenor; there is a good deal of tact required in setting snares properly for rabbits, and unless a person understands how low to lay his snares,—where the rabbits jump is, across which to place it,—whether in a windy night (always the best)—how often to repeat the setting—which side of a cover to begin on, and other matters requisite to insure success, he will find everything but what he ought in his snares. Were these few suggestions for the preservation of game which I have here ventured to throw out, only put into practice by farmers and bailiffs as they went round their farms,—how much game might be saved for themselves and their landlords.

I shall forbear entering into any discussion of the clause in the present game laws for the sale of game, but only advert to the fact, that since the act has been passed, in many counties the farmers now rent the game on their own farms for the purpose of either sporting themselves or reletting it to others; and, if those landlords who are not sportsmen, or who do not wish to preserve the game for their own use, were to make it a rule always to give the farmer the first refusal of it, instead of letting it to a stranger both landlord and tenant would be benefited. How much greater inducement would the farmer have in preserving the game if he had the letting of it, and derived a benefit tantamount to the care he took in doing so? And on a farm of three hundred acres, suppose that a reduction of rent equal to ten per cent, or 30*l.* is necessary, might not the landlord save the greater part of his loss to himself by allowing his tenant to make a profit of the game? Eighteen pence an acre for the game (and this is not a high price in a sporting country) would produce 22*l.* 10*s.* no small part of the reduction. To give an instance within my own experience.—I have rented for several years past, and still continue to rent; the shooting over six hundred acres of land, as well stocked with game as any sportsman can wish to have, and for this I pay 45*l.* a year, the tenant renting the game from his landlord (who lives at a distance), for a much less sum, and profiting by the difference. I believe this farmer now has the game in lieu of a reduction of rent, and he thus gets his farm for 45*l.* a year less rent, while his landlord loses nothing. Before I made this arrangement with him he wished all the game on his farm destroyed, but now, having a benefit in preserving it, he thinks he cannot have too much. I repeat, then, that where the game is to be let, landlords should always give their own tenantry the preference, and allow of their letting it or retaining it on their own account. I may appear perhaps to speak somewhat authoritatively on this point, but I have tried each plan myself, and have often known it tried by others, and the result has always been that notwithstanding every liberality shown towards the tenantry, they felt that where the game was let to a stranger, they were paying a full rent for their farms, while the landlords was making a second additional rent of from eighteen pence to two shillings an acre out of the farmer's produce; and consequently there was a direct motive for them to feel discontented, and destroy, rather than preserve, the game.

Yours.—

A SHROPSHIRE SPORTSMAN.

## NATURAL HISTORY OF SPORTING.

THE BLACK SQUIRREL

**E** are not, within our own experience, aware whether the pretty specimen of Squirrel, from which the figure before us was drawn is, strictly speaking, a native of this island. True we have seen squirrels of various tints, grey, foxy red, nearly black, and in the Northern part of Hampshire (the writer's native county) many of the squirrel have white tails; yet although assured by a London dealer that the animal in question was bred here, we suspect him to be of Yankee parentage, as black squirrels are very numerous in the New World. Dr. Bachman of Charlestown, S. Carolina, has written upon the subject of the squirrel, and from him, as better acquainted with the black and grey squirrel, we condense the following.

These elegant animals are distributed throughout every quarter of the world, Australia excepted. The general characters of the true squirrels (as exhibited by our well-known British species,) are familiar to all: its fine full eyes, its light contour, activity, its deep soft fur, and long bushy tail, have contributed to render it a general favourite. They are furnished with proper clavicles, or collar-bones, and possess the use of the fore-arm and paws in a high degree of perfection; the toes are four, with the rudiment of a thumb, on the feet; five on the hind five; the claws are sharp and hooked. Ears often tufted with a pencil of long hairs. In feeding, these animals sit up on the haunches, and hold their food (nuts, &c.) not between the fingers of their joined fore-paws, but between the rudimentary thumbs, while they work at it with their teeth.

According to the author above mentioned, several species of black squirrels exist, totally distinct from each other, and of these some are mere varieties. Of the genuine species he notices the large Louisiana black squirrel, the black squirrel, and the dusky squirrel. There is a black variety of the fox squirrel, and a black variety of the Northern grey squirrel which we take to be the sort delineated in our cut. The grey squirrels are numerous, and perplexing to the naturalist. The Northern grey squirrel has been, for instance, confounded with the Carolina grey squirrel, from which it is distinct. The Northern grey and black squirrel is a very common species, and exceedingly active and sprightly. It is spread through the Northern and Middle States: it is abundant in New York and in the mountainous parts of Pennsylvania, and extends as far north as Hudson's Bay: southwards, it occurs in Virginia, and perhaps still farther south.

## THE GREY SQUIRREL.

Like all the true squirrels, this species is arboreal in its habits, quick, and alert:—it rises with the sun, and continues industriously engaged in search of food during four or five hours in the morning, running over logs ascending trees and playfully coursing from limb to limb. During the warm weather of spring it prepares its cradle or nest on the branch of a tree, constructing it of dried sticks which it breaks off, or, if these are not at hand, of green twigs as thick as a finger, which it gnaws from the boughs. These it lays in the fork of a tree or of some large branch so as to make a framework: it then lines this framework with leaves; and over these again spreads a layer of moss. In the preparation of this nest, a pair is usually engaged for an hour in the morning, during several successive days, and the noise they make in cutting the branches and dragging the leaves may be heard at some distance. In winter they reside entirely in holes of trees, where their young in most instances are brought forth. The young are from four to six in number; and in a few weeks are sufficiently advanced to leave their nest. It is generally believed that this squirrel lays up a great hoard of food as a winter supply.

Further on the Dr. states that these which inhabit the southern portion of the United States, where the ground is seldom covered with snow, de-

rive in winter a precarious subsistence from seeds, insects, and worms, which are scratched up among the leaves: we may here observe that, singular enough, no one has noticed the fact, except Mr. C. Coward ("Mag. Nat. Hist." New Series, June, 1839, p. 311), of our common British squirrel being carnivorous as well as frugivorous; such is, however, the case: it attacks young birds, and greedily devours them; nor is the wood-pigeon safe from its assaults. The Northern grey squirrel feeds on nuts, and various seeds, but it seems to prefer the shell-bark, and the several species of hickory, to any other food. Green corn and young wheat suffer greatly from its depredations, and hence war of wholesale destruction is everywhere waged against it. In Pennsylvania an old law existed offering threepence a head for every squirrel destroyed; and in 1749 the enormous sum of 8,000*l.* was paid out of the treasury for the destruction of these depredators. The extensive migrations which are undertaken by this species, either from a scarcity of food, or from some other inexplicable cause, have often excited not only wonder, but apprehension. They generally take place in Autumn, but by no means with regularity. It would appear that in the far north-west multitudes congregate in different districts, forming scattered troops, which all bend their way instinctively in an eastern direction, collecting into larger bodies as they proceed: neither mountains nor rivers stop their progress; onward they come, a devouring army, laying waste the corn and wheat fields of the farmer; and as their numbers are thinned by the gun, others fill up the ranks; few, perhaps none, ever return westwardly; those that escape the carnage take up their abode in the forests of their newly-explored country. The grey squirrel has many enemies; the fox, the lynx, the weasel, hawks, and owls, are all eager to seize it: when attacked by the red-tailed hawk, its most formidable foe, it is amusing to see the skill and dexterity exercised by both, in the attack, and in the defence; often, indeed, the squirrel, by dodging and twisting round the branches and large limbs of the tree, foils and wears out his antagonist; when, however, a pair of hawks combine, the squirrel has no chance. As we propose, in Number 29, to give a figure of the Common SQUIRREL, we shall postpone a few anecdotes and particulars of our native, lively, and pretty specimen of the "tree rat," the only one of the rat species (except white and China mice) that has attained the privilege of a domestic favourite.

## Reminiscences of Racing and Racers, in 1845.

(For the Sportsman's Magazine.)

BY SOOTHSAYER.

(Continued from page 435.)

After a race for the Subscription Plate carried off by Little Finch, and a match between Prologue and Energy which was won by the former, a Sweepstakes of 100 sovs. each, seven subscribers, came off. The only horses brought to the post were Idas and Wood Pigeon; the betting was four to one on Idas, who won easily; the distance was about a mile—There cannot be a doubt but that the appearance of Idas, after the late severe weather, was most creditable to his trainers, and it elicited warm applause; he became a decided favourite for the 2,000 Guinea Stakes, and mended his position very much for the Derby. For the Claret Stakes the Cure beat Antler easily.—Cowl won the Stanhope Stakes, and Red Deer the Port. For a Handicap Sweepstakes of 15 sovs. Queen Mab was placed first; this mare, formerly called Eliza, used to be hacked about at the East Surrey, &c., but was bought by Mr. Payne, whose property she now is, who gave her a new name, and has found her a profitable investment. This closes the Craven Meeting.

It is not without some difficulty I make my selection of reminiscences; I am anxious not to neglect the provincials, yet find, at the same time, that there is sufficient food for contemplation in the large and more notorious meetings. I trust therefore that your readers will not feel disappointed though some races of local interest may not appear to have received their due; their own reminiscences, I doubt not, amply supply what mine do not afford.

With this feeling I shall mention merely that at the Durham races, April 17, Beaufront, who ran in the Derby in Orlando's year with very indifferent success, won two races very cleverly.

At the Bath and Somerset Meeting, April 22, Worthless won the Produce Stakes of 50 sovs. each, and ran a mile very fast. It was this race which got him friends for the 2,000 Guineas, and the Derby.

I must now draw the attention of your readers to the few observations I shall take occasion to add on any race of two-years-olds; for it is probable, that if had in remembrance, with reference to the coming Derby and Oaks, their own reminiscences, should they be so lucky as to win, will be equally if not more agreeable to them than the perusal of mine. For the Weston Stakes, at the same meeting, 15 sovs. each, Princess Alice was first, by a head; Astonishment, second; Madcap, third. The two first are fillies and are both in the Oaks for 1846. Sweetmeat took away the Somersetshire Stakes from Young Lochinvar, St. Lawrence, and a lot more, by a length. The City Cup fell to Lord George who won with Plenitude. The Durham Park Stakes were won by Worthless, beating Miss Ellis and some others. At the Epsom Spring Meeting, April 25, Sir Gilbert was second with Gwallor for the Trial Stakes, and first with the Shirine Colt for a Sweepstakes. Mr. Mack's

filly Camel out of Chance, lost all chance for the Derby by his running here.

The Newmarket First Spring Meeting, April 28, was very well attended, and had of course, a great influence on the Derby. In a Sweepstakes of 50 sovs. each, Paultons beat Lyons and Scarmantado, and gave a finishing blow to the latter for the Derby. In another Sweepstakes for the same amount Maynooth beat Tunick, and was three or four points, in consequence, better for the Derby. April 29, the Coffee Room Stakes brought three to the post, which, after a waiting race with the two last, was won by Lyons, beating Prologue and Refraction. This race was taken by some, who only look at one, two, three, as deciding the fate of Refraction for the Oaks, but I cannot help dropping a word of advice to your readers who take an interest in these matters. In all cases let them read the account of a race or hear from an eye-witness, which is better, *how* a race is run. For instance in this race, Prologue and Refraction waited too long; and, Lyons, having S. Mann on his back, won by a head, the other not quite reaching him on the post. The next event was one of the most important of the year. I need hardly say I allude to the 2,000 Guineas. A large concourse of people assembled to see the horses saddled and cantered, the universal opinion being in favour of Idas whose form and condition were as much bepraised as they had been at the Craven Meeting. The post saw Idas, Wood Pigeon, Paultons, Worthless and Winchilea, ready for the start, and off they went—they had scarcely cleared away ere the victor was apparent; Idas, amid great shouts, winning by two lengths. His portrait appeared in *Bell's Life* and in your journal, No. 9, "SPORTING WORLD," and he became first favourite for the Derby. Idas however was not, in many eyes, a Derby horse; his heavy shoulders, springy pasterns and low heels being great defects; he was also pronounced "leggy." The 1,000 Guinea Stakes were won by Pie-Nic (by Glaucus) beating Pug, Heatherbell, Topaz, and two or three others; she is a little gay animal, a bad bay, with black legs but somewhat speedy. For the Newmarket Stakes Idas walked over.

The topic of the result of the 2000 Guinea Stakes at Newmarket, soon subsided, for that more important subject, the Chester Cup, which had indeed, been one of the most absorbing for a long time past in the sporting circles.

On May 6th, the Chester Races opened with the Grosvenor Stakes, for which A-la-mode, (Mr. Mostyn's,) beat Coranna, Poussin, and another. For the Produce Stakes, 50 sovs. each, Queen Pomare beat her only other competitor, Lena. For the Plate 100 guineas, Alice Hawthorn beat Naworth—her last triumph of any moment. A Sweepstakes of 5 sovs. each, 50 added, brought a middling lot to the post. Freeman beat Psalmisger after a sharp contest, Mainstay, and a good lot more. For the Sweepstakes of 25 sovs. each, (2 year old) Princess Alice was first, The Traveller second, Curiosity third—Sotenus and Brutus, and a colt by Stockport Manila, beaten off. The race for the Cup took place in a shower of rain, with Kitchener on Fittallen, who got a regular soaking, as did the others; but such a "little one" could not assist his horse much, if at all, in the last half mile, however he got a place. Intrepid, a horse entitled to be entered as half-bred, was first, St. Lawrence second, Milton third. Intrepid, in point of fact, is as near thorough-bred as seven-eighths can make him. The Bat ran a match with Agriculture, and beat him, fulfilling the old adage, "none so blind as those who won't see." The Members' Plate was won by Dog Billy. The Marquis of Westminster's, by Milton. For the Dee Stakes, Coranna beat A-la-mode, and three others. Libel won the Chester St. Leger in a very fast race, beating Hope, Miss Ellis, and several others; he immediately became quoted for the Derby, and in my judgment, very properly and fairly so. His running before and after the Derby (shows him to be a good horse; how it happened that he was last for the Derby, I leave to a fair explanation, if it can be given; I doubt it. There were some other races at Chester I have not immediately in recollection. Ould Ireland, an importation from the Emerald Isle, and a failure for the Cup, beat a good field for a Free Handicap of 10 sovs. 50 added; he and Semiseria ran head and head for half-a-mile, but Ould Ireland put his nose in a front in spite of Nat, who rode Semiseria, and was declared on the post a winner by "half-a-head." Malt and Andrew Brandy, (2 year old,) ran in a 3 and 2 years old Stake, and were beaten; Hope first, The Hermit, another Irishman, second. For the beaten horses, Cour de Lion got a shave in the shape of 40 sovs.

The New market second spring, May 13, brought out nothing new; but I will just remark, that the Duke of Bedford and Lord Exeter made up a match between Prologue and Lyons; and, with reference to my remarks on the race between the same horses at the First Spring, it is as well to observe, that Prologue beat Lyons by three lengths easily. Queen Mab, 7st. 3lb. won the Suffolk Stakes, beating a good field; among them Alice Hawthorn, 9st. 9lb. rode by J. Day, jun.

Manchester Races, May 13th, brought out a fair field for the Cup, which was carried off by The Best of Three. Lord Harry, by Recovery, won the Victoria Stakes easily; he is a two year old. Cour de Lion, beat Trueboy, over 3 miles and a distance. The Broughton Stakes were won by Best of Three beating Montpomerie and others. Queen of Tyne beating David, Trueboy, and Dr. Husband, won 100 sov. specie, (Cup,) added to 15 sovs. each.

In my next communication, I may probably reach and dispose of the Derby for 1845.

## WRINKLES FOR THE GROOM—NO. VII.

### STABLE OPERATIONS IN WINTER.

N this season of mountain skies and low temperature, we feel sure that a few practical observations on this important subject, by the neglect of which more horses are lost than by serious accidents, will be acceptable in the cento of facts and scraps which we have collected under the above head. And first, of—

#### REMOVING THE MUD.

There are two ways of removing the mud. One may be termed the dry, and another the wet mode. The first is performed by means of the scraper and the currycomb, or a kind of brush made of whalebone, which answers much better than the currycomb. In most of the well-regulated coaching stables, the strappers are never allowed to apply water to a horse that has come off the road. The usual practice is to strip off the mud and loose water by the sweat knife; to walk the horse for about ten minutes, if he be warm or wet, and the weather fair, otherwise he stands a little in his stall, or in an open shed; then the man begins with the drier of those that have come in together. Much of the surface mud which the scraper has left about the legs is removed by a straw wisp, or a small birch broom, or the whalebone brush; the wisp likewise helps to dry the horse. The whalebone brush is a very useful article when the coat is long. That, and the currycomb, with the aid of a wisp, are almost the only implements coaching strappers require in the winter season. It clears away the mud, and separates the hairs, but it does not polish them. A gloss, such as the coat of these horses requires, is given by the wisp. The whalebone brush is sometimes too coarse, and many horses cannot bear it at any time, while others can suffer it only in winter. After the mud has been removed with this brush, the matted hair parted by the currycomb, and the horse dusted all over with the wisp, his feet are washed, the soles picked, the shoes examined, the legs and heels well rubbed, partly by the hand, and partly by the wisp, and the main and tail combed. In the best stables he is well dressed with the bristle brush before he goes to work. In other stables the usual mode of removing mud is by—

#### WASHING.

When the horse is very dirty he is usually washed outside the stable; his belly is scraped, and the remainder of the mud is washed off at once by the application of water. Some clean the body before they wash the legs, but that is only when there is not much mud about the horse. They do so that he may go into the stable quite clean. He soils his feet and legs by stamping the ground when his body has been cleaned. It matters little whether the dressing commence with the body or with the legs; but when the legs are washed the last thing, they are generally left undried. In washing, a sponge and a water brush are employed. Some use a mop, and this is called a lazy method; it is truly the trick of a careless sloven; it wets the legs, but does not clean them. The brush goes to the roots of the hair, and removes the sand and mud, without doing which, it is worse than useless to apply water. The sponge is employed for drying the hair, for soaking up and wiping away the loose water. Afterwards, the legs, and all the parts that have been washed, are rendered completely dry by rubbing with a straw wisp, the rubber, and the hand. Among valuable horses this is always done; wherever the legs have little hair about them, and that little cannot be properly dried after washing, no washing should take place.

#### WET LEGS.

It is a very common practice, because it is easy, to wash the legs: but none, save the best of stable-men, will be at the trouble of drying them; they are allowed to dry of themselves, and they become excessively cold. Evaporation commences; after a time a process is set up for producing heat sufficient to carry on evaporation and to maintain the temperature of the skin. Before this process can be fully established, the water has all evaporated; then the heat accumulates; inflammation succeeds, and often runs so far as to produce mortification. When the inflammation is slight and transient, the skin is soon completely restored to health, and no one knows that it had ever been inflamed. When the process runs higher, there is a slight oozing from the skin, which constitutes what is termed grease, or a spot of grease, for when this disease is spread over a large surface, it is the result of repeated neglect. When the inflammation has been still more severe, mortification ensues; the horse is lame, the leg swollen, and in a day or two a crack is visible across the pastern, generally at that part where the motion is greatest. This crack is sometimes a mere rupture of the tanned skin, but very often it is produced by a dead portion of the skin having fallen out; what is called a core in the heel arises from the same cause; it differs from the crack only in being deeper and wider. The reason why cold produces such local injury of the skin covering the legs, and not of that covering any other part, is sufficiently plain. The legs, in proportion to their size, have a very extensive surface exposed to evaporation, and the cold becomes more intense than it can ever become on the body. To avoid these evils, the legs must either be dried after washing, or they must not be wet.

The subject of our next wrinkle, will be clothing a wet horse.

## TO CORRESPONDENTS.

- S. R. T., Manchester.—What makes you think so? We hope that "suspicion," which Shakespeare says "doth ever haunt the guilty mind," does not prompt you to think evil of others. Prove your assertion (for at present it is mere assertion), and we will insert your communication.
- E. M.—He is a pot-house sportsman, and prates on points beyond his purlied ken. The *Railway Director* has communicated the earliest information to the public upon two or three great racing events, owing to the exertions of Mr. J. K. C.—As to his account of the fight of Cant and Bendigo, the writer of this was the only reporter who reached London on the night of the fight in time for a report, the first of which appeared in the *Morning Advertiser* of September 10th, whence it was copied into the evening papers of the same day. The fight was over about three minutes past six, nobody started from Wolverton till the nine o'clock up-train; and we saw the only reporter who could have supplied the information left belated, by his own consent, as no object (for his establishment), could be attained in hurrying on after a fatiguing day. Ignorance is always positive; and the murky half-light of the Adelphi is likely to breed nought but sporting ows.
- W. W.—It is "Badminton."
- HALIENS.—Assuredly not. A whale is not a fish: there are certain peculiarities (branchies, or gills, cold blood, the absence of a heart, generation by spawn, or ova, the absence of mamma, or breasts, &c.) which go to forming a fish, all of which are not present in the whale; it is, therefore, not a fish, but one of the mammalia.
- A. SUSCRIBER, Cambridge.—In the "Life Guards" and "Blues," which are mounted grenadiers, six feet is the understood standard; but fine grown healthy young men a trifle below that height are taken. There is no "first royal Hussars." All the Hussar regiments are "light dragons," and five feet eight-inch men are not refused, if otherwise eligible; though five feet nine inches are preferred. The age is regulated by the call or demand for men, and other considerations. Under twenty-five, we should say.
- A. YOUNG SPORSMAN, Devon.—Certainly, the whole of the parties, save and except the "lord of the soil," and his servants duly authorized, are liable to an action; but where is the churl who would bring it, or the jury that would award damages? even the second-named are liable in law to pay for any damage they may do in pursuing their diversion.
- A. SNOR.—In tossing, "Victoria" is now head, and the reverse, tail. The quibble is almost unworthy an answer.
- THE RIVE.—Cannon and Ned Neal fought for 100*l.* at Warfield, Berks. The latter was the winner. Jack Randall fought Ned Turner but once, he fought Martin twice.—Ward fought Cannon on the 19th July, 1835.—Dear Burke did not kill Simon Byrne—according to the verdict of a jury.
- R. N.—In answer to the question from "Beeth Ferry," the stakeholder was perfectly justified in giving up the money he held to B; but B cannot recover the remaining 1*l.* from C, the money down being his only forfeit.
- BELLARS.—W. S.—The striker is 40; a game of 50, he makes a white hazard, but, in withdrawing his cue, touches the red ball—is it a foul stroke?—Yes.
- A. GROOM.—Center is a bastard gallop, and not one of the natural paces of a horse.
- R. ENDBELL, Liverpool.—Try your luck—don't say we banished you—but the chances are against you, as 10 to 9.
- SYNTAX.—A literary gentleman of vast experience once said "The labour of an editor by no means consists in what he has to write, but in what he has to read." The lengthy communication of Syntax must have cost him much pains, and for the instant we thank him. But we can lay our hands upon all his information, in a vastly better form in printed books. There is not even a spice of novelty in his "facts."
- SOUTHERNER.—Many thanks for your punctuality and promptitude.
- A. NORTHERNER.—Why should we repeat the answer? Widdemere is in Lancashire.—We know nothing of the Memorial Laws of Troutbeck, Westmoreland.
- C.—If I find a hare or rabbit with my bagpipes, my own ground, can I follow it off my land, without my gun, for the purpose of getting my dogs back, without being deemed a trespasser, having leave of the farmer?—Yes.
- QUESTIONER.—It is Madeira, and not Sherry, which is improved by a voyage to the East Indies. Sherry comes direct from Spain, at least it ought to do so.
- T. B.—CRIBBAGE.—In cutting for partners at Cribbage, the King, and Queen, and the Knave, and Ten, are all tenth cards, and the parties must cut again. Three threes and two aces count eighteen at Cribbage.
- F. R. S.—B must pay the penalty of his own carelessness.
- E. C. R., Coventry.—We shall report the fight of Gill and Norley in the Stamped Edition of No. 28. The Gamecock began in No. 17, and has been continued with a few intermissions, to No. 26. All back numbers are in print.
- ENIGMA.—Write to the Editor of the *Erra*; he will answer you, doubtless.
- E. C. S.—The leading rabbi with many others, is a *fast* horse head. Bet him next time he obstinately offers it; it is not a bubble but a fair and legitimate wager.
- H. B., Derby.—See No. 12 of THE SPORTSMAN'S MAGAZINE.
- AN EAST-ENDER.—You cannot go to a better house for Sporting information, or a jolly straightforward boniface, than Tom Parish's, the White Horse, in Fann-street, Aldersgate.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

- SUNDAY, NOV. 23rd.—TWENTY-SEVENTH SUNDAY AFTER TRINITY.  
We know it is good that old winter should come,  
Roving awhile from his Lapland home;  
'Tis fitting that we should hear the sound  
Of his reindeer sledge on the slippery ground.  
For his wide and glittery cloak of snow  
Protects the seeds of life below;  
Beneath his mantle are nurtured and born  
The roots of the flowers, and germs of the corn;  
And the whistling tones of his pure strong breath  
Blow purging the vapours of pestilential death.
- MONDAY, 24th.—Baldock Champion Coursing Meeting.—Treaty with China, 1842.—Peace concluded with U. S. of America, 1814.
- TUESDAY, 25th.—Gill (of Coventry), and Norley of Manchester—see our report on the 27th.—Michaelmas Term ends.—Haddiscoe Steeplechase.—Lytham Champion Coursing Meeting.
- WEDNESDAY, 26th.—Lancashire Coursing Meeting.—Great Storm of 1703 began.—Sir James Graham recommends the abolition of the evening sittings at the Old Bailey, 1844, that criminals may not be sent across the sea while their judges are "half-dead over."
- THURSDAY, 27th.—Remember our Stamped Edition with report of both the *Fights* of Tuesday 26th, can be had by order.—Brompton Coursing Meeting.—Great eruption of Vesuvius, 1786: a great many unfortunate people in the neighbourhood took a drop too much of the crater on this day.
- FRIDAY, 28th.—Morpoth Coursing Meeting (and 27th).—Facetious *Fancies* for the *Gloomy Week*.—Gardening.—On rainy nights get in late *bananas* and supply cad with chaff. If full take up sixteenth inside and shake down for elbows. Turn down courts to avoid creditors, add turn up everywhere to avoid lawyers. Bills should be taken up as soon as they fall due, and when a crop of coins has been once raised from paper, care must be taken not to exhaust the ground. This is the usual season for dressing Guys, which, when carried, may be garnished with lantern and matches as usual.—*Notes of a Naturalist*.—The late Lord Mayor now begins to migrate, and the turtle which arrives about the month is the welcome harbinger of a succesor. Tradesmen, field-larks, snipes and managers, now present their long winter bills to our notice, and very few beauty spots are seen on the face of nature.
- SATURDAY, 29th.—Polish Revolution, 1831.—Annual Ball at Mansion House.—Oliver Goldsmith born, 1730.—Cool *Impudence*.—Yesterday an individual of dashing exterior presented a shilling to the toll-keeper of Waterloo Bridge, and sarcastically demanded change. The toll-keeper's nose turned blue with indignation, or the north-east wind it is not clearly ascertained which.—Last Day's sale of our ALMANAC with No. 28 of the MAGAZINE.

## A RHYMED APPEAL THAT WAS MEANT FOR PROSE.

HALL we, or shall we not? Such was the question we asked ourselves. "Good wine needs no bush," said Vanity; "you have been long enough before the public." "But," said Modesty, a safer and more useful prompter (save with railway directors, stage, incompetent engineers, sham surveyors, *et hoc genus omne*), "your quality is known; you are proved, tried, and the commendations of the judicious should prevent self-praise." "True," said moneyed Prudence; "yet there are other things in this working-day world to think of. You start a publication, but will the trade sell you? will they supply your customers if you are not of them and with them—the property of one or other of the publishers?" We know not and care not. Let every purchaser (and we know of many) who finds any difficulty in procuring either current or back numbers write to our office, 42, Helywell-street (forwarding the name of the vendor in the town), and we will take care to communicate directly with him. Thus much of prose.

The printer's proof of our Almanac lies before us. Why is it we asked the question—Shall we, or shall we not? Because,—

"E'en now, while looking on this sheet of paper—

This transformed rag, which lies beneath our nose,

Our meek, internal spirit cut aasper,

Yet why or wherefore heaven only knows!

Doubtless 'twas for that, by our midnight taper,

Th' ALMANAC we've promised finds its close;

We care not (save the friends we seek to please)

If almanacs were gone to — take their ease.

We've not quite cursed—altho' in verse Byronic,

We've told you how we feel. Come, chat awhile,

But pritheo do not think our strain ironic,

Because we lighten labour with a smile.

We don't believe in soft soap as a tonic

So take "French leave" to speak plain truth in style

Of a plain friend, who started in plain prose

But's got poetical—and so, "here goes!"

For numbers TWENTY-SEVEN we've been amusing

With turf-exploits, with Mills, Regattas, Races,

With Angling Oddments, "Wrinkles," "Hints," and Bruising,

Chronologies and Chants, Fast-trotting, Steeplechases,

The GUN, the Bow, the SWORD—not choosing

'E'en to forget "the Stick;"—with cuts of Sporting Faces;

The Badger too we've "drawn," and eke the Dog;

Still going, in sporting matters, "the whole hog."

SONG-BIRDS—the GAMECOCK, too, we've "handled,"

What yet remains to do, we'll cheerily meet,

So that, for Pleasure's trip, or toll, we're sandalled,

And thus or rough or smooth we'll gaily greet,

And though we've not the GRAYHOUND puppy "dandled,"

We'll show you how to breed the "long tails" fleet;

So at each Coursing Meet you'll scarce be seen

Without a copy of our MAGAZINE.

The HORSE too, noble brute, shall be our care,

Not canting, whining, o'er his fancied woes,

But doing still our best to teach whate'er

Experience, or sound practice clearly shows

To be the best. And here, regardless of false friends, or foes,

We'll tell, as sure as the 'eating proves the puddin',

How he who reads may learn to choose "a good 'un."

Then, as the pictorial—Don't you think,

We've done our best to keep it up with any

Who in the line of Sport have shed their ink,

To give you aye a penn'orth for your penny?

Of bird, or beast, or fish, we've made no mystery,

But given you, each week, their "Natural History."

Suggest, good CORRESPONDENTS, pray suggest,

Wherein you think our Magazine deficient;

Your promptings you shall find, among the rest,

Shall be to us as a command efficient;

Give us the hint, and although first you move it

It shall go hard if we do not improve it.

Then, as to this same number, worthy buyer—

'Tis you we look to—for as "length of days

Attend the good," so even, by his hire,

Must the poor penman live; and empty praise

'Gainst solid pudding still doth kick the beam,

So by his sale he fain must judge of your esteem.

"Farewell! a word that has been and must be,"

Try short or long—a week or rolling years—

You've spent your threepence—doth it anger thee?

Tr then a sixpenceworth with our compeers,

And if they beat our Almanac, disown it;

"Our head shall still go bare till merit crown it!"

Almanac Day, Nov. 20, 1845.

## GALLERY OF SPORTING CELEBRITIES—NO V.

GEORGE OSBALDESTON, ESQ.

HE "Old Squire"—old in years but green in spirit—here stands before us. When Dan O'Connell boasted himself as "the best abused man in all Europe," he did not foresee the "ballyraggin," that would fall to the share of the subject of our sketch, because he kindly consented to accept the office of "referee," on the occasion of an important pugilistic contest, when other gentlemen declined the thankless appointment. However, the "old Squire" has energy mental and bodily to laugh at his assailants and impugnors. He did his duty faithfully and fearlessly, in an unpleasant and unenviable position, and the "mens conscia recti" supports him, in his indifference to aspersion and slander. Losers will grumble, it is their privilege, and it must be left them.

Whether we regard Mr. Osbaldeston as an accomplished shot, a follower of the chase, the turf, or the road, he has few equals. It has been jocosely said of him, that he must be "copper bottomed," or he could never have stood all his work in the saddle—we allude to his celebrated feat at Newmarket, of riding two hundred miles in eight hours and

forty-two minutes. But we wish to give him no super-human advantages. He is (in point of labours) a sort of modern Hercules, and his name will live when those of prouder title are forgotten.

As a true British sportsman, Mr. Osbaldeston stands unrivalled; and no matter what the game is, he is sure to be at it. With him no season is too long, nor does any pass away in anxious expectation of the next. "Carpe diem," seems to be his motto and in "summer's heat and winter's cold" he is ever in active employment. What a life of exertion he has led! having hunted all the best countries in England—Nottinghamshire, Leicestershire, Lincolnshire, Northamptonshire, part of Warwickshire, and had a turn in the rural Hambledon country in Hampshire. By hunting a country we do not mean finding the "wherewithal," and being simply the "magnus Apollo" of the field, like many masters of hounds—but we mean the actual physical labour of hunting a pack of fox-hounds, an attempt which many have made and but few succeeded in—and in this department no days have ever been too long for him, nor have they come too close together. "Good stuff," they say, is put up in small "bundles;" and this is the case with Squire Osbaldeston, who, under the middle stature, has the strength and pluck of two single gentlemen rolled into one;—and long may he enjoy it.

## THE FISHER'S CREEL.

## SEA ANGLING.

SIR,—Seeing in your Magazine of last week in answer to a subscriber, Hammersmith, that you know of no work devoted to sea angling, I beg to mention, that if he can obtain "Brooks's Angler," he will find all he wishes to know. It is an old book. Being an angler myself, I would wish to furnish others with information, where it lies in my power. In No. 22 you proposed "to speak more fully on trolling;" I have anxiously looked for it, but have not seen anything of it. As Jack fishing is now in its prime, I do not think you will find a more fit time for the subject, Yours, A JACK FISHER.

Præd-street, Paddington, Nov. 12, 1845.

[The "Jack Fisher" shall find we have not forgotten trolling. Pressure of matter has delayed the article. Has he Numbers 4 and 5 of this Magazine? He will there find a few illustrative cuts, as well as a say on the subject.—Ed.]

## PIKE FISHING.

SIR,—In answer to the inquiry of a correspondent, as to when he may get some good pike fishing within twenty-five miles of London, I beg to inform him, that from my own experience, I can safely recommend him to try the river Wye, which goes through the Broad Mead at Woking, in Surrey. Let him go by rail (Southampton), and a half-hour's gentle walk from the station will take him to the village. I would advise him to call on Joe Groves, a good tempered fellow, and a constant troller thereabout, who will cheerfully put him *fly* to every angle where he is likely to find good sport; and will most likely take a cast with him. He will find three hostels in the village, but I should recommend the "Crown and Anchor," as being nearest the water, and possessing the most civil host.

There are here three waters, viz.—the Wye, the Canal, and the Old Water, in the latter of which it is necessary to ask for permission to fish, which, however, is never refused by its liberal owner, Captain B—.

Wishing your correspondent good sport, I am, yours, &c.

NED RUB.

BLEEDING AT THE NOSE.—Bleeding at the nose, if it be ever so violent or protracted, may be permanently stopped by the individual using some salted dried beef, which has been grated fine with a nutmeg grater, in the same manner as he would take snuff. Two or three pinches are said to be sufficient to stop any fit of bleeding.

SPECIMENS OF FINE WRITING.—Mild is the vapour of the choice cigar, but the voice of woman is drawn milder still. Sweet are the accents of a young and lovely girl tremblingly yielding the responsive "yes"—sweet as the first fond breathings of May morn—but, oh, how harsh to the reflective mind is the upptone of the landlady, who desires the settlement of her six weeks' rent. The first is as the lake which incloses its beauty in its placid silence; the last as the cataract which roars louder as it descends.

NIAGARA.—I visited the Falls quite unprepared for the startling effect I should experience. Whish, whash, whush—squish, squash, squash—whiz, wang, whang! These and a thousand other similar sounds vibrated in my ears. I looked upwards—sky, sea, and air. I looked downwards—air, sea, and sky. And then there was a rush—and a gurgling—and a splash—as if the mighty Ontario had got a sore throat, and was having a gigantic gargle. It was a terrific scene—a magnificent affair altogether—the sort of thing that would astonish a fellow in Piccadilly; but here, where all is grand, great, and glorious, it is a mere matter-of-fact—a dash of common-place. On quitting the Horse-shoe Fall, it began to rain hard, and as the setting sun scattered its last rays on the folds of my umbrella, I could have wished that a Patent cab could have been returning to Saratoga, and that there had been just room for one inside,—*Lyall's North America*.

## BRITISH BIRDS NO. XXI.

THE RUFF.

**T**HIS pretty and pugnacious bird, the female of which is termed a REEVE, is a bird of passage. In times of yore, ere improved drainage had diminished their haunts these pretty little birds were innumerable plentiful. The Ruffs and Reeves arrive in the fens of Lincolnshire, the Isle of Ely, and the East Riding of Yorkshire, in the spring, in great numbers. In the course of a single morning there have been above six dozen caught in one net, and a fowler has been known to catch between forty and fifty dozen in one season.

The ruff is scarcely so large as the common snipe, with a bill about an inch long. The face is covered with yellow pimples, and the back part of the head and neck are furnished with long feathers, standing out somewhat like the ruff worn by our ancestors: a few of these feathers stand up over each eye, and appear not unlike ears. The colours of the ruff are in no two birds alike: in general they are brownish and barred with black, though some have been seen that were altogether white. The lower parts of the belly and the tail coverts are white. The tail is longer than in the snipe, having the four middle feathers barred with black; the others are pale brown. The legs are of a greenish yellow, and the claws black. The female is smaller than the male, of a light brown colour, and destitute of the ruff on the neck. The male bird does not acquire his ruff till the second season, being till that time, in this respect, like the female, as he is also from the end of June till the pairing season, when Nature clothes him with the ruff, and the red pimples break out on his face; but, after the time of incubation the long feathers fall off, and the carbuncles shrink in under the skin, so as not to be discerned.

There are two passions which seem to determine the movements of all animated existence, and these are, the appetite for food and love. All other considerations yield to these, which exercise over the animal nature a powerful and enduring mastery. It is difficult to say which of these is the stronger, but perhaps the necessity of existence is that which operates most continuously, and is therefore entitled to the first place. But the other passion, that of love, is not less remarkable. The changes it produces in the very form of the animal are truly wonderful. In this season of the affections, the animal puts on his noblest aspect, the bird its brightest plumage. The creature, which before started at the quivering of the aspen leaf, becomes energetic, courageous, and even void of fear. The changes in the plumage of birds are in no case more remarkable than in this which visits our shores about this period of the year,

and which may be seen somewhat plentiful in the markets at that time. This bird, which belongs to the tribe of sandpipers, is known in the male as the Ruff, and in the female as the Reeve. The distinguishing name is given to the male bird on account of the peculiarity of his head gear at this season. Like all other sparks who "go a courting," he is arrayed in his very best suit of Sunday, or more properly, summer clothes. Round his neck he wears a ruff, somewhat similar in shape to that worn by the virgin queen of England, Elizabeth, of vast size compared with his own bulk, and altogether a very singular addendum to his ordinary clothing. In addition to this, a space round the eyes, which is void of feathers, becomes at this same period of a bright red colour and covered with small tubercles. And when to this imposing mien you add the pugnacity of his disposition, he is altogether as gallant a lover as the days of chivalry could ever boast. Linnaeus was happy in his nomenclature when he called this little fighter *Tringa pugnax*, or the pugnacious sandpiper.

According to the accounts of those who have written on the subject, the ruffs are much more numerous than the reeves; and on this account, severe contests frequently ensue between the males. The ruff chooses a stand on some dry bank, near a splash of water, round which he runs so often as to make a bare circular path. The moment a female comes in sight, all the males within a certain distance commence a general battle, placing their bills to the ground, spreading their ruffs, and using the same action as a cock; and this opportunity is seized by the fowlers, who, in the confusion, catch them by means of nets in great numbers.

These birds are sometimes kept in a state of confinement, and fattened for the table with bread and milk, hemp-seed, and sometimes boiled wheat; but if expedition is required, sugar is added, which in a fortnight makes them a lump of fat. A remarkable trait in their character is, that they feed most greedily the moment they are taken; food placed before them is instantly contended for. Great nicety is requisite to kill them in the highest state of perfection: if the precise period be suffered to pass, the birds are apt to fall away. The method of killing them is by cutting off the head with a pair of scissors, and the quantity of blood that issues, considering the size of the bird, is very great. Like woodcocks, they are dressed with their intestines; and, when killed at the critical time, epicures declare them to be the most delicious of all morsels.

When in a state of confinement, it seems each ruff takes its stand in the room in the same manner as it would in the open fen; if another invades its circle, an attack is made, a battle ensues, and a whole room may be set into fierce contests by compelling them to move their stations. If the trough out of which they feed be not sufficiently large so as to admit the birds without touching each other, fierce contests immediately ensue; but it is not requisite that each bird should have a separate trough, or that they should be fed in the dark—motions which were for some time entertained respecting these birds.

Ruffs assume such a variety of colours that it is scarcely possible to find two alike; but the great length of the feathers on the neck, from which they take their name, at once distinguishes them from all other birds. This tuft and the feathers of the ruff are frequently of different colours in the same bird, while the ruff itself is of an infinite variety of dyes. Latham observes, that "of whatever hue the ruff may be, the breast differs very little, and the transverse markings on the upper parts of its plumage somewhat correspond, the ground tint being mostly brown." The tuft in the male is not a warlike ornament only, but a sort of defensive armour, which wards off the blows by the length, stiffness, and closeness of the feathers: they bristle in a threatening manner when the bird makes an attack, and their colours form the chief distinction between the individuals. It is not known with certainty where these birds pass the winter: they leave this country about Michaelmas.

For a detail of the curious method of taking these luscious titbits, we are indebted to Colonel Montague, whose statements in his Ornithological Dictionary is as follows.

The female, in the beginning of May, makes her nest in a dry tuft of grass in the fens, and lays four white eggs, marked with rusty spots. These birds are common in the summer season in the fens of Denmark, Sweden, and Russia, and are also found in other more northern regions, even as far as Iceland.

The trade of catching ruffs is confined to a very few persons. They live in obscure places on the verge of the fens, and are found out with difficulty; for few, if any birds, are ever bought, but by those who make a trade of fattening them for the table; and they sedulously conceal the abode of the fowlers; so much so, that by no art could we obtain from any of them where they resided; and in order to deceive us, after evading our entreaties, they gave us instructions that led us in quite a contrary direction. The reason of all this was obvious; for after much labour and search in the most obscure places (for neither the innkeepers, nor other inhabitants of the towns, could give any information, and many did not know such a bird was peculiar to their fens), we found out a very civil and intelligent fowler, who resided close to Spalding, at Fengate, by name William Burton (we feel a pleasure in recording his name, not only from his obliging nature, but for the use of others in similar pursuits); and, strange to say, that although this man had constantly sold ruffs to

Mr. Towns, a noted feeder, hereafter more particularly noticed, as also to another feeder at Cowbit, by the name of Weeks, neither of those persons could be induced to inform us even of the name of this fowler. The reason, however, was evident, and justly remarked by Burton, for he obtained no more than ten shillings per dozen, whereas Weeks demanded thirty shillings for the like number he had the same day bought of Burton. The season was far advanced, and we were obliged to buy some at that price of Weeks, for Burton could not then catch us as many as we required.

At this time we were shown into a room where there were about seven dozen males and a dozen females, and of the former there were not two alike. This intrusion to choose our birds, drove them from their stands, and compelled some to trespass upon the premises of others, produced many battles.

By this feeder we learned, that two guineas a dozen were now the price for fattened ruffs; and he never remembered the price under thirty shillings, when fit for table.

Mr. Towns, the noted feeder at Spalding, assured us his family had been a hundred years in the trade, and boasted they had served George the Second, and many noble families in the kingdom. He undertook, at the desire of the late Marquess of Townsend, when that nobleman was Lord Lieutenant of Ireland, to take some ruffs to that country, and actually set off with twenty seven dozen from Lincolnshire; left seven dozen at the Duke of Devonshire's, at Chatsworth; continued his route across the kingdom, to Holyhead; and delivered seventeen dozen alive in Ireland; having lost only three dozen in so long a journey, confined and greatly crowded as they were in baskets, which were carried upon two horses.

The manner of taking these birds is somewhat different in the two seasons; in the spring, the ruff "skill," as it is termed; that is, they assemble upon a rising spot of ground, contiguous to where the reeves propose to deposit their eggs; there they take their stand, at a small distance from each other, and contend for the females; the nature of polygamous birds. This hill, or place of resort for love and battle, is sought for by the fowler, who, from habit, discovers it by the birds having trodden the turf somewhat bare, though not in an exact circle as usually described.

When a hill has been discovered, the fowler repairs to the spot before the break of day, spreads his net, places his decoy birds, and takes his stand at the distance of about one hundred and forty yards or more, according to the shyness of the birds.

As we propose in next number to give an engraving of the female of this curious fen-bird, we shall conclude this article next week.

(To be concluded in our next.)

## CORRESPONDENCE.

### ON EXERCISE.

"Neque enim ulla alia re homines propius ad Deos accedunt quam salutem hominibus dando."—CICERO.

Sir,—Frederick the Great observed, that when he considered the physical structure of the human frame, it appeared to him as if "nature had formed us rather to be postillions than sedentary men of letters," which expression, though no doubt strong, is in a great measure borne out by the evident adaptation of our bodies for activity and exertion; and it is a curious and remarkable fact, and one that easily can be tested by all who choose to try the experiment, that any particular parts of the body that are made use of more than others, become by use more thick, muscular, and more capable of bearing long-continued exertion than they were before,—for example, the very powerful arms of our blacksmiths and sailors, and the extraordinary muscular development in the legs of opera dancers and others who exhibit feats of agility in public, and which I attribute entirely to the constant practice, and severe exercise to which they subject themselves, by which the muscles of the arms of the former, and of the legs of the latter are brought into play. Need I call to mind the difference in muscular power between the human right and left arm in support of my argument? which difference of strength in favour of the right arm is occasioned by the constant use from infancy upwards of the right hand and arm on almost all occasions, in preference to the left: for I consider the superior muscular power of the right arm to be the result of education, for when a child is not taught by his parents or nurse to use his right hand always, in preference to his left, he perchance uses his left hand on most occasions and hence becomes left-handed; or perhaps he becomes "ambidexter" from not using either in preference. These cases appear to prove that in infancy our arms are both equally strong, but that by education and practice either becomes nearly as strong again as the other. On joining a gymnastic class, in the course of the first month's practice the arm between the shoulder and elbow joints (the place of the biceps muscle), will increase from three quarters of an inch to fully an inch above its previous circumference, owing to the muscle being brought into full action; but it will not increase in the same ratio afterwards, as the nearer it approaches its full development the less will be the progressive

proportional change in size, but it will get much more firm. Again, if the usual quantum of exercise be diminished or left wholly off, the decrease in the firmness of the muscle will take place in an equal degree, though the size of the arm itself will not be much lessened. When commencing the practice of gymnastics the lungs soon become oppressed, the body perspires violently, unless care is taken to begin with the more gentle kinds; and the muscles over the whole body, for a few days at first, become stiff and sore, especially those of the arms, which are principally brought into play; but after a short period, if the exercise be persevered in daily, these symptoms almost entirely disappear, and he, who lately was fatigued with five minutes' practice, will, at the end of a month, be able to undergo the most violent kinds of exercise for hours; and if close attention to diet be observed at the same time, his skin will become beautifully clear and elastic, and totally free from all pustules or eruptions; and the hand of a man in good condition admits of the light of a candle being seen through it when held up between the eye and flame: his bones will become more tough and less likely to be injured by violence or accident, his chest will be expanded, and the size of the abdomen reduced, so as very much to improve the appearance and figure; but one of the most important consequences of regular practice at gymnastics, or other systematic exercise, is the improvement of the "wind" as without free respiration neither man, nor any other animal, can make long continued and violent exertion, without complete exhaustion.

There is not any nation that is so much addicted to exercise in its various modifications as the British, to which our naturally active dispositions, combined with the variableness of the climate, neither enervating the body by its extreme heat, nor chilling the blood by excess of cold, are chiefly conducive. It is generally observed that in cold climates so long as the people are uncontaminated by luxurious habits, voluntary exercise, even to fatigue, is customary; but when luxury, by enervating the body, renders it less capable of undergoing fatigue, the habit of taking regular exercise is left off, and thus the frame becomes less able to resist the attacks of disease. We are also most partial to exercise in the open air, with the healthy winds of heaven playing around, and invigorating us with their genial influence, which of itself I hold to be of infinite importance, as I am of opinion that a man derives more benefit from one hour spent in exercise in the open air, than from treble the quantity under cover. The various kinds of exercise, too, which are most usually practised in this country are, with very few exceptions, taken "sub dio"—and these most worthy of mention are: 1. Hunting, 2. Shooting, 3. Fishing, 4. what may be termed Simple Equestrian exercise in contradistinction, to its more violent twin brother "Hunting," 5. Walking, 6. Running, 7. Quoits, 8. Cricket, 9. Golf, 10. Skating, 11. Curling, 12. Rowing, 13. Swimming. I can only call to mind four varieties that are worthy of being practised by a man in-door, viz., Fencing, Dancing, Gymnastics, and Billiards, which last variety is particularly adapted for persons in delicate health, as it brings into play a large proportion of the muscles of the body, and engages the attention in an agreeable manner, while it does not distress by its violence as many others do. Exercise prevents disease, or rather perhaps fortifies the body against it. If good health were a commodity that could be bought like a box of "Morrison's or Parr's Pills, or other health-conferring nostrums, who is there that would not hurry to the mart and purchase eagerly, even though they were obliged to swallow the box as well as its contents at one unsavoury mouthful? But exercise, which would certainly produce the desired result in many cases, is despised and neglected, and people allow themselves to drag on a comparatively miserable "vegetable existence," and to drop into a premature grave, because they will not be at the trouble of taking the exercise that would assuredly lead to the enjoyment of a green old age; for, as Dryden says,

"The wise for health on exercise depend;  
God never made his work for man to mend."

By Chase our long-lived fathers earned their food,  
Toil strung their nerves and purified their blood."

A gentleman mentioned to me the other day, that the late celebrated Doctor Gregory, in the course of one of his lectures in the college of Edinburgh, stated, in his presence, "that a man cannot stand perfectly motionless, for half an hour; and that he (Dr. G.) had once tried it, and had fainted at the end of twenty minutes, for that the blood requires the aid of motion from the body in order to retain its full circulating power."

We read occasionally in the public prints of some person or other, who has arrived at a very advanced age, walking a considerable distance or perhaps reading very small print; and most assuredly we are to attribute the power of doing to the daily systematic exercise and, generally speaking, temperate habits of life to which that person was accustomed, and which had not only enabled him to reach his advanced age, but had preserved to him his faculties, and the power of continuing that exercise from which he derived so much benefit. Old Parr of Salop, who lived to the great age of 152 years, and Henry Jenkins of Yorkshire, who lived to the surprising age of 169 years, were both distinguished for their active and temperate mode of living. We read that in the early history of mankind disease was hardly known. And why was disease

and its attendant consequences so little known in those days? Because men were then more dependant on active exertion for their daily bread, and other necessities of life; the body by labour, i. e. exercise, was maintained in a healthy state; the pores were kept free, the proper circulation of the blood was maintained; the body itself was hardened by almost constant exposure to the open air, the digestive powers were strengthened, and all noxious humours dissipated by perspiration, which when retained in the system occasions a large proportion of "the ills that flesh is heir to." I shall now hasten to conclude, or you will be thinking that I have no occasion to take that exercise to improve my wind: take exercise at least once a day, so as to excite the natural heat, and other functions of the body; take that exercise which has the most general effect upon the system, and which induces you to be in the open air; be regular in taking exercise; do not take much exercise after a hearty meal; and when you do eat you may be assured that exercise adds more relish to your food than "the King of Oude's Sauce" or any other condiment of that description that ever was invented.

ACTIVITAS.

## HINTS ON PURCHASING HORSES FROM DEALERS.

"Let a thing be ever so simple, it is as well to use care and discretion about it as if it was of great import."—BACON.

SIR.—If the following remarks, in which utility rather than originality is aimed at, you are welcome to insert them.

In times of yore, before Mr. Rascal came to be noted in this part of the globe terrestrial, bargains in horseflesh were conducted with good faith by both buyer and seller. It never occurs in the law reports of two centuries back of a glandered horse being sold as a whole one; nor of wall-eyed Dobbin as a *sure-seer*. Oh no, our ancestors had more respect for their characters than to tamper with them; but with the rapid strides of improvement came roguery. First it began in small ways, then did it enlarge its-If until, at the present time, it has become an unconquerable giant—unconquerable, but not uneludeable, and the art of eluding it is what I propose to teach the innocent. Albeit, I shall not do this voluminously, but succinctly and clearly, as I am able. Lord Lennox has given an example of the "changing" swindler, but as that will be found a few numbers back, it would be supererogation to repeat it here.

In setting out to purchase a horse, either a hunter or general, it would be as well to resolve on a fixed price, from which you must resolve not to deviate easily. The following prices I should say would about fit.

An hunter of the very best description (counting the circumstance of its being in a dealer's possession) say:

A hack, strong and likely, (counting, &c.) 150*l*. [The odd fifty more or less, as the horse seems worth it.

A general (when I say general, I mean a horse that would be fit to take the field or harness when required.) 40*l*. to 50*l*. [But give no more. You can always get good ones at that price.

A general (when I say general, I mean a horse that would be fit to take the field or harness when required.) 60*l*. to 70*l*. [This is as nearly as we can guess about the price, though it may be a little more or a little less.

In purchasing a horse, it is very necessary that particular attention should be paid to the *points*; a description of which we shall quote from the admirable little treatise of H. R. Hershberger, Esq., which work we should recommend to the amateur, as containing a vast amount of information in a small compass.

SHOULDERS.—The oblique or slanting shoulder is indispensable in the horse from which action and speed are required; but this is not so lasting as the upright shoulder, which has more muscle. Horses of action, therefore, have slanting shoulders; those for draught, upright and muscular ones.

ARMS.—A horse with a short arm will be found deficient in stride.

NOSTRILS.—As the horse breathes only through the nostril, it should be wide and expanded. This is a very striking feature in the thoroughbred horse. The nostril should be thin and elastic, so that it may more readily yield when the necessity of the animal requires a greater supply of air.

THE LIPS.—The lips should be thin without wrinkle, for if thick and hanging, they are almost insensible to the bit.

THE MOUTH.—A long and narrow mouth is desirable, as it indicates sensitive ears.

UNDER JAW.—A wide under jaw shows a capacious windpipe, so essential to the respiratory powers of the horse.

THE EYE.—The eye should be large and somewhat prominent, and the eyelid thin and delicate. If much of the white be seen it is objectionable.

THE NECK.—A long neck is preferable to a short one, for there are few horses of extraordinary speed that have not a long and slender neck.

These are the essential points of the horse, and if they are properly looked to, the purchaser can hardly be taken in in his bargain.

In purchasing a horse of which you have doubts, but cannot arrive at a conclusion, it is best to take Father North's advice, and "set jockey against jockey."

Never trust to a dealer's *counting* from memory; you are pretty sure to be done if you do.

If you go carefully to work, you may stand a chance of getting a really good horse at a moderate price.

Never go to a commission agent, except one who is known to be respectable.

Never answer an advertisement in the *Times*—"rogue: all—rogues all!" If you follow these rules implicitly, you cannot be taken in easily. Nov. 15, 1845. F. B. T.

## THE ASSAILANTS OF HUNTING.

Sir.—The "morality press" have of late indulged in numberless critiques not "couched in phrase polite" against this noble sport. Having been beaten out of their strong morality position, they have taken to the economy of the thing, and ventured to occupy the ground of its damage to the farmer and landholder. One of these papers has gone so far as to particularise the *locals* of the damaged party, and says, that "more mischief is done by the hunter than the hunted." We wish in as succinct a manner as we possibly can, to expose the falsehood of these charges; viz., the damage done to crops out and in seed. Not by assertion merely but by incontrovertible demonstration. It is a well-known fact that no huntsman would be wilfully guilty of riding through or over a field on which any destructible plant was growing, let alone a field of wheat, which these morality-mongers assert to be the case; and even in riding over a "seed ground" can any person imagine that any man would be such a jackass as to ride across a field at every step through which his horse would sink up to his hocks. Can it be thought that a man would wantonly knock up his own animal (perhaps lame him) do mischief to the farmer, and get the hounds an ill name in the country, and himself a good many more in the field? The idea is absurd. The fact of the case, is this and this only. In many counties the land is chiefly let to tenants so poor that they are cut out of all possibility of themselves riding a good colt, and enjoying the sport in a rational manner. These fellows always keep pot-hunting dogs, which are whistled together three or four times a week, when their masters and their *hopefuls* scour the whole country in pursuit of a hare; and this is why the "morality press" attacks the sport of hunting.—VENATOR.

THE SUPPLY AND PRESERVATION OF FOXES.—To recruit the waste of Foxes, they are sometimes imported from the Continent, but the foreign fox does not show equal sport with our own. It has also been proposed to procure them from Scotland, and the northern foxes would prove game ones, and could be very well spared from thence; indeed, any method of procuration would be preferable to the illicit traffic now kept up; when nothing is more common than the foxes of one country being caught and sold to the hunts of another. This robbery is particularly practised with cubs, which are dug out of the earths and brought up by hand, until a customer is found for them. Hunting four or five days a week even would not beget a scarcity on any locality where the covers were extensive, if no other means of destruction were employed but those of fair hunting.—*Blaine's Encyclopædia of Rural Sports*.

GERMAN BATTLE.—The following is an extract of a letter from Count Veltheim, written to a friend in this country, descriptive of a *battle*, or wholesale slaughter of game, which he describes as being very fashionable in Germany:—"I assisted (says the count) even during the coldest weather, in a shooting party of six following days, from morning to evening, without any detriment to my health, though several partakers of the sport had their noses, ears, and fingers frozen. We had last season, in this part of Germany, an uncommon quantity of game of all kinds; of course our shooting parties were very successful. I assisted at one of Baron Asseburg's, near the mountains of the Harg; where a company of a dozen shots killed, in three days, 13 deer, 56 roes, 10 foxes, and 327 hares. We could have killed, at the same time, a dozen wild boars, if the proprietor of the estate had not wished them to have been spared till the next season. Two friends of mine, General Count Kielmansegg and Baron Herzule, were, a fortnight since, at a shooting party in the rich plain near Magdeburg, where there were killed in four days 2,400 hares. But I do not like such feats, which are more like a massacre than a sport, partly because I am of opinion that there should be at all sports some chance and skill; and partly because I like shooting the best where different kinds of game are expected, although not in such immense quantities." When the late King of Naples, the greatest sportsman in Europe, was in Germany, about the year 1792, it was said in the German papers that in the different times he had been shooting in Austria, Bohemia, and Moravia, he had killed 5 bears, 1,820 wild boars, 1,968 stags, 13 wolves, 354 foxes, 15,350 pheasants, 1,121 rabbits, 16,354 hares, 1,625 she goats; 1,625 roebucks, and 12,435 partridges.

The following is an account of the destruction of game in Bohemia by a hunting party, of which the King of France made one, in 1755. There were twenty-three persons in the party, three of whom were ladies: the Princess Charlotte of Lorraine was one of them. The chase lasted eighteen days, and during that time they killed 47,950 head of game and wild deer, of which 19 were stags, 10 foxes, 18,243 hares, 19,545 partridges, 9,499 pheasants, 114 larks, 353 quails, and 454 other birds. The Emperor fired 1,798 shots, and the Princess Charlotte 9,010: in all there were 16,209 shots fired.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

## CHAPTER X.

TOM CRIBB, CHAMPION.—continued.

UR hero's life, with one slight interruption, is henceforth of a peaceful character. In 1814 he had the honour of exhibiting before the distinguished foreign Potentates then in this country; and his athletic proportions and manly bearing in the mimic fight attracted the particular notice of Marshal Blücher. An anecdote or two exemplifying the forbearance, goodness of heart and integrity of purpose of the patriarch of the Ring will not be here out of place as a conclusion to his biography. They are principally given upon the authority of Pierce Egan.

A navigator, from Lancashire, as big and as rough an article as can be imagined, prompted, it is supposed, by the great pugilistic success of Carter, took a turn, on Thursday evening, November 7, 1816, in the neighbourhood of Westminster, and suddenly pounced on the Champion of England and Tom Oliver, in the friendly act of blowing a cloud together. Without waiting for the formality of an introduction to those heroes of the fist, he boasted of his milling pretensions, and, sans cérémonie, challenged Oliver for a turn-up. The coat of Oliver, was half-way off to resent this unprovoked attack upon his prowess, but Cribb forbade it—observing, that the navigator was too heavy; and that he should be more fitted to accommodate this hasty customer, having no doubt but he should quickly alter his opinion of his own capabilities. The parties retired to a large shed at the back of the house, when a turn up commenced without farther delay. The navigator ran in like a bull, head foremost, and endeavoured to bring the Champion down after the Lancashire method, by seizing hold of his thighs, but he failed in his attempts most woefully, for in five minutes he was so punished that he cried out—"I yield." Cribb left him to reflect on his folly, but, in the course of a few minutes, he came in and again insisted upon having another set-to with "the Stout 'un." This was agreed to, but the navigator soon adopted his former phrase of "I yield!" Cribb now retired, supposing he had given complete satisfaction; but it was not long before he was compelled to renew the combat for the third time with this dissatisfied brute. The navigator resorted to urring, and endeavoured to effect a conquest by hugging; but Cribb clattered him in all directions, and marked his body so severely, that he now could scarcely articulate the provincial—"I yield!" The only regret expressed by the Champion was, that, during an attack of twenty minutes, he could not put in a straight blow, as the navigator never stood up like a man, merely attempting by foul means to throw, or disable his man. Cribb returned home without a scratch, while the man of mud received an important lesson on the advantages of science.

*The importance of Training.*—Without any disparagement to the pugilistic prowess of Tom Cribb, it will appear, from the following statement, from a work on Pedestrianism, revised by Captain Barclay, that the result might not have proved so favourable to the Champion, on the 29th of September, 1811, had he not been taken such care of by a scientific person during his training. It is well worthy the notice of all sporting men; and pugilists will do well to peruse it with attention.

"The Champion arrived at Ury on the 7th of July of that year. He weighed sixteen stone; and from his mode of living in London, and the confinement of a crowded city, he had become corpulent, big-bellied, full of gross humours, and short-breathed; and it was with difficulty he could walk ten miles. He first went through a course of physic, which consisted of three doses; but for two weeks he walked about as he pleased, and generally traversed the woods and plantations with a fowling-piece in his hand; the reports of his musket resounded every where through the groves and the hollows of that delightful place, to the great terror of the magpies and wood-pigeons.

"After amusing himself in this way for about a fortnight, he then commenced his regular walking exercise, which at first was about ten or twelve miles a day. It was soon after increased to eighteen or twenty; and he ran regularly, morning and evening, a quarter of a mile at the top of his speed. In consequence of his physic and exercise, his weight was reduced, in the course of five weeks, from sixteen stone to fourteen and nine pounds. At this period he commenced his sweats, and took three during the month he remained at Ury afterwards; and his weight was gradually reduced to thirteen stone and five pounds, which was ascertained to be his pitch of condition, as he would not reduce farther without weakening.

"During the course of his training, the Champion went twice to the Highlands, and took strong exercise. He walked to Mar-lodge, which is about sixty miles distant from Ury, where he arrived to dinner on the second day, being now able to go thirty miles a day with ease, and probably he could have walked twice as far if it had been necessary. He remained in the Highlands about a week each time, and amused himself with shooting. The principal advantage which he derived from these expeditions was the severe exercise he was obliged to undergo in following Captain Barclay. He improved more in strength and wind by his journeys to the Highlands than by any other part of the training process.

"His diet and drink were the same as used in the pedestrian regimen, and

in other respects, the rules previously laid down were generally applied to him. That he was brought to his ultimate pitch of condition was evident, from the high state of health and strength in which he appeared when he mounted the stage to contend with Molineux, who has since confessed, that when he saw his fine condition, he totally despaired of gaining the battle.

"Cribb was altogether about eleven weeks under training, but he remained only nine weeks at Ury. Besides his regular exercise, he was occasionally employed in sparring at Stonehaven, where he gave lessons in the pugilistic art. He was not allowed much rest, but was constantly occupied in some active employment. He enjoyed good spirits, being at the time fully convinced that he should beat his antagonist. He was managed, however, with great address, and the result corresponded with the wishes of his friends.
